Bulldogs For Sale.

Messrs. R. & W. Livingston offer the following bitches: Bellona, Silver Pitcher, Gipsy and Thespian, and the grand little bulldog Boz II. Address, 54 West Thirty-sixth street, New York. Apl14,1mo.

PRIZE AND PEDIGREE ENGLISH MASTIFFS.—Mr. James Hutchings, 25 Gandy st., Exeter, England, has several grand ones for sale, brindles and fawns, including stud dogs brood bitches and puppies. Tourists' inspection invited.

FOR SALE.—SCOTCH DEERHOUND DOG pups, from imported Dunrobin and Shelloch, from the Duke of Sutherland's kennels, Dunrobin Castle, Scotland; 6 mos. old; full pedigree. Address GEO. SHEPARD PAGE, 69 Wall st., N. Y. ap21,3t

FOR SALE.—TWO SOLID BLACK COCKER brood bitches, by Obo II. ex Althea; one is in whelp to Willey's Black Pete, Jr., other soon to come in heat. In perfect health. Sold for want of room. Address DR. WHEELOCK, Waterbury, Vt. 1t

BLACK COCKER BITCH ALTHEA (A.K.R. 842) for sale, dam of Mustard, Blister, Nig and many other good ones. *A Great Bargain.* Also liver and white bitch Gilt, in whelp. A very fine little cocker. Althea shipped in May; Gilt now. Send stamp for pedigree and price. HARRY D. BROWN, Waterbury, Vt. ap28,4t

FOR SALE OR EXCHANGE FOR A BREECH-loading shotgun, Daisy Ranger, pointer bitch, winner of vhc. (reserved) at late show in Boston, by Ranger Croxteth and Fanny Faust. In whelp to imported Bang. Address with stamp FRED B. STAFFORD, 24 Newton st., Faneuil, Mass. 1t

BLACK POINTERS.

A brace of handsome black dog pups, 6 wks. old, by my Croftstone (A.K.R. 3387) out of Phillip's Daisy, she by Amorey's imported Bob ex Sal. These pups are choice of litter and will be sold low. Address E. C. ALDEN, Dedham, Mass. ap28,3t

FOR SALE CHEAP.—CHOICE ENGLISH setter pups, comprising the blood of champion Leicester, Dash III., Pride of the Border, Lathrop's Dick and Perry's Pete. Bred especially for field shooting; A No. 1 stock. A bargain. Address N. LEONARD, Station A, Boston, Mass. ap28,2t

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, MAY 5, 1887.

VOL. XXVIII.—No. 15. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price. $5 per year; $2.50 for six months.

Address all communications,

ANSWERS TO CORRESPONDENTS.

THIRTY-TWO PAGES.

Four pages are added to the usual twenty-eight, and this issue of Forest and Stream consists of thirty-two pages.

THE AUDUBON SOCIETY.

THE movement initiated by the FOREST AND STREAM in February, 1886, for the protection of American non-game birds has met with great success. At the present writing the AUDUBON SOCIETY numbers about thirty thousand members, who are scattered over the length and breadth of this continent, besides a considerable number of persons in the various States of Europe, in India, Persia and other out of the way countries. The expenses of this movement, which have been very heavy, have been borne by the Forest and Stream Publishing Company without any assistance from outside persons.

In February of the present year the *Audubon Magazine*, a monthly publication, was produced. The purpose of this periodical was a double one. It was designed first to create a rational interest in birds, and to convey instruction as to their services—now so imperfectly understodo—to man, thus creating a popular sentiment in their favor, and second to create a fund which might cover the expenses of the Society and provide for its extension without any appeal to the public in aid of the movement.

It was determined to publish the *Audubon Magazine* at the very low price of fifty cents per annum in order to bring it within the reach of every one, to secure for it the widest possible currency, and so to secure the best results for the birds which the AUDUBON SOCIETY desires to protect. At this very low price it is evident that it must attain a very large circulation before even the expenses of publication can be met, to say nothing of contributing to a fund to meet the expenses of the Society. Four numbers of the magazine have been published, and we are thus enabled to form an intelligent judgment of the character of the periodical. It is full of matter which is both instructive and entertaining. Each number contains a full page illustration of some well-known bird, carefully reproduced from Audubon's plate, together with a description and life history of the species figured. Besides this the story of the life of the great artist-naturalist is appearing as a serial. Economic questions are treated in an intelligent and novel way, and there are lighter articles and stories for the younger folks. Simply as a work of instruction in natural history, and aside from the entertainment furnished by its well-written pages, and the good service which it must serve, the *Audubon Magazine* is by far the cheapest publication that we know of.

Sportsmen generally—and above all the sportsmen who read the FOREST AND STREAM—are opposed to any wanton slaughter of any living thing, and those who desire the protection of our small birds and sea fowl can in no way more effectively contribute to that end than by subscribing to the magazine and endeavoring to enlarge its constituency.

THE DECORATION DAY TROPHY.

DECORATION Day is observed as a public holiday in eleven States. While not a national holiday, its observance is so wide that the FOREST AND STREAM is perhaps justified in hoping that the participation in the DECORATION DAY TROPHY contest may be so widespread as to be national in character. The competition is open to the whole country and to every State, whether May 30 be observed as a holiday or not. The conditions have been made purposely broad so that small clubs might not be excluded and that general participation in the friendly contest of arms might be assured.

An illustration of the silver TROPHY is given in our Trap columns, and speaks for itself.

We repeat a request already made, that club secretaries will send in their entries at a day as early as convenient and in advance of the final date for closing of entries.

SPORT.

WHO shall define what sport is? The first definition of the word given in "Webster's Unabridged" is "that which diverts the mind," but the answer to the riddle we propound lies somewhere within the wide bounds of a definition further down the page, "diversion of the field, as fowling, hunting and fishing."

One sportsman would answer that it is to kill much game or catch many fish by legitimate and fair methods (and no one is a sportsman who would employ any other to that end), regardless of any discomfort one may suffer, or risk of limb, health or life he may run, indeed that such risk increases the sport.

Another, perhaps in the minority, would maintain that it is not the largeness of the score, but the interest and excitement of pursuit, and the skill exercised that constitute sport. That to obtain one shot at wary game, to make one successful difficult shot, to hook and land one large and cunning trout with nice choice of lure and skillful handling, is sport in a fuller sense than easier slaughter of a larger bag or creel. Another that for him there can be no sport with continued discomfort and hardship. He would not suffer the torment of July heat and mosquitoes for all the woodcock in the swamps, nor the freezing and drenching of November and December winds and waves for a boat-load of waterfowl, nor wade ice-cold April brooks for all the trout they hold. Give him the tempered air and water of May and June, when birds are singing and flowers blooming, October woods, abated of the nuisance of insect life, and perfumed with the pungent scent of falling leaves, invigorating with air neither too warm nor too cold, with fish and game plenty and not too wary, and his ideal of sport is realized. And another, doubtless in a smaller minority, will answer with fervor of conviction, that "it is not all of hunting to hunt, nor of fishing to fish;" that what makes the pursuit of fish and game most enjoyable and sport to him is the communion with nature which he has with rod and gun for convenient excuses and agreeable adjuncts. What he sees and hears are more to him than anything tangible he brings home.

The man who hunts foxes on foot, and shoots them before his one or two hounds, swears by his safe sport and sees nothing unfair in that which is as much despised by him who risks his limbs and neck in riding to the park as the drag hunt is by the other. One counts it no sport to shoot without the aid of a trained dog, and nothing game that such a dog will not stand. Another is content to stalk his own game, and almost everything wild is game to him. Highhole, squirrel and woodchuck help to fill his bag, and he enjoys the gathering of them in as keenly as the more ambitious sportsman does the scientific taking of his woodcock, quail and grouse. One is satisfied with the excitement of shooting at flying targets, living or inanimate, thrown from a trap; while another can see nothing but cruelty, or better than boys' play in such shooting.

One angler is happy "yanking" bullheads and sunfish from quiet waters with coarse tackle and a rod that was never made with hands, while another would find no more sport in such ignoble pastime than in digging the worms for bait. He must have delicate tackle, handled with nicety of skill in a well-fought struggle with a game fish to make fishing sport for him. It must be a fine art, not the hauling out of fish by main strength.

So, among the multiplicity of answers from these and many more, we get no definite one. We must be satisfied with that which comes nearest our own idea of what constitutes sport, and, spreading the broad mantle of charity over all, despise not kinship with any who, by means not unfair or dishonorable, seek diversion in the field in fowling, hunting and fishing.

SNAP SHOTS.

THE report of the Philadelphia Zoölogical Society for the year ending March 1, 1887, is a very satisfactory one. It shows a considerable increase in admissions, the total receipts from this source being $34,213.20, an increase over last year of $5,893.21. If the Philadelphia Society shows such good results, it is certainly fair to suppose that a good zoölogical garden in New York would do even better. The day when New York will have a satisfactory collection of wild animals cannot be much longer delayed. The sooner it comes the better.

This week appears the final instalment of our special correspondent's report on the winter features of the National Park. It has an especial interest to all sportsmen, for it gives a very full account of the large game to be found in the northern portion of the Park. In connection with this last letter of Mr. Hofer's series, the account of the arrest of trappers in the Park, by Captain Harris, will be read with interest. Eternal vigilance is the price of protection here, and Captain Harris is anxious to do his whole duty for the Park. His selection of Ed. Wilson as the guide who should lead the soldiers to the trappers' camp, was an admirable one, for Wilson is well known to have been one of the most efficient of the old force of assistant superintendents. As more and more comes to be known about the Park and the public interest in it increases, the prospects of obtaining from Congress the necessary legislation with regard to this reservation seem to grow brighter.

Game legislation at Albany drags its slow length along. The laws as yet remain unchanged, and the trout fishing season in the Forest Preserve began last Monday. The suggestion of a correspondent who proposes that a State convention be called to take charge of next year's game legislation is sensible. Years ago we pointed out to the New York State Association for the Protection of Fish and Game a way to make itself useful in this work, but that society, which was so finical as not to endure to be titled a "sportsmen's" association, systematically neglected its duty. If ever any body of men looked tired it was this New York association whenever a member rose in meeting to talk about game protection.

These sunny May afternoons the FOREST AND STREAM'S grizzlies, in their Central Park rock pit, munch peanuts and gaze indifferently at the roaring lion over across the way. They are good-mannered, happy-dispositioned brutes. The policeman on the outside of their den enjoys the May days too, for the bright weather brings to the bear pit throngs of women and children, at whom he can bawl to move on, as he hustles them roughly away. Central Park policeman have not a very enviable reputation for their bearing toward citizens, and this one at the bear pit can on occasion make himself particularly insolent and offensive.

Our correspondent "Jay Bebee" in another column touches on the definition of hybrid, and his views in this respect will hardly be accepted by naturalists. Any of the North American wild geese are different species from the domestic goose, and so the offspring of a union of any one of them with the barnyard fowl would be a hybrid.

WINTER IN WONDERLAND.

THROUGH THE YELLOWSTONE PARK ON SNOWSHOES.

V.

IN the evening I made inquiries about the whereabouts of the game around there. I was told of some being on the ridges near by, and then of the rescue of eight elk out of the cañon.

On the morning of Feb. 18, the Major and Mr. Thorn, while on a sight-seeing expedition, found eight cows and two heifers in the cañon between the two falls. There were no calves with the band. The Major thinks the lions killed them. If the lions did not there are lynxes around enough to do it. The river here is all frozen over and the snow at least 9ft. deep in the cañon. From all indications they had been in here a long time, probably over two weeks. They had traveled around all over the river and up on the sides of the cañon in their efforts to escape, but the deep snow on the steep hillside was more than they could get through.

There being no food for them in the cañon they had eaten the small limbs and boughs of the spruce and balsam fir trees as high up as they could reach, even eating the wood of limbs over half an inch through. The bark off dry trees and large limbs of a "quaking asp" (aspen) tree was almost devoured. Limbs over an inch in diameter were chewed off close to the body of the tree and the bark off that. The Major and Mr. Thorne hunted for the trail by which they entered the cañon; not finding this or any sign of it they decided to tramp a trail for them. The men returned to the hotel leaving their snowshoes: they tramped a trail from the little foot bridge crossing the gulch just above the hotel, down past that, through the gorge, between walls of rock, following the gulch on to Cascade Creek and out to the river. The Major was accompanied by his two dogs, Sue and Shep, who kept close to heel.

Keeping to one side they went below the elk and started them up. Two—a cow and heifer—broke past them. The cow, a very large one, went to the south side of the falls, ran up a very steep ridge forming the brink of a precipice overhanging the falls, got up to where the ice was almost perpendicular, paused a moment, looking back, when her feet slipped on the hard ice, she fell over backward, slid down on the comb of the ridge, then over the falls, and down, over 300ft., disappearing through a cloud of mist into a round hole between an ice bridge and the falls. Thorne ran to the edge and looked over. Nothing of her was to be seen. When the two elk went below the men stopped, expecting them to return and join the band. After the death of the cow, they started to drive the heifer back. She ran to the platform on the south side, from which tourists view the falls and cañon. When the men attempted to go near her, she would stamp and back up, until she was outside the railing and standing on ice that overhung the chasm below. Thorne went to the brink of the falls and threw boughs up at her, in hopes of driving her to the others. The Major was afraid to let the dogs go, fearing that both dogs and elk might fall over into the abyss. Finding they could not make the animal move, they left it. After much hard work running around on the elk trails, they got the eight elk started up Cascade Creek, but they missed the trail made for their escape up the gulch and went on up to Crystal Falls. While the Major with the two dogs stopped below, Thorne went up to and among them as he would domestic cows. At one time some of them broke past, almost stepping on him. All started down but one; she was wedged in between the snow and rocks. Thorne tramped a trail, and by pushing and twisting her got her out of this place into another where, by helping her, he thought he could get her out. Having about 6ft. of ⅜in. rope with him, which he used to carry his web snowshoes, he tied this around her neck and started to lead her out, but she would not come. When he pulled on the rope she would brace herself and pull back. He said: "When I would go to leave her she would bawl for me. I went back several times, but every time I tried to lead her she'd pull back, not knowing what I wanted of her, yet would make that same noise, calling for me, when I left her." Finding he could not get her out of her trouble he left her, with the intention of taking some hay to her in the morning, as there was part of a bale at the hotel. The seven elk Thorne had turned back had gone on down the creek to the gulch, and had then there turned up the trail tramped for them, passing within 8ft. of Major Lyman and the two dogs. The Major says they were very poor and weak. As they passed they paid no attention to him or the dogs, as by this time they had learned that they were not going to be hurt. The elk followed the trail, crossed the bridge and passed within 10ft. of the hotel, going on out in the open country. The men were worn out with their day's work tramping around in the snow.

In the morning they started down to get the others out. They found the one with the rope on had gone out in the night following, the others, or one could say, following Mr. Thorne out, as he was last over the trail. The heifer was still in the cañon. Every time they attempted to get between her and the Lower Fall or go near her, she would run to the platform and stay there. Knowing that she would soon starve if left in the cañon, they determined to make an effort to drive her away from the platform and out to the other elk. Thorne would go out on the ice where it projects over the falls and throw things at her, but she would not start away from there. He then climbed above, trying to get at her from that side, but could not. Out on the platform the elk showed fight, stamping and grinding her teeth. She had backed so far toward the edge that she had to stamp her hind feet to get a foothold on the ice. At last, as she stood there, her feet slipped and over the precipice she went. Whirling over and over for 300ft. distance, she struck on one end of the bridge of ice, near the hole where the other fell. The poor thing must have been killed instantly. It is possible that this elk would have found her way out, but this is not probable, as snow was falling most every day. There was not enough hay at the hotel to keep her alive more than a little while. Better sudden death than starvation.

On the 28th, a bright clear day, in company with Major Lyman and Mr. Thorne, we visited the two falls. Leaving the hotel we descended directly into the gulch up which the rescued elk came ten days before. We could see their trail although partially hidden by new snow. We followed this gulch down between walls of rock and overhanging snowdrifts to Cascade Creek, then on out to the river. This was frozen and covered with snow. Deciding to see the Lower Falls first we turned down stream. We soon saw signs of the elk where they had been eating off the limbs of trees. I broke off several of these, which I send to show the point of starvation which the elk had reached. We saw the trails on the side of the cañon where they had tried to force their way up through the snow, the hoof-marks on the rough ice where the cow went over, and the tracks of the heifer where she was when she plunged to instant death, and I even saw some of the boughs and sticks Thorne had thrown at her lodged on the ice.

The ice on the river projected 15ft. out over the falls, curving down on the outer edge until out of sight. Going near the brink the most beautiful frost work in the whole park was to be seen. Words could never describe this grand sight. On the south side the whole precipice from the river up and away around for hundreds of feet was one mass of ice and frost work. Up for about 200ft. from the river, the ice was in the form of gigantic icicles from 1ft. to 200ft. long. Above this the ice was more like a great bed of flowers, on edge masses of flowers, clusters, bunches and bouquets, projecting out from the rest; globular-shaped pendant clusters of ice, the surface covered with pearly frost-work like frozen dew drops, or the iridescent formation of the geysers, for 100 and 200ft. more. All this was not without color. The flowers were delicately shaded from a dark straw color to white, the icicles a faint blue, green and yellow. The whole of the cliff was overhung with a fringe of icicles from the top almost pure white. The top of the cliff and timber back of it was coated with fine ice that glittered as the sun shone on it from over the edge of the cañon above. Two dead trees, whose ice-coated tops were in the sunshine, looked like electric lights, they were so bright. The sun striking the other side of the highly colored cañon cast a golden glow over the whole scene impossible to describe.

Going to the platform and venturing out as far as one dared, I looked down to see the ice bridge formed across the river. This reached up at least one-third of the height of the falls, and was crescent-shaped, leaving an immense hole, into which the water poured; below this bridge the river was open. The water was a deep green color, although less in volume than in October, when I was last here.

Recrossing the river we ventured out as far as it was safe, to see the precipice on the north side, but could not unless we risked our lives on the comb of the ridge, over which the first elk fell.

Going to the Upper Falls we found great ice mounds and domes at its base reaching more than half way up its face. We climbed all over the bridges and mounds. From the top of one we saw that the main volume of water ran over the left edge as we looked at it in a solid stream. The rest of the falls were now but a cascade as far down as the level of the mound; the river below these falls is very wide, forming a circular basin, half of this was filled with the mounds, their bases reaching half-way across. From both Maj. Lyman and Mr. Thorne I learned that one mound of ice, at least 45ft. high, had formed in the last ten days.

At these falls were more ice flowers, some a dark yellow, some clinging to the rock over which the cascade ran. Some of the ice was a light straw color, shaded down to white. Part of the falls were covered with a lattice work of ice, through which the water and ice under it could be seen. Above dark rocks, covered with caps of snow, the edges of the cañon, fringed with timber, made a grand and imposing sight. We spent the day here in this cañon, going home when the sun was getting low. We climbed back up the gulch and turned aside to see some of the snow-covered buildings. In returning to the entrance I made a cut off by going over one end of the hotel to the front porch on my snowshoes.

The next day, March 1, we started for the sawmill, some two miles distant, in company with the Major, and his dogs harnessed to a sled. Two hundred yards from the hotel we came to the fresh trail of two elk going toward Cascade Creek. This I followed a short distance in order to learn how old it was. The elk had passed not over two hours before we started out. Expecting to get a shot at a mountain lion at the mill, or have a crack at a lynx, we took a .40-90 Sharps along and a small revolver. We had learned of five mountain lions said to have taken possession of the sawmill, barn, tent and other buildings out there. If the sign was favorable we intended to stay all night at the mill to get a shot at the lions. We soon got there and were disgusted, for we found nothing but a few lynx tracks. Not a lion or a sign of one could be seen. The barn was crushed in. A tent just showed from under the snow. The mill was standing, but the timbers with which it was strengthened were bent and twisted and some broken. A few more inches of snow, and this too would go down. The mill is situated on a spring creek, in the northwest corner of a large meadow.

We saw several old elk trails and places where they had been feeding. Coyote, fox, martin, rabbit and lynx tracks ran in every direction. There were many small birds. An osprey was noticed, and a few woodpeckers were seen hammering away for their dinner. A gull and a few ravens flying over the cañon made up the most bird life noticed. We were going toward Lookout Point and the Grand Cañon. Before we got there I saw several piles of lumber, and asking the Major about it, he said "it was the new hotel site." This is not the one selected back of Lookout Point, but one much nearer the cañon and considerably less than a quarter of a mile from it.

At Lookout Point we had a view of the Lower Falls, with its icy surroundings. Noticing a dark object on the end of the ice bridge, directly beneath the platform from which the elk fell, I called the others' attention to it. We concluded it was the body of the heifer. The long distance we were from the falls spoiled the effect of the frost work. Every point, tower, pinnacle, buttress, tree and projection in the cañon was crowned with snow. As the different additions were made to the cap it would settle out over the edges until now the cap of snow was more of a hood, covering the points and hanging down on the sides half their depth. This hid the darker portions of the rock in the cañon, giving it a much lighter appearance. The steam jets in the bottom and on the sides were sending up little columns of steam, like smoke from chimneys, looking as if people were living below. The cañon was not as attractive as in summer. Now there is too much white. In returning we crossed Cascade Creek where the Howard wagon train did in 1877 on its way over Mt. Washburne. Here the fresh trail of the morning came down and passed up the creek. We had gone entirely around the elk.

On the 2d and 3d it snowed some; these two days we devoted to resting and looking at the cañon.

On the 4th it was snowing, but cleared a little by 8 o'clock. At 8:30, with two days' provisions, we started for our trip over Mt. Washburne. Soon after crossing Cascade Creek we crossed the trail of the two elk whose trail we had seen on the 1st. In due time we were climbing a spur of Dunraven Peak; from here, on a clear day, one can see the Grand Tetons. Now the clouds hid them. Mts. Hancock and Sheridan were in sight. All the mountains on the east of Yellowstone Lake were in view. Leaving this ridge and keeping up, we soon came to the pass which takes us on to the waters of Carnelian Creek. Looking back we could see some of the country and timber in which Mr. Haynes and his party had wandered while lost. From the top of the pass we had a grand run down hill for some 500ft. following the water course; then turning aside to the right we commenced to climb the ridge which the trail follows up to the top of Mt. Washburne. Soon we crossed an elk trail made going down hill through snow 8ft. deep. Further on were the trails and beds of a large band of elk. Above on the ridge I saw the elk, twenty-three of them. Getting out of the timber, we found the western slopes of the hillsides almost bare, with good and sufficient grass on them to have wintered a large band of horses. Above was a band of eleven elk, six cows, two yearlings and three spikes (two year old bulls). I could not tell if this was a new band or part of the first twenty-three seen. I could see elk further up on the ridge. All had "winded us" and were moving. The eleven tried to come down and pass us on the ridge, but when within 200yds. of us they turned back. When I reached the summit of this ridge, I was a long distance ahead of Jack, and taking off my pack I walked out on to an immense snow drift on the east side that followed the ridge for miles. Here I sat down to rest and look for game. I could see Specimen Ridge, but not plainly, for a strong wind blowing filled the air with fine snowclouds. On all the bare ridges on this side of Washburne I could see elk scattered in bands, three, four and ten in a place. I could not see game across the river. While waiting for Jack I heard a "whining sound" to my left, and looking up, a spike bull was passing within 50ft. I could see shreds of old velvet still sticking to his horns; he was poor and drawn up. He passed out of sight over the edge of the drift. Snowclouds hid all the mountain tops, one resting on the summit above. My intention had been to go there for a view of the country and to look for game, but the clouds rendered such a trip useless.

Running down the mountain from here, we entered a grove to camp, flushing as we did so several dark grouse. Some call them blue, others dusky grouse. We selected a camp in this grove and passed a very comfortable night. By daylight we were on the march. As we left the grove I heard the song of a small bird, a wren. As the sun rose over the mountains to the east I came in sight of game. I saw thirty dark objects across the Yellowstone about one-third the distance from Tower Creek to opposite Washburne. These I took to be bison. As we were traveling toward them for some distance I constantly watched them for some movement. I could see elk on the other side opposite the mouth of Tower Creek. Soon we crossed a sag and on to the high ground looking into Antelope Creek. All around us the snow was pawed over by elk. My dark objects had turned to "sure enough" bison, yet were too far off to tell anything about them. A mile north of where the bison were was a band of fifty-four elk. Going on I saw other bands, fifteen in one, twelve in another, seven and twenty in others. Running on down hill, the longest runs we had on the whole trip, brought us to the hill overlooking Tower Creek. On the other side of that was a band of twelve elk and one old bull off to one side. The bulls had just commenced to drop their horns. I saw one fresh one on the ridge as we came down. Here too the snow was pawed over by the elk with trails leading through the deep drifts from one feeding place to another. The snow down here was about 5ft. deep. Following a ridge I went on alone to a butte directly over Tower Falls. Across the cañon and close to the edge, was a band of thirteen elk. There were four spikes in this bunch. Across Antelope Creek, between it and the Yellowstone, in the edge of the timber, were more elk, over twenty in the band. I followed down the ridge to where I had a view of the falls. These are the prettiest in the Park. Now they are almost hidden by ice up to within 25ft. of the top; masses of icicles are on each side and the brink covered by a hood of ice under a bed of snow. In the space behind the falling water could be seen icicles like stalagmites reaching up to within 10ft. of the top. The snow had fallen off most of the towers around the falls, filling the cañon below for 25ft. Returning to my shoes I crossed the creek above. Here there were open places. The volume of water is the same in this creek now as in August. Shouldering our shoes we climbed the steep hill, following an elk trail to the open bench on top. From this we could see elk in every direction. I soon gave up trying to count them. I could make out distant bands on the East Fork of the Yellowstone (Lamar River) bottoms and mountain sides. We crossed elk trails all the way to Lost Creek. Here we saw the first willows on our trip. The others were under snow. We soon came out to the Cooke City road, and half a mile further on we came to Yancy's Station.

We were kindly received. Mr. Yancy was looking for us, having learned we were coming out that way.

Here we learned people were discussing our trip, some going so far as to say they never expected to see us again. We spent the evening talking of the game in the Park, and inspected Mr. Yancy's new Winchester, a single shot, .40-caliber. This he thinks one of the best rifles he ever owned; is delighted with its fine shooting. Mr. Y. is an old hunter, and one of the best fishermen in the country. As the first mentioned sport is prohibited in the Park, he devotes some of his time to target shooting. Not far from his station is some of the best fishing in the Park.

By 8 o'clock in the morning we left Mr. Yancy's for the long 1,300-foot climb up Elk Creek to the high, open country above. In a quarter of an hour after leaving "Pleasant Valley" we saw elk. Nine were feeding on an

open spot not half a mile from Mr. Yancy's hotel. From this time on until I started down the cañon of Lava Creek (east fork of Gardiner River), I was not out of sight of elk at any time. We climbed the hill, easily following the sleigh road until we came to a deep cut into which the snow drifts and slides, making it impassable for teams in winter, but used for a wagon road in summer. The sleigh track turned to the left, over a higher hill to avoid this cut. Going through and out of the cut we came on to Geode Creek. Elk were to be seen in every direction; cows, calves and spikes. The calves could now more properly be called yearlings. Now and then there would be a bull or two off to one side. The proportion of cows, etc., was six cows and heifers, three calves and one spike to every ten head. The bulls older than two years are never with the band, except in the running season. Some of the older bulls have dropped their horns, commencing about the last day of February.

Before we came to Blacktail Deer Creek, Jack turned to the right, taking a trail to Gardiner, back of Mt. Evarts. I crossed Blacktail, seeing sign of game and elk on all the bare hills. The gulches were filled deep with snow. Soon I came to the head of the cañon of Lava Creek. Here are two very pretty falls, but buried under snow and ice. In the distance I could see the Mammoth Hot Spring terraces with high mountains for a background, with Electric Peak white and high above all the rest. To the left the Madison Range with its dozen fine peaks. To the right part of the Yellowstone Range, most of it hid by Mt. Evarts. On this was a band of some thirty elk and a bunch of ten mountain sheep.

Running down the long grade to Gardiner River, I went up it for two miles to the springs, and from there, next day, to Gardiner. Going down I did not see the six tame sheep observed when we started out. Jack was in town, having come in the day I reached the springs. We had made the round trip through the Park, as we intended to do when we started out, 160 miles on snowshoes. Counting in addition to this the side trips made, I traveled 225 miles. We camped out six nights, suffered no hardships or privation, and withal had a most enjoyable time. To be sure, we made no wonderful discoveries, for there are none to be made; the Park is too well known for that. My purpose in going through the Park was to see its winter features and to learn something about the game there. This I have done.

I can only give estimates in regard to the game. When it was possible I counted them, but still, one never sees all there are. To count all would require "a round up."

On the ridges around the Washburne there are at least 150 elk; about the falls, 50; on Specimen Ridge and the section of the Park to the north, at least 2,000; on Black Tail, Lava, Elk and Lost creeks, and country north of Tower Creek, some 1,600; in the country between Mammoth Hot Springs and the Madison Mountains, some 500. I know nothing of the number on the west side of these mountains. On Alum Creek and the country across the river there are elk, but how many I do not know. Perhaps 200 would be a large estimate, though some people put it as high as 800. In the south end of the Park I do not think the elk winter, but come in very early in the spring. Not counting these, this would give us 4,500 elk in the Park this winter. A few of the best hunters, men who do not get excited when they see a hundred elk and say there are a thousand, think there are from 7,000 to 8,000 elk in all; but I cannot think so, judging from the number I have counted in the country spoken of. One thing noticeable is the very small number of bulls older than two years old seen. On our trip not over fifteen were found. In one place where there were over a hundred cows and calves, there were but five bulls, and this, too, in a country where I could see almost all the game. We may be sure that the bulls we saw are not all there are by a long way. Some of the reasons for this disproportion of bulls to cows are these: The bulls are killed in summer because they are the best meat up to the running season. After that they are killed for their heads and horns for specimens. Then, too, a bull is easier to be found and approached than a cow, especially in the fall, for one sometimes goes up to a band of horses or a man on horseback just to see what they are, unless he has the wind of them.

Of bison I saw but thirty. I believe, however, that there are between 200 and 300 in the Park. Some people think there are not even fifty, as the high price paid for them, $50 to $75 for fine heads and hides, has induced hunters to kill them off and to take great risks of detection for the money offered.

Mountain sheep, antelope, blacktail deer and whitetail, as a rule, do not winter in the Park. There are a few sheep, some 200 antelope, but no blacktail or whitetail worth mentioning. Still, a great many have their young there and pass the summer, only going out as the snow comes. I have seen hundreds of sheep and blacktail on their way out in the fall, and returning in the spring. Last fall I knew hunters on the Gallatin River who saw, as they express it, "more blacktails coming out of the mountains in the Park this fall than I ever did before for years." Some say they think not less than 1,500 came out on the north side and west of the Yellowstone River.

Tourists through the Park, as a rule, keep the beaten roads, only going to the hotels, and never seeing any of the wild animals they hear so much about. Traveling as they do, nothing else can be expected. For their benefit some propose to pen up the elk in pastures for them to see as they ride along.

To see the game in this country, one must either leave the roads or visit the Park in the winter. At Yancy's (a day from either the Hot Springs or Gardiner) they would have elk on all sides of them. Thousands can be seen in a day from there. Elk may be seen within three miles of the Mammoth Hot Springs. At both these places hotels have been open all winter. A great many people with a few days practice on snowshoes, can see part or all the Park in winter and be well repaid for their trouble.

In a short time the proprietors of the hotels will find it to their interest to encourage winter travel, for, in addition to the game to be seen, certain features of the Park are much more interesting in winter than in summer.

E. HOFER.

SPRING IN VIRGINIA.

POINDEXTER PLACE, Virginia, April 15.—During the past fortnight, while "you all" (local vernacular) have been experiencing, as I learn from the papers (which every now and then I get hold of) a good deal of harsh weather. I have been rusticating in a climate where, for several days, the mercury flirted with 75° and 80° in the shade, and have fancied myself in the real woods by indulging in loafs under the shade of friendly pines, stretched full length on the springy sod.

I have not been entirely idle during this lay off, for upon several occasions I have worked more or less hard at hunting. Now don't throw up your editorial hands in horror and prepare to read me a lecture upon violation of FOREST AND STREAM ethics by hunting in spring, for I've neither killed nor tried to kill beast, bird or fish. I have "hunted without a gun." My first hunt was for trailing arbutus, and it led me through brier root tangles, wait-a-bit underbrush, muddy marshes, and up the faces of steep north-facing banks, rough enough work to satisfy the most cultivated taste of the most chronic pursuers of snipe and woodcock. It was my first tramp this year, and confiscated a good portion of my wind, to say nothing of a couple of pounds weight, if in perspiration, as in other water, the alliteration, "a pound a pint," holds good; but comparatively I had an easy time of it, for while my lower garments would permit me to stride clear of some of the tangles, petticoats would not. We were very successful and bagged lots of the shy flowers; our carrying resources were strained, and how I did miss the only handkerchief I had with me, which, shortly after our reaching the hunting ground, was, by a fair companion, borrowed to make a game bag of.

Another of my still-hunts was for Indian arrow heads, and such other implements as might turn up. About a mile from the house, the bank of a water-course is a low bluff; at certain places on this bluff (places which in consideration of the proximity of the Smithsonian—that camp of ardent hunters for such game—I shall not "give away") the face of the bank, as cut away by high tides and freshets, shows a conglomerate of clay, mud and shells. Arduous digging in this heap, and easier searching among the débris left by low tide, is often rewarded by a find. I was not lucky, the tide was high and the day warm; search I couldn't, and dig much I could, would and did not. The day before several very pretty specimens of obsidian and flint had been found and added to the cabinet of mine host, already enriched by quite a number of specimens, including a leather-dressing stone and rubber, a pestle and some spear heads. No traces of human bones have been found during the many years that these heaps have been known and searched. It seems probable that these places were simply the resort at certain seasons of some of the Virginia first families who came from the interior for a supply of fish, and while here subsisted on oysters.

I have enjoyed some "small deer hunting" after field mice. For companions I had Quail, Brasco and Major, three members of a happy family who deserve a brief description.

The happy family, led by Wallace, the bright and beautiful six-year-old, consists of Little Lord Fauntleroy of the manor, the three dogs mentioned; five cats, namely, Tonsy, Fanny, Alice, Smut and Maude; two pet fowls, Cleopatra and Cinderella; Lester, the solitary guinea hen, and Uncle Felix, a gorgeous, but lame old Muscovy drake. Sleeping and eating and in every way living together on the most intimate and friendly terms, this family gave me lots of fun, but for steady amusement I depended upon Wallace and the three dogs. Quail is a splendid old Irish setter, who through a long and busy life has earned a reputation second to none in th country, and has aided and abetted in the death of thousands of his namesakes. Now he is growing old and stiff, red-eyed, lazy and cross, but not so old or lazy but that the sight of a carried gun will draw him from his meal or nap. Brasco is a half-breed, setter and spaniel, who with no blood in particular o boast of, through his rare intelligence and docile disposition has become not only as good a bird dog as any man would wish to shoot over, but a valued friend and companion to every one who knows him. A dog that can do most anything but talk, and those who know him well claim that in that faculty he is not entirely deficient. He can and does make his wants known in unmistakable languge and by shrewd devices. For instance, but a few days since an uproar in the poultry yard, in which the growls of Brasco mingled with the yelping cries of Major, a little red pure blood cur, a warm friend and kennel mate of Brasco, drew Pay, Brasco's owner, to the spot. Major was on his back, legs up, tail in, mouth open, yelling, a very scared dog. Brasco was standing over him, holding him down with one foot and growling ferociously. Of course he was severely rebuked and driven off. Standing at a distance, looking beseechingly at his master and half whining, an idea seemed to strike him. He ran to the hen house and returned with an egg which he laid at Pay's feet with an air which was at once understood to mean that he had caught Major stealing the egg and had thrashed him for it. Major is simply cute, as good for nothing as a yellow cur could be when he came here a tramp and wiggled his way into a home, but so improved by his association with the others that he makes lots of fun for us.

A branch runs near the house, skirting a considerable portion of the farm. In this dwell many rats, and nearly every morning the trio start very early for a breakfast of fresh meat. Twice I have followed them up. Quail and Brasco take each a side, and with noses down work rapidly along till they strike a scent, and follow it to a hole. Then posting themselves, one above and one below, some ten yards distant, they stand as still as though on a point, except slowly turning their heads in search, while Major is set to digging. On neither of my trips were they successful. But I did not consider my time lost, for it's not bad in early April to be able to lie at ease on the leaf-covered ground and calmly smoke an outdoor pipe. Others have been more fortunate, and say that the instant a rat takes water the still-hunt becomes a chase, and that the dogs swim and dive so well that their chances of meat are full as good as are those of the rats for life; and they work in perfect harmony until the rodent is captured. Then if Brasco or Major get him a quarrel with Quail is imminent; if Quail gets him a trial of patience to the others, for they must wait till he is satisfied.

By the way, speaking of this little episode in Norfolk, I was informed that on the "eastern sho'" the muskrat, properly cooked, is esteemed a great delicacy, and this information came from a lady born and raised there, who knew whereof she spoke, for she herself had prepared many a good meal of them.

Our hunts for field mice were still more simple. Quail and Brasco would quarter the field with noses down; striking a scent a peculiar yelp would summon Major, who, as with the muskrats, was the boss digger, and he would go to work most eagerly, undeterred by the fact that he never got any mouse, for they fell victims to Quail and Brasco, and were evidently enjoyed.

So you see I've had one outing this year, and have revelled in pine odor, ozone and sunshine, and throughout all have been the happy recipient of the far-famed and well-known Virginian hospitality, which needs no description at this late day. Not all sunshine though. One morning, I think it was the last day of March or first of April, we awoke to a new sensation, the ground was white with snow, and mingled with the peach and apple blossoms were icicles—a pretty sight but not a welcome one. That day the northeaster kept us housed. I had the day before received a copy of "Nessmuk's" "Forest Runes," and while the ladies sewed I read aloud, first selecting by title, then after a narrow escape from running on a snag at "Elaine," saved only by a skillful sheer and sternboard, making reconnoissance before wading in, and we thoroughly enjoyed the rain.

I heightened their enjoyment as well as my own by a graphic description of the author and of my first meeting with him at the Forge House, First Lake, Fulton Chain, which, epitomized, may be thus rendered: *I*—"Take a seat." *He*—"Thank you," and sits down in my other chair. Five minutes after he had deserted it, and with an apology, when noticed, was most uncomfortably, I thought when I tried it, squatted and seated on his heels. On this trip I became familiar with that little hatchet, buckskin bag with ten bullets, muzzleloading rifle, ditty bag, and umbrella tent, all of which, when encountered in his camping-out instructions, were recognized as old friends.

On this occasion the jolly old fellow failed to appreciate my real character, for he certainly thought he was paying me a great compliment (which is true) as well as doing me a great favor by offering to me the use, when I wished it, of the Sairey Gamp, a boat which I felt sure would have drowned me off hand. He meant well all the same.

PISECO.

IN GEORGIA FORESTS.

THE very extensive pine country in Georgia between the Chattahoochee and Flint rivers is but sparsely settled; here and there, often at the distance of some miles, one finds a little clearing in this great forest. At this season (late in February) the scattered settlers set fire to the thick mat of brown and withered wire grass which covers the surface of the earth beneath the boughs of the lofty pines, which here frequently attain a height of 100ft. and upward, while their circumference 4ft. above the ground not unfrequently exceeds 11ft., as we ascertained by actual measurement. These forest fires do no harm to the pine trees which are sound, but those from which the turpentine has been removed by the ordinary plan of cutting a hole in the side of the tree, into which the turpentine descends and is gathered, are attacked by the flames from the burning grass and frequently completely destroyed. The surface of the ground among the pines, while gently undulating, is perfectly smooth, and the trees are so far apart that one can ride among them on horseback or even in a wagon. It is necessary, however, for the horseman to have an eye to the "gopher" holes, which are found in very many places in the light sandy soil from which the pines spring. These holes are large, and a horse putting his foot into one would be very apt to throw his rider over his head. The "gopher" is a variety of land turtle which remains in its hole dormant during the winter. Although running brooks and springs are rare in this pine country, one meets here and there with little pond holes whose shores are fringed with rank vegetation. In one of these we noticed a number of soft-shelled turtles.

After having left the highway we made our way with a wagon and pair of horses through the woods of Early, Miller and Decatur counties by private roads, if roads they may be called, which lead from one little clearing to another, and I am sure that I could not by any means find the same way back over the twenty or more tracks which we followed. Our way was ascertained by inquiry of the inmates of the scattered houses which we passed. Around or near almost every one of these lonely habitations clustered peach trees now in full bloom, while clumps of plum trees, covered with white blossoms, were nearly as abundant. Here and there in front of these log cottages stood a beautiful magnolia; one we saw was more than 30ft. in height. Or there might be a tall rose bush, of which we saw a specimen which was more than 12ft. high. In another garden was a huge cactus, whose buds were already preparing to open. The Cherokee rose, now in early bloom, we also met with. The holly, though common in the woods, did not seem to have been a favorite with the people; they made use, however, of evergreens as ornaments around their houses, the live oak occupying a prominent place. Wild flowers had already begun to make their appearance in the forest, especially about clearings or around the shores of ponds, the most prominent among the flowers of the forest were those of the red bud, a shrub, or rather tree, which was now a mass of lilac, the leaves not yet having put forth. About the ponds it often mingled its blossoms with those of the May haw, now in full bloom. This shrub stands in thick

bodies around the pools which are found all through these pine forests. We saw also the very fragrant yellow jessamine, in one case climbing the red bud close up to the white top of the blossom-laden neighboring wild plum, sprinkling the masses of lilac and white with its own yellow and filling all the surrounding air with its delicious fragrance. But with all of its beauty and fragrance the yellow jessamine is poison.

As we rode slowly past these lovely scenes, the balmy air and cloudless blue sky made me feel as if, in my own distant Canadian home, the storms and snows of icy winter must also have given place to the delicious breath of early summer. As if to add another charm to the scene, the blue and red birds frequently made their appearance amid the boughs, the bluebird, whose color is that of cobalt, is the harbinger of the Georgian spring. The redbird seemed to be of the most brilliant purple.

TROUBADOURS AND TROUVÈRES.

THE long Northern winter is not wholly cheerless nor unrelieved by seasons of pleasant inspiration. There come bright, glorious days, when a walk in the woods and fields is a positive exhilaration, when the melting snow assumes Protean forms of leaf and flower, mosaic and arabesque. Stripped of enshrouding foliage we learn the true meaning of the shrub, the bough, the tree. Sun and wind carve the ice-incrusted rocks and hills into forms of rare beauty. June is a painter; December the grandest and most tireless of sculptors.

It may be that in the dearth of light and color we learn to value more justly the wealth that remains. What sketches in black and white the snowbanks yield after a day of windy turmoil! Surely clinging vine of grape and twining honeysuckle were never clothed with such graceful vesture as that bestowed by the kingly frost; and as we tread the lonely forest aisles the hoarse call of the crow, the scream of the jay or the chirp of the chickadee remind us that our winged friends have not wholly forsaken us.

These are our troubadours, atoning for hoarseness of voice and infrequency of song by that firm constancy which will not permit them to desert in their age and decrepitude the fields and forests which wooed them with the June time's warmth and affluence. Southern airs may be balmier, Southern plains more bright and flower-strewn; they will not be seduced from their allegiance.

The little snowbird is the true moral hero of the feathered clan, extracting sunshine from the darkest day, sweetness from the sourest fate. No stalk of grass so dry and withered but he can find a hidden seed lurking for his delectation; no bramble so forbidding, no weed so bare, but that it furnishes him nourishment and support. His mate is a veritable Ruth in the field of gleaners, eking a rich harvest from the deserted stubble; and the ruby seed caskets of the wild rose, the flower-like berries of the bitter-sweet, furnish a dessert for the hordes of her followers. Drifting like the dead leaves, from which they are scarcely distinguishable before the gale, they form solid encampments upon our lawns, repaying with cheerful twitter the crumbs bestowed upon them.

A noisier suppliant is the chickadee, appealing to our benumbed sympathies with his ceaseless call of complaint. Let us harden our hearts against him, turn a deaf ear to his cajoleries and the laudations of the poets. What though his feet be cold with the storm and his heart a-flutter with forebodings of the fierce butcher bird, who thinks no more of impaling him upon a sharp bough than did the redoubtable Cyclops of spitting the unfortunate comrades of Ulysses. He is an ingrate; he will graciously receive our benefactions and reward our generosity when the spring shall come by picking to pieces the buds of our loveliest roses, our choicest fruit trees, in search of the incipient worm or insect. The chickadee is your true floral critic.

In the sunny mid-day I hear a low drumming among the locust trees. The woodpeckers are at work in the track of the borer. The whir of their wings gives life to the dead boughs, but like the jay they appeal to the eye rather than the ear, and win by silence.

On the bough of the great oak in the pasture near by, are perched the traditional two crows, "as black as black can be," and their hoarse cawing proclaims all manner of approaching evil. The crow is your born pessimist, the prophet of unfaith among the loyal minstrels. Himself is the paragon of fidelity. Would he were less so; faithfulness in an evil nature has its disadvantages. The burr and the wood tick have an adherent constancy with which we would gladly dispense.

The nights lengthen, the cold strengthens. A long-drawn note of onset, and the turmoil in the poultry yard proclaims that the horrid owl is abroad in the land. Sometimes we are wakened from slumber by the unearthly shriek of a viewless and disembodied spirit, and it takes some moments of severe mental discipline to assure us that it is only the cry of the harmless little screech-owl which has disturbed our rest.

As the days grow longer and the field supplies begin to fail, prairie chickens draw nearer human habitations, and the quail, forgetting their timidity, frequent the lawns and barnyards. Their voices, like the fingers of the ordinary musician, are out of practice; they give us no tuneful assurance of "more wet" in store for the submerged lands, nor relate in gossipy phrase the old story of "Bob White's" countless derelictions. They are wholly absorbed in pleasures of the palate, and emerge from their winter's banqueting round, plump and lazy.

The days slip by, and before we are aware April is tapping on the pane with the blushing fingers of the maple boughs. Some misty morning the far-off reverberant "boom" of the prairie chickens announces the advent of spring. Wild geese are flying northward, followed by the vast army of ducks, large and small; mallard, canvas or wood; black, white and mottled. Flocks of pigeons cross the sky, great hawks float with suspicious indifference above the poultry yard. Is that a fleeing patch of sunlight among the evergreens or the breast of a robin? And surely that bit of flying azure can be nothing but our errant bluebird.

Another morning and our doubts are put to rest. We are wakened by a stormy burst of melody from locust, oak and maple. The Trouvères are here, and the blackbirds open the melodic joust with an overture of trumpets and cymbals. The clear flute notes of the meadowlark pierce the chorus; the robin, soft-voiced and gentle, with winning caressing ways, supplicates remembrance; the plover calls from the steaming marshes; a saucy killdeer utters his challenge of defiance; the bluebird is all alive with the ecstasy of his song, and the jubilant warblers long-tarrying, low-flying, add strength and numbers to the harmonic force.

April brightens into May; the woods are white with bloom; the wild plum waves its flag of truce; falling apple blossoms carpet the orchards. One sunny morning as I take my way across the meadow, a saucy bobolink darts up from the willows, his black coat as fresh and shining, his white cravat as neatly adjusted as if he were but just escaped from the hands of his valet. He will not honor me with a nod of recognition, albeit I am assured he has not forgotten our long flirtation of a previous summer. His stare of indifference means, "we meet as strangers;" and take the hint and walk by on the further side. Vanity, however, is still his besetting weakness; he may be distant in demeanor, but I must not forswear my allegiance. As I pass on my way a strain of seductive music bursts on the air, so wild, so sweet, so thrilling, that the tears come unbidden to my eyes, and buried in the crowding memories of far away springtimes, I forgive him his coquetries.

The garden is in its glory; we are luxuriating in the thought of ripening berries, when one morning *pater familias* complains of the depredators among the pea vines. We have not far to look for the miscreant, whose lair is in the gnarled apple tree. His hanging nest swings to and fro in the breeze, and his flame-red plumage shines like a torch among the green leaves, while he pours forth an aria rapturously exultant. Prey upon our borders as you will, Sir Oriole! Take your pick of our choicest esculents, our daintiest fruits; only repay us now and then with song that makes us forget our toil and care, that runs like a tiny golden thread through the warp and woof of our dull material lives.

The South has its mockingbird, the prince of the Trouvères; yet not to be despised or overlooked is its Northern cousin, the brown thrush, who has a leafy perch among our maples, and drives the lesser singers to distraction by his faultless execution. Who can tell what wild jealousies, fierce contests and mad revenges are inspired by thine dulcet strains? True minstrel that he is, only to the inspiration of the master passion will his muse respond.

The langorous midsummer is at hand. The quail pipes softly in the stubble. In the quiet afternoons we hear the wood dove's melancholy complaint from the forest's deep recesses. The harvest moon builds a bridge of gold across the lake. Crickets chirp a shrill reminder of time's fleetness, and the whippoorwill, never forgetful, never to be consoled, bemoans its loss through the solemn twilight.

Swiftly the days pass by. Golden rod and aster bloom where but a few weeks since the wild rose showered its petals. The oaks turn scarlet, the maples crimson and gold. A strong wind smites the forest and it reels leafless and shivering in its desolation. The skies darken; there is a whir of wings, lone bugle calls from solitary trees, grand battle marches from the hosts encamped among the orchards and groves. The wild goose sounds the retreat. Fainter and further sound the echoes. The last note dies in the distance and our Trouvères have departed. Oh, balmy Southland, give them a grateful welcome!

SARAH D. HOBART.

MIGRATION OF THE FOX SPARROW.

IN the FOREST AND STREAM of April 23, 1885, Prof. Charles Linden, of Buffalo, reported "the capture of the first fox sparrow taken on the spring migration." On May 7, of the same year, I reported my observation to be right the reverse, never having seen but one specimen during the fall migration, but always seeing them in the spring. In 1886 I began to have my doubts about making my usual observations, but early on the morning of April 26 I saw one under circumstances that relieved me of all doubt. My attention was called to a bird sitting on the very top of a maple tree in front of my house. Securing my field glass I had a good view of him from an upper window; it was a fox sparrow, and he was enjoying a morning song. I had never before seen one in the act of singing, nor so late in the season, my last observation in 1885 being April 25. After he had finished his song he dropped to the lower branches of the trees on the opposite side of the street. I went out and followed him for some distance as he flew from tree to tree, always keeping a good distance between us.

A week ago last Tuesday (April 19) I started out about 4 o'clock P. M., and, as usual, took the light collecting gun with me, little expecting to use it, as I am not shooting as many birds as formerly. About five minutes walk from my house I came to some evergreens that inclose two sides of an apple orchard, and when within a few rods of them I saw a fox sparrow alight in an apple tree standing against the evergreens. My first thought on seeing it was of my promise of May 7, 1885, through the FOREST AND STREAM, to send the first specimen that I secured on the spring migration to Prof. Linden; and *Passerella iliaca* seemed to divine my thoughts as he kept a good gunshot distance from me; going from one apple tree to another until he came to the corner, when he went into the evergreens, and that was his fatal mistake, as his bright russet coat showed to better advantage against the dark green foliage, and the next moment it lay in my hand. After properly packing it away I returned toward where I first saw it, and on looking through the evergreens I saw another sitting in an apple tree not 25ft. away, and while watching it through my field glass another came into the same tree, and then two others. I watched them for some time and then walked a few rods away and went through the evergreens and approached them from that side, and in the next tree there were three more, making seven in the two trees, and with the one I had secured eight fox sparrows in the flock. I had never before seen more than a single one at a time, and can account for there being so many together only that there was a cold northeast wind, and the sun shining on the west side of the evergreens protected them from it. There was one much better specimen than the one I had secured, but I did not care to kill more of them, although I could have secured two at a single shot had I wished to do so. The specimen secured was duly forwarded to Prof. Linden that evening, and I have received a very interesting letter from him in regard to his observation of the species, and also of his receiving a specimen of the evening grosbeak, secured at Brant, within thirty miles of Buffalo, which I trust he will duly report to the FOREST AND STREAM.

LOCKPORT, Niagara County, N. Y.

MONGREL OR HYBRID GEESE.

A CORRESPONDENT in a late number of the FOREST AND STREAM expresses a good deal of interest in the question as to whether certain domesticated wild geese will cross with the common tame variety. Permit me to hazard the prediction that there will be no special trouble on that score if the birds are properly mated. But it seems hardly correct to speak of the progeny of such a union as "hybrids." More correctly, would they not be "mongrels" instead? A hybrid is a mongrel, but a mongrel is not necessarily a hybrid. Webster, it is true, does not exactly bear out this distinction, but then he is in the habit of blurring some of the finer shades of meaning that ought to exist between similar words in the English language. A mongrel might be said to be of mixed or impure blood, the offspring of two different strains of the same species; a hybrid would be the resulting product of a cross between two birds or animals of different species. The progeny of a bulldog and a shepherd would be a mongrel; the progeny of a hound and a wolf would be a hybrid. What do the breeders say to this distinction?

JAY BEBEE.

TOLEDO, O., April 28.

Editor Forest and Stream:

I have kept wild geese for the last fourteen years. Last year a pair of them mated and bred three, which I have. The old couple have bred again this year, having commenced incubating April 17. The gander of the pair never mated, but bred with a China goose (or swan), a wild goose and a large roven duck, all in the same season; but, as I said, did not mate with any nor show any attachment, as he did last season and does now for his mate. The China goose raised from this wild gander seven young. I kept them two years, but they showed no signs of breeding, and as the ganders were the most vicious birds I ever had about me, I killed them for the table.

BERLIN HEIGHTS, O., April 19.

CATS AFIELD.

MIDDLETOWN, Conn., April 11.—I suppose snake-catching cats are common enough, but one never came under my personal observation until the other day. My daughter, walking in the woods near the house, saw one of our cats, a pet male Maltese, playing with a snake some 18in. long. After killing it the cat ate a mouthful or two, and then, running up the bank, put his head and shoulders into a hole and tugged away quite awhile until he drew out by the tail another snake, about 2ft. long, which he proceeded to bite and play with. Just then a mastiff puppy ran up to see what was going on and stopped the performance. So I cannot say whether the snake would have been eaten or not. The cat must have hunted these snakes either from fondness for the sport or because he liked the flavor of snake, for he is well fed and has a large preserve of rats much nearer.

J. W. ALSOP.

Editor Forest and Stream:

FOREST AND STREAM has for many years done laborious and intelligent work to develop and elevate the dog family, with its many varieties, so essential to the welfare of mankind; but never a word has been said for the cat. From the sportsman's outlook she is classed with the vermin that destroy his pet game, and the word goes forth, "Shoot her on the spot whenever found afield." The cat's pedigree is never mentioned. Where she goes at night, on the housetop or over the fields, no one knows and no one cares; but the little kittens are found around the hearthstone in their season all the same. The breed continues to thrive without the aid of man, and unnoticed rats and mice by the tens of thousands are killed by her annually, a quail or perhaps a canary bird occasionally. I have always had a fondness for cats, and among the many heroes of the hosts I send you a photograph of the little Maltese cat Lucy, now in her sixth year, the mother of seventy-seven kittens, and with good prospects for another "brood" within a few days. Throughout all these long and trying years of motherhood Lucy has lived in a surrounding infested with rats and mice, but none of this vermin has ever annoyed the house she lives in.

DR. E. STERLING.

CLEVELAND, O., March 26.

FOOD OF HAWKS AND OWLS.—Agawam, Mass.—The night herons or "quaks" are coming in increased numbers this spring. There was formerly a large heronry near here, but it was broken up by the feather butchers, and the herons almost entirely disappeared, but they seem to be returning. These, with an occasional blue heron and eagle, show that the wild life is not extinct yet. I was much interested in the discussion of the food of owls and hawks. In the town of Hatfield, from the nest of a pair of large hooting owls, in the month of April, several years ago, two young owls about one-third grown were taken. There was in the nest parts of two muskrats and a wild duck. An old trapper resident here once told me that one morning, in the month of February, tracking a skunk on snow that had fallen the evening previous, he found the body of the skunk in open ground, with head split open and carcass partly eaten, and no signs of a death struggle, but on looking closer he saw a single track of a large owl close beside the body of the skunk, proving the bird powerful enough to kill so large an animal as Sir Mephitis with a single blow of beak or claws. We are in the midst of one of the worst snowstorms of the season, and yet last week a couple of fresh laid hawk eggs were found in a nest near here.—PINE TREE.

SWALLOWS IN MAINE.—Portland, Me., April 26.—Saw swallows here April 21, which is two to three weeks earlier than they generally arrive.—H. F. F.

ANOTHER THREE-ANTLERED BUCK.—Pinned up in my office is an illustration, taken from FOREST AND STREAM, of the horns of the "Old Hemlock Buck," which sported three horns, a very rare number. Knowing that a head was owned by Charles Richardson, of Rogersfield, which had a third horn, I got permission to take measurements, which I send you: Horns, proper shape and curve, 20in. long from base to tip, 5in. in circumference 2in. from skull; extreme width between horns, 17in. One horn has five antlers and the other three. The third horn is 2¼in. from the base of each horn, in the center of the forehead, directly between the upper half of its eyes, pointing directly in front. Length of horn 3in. from frontal bone. Does with horns have been killed here, but this is the only buck with three. The ice is 2ft. thick and people are catching plenty of "shad" weighing from 1 to 5lbs. Deer are plenty and come to the shore of the lake near the house, and occasionally one is driven across the lake by dogs.—R. M. SHUTTS (Indian Point, N. Y.).

DO SQUIRRELS HIBERNATE?—From what I have observed I think the striped squirrel is the only one that hibernates in New England. The red squirrel and the gray can be seen about any day through our long winter foraging for rations; but who ever saw the striped squirrel or chipmunk in the winter? When he does show himself the old folks say: "Spring has surely come." I dug one of these fellows out of his nest once and he had at that time about a peck of beechnuts in his underground home. While chopping wood I found a nest of young gray squirrels; snow was on the ground (April 9), and the weather was anything but warm. They were not many days old as their eyes were not open. I tried to raise them on "spoon victuals," as I had done with red ones, but failed, owing, as I thought, to cold weather. Will some one tell us if it is common for them to breed so early? —SOUTH SHORE (Massachusetts).

REMINISCENCES OF HAVRE DE GRACE.

IT has been my good fortune, during many years of travel and exploration, both in this country and abroad, to visit many quaint and curious places, and not the least interesting of these is the city of Havre de Grace, Maryland, famous for duck shooting, and, more especially, for its canvasbacks. Although for all practical purposes, and in point of population, a mere village, Havre de Grace, like its more populous and important namesake in France, boasts a mayor and a city charter; its inhabitants are not, therefore, villagers, but "city" people—appearances to the contrary notwithstanding.

But whether viewed in the light of village or city, certain it is that Havre de Grace is a most interesting place to visit at all times of the year, but especially in the gunning and fishing season. Although the city is located on a trunk line of railway, forming a great link in the all-rail connections southward, viz., on the P. W. & B. R. R., about half way between Baltimore and Wilmington, it is a curious fact that by far the greater number of its inhabitants have never been beyond the boundaries of their native place, and those few who have seen something of the outer world have, with few exceptions, extended their explorations no further than Baltimore, or Philadelphia at the furthest. The latter city is the great market for Havre de Grace; the gunners and fishermen ship all their ducks and shad to the Quaker City, and always command good prices. During the season some few stray invoices go to Baltimore and Washington, but little or nothing to New York, which draws its supplies from elsewhere.

In the spring and summer Havre de Grace is a most charming place, with its abundance of shade trees, velvety lawns and any quantity of flowers. Owing to the humidity of the climate, vegetation of all kinds flourishes, and roses especially grow in great abundance and attain the greatest perfection. I know of only one other place in the United States (Cambridge, Md.) where roses grow to such perfection in the open air as at Havre de Grace.

It is not flowers, however, but wild ducks, that have conferred upon Havre de Grace the distinction which it enjoys among sportsmen. Canvasbacks, mallards, redheads, broadbills (or blackheads), teal, greasers, bluewings and almost any other species of ducks are found here in the greatest abundance (that is, early in the season), and of greater weight and better quality than elsewhere. The gourmets of the City of Brotherly Love fully appreciate this, and buy up every duck shot by the professional gunners at Havre de Grace. These professional gunners (and the majority of the male inhabitants follow gunning for a living from October till April, and then take to fishing from April till October) are expert shots, although I fear that some of them are still given to the use of "great guns" on the sly—at least, when I was there last March, toward the close of the season, often in the stillness of the night I heard what sounded wonderfully like the report of a boat gun away down on the flats of the Susquehanna. When I spoke of it in the morning, my host winked his eye and said it was probably a heavily loaded train running across the bridge to Perryville; but I have traveled too much not to know the difference between a loaded gun and a loaded train. Too thin!

Be this as it may, I never saw any of these "big" guns while I was there, except in a photograph, and never heard them spoken of except in a derogatory manner. Certain it is, that by far the majority of the gunners shoot their ducks in an able and sportsmanlike manner, with 10-gauge guns, 4drs. of powder, and 1oz. No. 4 shot. That is the regulation charge. Chokebores are not in favor, as they shoot too close at the 35yd. range, which is the usual range for killing ducks from the sinkboxes. I found most of the gunners using double-barreled breechloaders of English make, with cylinder barrels, but those fellows will shoot well with any sort of a gun, and put the sports, with their expensive Scott and Greener hammerless, to shame. "It is not the gun near so much as the man the hitting depends on," as Mr. George Day said to me when we were discussing the "sports," and what Mr. Day doesn't know about ducks, and gunning for them, isn't worth knowing. He is conceded to be an authority on that subject by every man, woman and child in Havre de Grace, and his advice is sought (and, I may add, freely given) by every "sport" who comes there.

Havre de Grace folk never call amateur gunners by their right appellation of "sportsmen"; no, "sports" is the abbreviated and euphonious title by which this class of gentry is known there, and these "sports" add not a little to the material welfare of the place. They nearly all come from New York, Philadelphia and Baltimore, very frequently in their own luxuriously furnished yachts, and, as a class, they are liberal both with money and whisky. And as Havre de Grace is a "local option" place, the import of this last-named feature of the sports' liberality may readily be imagined.

All the duck shooting at Havre de Grace (ignoring the problematical existence of big guns) is done from sinkboxes, and that style of shooting requires considerable practice, as I know from experience, before one gets his hand in. To lie for several successive hours flat on your back in a tin coffin, sunk beneath the water, with the wings just even with the surface, is somewhat trying to the novice who shoots from a sinkbox for the first time. Bushwhacking or blind shooting is much less fatiguing. But, as with everything else, one gets accustomed to it, and, when the ducks decoy well, soon forgets incipient rheumatism and sore limbs. But when, as sometimes happens, the ducks, for some occult reason, will not decoy, then the position in a sinkbox, with the water just above the freezing point, is apt to become tiresome. I know that I grew very tired and cold and sore, and longed to get on shore to the flesh pots and warm fire of my kind host.

I found one double-barreled gun (a Remington No. 10, left barrel full choke, right barrel modified cylinder, made to order, A No. 1) as much as I could manage, but the native gunners always take two guns with them in the box, and rarely miss a bird for each barrel. If Mr. Day or Will Pennington is in the box, with two guns, four ducks decoying toward that box is four dead ducks, sure. Piff, paff, puff, bang! four shots in quick succession, and four ducks as dead as door nails, that is the way they do business. I have seen them do it, and tried to do it myself; but, somehow or other, I always got that second gun in too late. I could work the first two barrels all right on an incomer and a cross flyer, or on two cross flyers for that matter, but that second gun was too slow, and taught me how wonderfully fast a duck, when he is mad or scared, can fly. A locomotive on a down grade is nothing to it.

With good gunners, whether these be native or "sports," the habit is to use, at least, two sets of decoys, anchored at a distance of about 35 to 40yds. from the box; one set being anchored in front of the box and the other to the right or left of the same, according to the disposition of the boxes of the other sports or gunners. Where a "double box" is used, that is to say, two boxes combined in one float adapted for the use of two gunners, a third set of decoys is used, so that the box will have one set to the left, one straight in front, and one to the right, all anchored at a distance of between 30 and 40yds. I have had no experience in a "double" box, but I can readily imagine that shooting from that kind of a box must be a difficult affair, for the simple reason that the occupants of the two "coffins" in the box sometimes must shoot at cross purposes. Even from a single box, and with all the advantages in one's favor, shooting ducks from a sinkbox is no easy matter and requires a good deal of practice and experience before a sport will be apt to achieve any degree of success.

It is not for me to say what degree of success I met with, suffice it to say, that I did probably as well as most amateur gunners who come to Havre de Grace for sport. Based upon experience, however, I should advise sportsmen to come early in the season, because in February and March the ducks fly wild, on account of the incessant gunning, and it is very much harder to make a good bag of game in March than in November or December. While I was at Havre de Grace last March comparatively few sportsmen of any consequence were there, most having left earlier in the season; I was pleased, however, to see there the good sloop Reckless, belonging in Philadelphia, the owners and captain of which are well and most favorable known at Havre de Grace.

For the information of those who desire to try their luck at Havre de Grace, it may be well to state a few facts relating to the conditions on which professionals are willing to take out amateur gunners for sport. I, for myself and friends, was fortunate enough to have friends there who were glad to give us all the sport we wanted for nothing; but the case is very different with recognized "sports" who come from New York, Philadelphia or Baltimore, and are supposed to have a pocketful of money. To quote from the "Mikado," "it all depends, you know." If a man comes there dressed in a fashionable hunting suit, with two or three hammerless guns of latest pattern, the chances are that he will be "taken in" as a sport and imposed upon accordingly. But if a true sportsman goes there without putting on any style, he will meet with generous and warm-hearted people with whom he will soon make friends. And a more congenial, whole-souled and liberal-minded class of people than I met at Havre de Grace I have never met in the world, and I have crossed the Atlantic Ocean nine times.

If any of the readers of this article should ever desire to try either duck shooting or fishing at Havre de Grace, I should advise them to communicate with my genial host, Captain Henry O'Neill, the keeper of the lighthouse at Havre de Grace; or else with my esteemed friend and fellow-citizen, Mr. George Day, already referred to in this article. As I once stated, what Mr. Day does not know about ducks, and the secrets and arts of shooting them, is not worth knowing. He could have taught Audubon the true habits and classifications of the numerous species of ducks which frequent the Susquehanna and the Chesapeake.

In conclusion, I would advise every true lover of sport who goes to Havre de Grace to cultivate a friendly and social relation with the charming men and women of that place, and by doing so I may safely venture to assure them of a most pleasant time during their sojourn at that quaint and curious old place. LOUIS BAGGER.

MERIDEN, Conn.—The Parker Gun Club, on motion of J. F. Ives, has offered a reward of $25 for evidence that will convict any person of violating the game laws of this State.

THE NATIONAL PARK.

MAMMOTH HOT SPRINGS, Yellowstone National Park, April 22, 1887.—*Editor Forest and Stream:* A few days ago Capt. Harris, acting superintendent of the Park, learned that a party living at Norris was engaged in hunting and trapping for furs. He immediately set to work to effect their arrest. Temporarily disabling the telephone wire between this point and Norris, which had recently been repaired, he cut off all chance of their being warned in time to hide any evidence of their guilt. Securing the services of Ed Wilson, one of the ex-assistant superintendents, the Captain started him out on the night of the 20th, with two soldiers, Sergeant Swain and one private. They traveled on snowshoes. Arriving at the Gibbon, without making their presence known, they followed up different trails and secured the traps set for the capture of beaver and other fur-bearing animals. They then arrested the parties, James and A. Kelly. James is one of the freighters snowed in at Norris with his teams. The other, Con Sheehan, left the Park in March, taking his horses out on the crust. In James's possession they found beaver and otter furs. After arresting him they took possession of his horses, harness, sleds, rifle, gun, traps, and all property belonging to him. Kelly, who is in charge of the hotel at Norris, was placed under arrest. To what extent he is implicated I could not learn. Leaving the soldier in charge they returned to the Hot Springs with James as a prisoner. He was turned over to Captain Harris.

It appears that James, on his last trip over the Grand Cañon, where he was engaged in hauling lumber, killed three elk. This was some time in January. The snow getting too deep for the teams to work, he put in some of his time hunting small game and trapping.

It is reported that other parties are implicated in the killing of game. Who they are and what the extent of their depredations your correspondent has not learned. This arrest is the first one this season and shows that Captain Harris is doing everything possible to suppress all hunting or trapping in the Park. What action will be taken in the James case is not known, at least his property will be confiscated.

Captain C. B. Sears, the engineer in charge of improvements in the Park, has appointed Mr. Al Lamartine as superintendent of work on roads and bridges. Mr. Lamartine has been in charge of working crews in the Park for years constructing new roads under the direction of Capt. D. C. Kingman. There is $4,000 of last year's appropriation unexpended. This will be used in putting the roads in repair, removing fallen timber and rocks, and re-decking the bridges across Gardiner River. The heavy travel over this part of the road has cut it up and worn the bridge planks very thin, rendering them dangerous.

The $20,000 appropriated for this year's work is not available until July 1. This will be used in finishing the road from Norris to the Grand Cañon, making better roads from beyond Golden Gate to Willow Park, and along Gibbon River, the old road in these places being rough and narrow. They will be replaced by well graded roads thirty feet wide. It is thought no new roads will be opened this season. A good trail may be made over Mt. Washburne, following the old trail up the north side to the summit, then making a new trail from there down on the south side of the mountain to the east or Cañon trail, joining that in an open meadow at the foot of the mountain. This route, if opened up, will give parties who desire to ride over it all the advantages of the trail along the edge of the Grand Cañon for some four miles or more, then the advantage of a ride to the summit of the mountain, from which, on a clear day, can be seen the Yellowstone Lake, steam from the Geyser Basins the Grand Tetons, and hundreds of other peaks and mountains. This point gives one an unbroken horizon or about twenty miles in every direction, some of the peaks in the Madison range being the first to obstruct the view. The construction of this road will depend on the approval of Captain Sears.

Part of one of the bands of antelope that wintered on Mt. Evarts—about twenty—can be seen almost every day from the town of Gardiner, which is within a few feet of the Park line. The antelope come down on the hillsides and flats to feed on the fresh green grass, often within less than a mile of the town. The inhabitants often stand in their doors and watch them with glasses.

Several small bands of blacktail deer have been seen on their way to their summer range in the Park.

I saw one band of mountain sheep several times, each time a little nearer to the great national game preserve, where they can live, have their young, grow fat and enjoy life until forced out by deep snows.

We are having our spring snows now, making it very unpleasant for those who have to be out in them. They wet one through in a short time if not well clad; they come up very suddenly and sometimes last but a few minutes, at others developing into a blizzard which kills off many poor and weak animals of all kinds. Elk and other game that have struggled through a very severe winter will often die soon after one of these cold spring storms. Getting a little green grass in the spring weakens the very poor ones so much that they can stand but little more exposure.

The game has moved but little lately, except to go a little lower for the fresh grass.

We hear of no young animals among the game as yet. I hope soon to be out where they are to watch their movements. H.

THE OLD WIDOW.—There is being exhibited in Henry C. Squires's window at 178 Broadway, the remarkable gun called "the Old Widow," which has been in constant use by Dr. Carver for the last ten years and he claims to have shot it 500,000 times without repairs or miss-fire. It is a hammerless Greener, and notwithstanding its unparalleled service is now in good condition. Carver shot it at Crystal Palace, London, in 1879, and used it every day for four months in his exhibitions; he shot it before the Prince of Wales, the Duke and Duchess of Connaught, Prince Leopold, the Emperor and Crown Prince of Germany, the Emperor and Empress of Austria, and others of the crowned heads of Europe. He won with it 207 consecutive matches in England, France and Germany, and on his return to the United States, defeated Bogardus in twenty-two matches. Mr. Squires informs us that "the Old Widow" is to be exhibited in every large city in Europe. It is well worth while taking the time to see one of the most remarkable guns in the word.

A TRIP TO LAKE CHAMPLAIN.

THOUGH I may be "giving away," in this article, the knowledge of as good shooting grounds as may be found in America, still I am only doing what every true sportsman ought to do for another, where recuperation of strength is to be combined with good hunting.

With my noble dog Dan I boarded the train on the first Monday in October, 1886, bound for Whitehall, on Lake Champlain, N. Y. I was accompanied by my kind and congenial friend, the crack wing shot of Ulster county, Mr. John H. Decker, assistant superintendent of the Ulster & Delaware Railroad. He had with him his dog Fly, over whose head many a game bird had been killed. As we passed through a part of the State new to us, now and then my companion would call out to me, "There is a good woodcock ground, or here is a good quail field," thus breaking the monotony of the ride. Arrived at Whitehall we repaired to the Yule House, a commodious hostelry, within a stone's throw of the lake. We found mine host a jolly, well preserved man of sixty years, who had spent the greater part of his life commanding one of the fleetest steamers on the lake, and now retired in "dry dock," as it were, but not to decay, nor too old to keep a hotel.

Upon inquiry of our skipper landlord, where suitable guides could be obtained, he at once recommended the Blanchard family, father and three sons, Mose, Edward and Jack, who by hunting, fishing and acting as guides for many years, had gained an experience which made them specially desirable. We sent for Mose and Jack and Mr. Decker and I repaired to the smoking room to look them over. Mose Blanchard, the eldest, was apparently about thirty-eight years of age, standing 5ft. 10in., medium weight, wiry, strong frame, as if peculiarly fitted for his calling; his countenance was rather pleasing; an unmistakable French nose bespoke plainly his descent. Jack, about thirty-five years old, at first inspection, appeared to be, in my opinion, the ideal of a woodsman and guide. Though not quite so tall or stout as his brother his compactly built frame and sinewy muscles showed him to be a most formidable antagonist if once aroused. His dress was of the typical frontiersman or "Buffalo Bill" style—a black broad-brimmed slouch hat, left side turned up, rested carelessly on one side of his head, coal black locks fell in clustering curls about his neck. His eyes were those deep, keen, jet black, which bespoke the fearlessness of the man; also warned one not to trifle or presume too far on the good nature of the owner. His forehead square, full height and nose like his brother's, was the only resemblance between them; mouth and chin expressed firmness and strong will. His moustache was waxed and pointed, à la Frenchman. Corduroy breeches were stuck into knee boots. Around his body was a wide leather belt, from which a huntsman's knife projected. A heavy blue blouse hunting shirt open at the front, with black handkerchief, tied like a sailor's, completed the outfit. Altogether he was a character, rare to be found, such as the romance writers of the day would be glad to know. Our inspection resulted in their engagement for the week.

The morning came, and with it a severe storm which awoke me by the rain beating against the window panes. It looked dubious indeed. At 1 o'clock, however, the clouds broke away, revealing here and there patches of blue sky, assuring us the storm was over, but the best part of the day gone.

We concluded to make a short trip along the large creek which flows from the Vermont side and empties into the great lake near the hotel. At a point which gave evidence of game, we had scarcely got under cover before we heard the sharp call of Mr. Decker to mark, followed by the ringing report of his hammerless, and a fine plump partridge came down. Dog Fly soon came proudly forward, bearing the bird in his mouth. First blood for Decker. At the call to mark the mate down, I saw the bird come flying out of the reach of my gun and located his landing. Dan was working in that direction, and in a little while he hauled up, made a most beautiful point, and stood like a statue—as pretty a picture as any hunter could wish to see. I called to Jack to look sharp and be on the watch if I should miss her. Dan was ordered to put her up. Fortunately, for me, the bird took a straight drive through a small opening. Quickly bringing to bear on her, I let go my right choke and brought her down nicely and Dan brought her in. These points exhibited by Dan and Fly greatly pleased Jack and Mose.

While working our way along the creek a single bluebill came flying over our heads at a fair shooting distance, but speeding like the wind. Mr. Decker drew right on her, carefully calculating the distance and speed of the bird, and in response to the call of 1½oz. of No. 4 shot the duck came down. This was a fine shot, and caused the guides to think they would have to look out for their laurels at the end of the week. This shot scored one against me.

We were now coming upon a low swale, marshy ground, which our guides said was good feeding grounds for woodcock. We divided into twos, working either side, while the dogs covered the low lands. We had not far to proceed before both dogs halted and stood on separate birds, Dan sending his to the left, where Jack and I were standing a few rods apart, while Fly flushed his bird, sending her within reach of Mr. Decker. It was a left-quarter shot for me, and I missed, but Jack stopped her and Dan retrieved. Of course Mr. Decker got his bird, although it was a long-range and right-quarter shot.

Mose, who had done but little, if any, of the shooting thus far, now left us to reconnoiter for gray squirrels in a large primeval forest near by, while we continued on the woodcock grounds, from which we gathered a fine bag full. In an hour and a half Mose returned from his lone hunt with seven large gray squirrels, and he told us that he could see gray squirrels running in all directions. They were so plenty that we could have loaded our wagon with them had we devoted time to them, but we preferred the game birds, and concluded to leave the squirrels to the "pokers." Darkness coming on, and five miles from home, tired, hungry and wet from the morning rains, we entered our vehicle, while Dan and Fly trotted along in our wake. Our road lay along the creek. On either side were patches of wood. Missing the dogs, we halted just in time to hear Dan give a short, sharp yelp. I knew what that meant, as on former occasions Dan had exhibited the same trait when he had flushed a partridge to a tree; so I said, "Get out, boys, and unlimber, game there sure." It was now so dark that we could not see the dogs in the woods. But Jack located the bark of Dan, and, proceeding cautiously in that direction, came to a small hemlock tree, where he found Dan and Fly both pointing to limbs of the tree. Peeping up he saw the bird standing out in bold relief against the starry sky. It soon came down to the call of Jack's gun. This making the total for the day seven woodcock, four partridges, one duck and seven gray squirrels, all taken in less than to hours actual hunting time.

The morning was bright and clear, with cold, frosty, nipping air—just the morning for hunting. It had been decided the evening before that we should spend this day in snipe shooting, to be followed by duck shooting in the evening, as the ducks came to the feeding grounds. Two boats were in readiness at 8 o'clock; our guides had also provided fishing tackle. Jack and I took one boat, Mr. Decker and Mose the other. Pickerel and bass were said to be plenty in the lake, and in the season it was no trick (we were told) to catch 75lbs. of pickerel in a few hours.

The snipe grounds were five miles up the lake, and there was good fishing all the way up. We expected no little sport. After getting out of the noise of the paddle wheels of the steamers we come to an historical point called Old Put's Leap (so informed by Jack). It is a rocky promontory, rising perpendicularly 20ft. out of the water. The water at its base is 30ft. deep. The lake is here very narrow, not more than 200yds. across; a low marshy ground on the opposite side, with rocky, broken bridle path, giving access to Vermont. Resting on his oars Jack related to me this story. I will not attempt to give Jack's vernacular.

Old Put (General Israel Putnam) was an Indian hater and had caused the death of many a redskin. The Indians feared him greatly, believing him to bear a charmed life, for he invariably escaped from the traps set for him. It was their desire to capture Old Put alive and to satiate their fiendish revenge by the torture of the stake. Old Put, aware of this, doubled his watchfulness; and many a hairbreadth escape he had, but none so narrow as this of "Put's Leap." Once, while making his way unattended from where Whitehall now stands to Ticonderoga or to Western Vermont, he came upon an ambuscade of a dozen Indians or more. The Indians were aware of Old Put's movements, and had prepared the ambuscade with the avowed intention to capture him alive and carry out their long-wished-for devilish scheme of burning him at the stake. With exultant, fiendish yells they closed upon him. But Put being mounted on a very fleet horse, gave him the spurs and sped for his life, sending a bullet crashing through the brain of the nearest Indian. He put directly for this rocky promontory, which seemed his only escape. Arrows whizzed past his head. The whole pack of howling redskins gave chase, believing there was no possible chance for escape in the direction he had taken. But Old Put's scalp was not to be taken yet. Going at headlong speed, with the yelling fiends close behind, he halted within a few feet of the edge of the cliff, looked back at the pursuing red devils, gave a yell of defiance, struck his rowels deep into his horse's flanks and sprang headlong from the cliff, landing full 20ft. from the rocky base, swam to the opposite shore and was ascending the bank when the Indians came up. They halted at the edge of the cliff in astonishment, viewed the mighty leap a moment, gave a grunt of disappointment, saying, "Pale face make mighty big jump," and left in disgust.

I gave Jack a look of incredulity, but he affirmed that the Government had erected a monument on the rock in commemoration of the event, but had allowed it to go to decay. Enough was left, he said, to convince me, if I would take the trouble to climb the rock and examine for myself. After this I could not doubt Jack's veracity, and adopted his narrative as truth.

During Jack's story we could see Mr. Decker on the opposite side of the lake pulling the pickerel in repeatedly. I quickly threw my spoon and reeled out a hundred feet or more, while Jack was guiding the boat within an oar's length of the grassy edge of the channel. My spoon was spinning finely, making a tempting bait for some lazy fellow. Sure enough, we had not gone many boat lengths before a tremendous big fish struck the hook, and made the reel spin like lightning for a moment before I could check him. My rod bent nearly double now, and Jack called out, "Handle him carefully; he is a big one." He was too large to reel in at once, and I let him get tired before I dared attempt it. Gradually now I began to reel in. He came very stubbornly until I had him within ten feet of the boat, when to my utter dismay he made a plunge nearly his length out of the water, turned in an opposite direction, tore the spoon hooks from his mouth, left part hanging to the barbs—"so near yet so far." Jack, who is all veracity, said, "That fellow was a good five-pounder." We had better luck before we arrived at the snipe grounds. We found the two boats had caught on the way up about 20lbs. of pickerel. We now exchanged the rod for the gun. On the opposite side of the lake was Jack's father, guiding a party. We had heard their guns for some time as they bagged the snipe. Their continued shooting had sent many redlegs over to our side of the lake, and we anticipated fine sport.

The bank of the lake at this point and for many miles up was a very soft mud, with grass which which made it very difficult walking; but, relying on my rubber boots, I soon struck out, Dan following. I had marked a small flock; Dan was working after them and finally stood on them until I could get in fair range.

These snipe, on their first flight, fly a wavy, oscillating motion for many yards, then fly straight, thus by instinct protecting themselves and making it extremely difficult to bring them down. But I know what my Pieper could do and waited till the birds got to their natural flight, when I sent an ounce and a half number ten shot after them and brought down two. I continued bagging them and in an exciting moment did not look careful to my footing, "the bottom fell out" and I was completely mixed in the soft mud. To keep from sinking further I threw myself forward with my gun under my breast, and reaching for a "bog," with great difficulty drew myself out of my boots and left them sticking in the mud. Jack soon came to my relief and assisted me to solid ground a pitiable looking object. I was nearly covered with mud from shoulders to feet. It soon dried, however, when it was easily removed and my clothing returned to its natural color. But the accident had greatly cooled my ardor for any more snipe shooting, I had bagged eight and felt satisfied to spend the remainder of the day on another kind of game.

The railroad ran close to the lake, and here crossed a small culvert which connected a large deep pond with the main lake on the east. Under the culvert was a depth of scarcely 6in. of water and it was not over 4ft. wide. While we were lunching Mr. Decker heard a flopping and splashing under the culvert. Jumping up and stepping to the edge of abutments he peered down and gave an exclamation of surprise and called to us. There, down in the shallow stream under the culvert was a good 5lb. black bass, trying to make a passage from the small lake to the Champlain. Probably he had been chasing minnows into this shallow water and was now trying to make his escape to deeper water. Quickly running down Jack grabbed him and brought him up. He was a perfect beauty, and gave us a nice meal the next morning. Jack thought that there must be a bonanza for him in that pond, where, he said, there were hundreds of fish like this.

It had been decided that the evening should be spent shooting ducks, which came by hundreds from all directions, to certain feeding grounds, about four miles further up the lake. When nearly to the feeding grounds, passing close to the shore, we came upon a camping out party, a board shanty, with small tents about, occupied by half a dozen sportsmen. A peculiar decoration of the shanty attracted our attention. Several different strings ran the whole length of the shanty (14ft.), and on each string, tied an inch or two apart, hung the caudal appendages of hundreds of gray squirrels. When our boat came directly opposite to the party two stalwart fellows came out, bearing between them, on a large pole, the shoot for that day—a bunch of gray squirrels as large as a two-bushel basket. We gave them three cheers and passed on to the feeding grounds, where we arrived at sunset.

This feeding place consisted of a flat with a few inches of water and fly grass covering a diameter of one to three miles. By taking different positions, on the corners of a square, as it were, a few rods apart, we could have better opportunity to bombard the ducks as they came flying over our heads, or near us. Jack and I had waded through mud and grass nearly to the channel, while Mr. Decker and Mose stood opposite to us on the shore. It was fairly dusk now, and already we could hear the whiz and whir of the swift flying mallards. The fusilade opened first with Mr. Decker, then Mose and Jack, followed by both barrels of my gun, in a flock of such length that I had time to slip in another shell and get one more crack on them before they passed by. It was a curious sight now, as eight barrels were continually being discharged as fast, nearly, as one can count. Never before have I witnessed such a gathering of aquatic birds. It seemed that we must be struck down by them, in their swift flight; and at times they flew so low as to cause an involuntary ducking of our heads for fear of being hit. We could hear the ducks fall with a heavy thud, almost after each shot, all around us, some near enough to pick up without moving from our tracks. Their numbers seemed to be untold. Thousands coming from the Adirondacks and northerly part of the lake; and when we left the grounds at 6:30 P. M., they were still coming in as large flocks as ever, and the whir of their wings seemed like the passing of a railroad train. As it was too dark to attempt to find the ducks we had killed, we concluded to go home and return in the morning to gather our harvest. We found six mallards, however, that had fallen near us.

When ready to start home our watches pointed to the hour of ten, and there was an eight mile row before us. It was a beautiful night, clear and starry, the water calm and unruffled. Although we were tired and hungry, the ride was greatly enjoyed. That trip on that calm night completely broke up my hay fever, from which I had been suffering for two months. This region, we found, is very beneficial to hay fever patients. When we arrived at our hotel it was midnight, but our host ordered a hot meal to be in readiness for us, and it need not be said that this was duly appreciated.

The next morning Mr. Decker set out for a visit to Ticonderoga. This broke up our intended return to the scene of the last night's bombardment to gather the many birds that we knew must be lying on the grounds. It was finally arranged that one of the guides should visit the grounds and secure the birds for his own disposal; as it was a sixteen mile row, there and back, the ducks could hardly compensate one for his trouble, even if there should be as many as we anticipated.

The two guides and myself drove to a small lake which lay between the two cultivated hills, with the mountain between it and Lake Champlain for background. Arriving at the southerly side of the lake Mose ascended one of the hills to reconnoiter, while Jack and I passed on to the northerly side. Mose was to give us signals. We had not long to wait before an exclamation from Jack caused me to look up. "Ducks in that pond, sure," said he. "I have got the signal from Mose." I looked in the direction indicated, and sure enough there stood Mose, and though nearly half a mile from us we could distinctly see his signs, made with both arms, a code of signals that these two guides understood and had been working from for years. Jack was all animation now. "Not less than fifty ducks in that lake in sight of Mose. We must follow his signals, and it will not be his fault if he does not bring us within easy gunshot of the whole lot." We set out, Indian fashion, down a ravine, leading up to the lake, screening us from the ducks, but in full sight of Mose, on the hill. A fringe of black alders had grown to a considerable height all along the shore of the lake, which, when once reached, would completely protect us from sight of the ducks, while the motions of Mose could be plainly observed. To reach these black alders we had to crawl on hands and knees, now verging to the right or to the left, as the directions of Mose's signals seemed to indicate. We finally succeeded in reaching the fringe of black alders without being observed by the ducks. Jack now partly raised his head above the alders, when a warning motion to be cautious came from Mose, followed by a signal to pass further on, keeping close behind the alders. We had proceeded to a small point making out into the lake, when cautiously Jack took a peep, and caught the signal from Mose, "Near enough."

My heart had been going pit-a-pat for some time under the restraint, and I was getting extremely nervous. Jack

motioned me to lie flat while he located the ducks. Taking a cautious peep through the alders in the direction indicated by Mose, he saw a sight that caused him to drop as if shot. He whispered that not less than fifty or sixty mallard and black ducks were not over 45yds. away. I slowly rose on one knee, and, peering through the alders, to my delight there opened a sight that brought my nerves steady as iron; within easy range were the big fat fellows ready for the slaughter.

It was agreed between us that I should take the first shot at them on the water and second shot while they were rising, and Jack was to give both barrels on the wing. Cautiously now I rose on one knee again, slowly brought my gun to bear on the thickest gathering, and pulled the left barrel. Seven ducks lay dead, with three flopping on the water. As the flock rose my right barrel tumbled over one more, while Jack brought down five on the wing. We immediately began peppering away at the wounded, until we counted fourteen dead ducks in sight from the bank, while a few more were paddling off through the grass out of the reach of our guns. Our success was due to Mose's intelligent direction, and it remained for him to show on this occasion that he was equal to any emergency. When the question arose, how were we to get the ducks, there being no boat, "I'll get them," said Mose; and suiting the action to the word, immediately stripped and plunged in through miry mud and water and snapping-turtles, which were plenty, until he had retrieved every duck killed. When he came out his limbs were black with leeches, and it took all hands nearly half an hour to remove them. Counting the ducks, we found six mallards and eight black of unusual size.

On arriving at our hotel we arranged our ducks in a showy pile and awaited the return of Mr. Decker. At 5 o'clock he came, soon espied our feathery game, and was astonished at the number and size of the beautiful birds. This day's shoot assured us that we were not going home empty-handed. We concluded to forego the pleasure of spending Saturday hunting deer. We were told that they were quite plenty within six miles of the town, but dogs were not allowed in the chase, consequently our chances were so narrowed that we gave it up.

Friday morning it was decided that the "Old Man" and all his boys, except Jack, should accompany Mr. Decker to a special reserved woodcock ground, while Jack and I should visit the scene of our former triumph and bag a few more ducks. There had been a nipping frost during the night, and the morning seemed peculiarly bracing and healthful. We were soon at the small lake where we had bagged the fourteen ducks the day before. From the bank we discovered five or six big black fellows on the opposite side of the lake. We went through nearly the same maneuvers as when guided by Mose the day before to reach the alders before spoken of. We got within 75yds. of the ducks, but we could get no closer without exposure. There were three very close together, while several were scattered in the grass near by. I concluded to try on the three, while Jack, as usual, was to take the wing shot. He had his doubts whether we could reach them at that distance. I had prepared some shells with 1¼oz. No. 3, and 3¼drs. powder, and with this I gave them the right barrel, and there lay the three, two "stone dead," while the other, in a moment, dropped with life extinct.

Jack had equally as good luck with his first shot; two fell in the water, near the others, while a splendid long-necked fellow was going in full flight on the left quarter. I fired my left barrel, but the duck continued his flight. "Shot a little behind," said Jack. "I'll stop him," and true to his word, brought him down. The dog Dan had accompanied us on this occasion, and unexpectedly after a little coaching retrieved every duck, except a wounded one, observed by Jack to swim to the shore. All our search for it was in vain. There was a large wood on this side of the lake which looked gamy, and we concluded to work through in parallel lines, a few rods apart, to try for partridges. Dan had been working to the left of Jack, in quite thick underbrush, about an eighth of a mile from the lake, when, in response to my call, he did not make his appearance. I knew by this that he must be standing on a bird, but before I got to the underbrush the dog came out, bearing in his mouth the identical big black wounded duck which we had been unable to find. This duck had climbed the sloping banks and waddled through the woods to this point, when caught by Dan. A wing was broken, otherwise it was unhurt. This was a great triumph for Dan, and Jack actually hugged the dog. This made six ducks of the flock numbering less than a dozen.

We continued our work through the woods, and Dan soon sent two partridges to the right of Jack, who quickly stopped one, while my shot on the other brought a few feathers to float softly away, the bird continuing her flight out of sight. I was a little annoyed by this missing shot, and Jack chaffed me considerably about it; but I was even with him before we returned home. We had come on a large grove of young poplars through which a small creek wound its way. On either side of the creek were quite high banks. Dan showed signs of game, finally pointing his birds. Two woodcock put off in different directions. I was in readiness and stopped one, while the other escaped by a miss from Jack. It was my turn to chaff now; but the dog gave Jack another chance on the same bird, when he was more successful.

It was now 4 o'clock P. M., and we were tired out and satisfied with our day's work. On counting the game we found we had six ducks, one partridge and two woodcock, enough to make a respectable show.

On our way to the wagon a beautiful hawk of unusual dimensions came sailing near by, lighting on a fence. Jack put a few shot through its head, hardly ruffling a feather. The bird was so pretty that I ordered it set up by Jack's father, an experienced taxidermist; and at this writing I have only to turn my head to view the bird, life-like, here in my library at home.

Mr. Decker, with "Father" Blanchard and son Edward, had arived home before us. Altogether they had twenty-three woodcock and two partridges. During the day Ed seemed very anxious to bag all the game, and was succeeding in his efforts, until Mr. Decker thought it time to take a hand in or lose his laurels. The dog Fly was working in range of the whole party, when he suddenly stood on a woodcock, making a beautiful point over his left shoulder. Fly was ordered to put up the bird, and before Ed could bring his gun to bear on it Decker, who was some distance away, sent his No. 10 shot after it and brought it down. It being a longer range than the guides were used to, the old man exclaimed, "Splendid shot! Splendid shot!" repeating it several times in his peculiar manner. When the hour came to return home Mr. D. had full his share, and left a record with the guides of best shot on the wing they had met in years.

Saturday morning we started home. Our game had been kept on ice and all were fresh and nice. It required some time to repack them in a large boot box obtained for the purpose. On counting our game for the four and one half days hunting we found 26 black and mallard ducks, 33 woodcock, 10 redleg snipe, 1 red rail, 1 bittern (standing nearly breast high), 10 partridges, 1 hawk, total 82. The week's work had wrought a material physical change in both and this was very noticeable by our own friends. At this writing it is a fixed determinatian with me to duplicate the trip to Champlain the coming season. Our game was distributed among our friends and quickly disposed of. D. C. OVERBAUGH.

KINGSTON, N. Y.

CANADIAN WOODS OUTFIT.

IN moose calling, as the sacking is generally heavy, cut down weight as much possible. The weather being mild at that season I never take a tent, but only a light waterpoof square to make a lean-to in a hurry; but usually I make the men peel spruce or birch bark, with which a sufficient shelter is soon made. I would not use a close tent on any account. Nothing can be more jolly than reclining on the fragrant fir boughs before a roaring hardwood fire, of rock maple for choice; and this luxury cannot be enjoyed in a closed tent. I have my blanket made into a bag, which I find a great improvement. A soft head covering is essential to comfort at night and for general purposes in the woods

The frying pan should have a short handle, with two rings on it large enough to pass a handle of hardwood through; this handle can easily be cut when wanted. The pan is very handy without the long handle generally used. A few dippers, plates, dishes and kettles from the tinsmith, with some forks and spoons complete the cooking outfit, and with some thin rope, two or three axes, varying from 2¼lbs. to 3½lbs. heads are nearly everything requisite, outside the important element of grub. The great difficulty in the grocery outfit is to take sufficient good plain food without running short or burdening oneself with unnecessary weight in the way of luxuries. The following list has stood the test of experience: Pork, beans, tea, canned coffee and milk, dried apples, canned beef, ditto milk, pepper, hardtack, flour, matches, soap, tobacco, ham, codfish or Digby's smoked herring and sugar.

As to rifles, each man will have his own ideas. My preference at present is a double express .45, weighing 9½lbs., charge 110grs. powder, and a 300gr. express bullet. This works well up to 250yds. with a very flat trajectory and great accuracy. This rifle I purchased ten years ago and took to Ceylon, where I proved its power against far more dangerous game than any we have here; if I ever have a rifle built especially for our shooting here it will be a .40 express. A sportsman accustomed to any particular rifle would probably do better with it than by changing it at the last minute for a superior weapon with which he was not so familiar. One of the most successful shots at deer I have ever known shot with an antiquated Spencer repeater, rim fire, and we all know what sort of trajectory that would have. A knife is wanted with good stuff in the blade, which need not be more than four or five inches long, with a plain wooden handle solidly riveted to the tang. No fancy articles, yclept hunting knives, are of much practical value. Never be without knife, matches and compass for any consideration when out of camp, otherwise unpleasant consequences will occur sooner or later. If a shotgun is taken let it be a common gun, as they get awfully knocked about in the woods, and any shooting iron will kill partridge; but when moose calling I recommend as little firing as possible, and only take a small .22 revolver with which many birds can be bagged without disturbing the ground.

In caribou hunting in the winter I take toboggans, a regular lean-to tent made of cotton or light duck, more blankets; and this year I think of trying a fur bag to sleep in, as a few more pounds weight does not so much matter with the greater facilities toboggans offer of carrying camp kit. Our hunting toboggans here are quite different from those represented on Christmas cards, and I believe really used in Quebec. Tbey are on runners and shod with sled steel 2½in. broad, and a good man will haul 100 to 150lbs. if the going is good. C. A. B.

FREDERICTON, New Brunswick.

SPOTS IN GUN BARRELS.

MACON, Ga., April 27.—*Editor Forest and Stream:* I have noted with interest your correspondents' letters on spots in gun barrels, and the difficulty which they seem to have in getting rid of them. My experience is rather limited, having owned but two guns since boyhood, and shot those not exceeding 300 or 400 times a year. Before I became the happy owner of a breechloader, an old sportsman would sometimes gratify my boyish love of guns and shooting by allowing me to accompany him on an afternoon tramp for quail or squirrels. He gave me many valuable lessons on the handling and care of a gun, among them how to prepare an oil that has always kept my guns bright and free from rust spots or pits. I often admired his fine Scott gun that he had shot several years, and the closest inspection would not reveal a spot or blemish on nor in it. Take a pint of neatsfoot oil (the oil extracted from cows' feet by boiling) and put in a shallow vessel (a fry-pan is best) over a slow fire. Let it simmer until there is no longer any scum and it boils clear without bubbles or hissing sound. It is then pure and free from water or salt. While still hot, after taking off the fire, add one ounce of pulverized camphor, stirring briskly until thoroughly dissolved. After shooting I swab out the barrels perfectly clean with hot water and dry them by repeated wipings with soft linen rags, then make a liberal application of the oil both inside and out, using care to touch no part of the metal with my hands while putting it in the case. I had ten days shooting on salt water one season, and by the above treatment kept my gun in perfect order. After such a cleaning and oiling, if put in a dry case, I never find it necessary to clean again from one shooting season to another. E. C. F.

A PANTHER HUNT IN THE CANEBRAKE.

SLEMONS, Ark., April 22.—It was at an early hour on the morning of the 15th inst. that Lot P. Smith, of Chicago; J. C. Campbell, of Oconto, Wis.; Howard Robb, of Arkansas City; T. H. Baldy, a neighbor, and myself, left my house for a day's sport in the Mississippi River swamps. We had our team of bear dogs, led by old Blue. The programme was to go down Big Bayou to the mouth of Bear Bayou, across to Crooked Bayou, up this to the "water hole," thence west and home. We would pass on this route the "Devil's Nest," one of the worst canebrakes in Chicot county, and where, if there is a bear in the neighborhood, he is sure to be found. Old Blue, however, failed to find him, and we continued our ride, the stillness about us being broken only by the occasional hoo-hoot of the swamp owl.

At 2 o'clock in the afternoon we were near the "water hole," which is a little long hole that holds water all summer, even in the dryest time, and is consequently a favorite resort for game of all kinds. Nature has so arranged as to suit them all, for to the north the woods are perfectly open, while on the south side the heavy cane reaches to the water.

On nearing this cane old Blue scents and gives mouth in a manner that tells us that the game is there and worthy our steel. Into the thicket he goes followed by the whole team, and soon we hear a roar that makes my Chicago friend tremble with excitement. The cane crashes. Everyone pushes to get nearer. There are a few rounds by the dogs, and all is quiet. I had worked down the west side of the cane and was near the dogs; in fact, when they quit giving mouth, they were all around me searching for the track. I knew by their actions that the game had made a short dodge or taken a tree. I look up and right over me, in a large oak, is a monster panther, alternately looking defiance at me and curiosity at the dogs. I dismount and select a good open place to shoot from. The sharp crack of my Winchester follows. He leaps high in the air and falls with a crash that is heard 200yds. At the same moment another panther, which I had not seen, springs to the ground from the same tree, and makes off through the cane with the whole team in full cry at his heels. The race does not last long for soon the deep baying of the dogs tells me they have treed again. A scramble through the cane and I am under the tree. The Winchester peals, and before the game reaches the earth he has three balls through him, and is dead.

The horn is blown, the men come. We drag him out of the cane. I tell them another and a larger one has been killed. We return and drag him out, and are congratulating each other on our fine luck, when old Blue, not yet satisfied, returns to the cane, and directly the whole team are making such music that Smith picks up his rifle, exclaiming, "If there's another, he's mine!" We follow on foot. They have tacked and are coming directly toward us. We are in an open slough while the dogs are in the cane. They approach, and we are looking every moment for them to pop out, when looking up, I whisper to Smith, "There he is. Take pains. Aim low." At the report of the Winchester, the panther tumbles end over end, and we suppose is dead; but not so, for away go panther and dogs. The chase is for only a few yards, however, and from the angry bay of the dogs we know the panther is badly wounded and means fight. Now a wounded panther is a tough customer to tackle, especially in a thicket like the one this chap was in. We knew the time had come when we must act quick and with coolness to save our dogs. We were anxious for Smith to complete the work, and Baldy and myself laid down our guns and proposed to go in with him. The fight was going on only a little distance off, and above the crashing of cane, barking and yells from the unlucky dog the panther had down, could be heard the hoarse growls of the game. This was Mr. Smith's first encounter with a panther, and as we started to crowd in we admonished him to keep cool, which caution, however, was unnecessary as he showed the nerve and pluck of an old hunter. The muzzle of the gun was shoved between dog and panther, a flash, and all was over. Several of our dogs were badly torn, but we had three large panthers, the largest 8ft., the other two 7ft. in length.

It must not be understood from this that there are three panthers in every patch of cane. I have been living here since 1861, and have never heard of just such an occurrence. The only way I can explain it is that the buffalo gnats were very bad and deer went into this cane to escape them (though to meet a worse fate), and the panthers, knowing this, congregated to have a venison feast. J. M. WADDELL.

A SEAL VISITS THE DECOYS.—Oakdale, L. I., April 18.—While duck shooting on the South Bay this morning I saw a black object swimming some distance outside of my decoys. After watching it some time it came almost up to the outside decoys, and raised itself up out of the water, as a duck does when he stretches up and flaps his wings. When so much of him was out of the water he looked like a large dog and appeared to be trying to find out what the decoys were, but was afraid to come too close to them. After raising himself out of the water several times to examine the decoys, he swam to the west of them and came to within a few feet of the shore, but as his curiosity was not satisfied he swam out again and took another look at the wooden imitations, and then swam into the shore to the east of the decoys. I did not see him again after that, as he disappeared altogether. I presume it was a seal, but is it not very far into the spring for seal to be in these waters? It was very cold, the rain and snow freezing on my clothes as fast as it fell. Although it is April 18, I did not suffer so much with the cold while gunning in the ice all winter, as I did to-day. —ALFRED A. FRASER.

CLEANING OUT THE LAST ONE.—South Duxbury, Mass.—In February, four weeks ago, I saw two very small lots of quail that had escaped the eye of the gunner. A city sportsman came here for a day's gunning; the first flock he struck was one of thirteen; after he had got through it was no more; he took them all in. A local market-gunner worked six weeks on a very large bevy that were hatched not a stone's throw from my house; when he got through there were six left. I got nary a shot. I don't like to post my place to get a few quail; for I don't like to appear to be a hog, nor do I like having the birds "hogged."—SOUTH SHORE.

THE ELUSIVE SNIPE.

NEW YORK, April 15.—I have often read in the columns of the FOREST AND STREAM that spring snipe shooting should be abolished. I always thought before that this sentiment was correct, but now I know it.

My father had been urging me to go down into the classic State of New Jersey, where a pup of ours is hibernating, and combine with the pleasure of seeing whether the pup would recognize me the business of snipe shooting, and intimating that if I didn't take every opportunity for shooting that presented itself, I would never be able to slay anything. The latter argument, which was rather personal, finally started me off last Wednesday night, hand in hand with a bag weighing several hundred pounds, and a gun. I arrived at last at my destination with my hands full of blisters caused by the bag, and slept peacefully till early cock crow—which *was* early.

We then started to drive to various small ponds and meadows. We soon ran into a snipe, which my guide laid out all mangled on the ground, about sixty yards off. We then proceeded on our way, and found nothing but a few mosquitoes—which weren't, however, in good health—for some time. Finally, as we crossed a small piece of meadow I saw a snipe spring into the air. He corkscrewed off, and I was preparing to lay him low, when he sat down of his own free will. I approached him with great care, and when he rose I let fly both barrels at him in quick succession, which always sounds more sportsmanlike than to fire one only. He didn't pitch headlong in his swift flight. We never saw him again.

I have read in the pages of "Frank Forester" that when a snipe rises he pauses there and utters a peculiar whistle. My snipe (for he was mine in heart if not in reality) did not pause and he did not utter a peculiar whistle or any other whistle. "Frank Forrester" adds that when the snipe gets through pausing and whistling his peculiar whistle he begins to zig-zag, and after he has zig-zagged for a short distance he goes straight. My snipe did not zig-zag and then go straight. He flew as if he was intoxicated, in every way at once, but from the instant he started he made as hard as he could go for the dim distance, and he got there before he had straightened himself out.

Soon after this we started back and I soon realized that though it may sound more sportsmanlike to fire both barrels of your gun, it gives you double the amount of cleaning that you would otherwise have.

I got home to New York the same night. Next morning I had a stiff neck and a bad cold. To-day is Saturday and I am in the house with that same stiff neck and cold and expect to stay here several days longer. But that is not all. I would have gone after the snipe yesterday afternoon instead of Wednesday if it had not been that I wanted specially to see a base ball game to-day. The game is being played at this moment, but I am not looking at it, though I am in town.

But to cap all, my father gave my brother who does not shoot $5 to make up for my trip.

I don't want any more spring shooting. B.

HUNTING RIFLE SIGHTS.

Editor Forest and Stream:

In April 28 issue of your paper "Munsungun" has an article on hunting rifle sights which I must criticise. After admitting that the Lyman rear sight gives a large field of vision, he says the objections to it are: 1st, "It is confusing in catching the range of the sights, *i.e.*, the front through the rear," and goes on to say, "this is owing to the position of the sight on the stock of the gun, leaving too a great distance between the front and rear sight."

Most of those who use this sight do not find it confusing in catching the range of the sights, for when it is used properly the shooter does not try to look through it in the proper sense of the term, in fact he gives no attention to it at all. As his rifle comes up to the shoulder the attention of the shooter should only be fixed on the object to be shot at and the front sight, letting the rear sight take care of itself. The rear sight will take care of itself and guide the eye accurately, for it interferes a little with the field of vision of the right eye, giving the appearance of a large circle like a hoop, and one cannot get the eye away from the inside of this circle without an effort.

When aiming, if the sight is looked at, the lens of the eye becomes less flat, in order to get the shorter focus, as is the case in looking at all near objects. In trying to get this shorter focus the eye is not right for seeing the front sight, and the focus is very bad for seeing the object. This is clearly "Munsungun's" trouble, for he says that the fault is the rear sight is on the gun stock and that there is too great a distance between the sights. He evidently thinks it would be an improvement if the rear sight was further forward, which certainly would be the case if the sight must be looked at. If this were done, however, it would be useless for shooting rapidly, neither would it be as accurate, for then the sighting would be done on the old principle, that of trying to see three objects (the rear sight, the front sight and the object) at different distances all at once, which results in seeing none of them distinctly. One correct principle in all aiming is this, the right eye should be in focus with the object shot at. This principle cannot be easily carried out with any of the ordinary forms of hunting sights, for the shooter cannot give them attention enough to shoot with much degree of accuracy. With the Lyman sight, however, this principle is not violated, for although attention is given to the front sight, it is simply laid against the object, so to speak, and whatever effort there may be in getting the rear sight into line it is done quite unconsciously and does not delay the shooting any more than if it were not there. Old eyes especially must conform to this principle, for the lens of the eye in this case is not flexible and cannot change its focus. This explains why they cannot use the rifle in hunting with any degree of accuracy unless they use the Lyman sight.

"Munsungun's" second objection to this sight is that it is liable to get knocked down and out of position when hunting. This, I am sorry to say, has been the case with many of these sights in the past, and especially so when fitted to bases outside of the factory. This fault, however, no longer exists, for the sights are now so held by the base spring as to remain firmly in place, and when hunting cannot be knocked out of position by an ordinary blow.

I will here state to those having my sights with this fault of being too easily moved out of position, that they can have this trouble remedied without charge by mailing the sight to the factory at Middlefield, Conn. The greatly increased sale and popularity of the Lyman rear sight for hunting rifles is owing principally to the fact that it is far more easy to aim the rifle and the results are much more accurate than with any form of rear sight used on the barrel. WILLIAM LYMAN.

"THE SIERRA MADRE EXPLORING AND MINING COMPANY."—You may remember my last communication on the "Sierra Madre as a New Hunting Ground." Since then my time has been occupied with an investigation of this region, and in fact for many years previously. Your paper has been selected as the best medium for introducing the above mentioned enterprise to the public for the reason that it reaches a class of readers preferred for the exhibition. The Sierra Madre (or Mother Mountain) of northern Mexico was the richest mineral country reached by the Spaniards. The reason that development has not been made is that the country has been infested by the hostile Apache Indians until within the last year, when their occupation was terminated by the capture of Geronimo and his band. Deming, the railroad junction in New Mexico, has been selected as the starting point, on account of railroad, telegraph, express and postal facilities, its proximity to the boundary line, and most convenient base of supply. The Sierra Madre will be found as rich in minerals, land, water, timber and resources as California, with climate and salubrity unsurpassed. The entrance fee has been fixed at $500, as that is the least sum that will defray the outfit and expenses of each person; but men of means may subscribe a larger amount if they desire a greater interest. There is not the slightest intention to violate the laws or customs of Mexico, but the strictest observance of law and order will be enforced.—CHAS. D. POSTON (Deming, New Mexico).

WHY HE WATCHED THE DOVES.—Americans were scarce enough in Sonora at the time we were chasing Geronimo. About the only Americans we found in the State were some old Confederates who had left the United States right after the war, and had settled in that out-of-the-way place. One I stopped with a whole afternoon at Sahuaripa was Dr. William McClung Pigott, who was Chief Surgeon of McLaw's Division, Longstreet's Corps. The old Doctor went to Turkey first, and after wandering about the world some years settled in Sonora. He has a fine place, and whenever he hears of any Americans in his neighborhood he has them come and stop with him. After dinner we went out in the shade, and the old gentleman all at once began to take a great interest in some doves that were flying about. I guess he watched those doves a couple of hours, and I watched him. My curiosity was aroused. I couldn't, for the life of me, make out what he was trying to do. Finally, he got up, with an expression of satisfaction, went into the house, brought out a gun, and fired into the trees. Three doves fell down. Then he told me that he had been waiting all that time to get the three in a row. Powder and shot come high in that country.—*Scout Wm. M. Edwards.*

PENETRATION TESTS.—Let me return my thanks to "J. M. W.," of Augusta, Ga., for his second series of "Penetration Tests." He has come out just as I expected, and I have no doubt that he and I agree perfectly in our conclusions. He has proved that 2½drs. of powder, with one thick wad and one felt one, gave a better penetration than 3¼drs. with either two thick wads and 1oz. of shot, or with one thin wad, one felt one and 1¼oz. shot. In fact he has now covered the ground pretty fairly, and shown that there is a proper medium in all things. I should not expect one thin wad and one felt one to work well, for the soft spongy felt needs a proper backing to expand it and make it fill the barrel, but with the combination of one thick and one felt wad, which I tried last fall, and which he has now tested, I believe the happy mean is attained. I see that Von Lengerke & Co. are now advertising a special thin "shot wad," which may be a good thing, as all that is wanted on top of the shot is enough to keep it from starting from its place in the chamber when the other barrel is fired.—VON W.

EASTERN SHORE OF VIRGINIA.—Mappsburg, Va., April 27.—*Editor Forest and Stream:* The season for fair conclusions as to the probable crop of quail in this section (Accomack county) is at hand. My observations are that quail are mating off very prettily. I have had occasion right recently on business matters to be from home, and on my rides through the country I have never in all my life seen quail better mated. On many and many occasions I have seen on the roadside a cock and hen together, as tame as dunghill fowl. This indicates a good crop of birds and should be very cheering to the lovers of the gun. Our Atlantic coast birds are not here yet Let your seekers of shooting come about May 15, then to June 15 birds are on their flight, between which time the best of sport can be had. During this time, too, the weather is pleasant and warm; the very best trout fishing may be had and the seeker of sport can get the worth of his money, you may be sure.—T. G. ELLIOTT.

AGAWAM, Mass., April 18.—*Editor Forest and Stream:* I can report for this section that a fair number of grouse are left over, and I think more than the usual stock of gray squirrels and rabbits; and certainly more than the usual flight of geese and ducks has gone over. But it has been a hard winter on the few quail we have here. Out of a flock of thirteen living up to the middle of January, I have been able to find but four in April; and I fear other flocks have suffered as much, but I have had no time to look them up as yet.—PINE TREE.

BENDING GUN STOCKS.—Noticing in your last issue a new method of changing drop of gun stocks, I say to your readers don't do it, as it will always show and does not alter the bend in the grip, where the change should be made to allow the hand to be lower when grasping stock. Don't steam your stock as that is not the correct way to do it, but send your gun to a first-class mechanic who knows a trick worth either of the above, and who will bend your gun stock to any crook needed without injury to it.—W. H. C.

LYMAN'S IVORY SHOTGUN SIGHT, unlike the ordinary metallic sight, does not glimmer in the sunlight and it can be seen in a dim light. Another improvement in this sight is its large size. Almost every sportsman knows how little is the value of the ordinary sights for quick work; in fact they are generally made so small and of such material as to be hardly noticed when aiming. With this sight one can do far better shooting at the trap and in the field. The sight is so made as to expose only the ivory above the rib of the gun and at the same time is held in the steel sleeve or holder, so as to give it the greatest possible amount of strength.

THE CROW AS A DECOY.—Of the many characteristics for which the common crow is noted, none can be used to a greater advantage by sportsmen than its mimicry, by employing the crow as a decoy for wild ducks, turkeys, etc. Having made myself sufficiently acquainted with the habits of this bird, I feel assured of its success as such. I have frequently seen domesticated turkeys, ducks, peafowl, guineas and even pigeons misled by the mimicking of a tame crow kept by a friend.—W. G. L. T.

GROUSE AND SNOW CRUST.—I do not think ruffed grouse ever get crusted in. Have tramped the woods of central Massachusetts since I was first able to run. Have seen where they have been struck by hawks, pulled down by foxes, flown against telegraph wires, and in one instance the feathers, where one had struck the iron bridge between this town and the city; but I never found one dead or alive crusted in. I think they are too thoroughly Yankee for that.—PINE TREE (Agawam, Mass.).

CADIZ, O., April 25.—There is plenty small game here, such as rabbits, squirrels, quail, coon and possum. My beagles are looking fine, and I expect to have many a merry chase after Molly in the coming season. The game law is pretty rigidly enforced in this section, and game is on the increase. The squirrel season opens June 1. Woodchucks or ground hogs are so numerous that the farmers pay a bounty on their scalps.—S. C. G.

MAINE LUMBERMEN AND GAME.—Under date of April 18, a Maine correspondent writes: Many crews are returning to the woods for driving, but for a long time they will do nothing but lay around camp and kill big game. The snow is between 5 and 6ft. deep, and the best crust for getting moose as it will bear up anywhere, even in black growth, without snowshoes.

BARNEGAT BAY.—Perth Amboy, April 9.—A postal card received to-day from Harvey Cedars, Barnegat Bay, says: "Bay birds have just arrived. Reported rather plenty for this time of season. Some sheldrakes left. Flounders still biting." A flock of yelpers was seen to-day at Cheesequake Creek. English snipe are scarce.—J. L. K.

GAME IN THE SWEET GRASS HILLS.—A correspondent writes, under date of April 18, from the mining camp in the Sweet Grass Hiils, Montana: "There are lots of antelope here and some deer and sheep. I saw a great many dead antelope—mostly yearlings—on the prairie when I came down here. They froze to death last winter.—J. W. S.

PRAIRIE CHICKENS FOR ARIZONA.—A correspondent desires to obtain from Kansas or Texas ten to twenty pairs of pinnated grouse (prairie chickens) for stocking the neighborhood of Tucson, Arizona. We shall be glad to hear from any one in either of those States who can supply his wants.

NEW YORK GAME LAWS.

THE Assembly has passed Bulkley's bill (No. 433) forbidding the use of nets in certain parts of Jefferson county, also Thompson's bill amending the Jefferson county act of 1886.

The Senate has passed Senator Wemple's bill providing for a fish hatchery in the Adirondacks.

The Senate has ordered to a third reading Coggeshall's two bills—the one prohibiting the catching of brook trout less than 6in. long; the other making the season for woodcock, partridges and squirrels, Sept. 1 to Dec. 1, and relating to snared birds, etc.

ALBANY, May 2.—The Albany correspondent of the FOREST AND STREAM endeavors to follow the legislation at Albany with great care. But sometimes he finds that he has omitted or misstated something that is quite important. For instance, last week he opened his letter by saying that Mr. Fitch had not been able to advance his bill relating to a fish hatchery at Cold Spring Harbor, although he had made great efforts to do so. The fact was that, during the absence of the correspondent from the Assembly chamber, Mr. Fitch had already succeeded in doing what he wished. The correspondent at once sent a correction to the FOREST AND STREAM, but it probably did not reach the office before the time of going to press. The exact facts are that the bill was on the order of third reading in the Assembly, and that it has passed the Assembly. There is much less work to be done in the Senate than in the Assembly and so it is likely to reach the Governor soon.

The only bill that has been introduced during the past week in either House is one by Senator Murphy authorizing the possession and sale of salmon trout and other fish taken from waters outside of this State. The bill, which has already passed the Senate, is as follows:

Section 1. It shall be lawful to have in possession and to sell within this State, at any time, salmon trout, sometimes known as lake trout; Virginia chub, sometimes known as black bass, and pike-perch, sometimes known as wall-eyed pike, lawfully taken from waters outside or this State. Sec. 2. None of the provisions of laws heretofore enacted for the preservation of fish or other game within this State shall be construed to prohibit or interfere with the possession or sale of the above specified fish taken from waters outside of this State, provided that it be proven in any action or prosecution for such possession or sale that such fish was lawfully taken from waters outside of this State. Sec. 3. This act shall take effect immediately.

The Senate has passed Senator Pierce's bill making the quail and rabbit season on Long Island, Nov. 15 to Dec. 31; also Assemblyman Moore's bill amending the song-bird act of 1886, in the interest of science.

The Senate has ordered to a third reading Assemblyman Bulkley's bill relating to fishing in Lake Ontario, within the limits of Jefferson county.

Senator Coggeshall made an unsuccessful attempt to order to a third reading his brook trout bill and his woodcock and squirrel bill.

The Senate Committee on game laws has reported Senator Dunham's bill relating to lessees of special privileges.

Senator Low does not feel at all discouraged in regard to his bill consolidating the duties of the dairy commissioner, forest commissioners, and the fish and game protectors in one official, under the name of the State Agricultural Bureau. The bill is now on the order of third reading in the Senate, and every one else beside Senator Low looks upon it as dead. But the Senator will not concede that he has been beaten.

Senator Wemple's bill for a fish hatchery at Mill Creek, Hamilton county, has passed both branches of the Legislature and now awaits the Governor's signature to become a law.

ALBANY.

Editor Forest and Stream:

There are probably no other laws of the State that are so often amended, so thoroughly bewildered, and in many cases made so utterly impracticable as the laws for the protection of game and fish. There is not a session of our Legislature that some wiseacres or fishmongers, or selfish defiant deer-slayers, do not use every effort to have the laws so changed that they may kill, catch and have in possession, such game or fish as may suit their selfish inclinations or purposes. If I am correctly informed, many of the proposed amendments to the game laws now before our Legislature would be entirely impracticable, and if enacted would be destructive of the purposes for which such laws are supposed to exist. It is time to call a halt.

New York city has its particular views about the matter and is ready at all times to back them with men and money. Other parts of the State with possibly more practicable ideas and with near approach to the beneficial operation of these laws, very materially differ, as to what may be taken as best for the general good, and therefore to a great extent arise these continued changes of laws, the enactment of which scarcely receives the signature of the Governor and passes from the printer's hands before a succeeding Legislature repeats the farce with the usual applause. No law can be enacted that will be satisfactory to the entire State, or that can or will be observed and enforced until such laws shall be agreed upon and perfected by a convention of men interested both in the protection and sale of game and fish; and not until then will there be an end of the constant and lamentable changes that are simply a delusion to the public and a disgrace to the State.

Why cannot the FOREST AND STREAM, as a suitable medium, call such a convention at Utica or Syracuse, say in September next?

SYRACUSE.

WISCONSIN GAME LAW.

CHAPTER 374. An Act to secure the better preservation of game. The people of the State of Wisconsin, represented in Senate and Assembly, do enact as follows:

Section 1. It shall be unlawful to take, catch, kill, or have in possession when killed or taken, any woodcock, between the first day of December and the succeeding tenth day of July.

Sec. 2. It shall be unlawful to take, catch, kill or have in possession when killed or taken, any quail, partridge, pheasant or ruffed grouse, prairie hen or prairie chicken, sharp-tailed grouse or grouse of any other variety, snipe, plover or wild duck of any variety, or wild goose or brant of any variety, or any aquatic fowl whatever, between the first day of December and the succeeding first day of September.

Sec. 3. It shall be unlawful to kill or take by any means, contrivance or device whatever, or pursue with intent to kill or take or worry, or to hunt with dog or dogs, any deer, buck, doe or fawn, between the tenth day of November and the succeeding first day of October.

Sec. 4. It shall be unlawful at any time to take, catch or kill, or to attempt to take, catch or kill any of the animals or birds mentioned in the first three sections of this act, by means of any snare, net, trap, or spring gun; and it shall also be unlawful at any time to use in pursuit of any such animal or bird, any pivot or swivel gun, or any other firearm not habitually held at arm's length and discharged from the shoulder.

Sec. 5. It shall be unlawful to take, destroy or have in possession the eggs of any of the birds mentioned in this act, or of any wild pigeon, or to wantonly disturb or molest the nesting place of any such bird or pigeon, or to kill, wound or take any wild pigeon within three miles of a pigeon roost.

Sec. 6. It shall be unlawful to use, in the pursuit of duck, goose, brant or other aquatic bird, any sneakboat, sailboat, steamboat or floating raft or box, or any similar device, and it shall also be unlawful to construct or use any blind in the open water outside the natural growth of grass or rushes then and there projecting above the water.

Sec. 7. It shall be unlawful at any season to hunt, shoot, catch or pursue any of the birds or animals mentioned in the first six sections of this act, in the night time, or to employ any device, means or contrivance whatever for catching, killing or destroying any such bird or animal in the night time.

Sec. 8. It shall be unlawful to kill, take, wound or pursue, purchase or have in possession when so killed or taken, any of the birds or animals mentioned in the first six sections of this act with intent to export, carry or convey the same, or any part or portion of such bird or animal, beyond the boundaries of this State. In determining the question of intent of any party charged under this section, any competent proof that the accused has within one year exported or caused to be exported or conveyed beyond the limits of this State, any bird or animal covered by this section, or any part of such bird or animal, shall be received as *prima facie* evidence of the existence of such unlawful intent charged in the complaint or information.

Sec. 9. It shall be unlawful to take, catch, kill or destroy, or have in possession when so killed or taken, any otter, martin, mink or fisher, between the first day of May and the succeeding first day of November.

Sec. 10. It shall be unlawful to pursue, trap, ensnare or kill, any otter, beaver, mink or muskrat, or other fur-bearing animal, upon the lands or to the middle of any stream of water adjoining lands of another person who is engaged in the business upon such lands of breeding or rearing any such animals.

Sec. 11. Any person who shall violate any provision of this act shall be guilty of a misdemeanor, and shall be punished by fine not exceeding one hundred dollars, or by imprisonment in the county jail not more than six months, or by both such fine and imprisonment.

Sec. 12. Sections 4,564, 4,565 and 4,566, and all acts and parts of acts contravening the provisions of this act are hereby repealed, but this act shall not be held to repeal or suspend the operation of penal laws of a local character applicable to the same subject which are now in force, within local territorial limits.

Sec. 13. This act shall take effect and be in force from and after its passage and publication.

(Approved April 8, 1887. Published April 26, 1887.)

"FOREST RUNES."

A collection of delightful poems that have the sheen of water, the odor of leaves and the fragrance of flowers, that tell of hunting and fishing, and of homely life in field and woods, of forest and mountain, plain and river, of things animate, inanimate, of heroes and heroines, and just such a book as one likes to read on a winter night or a summer day.—*Public Opinion, Washington.*

A Denver correspondent writes: "Some one writing of this book has an opportunity to commend its delightful simplicity, and its truthfulness to nature as well as the music of it. I like it because there is a sturdy honesty in it, with no striving for display. And it seems to me this of itself ought to win it a place in the esteem not only of plain folks like myself, but in the regard of scholarly men. I trust some one will do himself the honor."

PUBLISHERS' DEPARTMENT.

NO CROOKEDNESS.—Clinton, Conn., April 18, 1887.—I advertised in various sporting papers. With one exception, none of them were courteous enough to send me the issue containing the "ad.," as you did; and it is my conviction that yours is not only by far the best advertising medium, but it is removed from any and all suspicion of crookedness or jockeyism.—DWIGHT HOLBROOK.

The Adirondack Railway Company issues an illustrated handbook, "Birch Bark from the Adirondacks," which gives much useful information to North Woods tourists.

The Maine Central Railroad sends us three illustrated guide books, prepared by Mr. G. H. Haynes, of Camden, Me. They are descriptive of the Rangeley Lakes, Parmachence and other resorts.

EVERY one knows that cocoa is an excellent tonic. Taken in the morning, at breakfast, it has no equal for nutrition and strengthening qualities; but it can be taken with advantage at any time. It is especially recommended for nursing mothers, to whom its benefits are invaluable. Unfortunately, cocoa is sometimes mixed with starch, arrowroot or sugar, and thus loses a great part of its special properties; hence, great care should be taken to procure the best in the market. Baker's Breakfast Cocoa and Chocolate preparations have long been the standard of excellence, and are guaranteed absolutely pure.—*Adv.*

THE DOGWOOD BLOSSOMS.

(To my friend, Walter S. Viele, Fish Warden, First District, Ind.)

WHEN the warm spring sun is shining
And the flowers begin to bloom,
And the little leaves are peeping
From the forest's wintry gloom,
Then the angler roams the meadow
With his heart and footsteps light,
For the dogwood is in blossom
And the fish begin to bite.

Oh, the warm and mellow sunlight,
How it seems to kiss the ground
Till it quivers in its gladness,
How it wakes the song birds' sound,
And not a white cloud flecking
Dims the sky so blue and bright,
Ah, the dogwood is in blossom
And the fish begin to bite.

Beneath some forest monarch
Upon the sward I've lain,
Where the sunbeams through the branches
Break into light and shade;
And I feast my eyes in gladness
On the simple woodland sight,
When the dogwood is in blossom
And the fish begin to bite.

Half dozing, dreaming, waking,
I pass the hours away
Till the sunbeams slanting lower
Mark the closing of the day,
And the soft moon slowly rising
Bathes the earth with silvery light,
When the dogwood is in blossom
And the fish begin to bite.

Ye bustling men of business,
Take from your lives one day
And wander through the meadows
In the balmy month of May.
You'll be better, happier, purer,
When you wander home at night,
When the dogwood is in blossom
And the fish begin to bite.

F. M. GILBERT.

EVANSVILLE, Ind.

THE MAINE SEASON.

WARMER weather has inspired considerable activity in the minds of rod and line sportsmen in this vicinity, and the dealers in tackle begin to be very busy. Rods are being overhauled and put in order, while lines and reels are being examined. It now looks as though the opening of the Maine trout lakes would, after all, be welcomed by about the usual number of early sportsmen.

By the way, the latest invention in the way of improved tackle is a tension reel for trout, bass and salmon fishing. It is, as its name indicates, simply a tension reel, there being no spring for winding up the line, as in the automatic reel, but all of the effect of an automatic or a spring reel is obtained, to any degree desired, by a simple device which regulates the tension. The operator keeps winding, while the tension allows the fish to dart away and take all the line he wants. He comes toward the operator with as much of a jerk as a fish is capable of, but the tension causes the spool to revolve and the slack line is taken up in a moment. A good deal is expected of this reel, and Appleton & Litchfield, who are manufacturing them for the first time since the invention, have sold a large number, simply from the working model.

The opening of the Maine trout season comes with a good deal of water, so far as the streams are concerned. The first day of May brought a freshet of greater proportions than has been known for years in that State. The rivers and even the smaller streams were greatly overflown. Nothing has been done in the way of trout fishing on the streams, and a decline of the waters will have to be waited for. This is likely to come rather slowly, as there is yet a good deal of snow in the woods and on the mountains. It is expected that the Sebago lakes will be late about opening this year and the run of landlocked salmon will also be late. Last year these lakes cleared of ice the last days of April, but they are still ice-bound, or were on the second day of May. A good deal of attention will be given to these landlocked salmon this year by Portland, Saco and Biddeford parties of sportsmen, as well as by the local fishermen in that vicinity. The size of the fish imprisoned by the Commissioners for breeding purposes last fall in the streams leading into these lakes has not been forgotten by the local sportsmen, many of whom saw them. One male fish weighed over 30lbs., and there were two or three females nearly as large. Angling will have rather more of an incentive the e than usual this spring.

But it is at Bangor where excitement is expected to reign supreme among the salmon anglers. Already a number of Boston sportsmen are only waiting for the word that the salmon are rising below the dam, when they will take the first train for Bangor. Commissioner Stilwell and Tom Allen, the famous warden, whom all the poachers hate, both expect a better run of salmon than last year. The ice has gone out of the river with a tremendous freshet, and as soon as it has fallen to a reasonable pitch the salmon are expected. Boston sportsmen have letters from their friends in Bangor, warning them to be ready any day now. A club has been organized, called the Penobscot River Salmon Club, through the efforts of Mr. Allen, and they have built a club house for the entertainment of sportsmen, on the banks of the river near the fishing grounds. The papers say that a nine-pound salmon was taken the other day from the Kennebec, at Augusta. The Commissioners have for several years past been putting salmon fry into that river, and it is hoped that this is one of the first signs that this river, as well as the Penobscot, has at last been reclaimed, and is about to become celebrated for its salmon fishing.

The latest reports say that Moosehead Lake is not likely to open this year before the last of May. It is understood that Congressman Collins, of this city, will lead a party to Moosehead as soon as the ice is out. It is claimed that the rush to Moosehead will be larger than usual this year. Several parties from Boston, Hartford, New Haven and New York will go to Bangor and try the salmon till the ice is out of Moosehead, when they will depart for that region. The Androscoggin Lake waters are still ice-bound, and are likely to be till the last of May. The owners of camps and lodges in that region of monster trout begin to be impatient for the ice to be out. Warm weather and a few green leaves in Boston has set them to longing for the old haunts. Capt. Farrar has gone to the lake region to put his steamers in readiness; but reports of only a day or two ago speak of snow in plenty and thick ice. The prospect is that the recent freshet has raised the lakes to the highest water-mark, and that a vast quantity of the flowage-killed trees on the shores of the Androscoggin lakes must be raised up with the ice, and hence will be floated away. In short, this year is likely to improve the shores of Richardson Lake a good deal.

That notorious game warden murderer, Graves, has been brought back, all the way from California, to Machias, where he is now lodged in jail. It is reported that he puts on quite a bold front and says that he shot the two wardens in self-defense. It is thought that his trial will be begun as soon as the 9th of May, in the Supreme Court of Washington county, now in session. State Attorney-General Baker will appear for the State, with County Attorney Livermore to conduct the case for the county. Graves will be defended by Jasper Hutchins, of Bangor, with other counsel. There is some danger that public sentiment, having forgot the brutal murder of poor Hill and Niles, will begin to work in Graves's favor. Graves claims that he has made a record of the whole affair, which he shall present in court, showing that the wardens set upon him with revolvers, and that he "had to have the first shot." It is curious that during Graves's absence the State has abolished capital punishment; hence, by running away, he has saved his neck.

SPECIAL.

ADIRONDACK PRESERVE ASSOCIATION

AT the annual meeting of the Adirondack Preserve Association, held at 176 Broadway, May 2, the following officers were elected: President, Henry C. Squires, 178 Broadway; Vice-President, Edwin W. Adams, 114 Wall street; Treasurer, Geo. W. Shiebler, 8 Liberty place; Secretary, J. G. Case, 105 East Seventy-third street. Trustees, to serve two years, J. G. Case, D. T. Ramsey, 247 Water street; to serve one year, A. K. Shiebler, 20 Maiden Lane; F. W. Kitching, 94 Reade street. These are all well known business men, and in their control the association ought to be well managed.

The association was incorporated last year, having for its objects the encouragement of social recreation, and of boating, fishing, lawful sports and the preservation of game and forests. The increasing population in the Eastern States and the growing scarcity of localities where sportsmen, pleasure and health seekers can enjoy primeval nature in all its beauty and attractiveness, have none too soon drawn the attention of the Adirondack Preserve Association to the necessity of an organization such as theirs—one sure to be highly appreciated by those who love to visit the beautiful collection of forests, lakes and mountains included in the Adirondack region. It is a hopeful sign to see sportsmen and lovers of nature identified with such a society as the Adirondack Preserve Association, thus lending their assistance in preserving the woods themselves and increasing game of all kinds in the forests and streams.

The high pressure at which business generally is now carried on demands recreation and recuperation for our business men. Only those who have visited the Adirondacks for a few weeks' vacation can realize or appreciate the renewed life and increased vigor which its high, pure air so generously bestows upon its frequenters.

The association has secured a commodious club house, situated picturesquely among the hills, and close to as good trouting and hunting as can be found in the Adirondacks. This enables them to give to their members such comforts as cannot be found elsewhere in that section. With the management in their own hands, the furnishing of the club house and table (which latter will be under the management of a competent caterer) will be made to suit the taste of the guests. Many Adirondack visitors will fully appreciate the necessity of this better attention to bed and board, for how many otherwise pleasant vacations have been partially marred by poorly cooked and served food and a worse bed.

The membership of the association is limited and the initiation fee $100, which is not excessive when the various advantages mentioned are taken into consideration.

BLACK COD OF THE NORTHWEST COAST.—A dispatch to the New York *Times* says: "Ottawa, April 28.—The Fisheries Department propose to send another exploring expedition to the northern waters of British Columbia this summer, with the object of completing the survey of Black Cod Banks discovered in the Pacific, northeast of Vancouver Island. A number of fishing firms operating in the Gulf of St. Lawrence have sent representatives to British Columbia, and if their reports prove favorable they will commence this season dry curing fish for export." This shows how quick to take a hint are our Canadian cousins. In his interesting volume entitled, "Our New Alaska," published last year, Mr. Chas. Hallock wrote at great length of the black cod of the Pacific and predicted that the fishermen of the Atlantic coast would soon give their attention to the great fishery resources of the Pacific.

ROD AND REEL ASSOCIATION.—The committee of arrangements will meet on Friday, the 6th inst., at 3 P. M., at E. G. Blackford's laboratory in Fulton Market, to finish all pending business pertaining to the tournament to be held May 25 and 26. As the score books will be given to the printers on or before the 9th inst. all parties who propose contributing prizes or desire to advertise in same should communicate at once with the secretary. Copies of the score book will be mailed on issue to all members, prize donors and advertisers, and to those who send their address and stamp for postage.—GONZALO POEY, Secretary, P. O. Box 3049, New York.

SALMON IN MAINE.—Dixfield, Me., April 29.—*Editor Forest and Stream:* Our season is very backward, and it looks now as if our fishing would be very late. The ice has been out of the Penobscot but a few days. Last year we commenced catching salmon there with fly the 27th of April. The river is high and the water colored. The salmon have been fished for every day, and I have been expecting to hear of one being caught, but as yet none have been taken. The ice in the Sebago goes out very early. I heard in Portland yesterday that the upper part of the lake was clear, and I presume to-day the ice is all out. Mr. Stilwell and myself intend to go over there Monday, May 2, to look after our young landlocked salmon which we are hatching for Sebago waters, and of which we are to turn in there 750,000 this spring. Shall probably try the salmon a day or two, and will inform FOREST AND STREAM how matters are pertaining to fish in those waters. At Rangeley and Moosehead there is yet 3ft. of snow in the woods, and the travelers go on runners instead of wheels. A few warm days will make a wonderful difference, as there is no frost in the ground. I think it looks very favorable for good fishing the coming season in Maine, and would advise those who intend to come here at the opening to file up their fish hooks and be ready, as the time is close at hand and even at the door.—HENRY O. STANLEY.

THOMAS SATCHELL.—Literary anglers will regret to learn that Mr. Thomas Satchell died at his home, Downshire Hill House, Hamsted, London, on April 17. Notices of Mr. Satchell's works have frequently appeared in our columns. He was joint author with Mr. Thomas Westwood of the "Bibliotheca Piscatoria," and through his researches in ancient angling literature we can now obtain access to books, through his reprints, which were only known to us by their titles, or, at best, from a quotation. The "Library of Old Fishing Books," with the issue of which Mr. Satchell mainly, in collaboration with Mr. Westwood, was intimately connected, comprised "The Chronicle of the Compleat Angler," "The Secrets of Angling" (John Dennys, 1613), "Older Form of the Treatyse of Fysshynge wyth an Angle" (1450), "A Booke of Fishing with Hooke and Line" (Leonard Mascall, 1590), and "The Angler's Note Book and Naturalist's Record," which appeared in serial form some two years ago, and after the completion of the "green series" was suspended for a year, and the "yellow series" remains incomplete. To the literary angler the death of Mr. Satchell is a loss that will be felt wherever the English language is spoken.

"FARMER BROWN'S TROUT."—Farmer Brown has the big end of the stick, for he owns the woods and the fields and is learning to protect or destroy. As an example of this, I can mention a little pond near here that a few years since in summer was a shady pool, beloved by the quiet angler, and affording bass, pickerel and perch, as well as lesser fish. Now in summer it is a dirty, muddy pond hole, so heated by the sun that the fish are scarcely fit to eat. The great trees are cut away and not a bush even allowed to take their place, because sportsmen, not content with fishing, must lawlessly tread down the grass for rods around the pond.—PINE TREE.

IT IS AN ANCIENT DEVICE.—*Editor Forest and Stream:* An old retired fisherman told me not long since a method of luring fish into nets, which he claims is original and uniformly successful. He had blown to special order several heavy glass balls about 8in. in diameter, with a lipped neck similar to those on bottles. Inside these were placed enough minnows to form an attractive bait, which were confined by a perforated cork stopple. A ball and its contents were then placed in the rear end of a net, the meshes of which were purposely arranged to entangle about the gills of fish that had made a savage rush to capture the minnows. The majority, of course, gained admittance at the regular openings, although in many instances he has taken about the same number from each place. Have you any similar lure on record?—JO (Wellsville, O.).

THE ALBANY FLY-CASTING ASSOCIATION will hold their annual tournament on June 21.—F. K. WOOD, Member of Executive Committee.

SALMON IN THE HUDSON.

THE following letter on the subject of salmon in the Hudson River and of fishways for them was written to Dr. Samuel B. Ward, President of the Eastern New York Fish and Game Protective Association in reply to a communication from him:

DEAR SIR—I have yours of Jan. 24, suggesting that I might wish to say something regarding the salmon in the Hudson River. I have, as you are probably aware, conducted the hatching and planting of the true sea salmon which have been placed in the river for the past five years, under the direction of Prof. S. F. Baird, United States Commissioner of Fish and Fisheries. The eggs were obtained from the United States salmon station on the Penobscot River, at Orland, Me., and were forwarded to the hatchery at Cold Spring Harbor, Long Island, which, while a station of the New York Fish Commission, does some work for the general government, which bears a portion of the expense. The number of fish planted in the river, your Association has already received from your vice-president, Mr. A. N. Cheney, to whose great interest in these experiments we owe much information regarding the existence of the fish in the river. Mr. Cheney first sent us specimens of about 7in. long from Clendon Brook, near Glens Falls, and has kept us advised of all that he has seen or heard of the fish. Last summer there were five, if not six, adult salmon taken in the river, one of which weighed 16½lbs. Some of these fish were taken near the Troy dam, one down at Coxsackie and one in Gravesend Bay at the mouth of the river; the latter a fish of 10lbs. I think that all the fish were taken in nets, but have no definite information concerning this.

It has been the policy of Prof. Baird not to interfere in any way, as I understand him, with State laws for the capture of fish. He supplies millions of fry of different kinds to many parts of the United States, wherever he thinks the waters are suitable, and then considers that he has done his duty, and it rests with the people whose waters are stocked to protect the fish placed therein. In making the following suggestions, therefore, I ask to be considered merely as a member of the Association of which you are president, and not in any official capacities as Prof. Baird's assistant in this matter, or as a superintendent of the New York Fish Commission:

It is well known that the Hudson was not an original salmon river, but that may have been on account of the obstructions which debarred the way of the parent fish to its upper waters, where we now have positive evidence that the young salmon thrive in the cool brooks which supply the river above Glens Falls, therefore, as the experiment of stocking the river was not a very expensive one, Prof. Baird thought it well worth trying, and the results so far are encouraging. It is not at all likely that every fish which returned to the river last year was captured, therefore we cannot say how many did return. Had only one been caught it might have been thought a stray fish which had come down from some of the Connecticut rivers; for at intervals of many years a single salmon has been taken in the shad nets of the lower Hudson, but on no occasion that I know of has ever more than one been taken in a single year. The fish captured last summer appearing just four years after our small planting in 1882, may with certainty be credited to our work, and I look forward to see the run increase yearly.

To properly protect these fish until such time as we may be enabled to obtain salmon eggs from the Hudson, it would be well, in my opinion, to prohibit their capture by any means whatever, for a period of four or five years, and after that to allow them to be taken by hook and line only, making it a misdemeanor for any person to retain a salmon in his possession, or to kill it, or to sell it to another if it is accidentally captured in a net used in taking other fish, or, in other words, compelling the person to return the fish to the water alive. I am aware that should such a law be passed those persons who were disposed to disregard it would not report their captures, and we would be deprived of the encouragement of further stocking which such reports give; but this is a secondary consideration to the preservation of this valuable fish, and however gratifying such reports may be to the fishculturist he would be unwise to counsel unrestricted fishing in order that he might receive such evidence of the success of his work.

Another thing needed is a system of effective fishways which will allow the salmon to reach the mountain brooks, where alone they find suitable breeding grounds. There is something which is called a fishway, or was built for one, in the dam at Troy, but is wholly useless. I think it is a mere timber chute built years ago, and is of a pattern that never worked well. The modern fishways, such for instance as the McDonald, will give free passage to the fish, and will pass them safely to the waters above, provided they are not netted or speared while in the fishway. Above Troy there are several dams and natural falls which, if I remember rightly, are something like 80 or 90 feet in the aggregate, and these can probably be supplied with fishways of modern construction at a cost of $10,000 to $12,000. I have not figured closely on this subject of cost, but estimates can easily be obtained from men who are more expert in the matter of building fishways.

It is among the possibilities that if the salmon ascend to the waters of the Upper Hudson, they can also be established in the tributaries of the Mohawk. The West Canada Creek would make a splendid salmon river, and the few dams upon it could easily be overcome by fishways. The principal obstruction is, of course, at Cohoes, where the total height to be overcome is somewhere between 110 and 130ft., and the cost there would probably be more than for the whole Hudson.

While on the subject of fishways, I would say that the Salmon River, emptying into Lake Ontario at Pulaski, was formerly a famous salmon stream, but of late years it has very much deteriorated, although a few are taken in it almost every year. I have also made plantings of salmon fry in this river, by direction of Prof. Baird, but find that the people there attribute the falling off in the catch of salmon to the erection of dams. There is a dam near Pulaski, about 11ft. high, which has the foundations for a fishway already laid, and it is possible that a proposal to build a first class fishway on that river would enlist the sympathy of residents in the western part of the State, and that their representatives would join a movement to erect fishways on all the streams of the State which contain salmon.

In this connection permit me to call your attention to the experiment of re-stocking the Connecticut River with salmon. It was originally a splendid, natural salmon stream, but under a system of netting, spearing and murdering the fish, even on the spawning beds, the last fish disappeared, and some twenty-five years had elapsed, I think, since the salmon had been taken in it, when Prof. Baird and some of the New England Fish Commissioners thought it worth while to try and restock the river. Four or five years after the first planting a few fish were seen in the river. The year following some 40 or 50 were taken. I can not give the exact figures for I am writing from memory, and for three years after, comparatively large numbers of salmon were sent to New York market, and Connecticut River salmon were common in New York. I have seen ten or a dozen at a time on the slabs at Mr. Blackford's in Fulton Market. The fish were taken in nets ands pounds at the mouth of the river and few or none were allowed to reach the breeding grounds. The plantings were stopped and the fish have gradually disappeared. I cannot recall when the last plant was made, but it must have been six or eight years ago, and now an occasional salmon surprises the shad fishermen in the Connecticut. It is possible that this history may be repeated in the Hudson unless an effort is made to protect the few fish resulting from the first plants, and access to the spawning grounds be furnished them.

Very respectfully yours,
FRED MATHER.

NOTE.—I am thoroughly satisfied that Mr. Mather greatly underestimates the number of salmon taken in the Hudson last season. From reliable information I believe that at least thirty adult fish were taken and perhaps fifty.—S. B. W.

THE CONNECTICUT SHELLFISH COMMISSION.

DURING the few years in which there has been a Shellfish Commission in the State of Connecticut there has been a great deal of most excellent work done in correctly mapping and locating the oyster beds of the State, a thing which never was attempted before, and the Shellfish Commission of the State is regarded as a model of all that is desirable in the way of mapping, leasing and controlling oyster beds on our coast, and the system has been proposed for adoption in the State of New York. The Commissioners are able and intelligent men, who have worked hard and faithfully to establish this state of things, and after all the most expensive part of the work is done, and it only remains for the Commission, with the aid of Mr. Bogart, the very able engineer, to complete the maps, a few persons who are interested in restoring the chaotic state of things which formerly existed, have petitioned to the General Assembly to abolish the Board of Shellfish Commissioners because, as they state, the remaining work to be done is of such a character as can readily be performed by one competent executive with far less expense than at present. This movement probably emanates from some person or persons who would like to name the successor to the Shellfish Commission, for reasons best known to themselves. We sincerely hope that their petition will be refused, and that the present Commissioners will not resign in the midst of their work and place its completion in the hands of men not familiar with the methods which the present Commissioners have built up.

BLUEBACK AND SUNAPEE TROUT.

CONCERNING the embryonic markings on these fish, on which something has been said in our issue of April 21 and 28, Mr. Henry O. Stanly, Fish Commissioner of Maine, writes to Mr. Mather as follows: "I have watched the bluebacks (*Salmo oquassa*) carefully, habits and characteristics, and have taken all the eggs that have ever been taken at Rangeley, have hatched them a number of years and watched them through all their stages till turned loose, and have never noticed any white line on the lower edge of the tail fin you speak of. Had there been any (even if very slight) I think I should not have failed to notice it. I am sorry to say we have not any eggs hatching this season to verify my opinion, but I feel very sure there is none. The adult fish does not have any white on the fins at all like the brook trout. The fins of the males are bright red, or the color of bright autumn leaves. When taken from the water they are of a dark color, but after death turn to a light yellowish cast. The spots are very minute, very thick, very bright yellow and red. Both thicker and brighter than on the brook trout. There are not a biting fish more than the sucker, about the same. I have occasionally caught them in summer in deep water, but never more than one or two at a time. They are a very hardy fish and tenacious of life, nearly as much so as the eel or bullhead. I have frequently seen them alive in the morning, where they have lain on the shore all night. When they come up the streams to spawn, they school together like the herring and smelts, do not make and work on beds like the trout, yet they spawn in same pools usually. My opinion is, that they are not the same species as the New Hampshire fish, although I have never seen one of the latter. All I know of them is from the description I have seen in FOREST AND STREAM and other papers. As I understand it, the Sunapee trout are caught of various sizes; the blueback never. Out of a thousand I do not think you could select two that will vary over one ounce in weight, or even that you could pick up five (take them as they come) that will vary an ounce from a pound—five to the pound is the rule. Their eggs are the same size as those of the trout, and the difference I am not able to detect by their looks and size. I have never found one with more than 100 eggs, as a rule about fifty. Are very hardy and will stand very rough handling, and about all hatch. From the 10th to the 20th of October is the only time they are seen.

"Within the last twelve years we have distributed them in various lakes and ponds in Maine, but have never seen any returns from them, yet they might have taken root in all the places where they have been put and not been seen, as there are only about ten days in the year that they show themselves, and I have not looked for them at that time.

"My opinion is (although I have no particular authority to found it on) that they attain their growth very quickly (say two years). The only reason I have to confirm it is that (in summer) when the brook trout are in deep water I have often taken large trout with from one to six bluebacks in their stomachs, and have never seen any but full-grown ones—none less than three ounces."

THE ADIRONDACK FISH HATCHERY.—Senator Wemple's bill for a fish hatchery at Mill Creek, Hamilton county, has passed both branches of the Legislature, and now awaits the Governor's signature to become a law. We have given a brief description of the site in a former issue, and will now give a more general description of the region to be benefited. The Adirondack region is divided by two great watersheds, from one of which the waters flow into the St. Lawrence and Lake Ontario, and from the other into the Hudson River direct or into the Mohawk and its tributaries. This region is the great sanitarium of the Empire State, and future generations will bless those who builded so wisely in the enactment of laws for the preservation of its forests. The State Forestry Commission says: "As years go on and these woods are protected from spoliation, the young soft timber will grow up and the forest assume its primitive condition." We add, as well the lakes and streams teem with native brook and lake trout; that many lakes and streams have been depleted of trout, and the cause is well known to anglers in this region. Many of the causes are now removed, and we know that the inhabitants of Hamilton county will gladly aid in restocking and preserving its waters from further spoliation. The hatchery, if established, can supply all the waters on the south watershed—that is, the waters flowing into the Hudson and Mohawk and their tributaries. We hope it may receive the executive approval.—*Mohawk Valley Democrat.*

SABLE ISLAND SUPPOSITIONS.

IN an article entitled "An Ocean Graveyard," in the May *Scribner's Magazine*, Mr. J. Macdonald Oxley gives some account of Sable Island, famed for its wrecks. Because of the hazard of approach the island is rarely accessible and "a visit can be made only under certain conditions. * * * Let us suppose," says Mr. Oxley, "that we have obtained permission to accompany the Newfield upon one of her regular supply trips." And then he goes on to describe the island as follows:

"After exchanging greetings with the superintendent and his staff, * * * our first thought is to climb the big flagstaff and view the landscape from the crow's nest perched perilously on high. The ascent accomplished, a wonderful panorama lies outspread before us. From beneath our feet the narrow island stretches east and west its bow-like form, holding a shallow lagoon, some eight miles long, in its center, and presenting many an effective contrast of sandy upland and grassy meadow, bare, bleak and richly flowered nook, where fairies might hold their midnight revels. From the foreground with its group of buildings, the eye roams over to the West End lighthouse, whence the men are now hurrying, pony-back, at the summons of the flag announcing the steamer's arrival. Every sandy peak or verdurous knoll bears some sad tradition. Baker's Hill, Trot's Cove, Scotchman's Head, French Gardens—so many silent records of human suffering. Then turning eastward we see the little burying ground, nestling in the deep rich grass and consecrated to the last sleep of many a victim to the ocean's wrath. Nine miles further down a telescope makes plain the flagstaff at the foot of the lake, and five miles beyond that the East End light with its attendant buildings. Herds of wild ponies jealously guarded by shaggy stallions graze upon the hillsides, black duck and sheldrake in tempting flocks paddle about the innumerable ponds, while seabirds fill the air with their harsh chatter, and whole regiments of seals bask in snug content along the sunny beach. Here and there the bleaching ribs of naval skeletons protrude half buried from the sand, and the whole picture it set in a silver frosted frame of seething surf."—*Scribner's, pp. 605-6.*

Now, if Mr. Oxley will permit a suggestion, let him while supposing suppose an easier method of getting such a pretty little word picture. Let him suppose, for instance, that instead of going away down to Sable Island, he goes to his bookcase, takes from the shelf Dr. J. B. Gilpin's account of the island and copies it thus:

"Here and there along the wild beach lie the ribs of unlucky traders half buried in the shifting sand. * * * Nearly the first thing the visitor does is to mount the flagstaff, and, climbing into the crow's nest, scan the scene. The ocean bounds him everywhere. Spread east and west, he views the narrow island in form of a bow, as if the great Atlantic waves had bent it around, nowhere much above 1m. wide, 20m. long, including the dry bars, and holding a shallow lake 13m. long in its center. There it all lies spread like a map at his feet—grassy hill and sandy valley fading away into the distance. On the foreground the outpost men galloping their rough ponies into headquarters, recalled by the flag flying over his head; the West-end house of refuge, with bread and matches, firewood and kettle, and directions to find water, and headquarters with flagstaff on the adjoining hill

Every sandy peak or grassy knoll with a dead man's name or old ship's tradition—Baker's Hill, Trott's Cove, Scotchman's Head, French Gardens—traditionary spot where the poor convicts expiated their social crimes—the little burial ground nestling in the long grass of a high hill, and consecrated to the repose of many a sea-tossed limb; and 2-3m. down the shallow lake, the Southside house and barn, and staff and boats lying on the lake beside the door. Nine miles further down, by the aid of a glass, he may view the flagstaff at the foot of the lake, and 5m. further the East-end lookout, with its staff and watch house. Herds of wild ponies dot the hills, and black duck and sheldrakes are heading their young broods on the mirror-like ponds. Seals innumerable are basking on the warm sands, or piled like ledges of rock along the shores. The Glasgow's bow, the Maskonemet's stern, the East Boston's hulk, and the grinning ribs of the well-fastened Guide, are spotting the sands, each with its tale of last adventure, hardships passed, and toil endured. The whole picture is set in a silver-frosted frame of rolling surf and sea-ribbed sand."—*Dr. J. B. Gilpin, quoted in Osgood's "Maritime Provinces," edition of 1875, pp. 184-5.*

As a third supposition, does any one suppose that Mr. J. Macdonald Oxley ever sighted Sable Island himself or got his description by any other method than stealing it from Dr. Gilpin?

FIXTURES.

DOG SHOWS.

May 3 to 6, 1887.—Eleventh Annual Dog Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent. Entries close April 18.

May 24 to 27.—Inaugural Dog Show of the Michigan Kennel Club, at Detroit, Mich. Chas. Weil, Secretary, Newberry and McMillan Building, Detroit, Mich. Entries close May 10.

Sept. 1 to 3.—Inaugural Dog Show of the Pacific Kennel Club, at San Francisco, Cal. J. E. Watson, Secretary, 516 Sacramento street, San Francisco, Cal.

Sept. 12 to 17.—First Show St. Paul and Minnesota Kennel Club, St. Paul, Minn. W. G. Whitehead, Secretary.

Oct. 12 and 13.—Stafford Kennel Club Show, Stafford Springs, Conn. R. S. Hicks, Secretary.

FIELD TRIALS.

Nov. 7.—Third Annual Field Trials of the Western Field Trials Association. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 21.—Ninth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

December.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4968.**

THE HARTFORD DOG SHOW.

THE Hartford Kennel Club's second annual show was given in Union Armory, on Tuesday, Wednesday, Thursday and Friday of last week. It was a tiny affair—the smallest show given by a member of the A. K. C. The actual number of dogs in competition was two hundred and fifty-three, and the lesson that has been read to this club is one not likely to be forgotten by the management.

Last year Messrs. Tracy and Donner, the pointer and English setter judges, selected by a large majority of the exhibitors of this country, had sixty-four entries between them. This year Mr. John Davidson, who was not appointed by a majority of exhibitors, brought out ninety-six entries in the same classes, or thirty-two more than the people's choice combined; and Mr. Jas. Mortimer, the Spaniel Club's judge elect, mustered nineteen entries last year against the thirty-five of superior quality entered under Mr. Hemingway this year. Only one of the judges appointed by the people was re-engaged for the last show—Mr. James Mortimer—who was given the choice of classes and of course selected the ones which always bring out the largest number of entries. The tail end of the classes was given to Mr. Barlow, which certainly looked strange, seeing that this gentleman has a record as breeder and exhibitor of fox-terriers and bulldogs and of one or two other breeds.

The breeds selected by Mr. Mortimer were mastiffs, St. Bernards, collies, bull-terriers, fox-terriers, pugs, Italian greyhounds, poodles, toy spaniels and miscellaneous, which were divided into 46 classes. The number of entries in these classes was 118, of which 33 were absent, leaving 85 dogs to compete, which is something less than two in a class. This is a wretched showing, especially when we take into account the fact that the valuable Apollo Stakes for fox-terriers and other prizes given by members of the Fox-terrier Club were offered for competition. Last year the same judge had 139 entries in these classes. In calling attention to the above facts it has not been my intention to explode the "Hartford Plan" (that has already been done), but to convince certain parties that they can no more control the dog shows of this country than they can stay the flowing and ebbing of the tide. When men have had experience as exhibitors and breeders of high class dogs, the result of their labors is certain to be sought after and appreciated. But the intelligent exhibitor is not going to have any would-be judge or number of would-be judges pushed down his throat so long as he knows they have no record to back up their pretensions.

The benching was of the old-fashioned kind, which looks sadly out of date, and the management, with one exception, was excellent. Certain dogs, which were permitted to leave the building before the close of the show, should not have been allowed to do so. This is a growing evil and must be abolished. I am told that complaints are to be made through the press, and pending inquiry into the several cases I need say no more.

Mr. Tallman, of the firm of Spalding Bros., looked after the feeding, and each dog was liberally supplied with Challenge Dog Food. No complaints were reported.

I regret to say the attendance was very light. With few visitors and fewer dogs the Hartford Club must be in low water.

MASTIFFS—(MR. MORTIMER).

Ilford Caution was absent from the champion class for dogs and the corresponding class for bitches contained no entries. Orion, Mr. Moore's new purchase, made an example of his two seedy-looking opponents in the open class for dogs. They are not show dogs. The Lady Clare, better in muzzle, coat and color than Southern Belle, beat her. The latter is much better in size and strength in limbs. Countess, vhc., is shallow in muzzle, light in size and smutty in color. Victoria, c., is not a show dog; bad skull, muzzle, ear, expression and limbs. The winning puppies will never make show dogs—poor-headed specimens. Gurth, hc., and Harold, c., are faulty in head, ears and limbs. The classes were not so well filled or so good in quality as they were last year.

ST. BERNARDS—(MR. MORTIMER).

It was a fortunate thing for the Hartford Club that the Hospice Kennels entered their dogs, had they not done so the judge would have had exactly two dogs to pass on. Twelve classes were provided for the breed, a very liberal number for a small show, and there were eighteen entries, four of which did not compete—a very poor showing. The winners, with the exception of Prince Barry, have been fully described in these columns. This puppy was removed from the Boston show before your reporter could get a look at him. He is a big dog and stands well on his legs, good coat, markings not correct, skull rather small, muzzle snipy, back a trifle slack, good loin, quarters much above average, brush fairly good, forelegs straight, good feet, stands well and moves well; more bone would improve him.

GREAT DANES AND NEWFOUNDLANDS—(MR. BARLOW).

Don Cæsar, looking well, was the only Great Dane shown. Colonel was much the best of the two Newfoundlands. His head is very much better than the average, and he has plenty of size; stop not well defined, back a trifle weak, stifles and hocks not quite right and coat not flat. Tag, second prize, is not a show dog, and should not have been noticed; very poor head, eyes, coat and tail.

DEERHOUNDS—(MR. DAVIDSON).

There were fourteen entries in these classes, and Mr. Thayer's well-known kennel made a clean sweep of the prizes. Robber Chieftain, highly spoken of in my Philadelphia report, was first in puppies and first in the open class for aged dogs. Heatherbelle again beat Thora, as she always will do under competent judgment.

GREYHOUNDS—(MR. DAVIDSON).

Lancashire Witch, looking well, had no competition in the champion class, and Balkis easily beat Prince, whose coarse head, prick ears, and heavy shoulders are certain to keep him in the back ground. Cassandra was the only entry in the open class for bitches—a brindle of great quality. I will have something further to say about this bitch when certain parties have stumbled over her. Queen in Black, described in my Philadelphia report, was the only puppy shown, and was given second—all she deserved.

POINTERS—(MR. DAVIDSON).

There were fifty-five entries in these classes against twenty-seven last year—a rather substantial refutation of the club's statement that its judges were appointed by the votes of a majority of exhibitors in this country. The Graphic Kennels' exhibits were absent, owing to distemper having visited and carried away a number of their young dogs. But for this misfortune the quality in the classes would have been second to no show of the year, with the exception, perhaps, of Boston. Tammany and Sachem once more tried conclusions in the open class for large dogs, and Tammany won. Sachem is the truer made dog, but Tammany has the advantage in head. I could never tell how it was that a dog of such faulty conformation as Tammany undoubtedly is could be such a wonderful mover as he has from time to time been described. To satisfy myself on the question I had him brought out in company with Sachem. There must have been used some very elastic pens. Tammany is all tied up in his gait, and when he tried to keep pace with Sachem, it was apparent to everybody present that he was unequal to the task. He may be a plodding stayer, but to say he is either fast or an easy mover is to state what is untrue. Plunger, hc., is leggy, wide in front and light of limb. His eyes are not good and his ears are set too high. Sancho, vhc., is not first-class either in head or set on of ears, and is throaty and wide in front. Bellona scored rather an easy win over Kate VIII. and Nell. If she would breed she would be a very cheap bitch at the catalogue price. These bitches are well known to your readers. The judge was right in pegging Phyllis back. She has had a poor time of it since I pointed out her deformed chest at the Newark show. Lilly Faust, hc., has a domed skull, and her ears are not well carried, legs and feet fairly good. Naso of Kippen was alone in the light-weight champion class. He was taken home sick before the show was over, as was also the case at Philadelphia. Queen Bow won in the corresponding bitch class. Of the ten dogs entered in the open classes only two faced the judge. Dash III. took first prize. "Breeder, unknown. Sire, Game. Dam, unknown. $75." Such an entry as that would disqualify at a show given by the English Kennel Club, but here not a word is said. The dog has a fairly good head, neck not quite clean, chest round, loin flat, quarters and hocks fairly good, tail rather coarse and not well carried, much too wide in front, shoulders not well placed, nice coat and color, moves well. Don, second prize, is not a show dog. I would have withheld the prize. First in the corresponding bitch class went to Belle Randolph. Head too wide, muzzle not clean, eyes not quite right, ears not well carried, throaty, shoulders rather heavy, quarters and hocks much above average, tail coarse and docked short, good coat and color, legs light in bone, otherwise good. Here I think Mr. Davidson made a mistake. Glauca, second prize, was my choice for first. She is well known, having won first at Newark and second at Boston. Lady Nett, hc., has a poor head and her ears are placed too high. Model Doodle, vhc., was removed from the show before I had a chance to examine her. Fred B., first prize in the puppy class for dogs, was properly placed first. He has almost exactly the same faults as his sire, Tammany—light eyes, a heavy neck, wide chest, poor shoulders and faulty forelegs. Pommery Sec, well known, was second. Hartford and Jimmie, Jr., will not develop into show dogs. First in the bitch class went to Mayflower, who was first at Newark. Lalla Croxteth, second prize, is a new one. Head domed, muzzle fairly good, not quite clean below the eyes, eyes light, ears not carried quite right, neck of good length but very throaty, chest not deep enough and ribs not carried well back, back fair, stifles not quite right, hocks fairly good, tail coarse and not well carried, forearms light and legs not well placed, feet not first-rate, rather leggy and light in bone, color rather rusty, good coat, will not make a good one.

ENGLISH SETTERS—(MR. DAVIDSON).

The quality of these classes was decidedly better than was the case last year. Rockingham, Plantagenet, Foreman and Royal Albert were the entries in the champion class for dogs and Rockingham again won. My opinion of these dogs is well known. Rock is not in first-rate condition, neither is Royal Albert, but the fight lay between them. Cora of Wetherall, looking very well, was alone in the corresponding class for bitches. The closer one examines this bitch the more does he wonder how Daisy ever came to beat her at New York last spring. Cora is twenty points in a hundred a better bitch than she. Royal Prince scored rather an easy win in the open class for dogs, and Phil Warwick made a fair second. This dog has quite a nice head which might be cleaner cut just below the eyes. His eyes, while not bad, might be better and his ears are not perfectly carried, back and chest fairly good, loin long and light, quarters too light and hollow, hocks and stifles straight, shoulders straight, forelegs not very well placed, stands over a bit at pasterns; good feet, coat not flat, fair good flag and showns some character. Pride of Dixie II., c., is not good in head and is straight behind and deficient in coat. Pride of Orleans, vhc., is not good in head, quarters or loin. York, c., is all out of condition—much too fat. He shows setter character. Dashing Sport, vhc., has a fairly good head and beautiful coat, but his faulty shoulders, light eyes, poor loin and light limbs will always stop him at the critical moment. Dash, hc., is faulty at both ends. Don Belton, hc., is not good in head, stop not defined. Duke of Wellington has a poor head and is rather hollow in back and short in ear. Yale Belton, hc., is not in show form. Rock Bondhu is coarse in muzzle, light in limbs and faulty in stifles. Don Petrel, c., is not in good shape. Pride of Dixie, vhc., keeps popping in his nose for a card. His owner has considerable pluck to send him through the circuit, as he is only a third-rater. Daisy Foreman, well known as just a fair bitch, was first in her class and Jeannie III., made a good second; cheeks not quite clean, muzzle not quite square enough in profile, eyes and ears fairly good, chest too round, back might be better, strong loin; quarters and hocks fairly good, tail to long, not well feathered and not well carried, shoulders rather heavy, legs not quite straight, feet not first-class; do with more bone, coat straight, but rather scanty; shows some quality. Maud, hc., is not good in head, coat or ear. Grace, hc., has a fairly good head. Beauty Bondhu has poor head and eyes. The others are well known. Puppies were not very good, but of much better quality than last year. Blitzen won first in dogs; head rather heavy and not clean, muzzle coarse, especially below the eyes; eyes and ears fairly good, neck of nice length, but not quite clean; back and chest fairly good, loin rather long, quarters and hocks fair, tail long, legs not quite straight and feet turned outward; he will probably develop into a coarse dog. Blondin, second prize, is in the same ownership; head not first-class, muzzle short and not clean cut, ears rather short, eyes dark, a coarse head; back, chest and loin fair, quarters rather light, tail long, good legs and feet, shoulders much better than the average, coat fairly good. Prince, in the same class, is a white, brown and tan dog with yellow eyes. Premier Lad was absent. American Girl, not quite my sort, but clearly the best, was first in the corresponding class for ladies; skull rather heavy, muzzle clean cut, especially below the eyes; fairly good ears, placed too high, chest very deficient, ribs not well carried back, loin flat and back rather hollow, quarters and hocks fairly good, tail much too long, forelegs not well placed, but of good strength, feet turned outward, nice coat and color; looks like growing into a coarse bitch. Queen, second prize, will never make a crack, still she is better than the average exhibited this season; cheeks too full, muzzle not cut out clean below the eyes and not square enough, ears not carried quite right, eyes too light, neck fairly good, chest, back and loin fairly good, stifles and hocks very straight and quarters light, stands rather low at the shoulder, tail longer than I like and not well carried, limbs very light, shoulders not quite right, nice coat.

IRISH SETTERS—(MR. DAVIDSON).

Chief, Tim, Gerald, Elcho, Jr., and Blarney, were the dogs entered in the champion class. Elcho, Jr., and Blarney were absent, leaving Gerald and Mr. Wenzel's brace to fight out the battle. There was no fear that Mr. Davidson would repeat the Newark blunder of placing Gerald over Tim, and the latter won, with a number of points to the good. Gerald is much too high on the leg, and is not so good in head and loin as Tim. In color he beats Tim, but color does not make an Irish setter, neither does size. I was the first to say that Tim is about the best Irish setter in this country, and he is the dog I selected to represent the breed in the work I am now writing. Hazel was absent from the champion bitch class, leaving Yoube and Zella Glenduff to compete for the mug. Zella is all out of condition, and her light frame and limbs looked lighter than ever. Yoube won. She is away behind Zella in head, but beats her in chest, back, loin, bone and substance, and being in good condition was clearly entitled to the prize; but she is by no means a crack. Jerry had the open class for dogs to himself, Tim having been transferred to the champion class, and Begorra and Bruce absent. He is a promising young dog, and if all goes well with him he will be heard from again. Head just a trifle heavy, peak fairly good, muzzle of good length and formation, eyes rather small, ears well placed and well carried, neck of fair length but not clean, back, chest, loin and quarters about average; hocks would do with more bend and are placed rather high; forelegs might have been better set on—too far under the chest; stands over a bit at knees, good feet, color not first-rate, condition poor, has plenty of size, shows character, and is almost certain to improve. Laura B., the Pittsburgh and Philadelphia winner, scored an easy first in the bitch class, Perdita being properly placed second, although not a good one. Head flat and much too heavy, muzzle short and not clean, ears placed too high, eyes a shade light—not at all a good head; back, chest and loin fairly good, quarters much above average, hocks rather straight, fair good flag, forelegs not well placed—too far under the chest; forearm light, feet turned outward, color might be better, coat flat, moves well. Ready, hc., is too small and weedy, but is a goer. Maud II. was not for competition. Jerry, first in the open dog class, was well-placed first in the puppy class, and Arrowanna made a good second. Head a trifle full, muzzle long and clean, eyes too light, show the haw, ears well placed but not perfectly carried, chest and loin rather light at present, stifles and hocks not quite A1, tail faulty, legs good down to knees, stands over a trifle at knees, good feet; rather a promising pup, shows character and quality, and looks like an improving sort. The first prize bitch puppy is not a good one. Head rather short, muzzle snipy, stop not well defined, ears short and wide and placed too high on the head, chest, back and loin fairly good, stifles not well placed, turned in a trifle, causing the hocks to be thrown out; flag not first-class, very light in bone, small and weedy, color just fair, good coat.

BLACK AND TAN SETTERS—(MR. GLOVER).

In quantity and quality these classes showed a falling off and were a very poor lot. The management had the misfortune to lose Gazette and Belle, owned by the Inwood Kennels, and the Hartford Club must pay for the dogs or face a law suit. Gem, well-known, had the champion class to himself, and Mont, who was second at Boston and Providence, scored an easy win in the open class for dogs. Gift, second prize, was second at this show last year and was fully described. He is not a show dog. Fly, hc., has poor head and light eyes. Rover is a black dog with yellow eyes. First in bitches went to Rose, fully described in my Buffalo report. She is not a good one and is points behind Jessie who was second. This bitch is also well known. She was second at Boston this year and last. Queen, vhc., is faulty in head and limbs. Countess, c., is small and weedy—a very poor class. There were no entries in the puppy class.

SPANIELS—(MR. HEMINGWAY).

Mr. Mortimer judged these classes last year and there were nineteen entries, several of which were absent. This year the club, profiting by past experince, secured the services of a breeder and owner of spaniels, the result being that thirty-five dogs were entered and the quality was decidedly better. Newton Abbot Lady, not in very good condition, was in the champion class for field spaniels, there being no competition in the class. Jet was first in the open class for either sex. Head too wide, stop not well defined, muzzle not square enough, ears placed rather high, eyes small and a shade light, chest, back, loin, quarters and hocks fairly good, limbs too light, coat not flat, rather leggy. Newton Abbot, described in my Buffalo report, was second, and Donnil Dhu, vhc. Miss Obo II. had an easy task set her in the champion cocker class. I gave Brunt first and special at Buffalo but he did not meet a Miss Obo II. on that occasion. Mr. Willey's grand bitch beats him many points in head, muzzle, eyes, ears, loin, and feather. Dandy W. had the open class of dogs to himself. Beatrice W., first in the bitch class, was third at Boston. Chloe W., second prize, is a long way removed from the excellent form of her kennel companions, Miss Obo II. and Shina. Juno W., vhc., is in whelp and did not show up well. Dido W., vhc. reserve, was second at Boston last year. Little Red Rover made an example of his opponents in the class for cockers other than black; Dora was second cheeks rather full, muzzle not square enough, ears rather short and might hang closer, neck, chest, back, loin and quarters good, tail thin, legs and feet fairly good but

light in bone. Dandy W. scored again in the puppy class, Obo V. being second. The latter is heavy in skull, muzzle very wide, with little depth and somewhat tapered, slightly underhung, eyes fairly good, ears placed too high—not at all a good head. Body rather light and ribs not carried far enough back, quarters and hocks fairly good, elbows out, legs of good formation but light in bone, feet fairly good, good coat, will not make a good one. Newcastle, Tyne and Drake were the winners in the Clumber classes. Johnny was absent. I will have something to say about these dogs on a future occasion.

COLLIES—(MR. MORTIMER).

There were twenty-three entries in the six classes provided, and of these nine were absent. Glengarry and Zulu Princess were alone in the champion classes. Brian Boru, a new one, was first in the open class for dogs. Head too heavy and muzzle rather coarse, ears not well carried, eyes round and full and light, back a trifle short, strong loin, stifles fairly good, hocks rather straight, brush a trifle short and carried too gaily, good frill and mane, coat rather short and too soft, shoulders, legs and feet fairly good, nice size, nice color and markings, moves fairly well, has dew claws. Ben Lomond, second prize, is not a first-rater; head much too heavy, muzzle short and rather coarse, too much brow, ears not sufficiently erect, chest too round, loin, quarters and hocks much above average, good brush, shoulders rather heavy, fair good legs and feet, nice mane and frill, top coat not hard enough, moves fairly well. Ronald, vhc., is soft in coat and carries his brush à la Pomeranian. Lady Ellis and Lass O'Lowrie had the bitch class to themselves. They are well known to your readers. Lothian Chief, first in the puppy class for dogs, will never make a good one. His head is not first-class and he is heavily handicapped with a prick ear. The bitches were a wretched lot and the prizes withheld.

BEAGLES AND BASSETS—(MR. ELMORE).

While the entries in these classes were not numerous the quality was good. Messrs. Wakefield and Krueger supplied the winners in every class. Little Duke had a walk over in the champion class for dogs, and Twinkle, looking better than she did at Boston, easily beat Bush in the corresponding class for bitches. Cameron's Racket headed the open class for dogs and also secured the special for best beagle in the show. I like Fitz Hugh Lee better than some of the dogs placed ahead of him. His head is not quite right, but behind it he beats Trailer, for instance, enough to outweigh the points he loses in head. In bitches I liked the second prize winner quite as well as Vickey, placed first. Maida, c., was all out of condition. Snowflake is faulty in skull, has a butterfly nose and stands wide in front. Whisper, third at Newark, won in the puppy class, which was not a good one. Bertrand, not first-class in head and ears, was the only Basset hound shown.

PUGS—(MR. MORTIMER).

There were ten entries in the four classes, half of which were from Dr. Cryer's kennels. Bessie, Santa Claus, Doctor, Vesta, Daisy and Psyche were the winners. They are well-known to your readers, having been fully described more than once of late.

BULLDOGS—(MR. BARLOW).

There were thirteen entries in these classes, and the quality was excellent. Robinson Crusoe, Britomartis, Hillside, Carmen, Moses, Juno and Juanita represented the Hillside Kennels, and took most of the prizes. Tostig, second to Hillside, lacks volume of skull, is fairly good in layback, but is not first rate in eyes or ears; ribs not well sprung and loin not roached, elbows might be better placed and chest more let down, good legs and feet, rather leggy and light. Belle of the Ball is shorter in face than Carmen but not so good in several other respects. Merry Monarch is full brother to Robinson Crusoe, but not his equal either in head, body or limbs; he is, however, a fairly good dog.

BULL-TERRIERS—(MR. MORTIMER).

The quality of these classes was good. Victoria was alone in the champion class, and Jubilee and The Baron, both well known, were first and second in the open class for dogs and had no competition. Grand Duchess, an excellent specimen, was first in the bitch class. This beautiful bitch should have been first last year when she was placed second by the same judge. With the exception that she is a trifle fine at all points she is a smasher. Queen of the May, second prize, is a new one. She has a good record obtained at the other side of the Herring Pond, but is not quite first-class. Cheeks a trifle full, rather weak before the eyes and inclined to be lippy, expression not quite right, good length of head, chest rounder than I like, good loin, quarters muscular, stifles not quite right, nice straight legs and feet, tail rather coarse and might be better carried. Silver and Bess, the only entries in the light weight class, were first and second in the order named. Had I been judge the latter would have been disqualified. Jubilee was the only puppy shown, and he won. He was first at Boston and Providence and is well known.

FOX-TERRIERS—(MR. MORTIMER).

Only sixteen dogs in seven classes to face a fox-terrier judge, is, I fancy, the worst on record. The valuable Apollo Stakes alone should have brought out as many dogs as competed in the seven classes. I have tried and tried in vain to find out why this valuable prize was offered at the Hartford show, and why it was not judged by a specialty judge. Perhaps Mr. Thayer or some other prominent member of the Fox-Terrier Club can throw light on the question. What is the use of having these specialty clubs unless specialists are appointed to award the valuable prizes offered? A man who poured water into a sieve would be laughed at; yet this is precisely what the Fox-Terrier Club is doing. Lucifer and Safety were the only exhibits to face the judge in the champion classes. Four only of the eight entered in the open class for dogs put in an appearance. Luke, first in the puppy class at the Newport fox-terrier show, won, with Raby Jack, well known, second, and Nobby, faulty in head and two or three other places, vhc. Piccinino, hc., is faulty in head and eye, and soft in coat. A poor class. The corresponding class for bitches was not a good one. Marguerite, well-known, was first, and Richmond Myrtle made a good second. Allspice, first in the puppy class last year, was given vhc.; she is not sound, but may prove a useful brood bitch, as she is fairly good looking and well bred. Shameless Mixture scored again in the puppy class. Mephisto, in his present condition, was not entitled to second prize, which clearly belonged to Sandy Mixture; he should not have been sent to the show. In many respects I prefer Sandy Mixture to Shameless Mixture. He is of better type, but his pins are not straight. Only one bitch puppy was shown; she was first at Providence. The class for wire-hairs did not fill.

OTHER TERRIES—(MR. BARLOW).

These classes were very poorly represented. Tees Rock, the first prize Bedlington, is a good dog, faulty in head and muzzle, but good in body, legs, feet, coat and topknot. Put Sentinel's head on to his body and you would have a pretty good looking dog. Elswick Sue has a poor head. Rocks is improving, but he will never be first-class. Lady Kate was the best of the Skyes, and won. Highland Nellie, second prize, is rather soft in coat and would do with more length.

TOY SPANIELS—(MR. MORTIMER).

There was one dog in each of the three classes and they are well known to the readers of this paper. All were in good condition.

ITALIAN GREYHOUNDS—(MR. MORTIMER).

There were three entries in this class, but only one Italian greyhound. Minnie, second prize, should have been first, and the other prizes withheld for want of merit. Cute, first prize, has a very poor head and is prick-eared, a fault which should almost disqualify; eyes very light, chest and loins very poor, quarters wretched, tail broken and carried over the back, forelegs sadly placed and crooked, moves badly, too large, shows neither quality nor character, not a true Italian greyhound, and consequently should not have been noticed.

MISCELLANEOUS—(MR. BARLOW).

Mr. Mortimer was down to judge these classes; but, for some reason or other, they were handled by Mr. Barlow. My esteemed friend from Philadelphia should remember that, in trying to oblige Mr. Mortimer, he did himself and others an injustice which cannot easily be repaired. Patsy O'Connor, vhc., should have scored the easiest possible win over Lucifer and Colleen O'Donoghue. This was a shocking decision. Patsy O'Connor is a good dog, whereas Colleen O'Donoghue is a third-rater. The dog is better in muzzle, head, eyes, topknot, ears, coat, size and tail, and he shows considerable true character, whereas the bitch shows little, if any. I feel sure that Mr. Barlow will seek an early opportunity to re-examine the dogs and right the wrong so far as it lies in his power to do so. CHARLES H. MASON.

BLACK AND TAN SETTERS.—CHAMPION—Inwood Kennels' Gem. *Dogs:* 1st, Dr. W. H. Tillinghast's Mout; 2d, J. Howe's Gift. Very high com., T. W. Hooker's Dash. High com., E. C. Howe's Fly. *Bitches:* 1st, W. E. Rothermel's Rose; 2d, G. E. Browne's Jessica. Very high com. and com., G. D. Terhune's Queen and Queen II. Com., Inwood Kennels' Countess. *Puppies:* No entries.

SPECIAL PRIZES.

Kennel St. Bernards, Hospice Kennels; pointers, Westminster Kennel Club; English setters, Blackstone Kennel; spaniels, J. P. Willey; fox-terriers, Blemton Kennels; beagles, A. R. Wakefield; pugs, Dr. M. H. Cryer; deerhounds, J. E. Thayer; collies, Hempstead Farm Co.; Irish setters, Max Wenzel; mastiff dog, E. H. Moore's Orion; bitch, G. & H. B. Cromwell's The Lady Clare; puppy, Dr. P. H. Ingall's Brian; rough-coated St. Bernard dog, Hospice Kennels' Otho; bitch, R. J. Sawyer's Swiss Beda; puppy, H. S. Pitkin's Prince Barry; smooth-coated dog, Hospice Kennels' Hector; bitch, E. H. Moore's Gip; deerhound dog, J. E. Thayer's Chieftain; bitch, same owner's Wanda; brace greyhounds, H. W. Huntington's Balkis and Lancashire Witch; pointer dog, large, F. R. Hitchcock's Tammany; small, Westminster Kennel Club's Naso of Kippen; best in show the same; brace (two), the same with Ballona; dog puppy S. S. Banks's Ned B; bitch, G. L. Wilson's Mayflower; bitch, sired by Croxteth (two) Greenfield Kennels' Lalla Croxteth; English setter stud dog, Blackstone Kennels' Foreman with Daisy Foreman and Jenny III.; dog puppy, Blue Belton Kennels' Blitzen; bitch puppy, J. K. Lanman's American Girl; get of Foreman, G. W. Neal's Daisy Foreman; of Yale Belton, A. B. Saxton's Dashing Sport; Irish setter dog, Max Wenzel's Tim; bitch, J. M. Leckley's Laura B; dog puppy, F. Cheeney Jr.'s Tim; bitch, O. S. Kelsey's Curror Bell; black and tan setter dog, Inwood Kennels' Gem; bitch, W. E. Rothermel's Rose; brace field spaniels; A. C. Wilmerding's Newton Abbot and Newdeon Abbot Lady; cocker spaniels (two) J. P. Willey's Miss Obo II.; Clumber, M. Richardson's Newcastle; collie dog, Hempstead Farm Co.'s Glengarry; bitch, same owner's Lady Ellis; puppy, Lothian Kennels' Lothian Chief; Beagle Club's cup, dog, A. C. Krueger's Cameron's Racket; bitch, same owner's Vickey; beagle puppy, same owner's Whisper; basset hound, C. B. Gilbert's Bertrand; pug dog in open class, Dr. M. H. Cryer's Doctor; bull, J. E. Thayer's Britomartis; dog in open class, same owner's Hillside; bull-terrier (two), E. D. Morgan's Grand Duchess; bitch (two), the same; Bedlington terrier, dog, E. D. Morgan's Tees Rock; bitch, W. H. Russell's Elswick Sue; Skye terrier, C. A. Shinn's Lady Kate; Chesapeake Bay dog, C. B. Jenning's Sport; poodle, J. M. Loring's Soot; Newfoundland, R. D. Cole's Colonel; American bred fox-terrier, F. Hoey's Luke; Fox-Terrier Club Apollo Stake, the same; dog in open class, the same; bitch, Blemton Kennels' Marguerite; dog puppy (three), J. E. Thayer's Shameless Mixture; dog and bitch and dog and bitch puppy, Blemton Kennels' pair, same owner's Lucifer and Safety; Blenheim spaniel, W. Phillips's King Pippin; Italian greyhound, W. E. Norris's Cute; pug in open class, Dr. M. H. Cryer's Doctor; field spaniel (two), A. C. Wilmerding's Newton Abbot Lady; bobtailed sheepdog, Glencoe Collie Kennels' Sir Lucifer; spaniel puppy, J. P. Willey's Dandy W.; puppy sired by Graphic, Clifton Kennels' Pomancy Sec; black and tan setter in open class, Dr. W. H. Tillinghast's Mout; beagle puppy, A. C. Krueger's Whisper; setter dog owned in Hartford, H. Bryant's Dash II.; brace English setters, F. Windholz's Rockingham and Cora of Wetheral; collies, Hempstead Farm Co.'s Glengarry and Lady Ellis; beagle, A. C. Krueger's Cameron's Racket; brace, same with Vickey; cocker or field spaniel, J. P. Willey's Miss Obo II.; collie in open class, Hempstead Farm Co.'s Lady Ellis; water spaniel, B. F. Lewis's Colleen O'Donoghue; pug bitch in open class, Dr. M. H. Cryer's Daisy; in miscellaneous class, Sir Lucifer and Colleen O'Donoghue.

THE NEW YORK DOG SHOW.

IF any one financially interested in the success of the New York dog show looked at the sky on Monday night, his thoughts took a gloomy cast. The moon shone dimly through a mackerel sky, and the stars cast but a faint and misty light through a moisture-laden atmosphere. It looked like rain, and rain would reduce the attendance at the show at least one-half. Nevertheless, Tuesday morning was bright, warm and pleasant. Those were wise who were early at the show, for on this first morning was the best time to see the dogs and to get an idea of what there was present in the way of dogflesh. On entering the building from the Madison avenue side and turning to the left, the mastiffs are first to be seen on the outside benches, and following them the St. Bernards, rough and smooth, the Newfoundlands, deerhounds and greyhounds. The benches of the inner rows are occupied by the smaller dogs; hounds, pointers, setters, spaniels and collies on the Twenty-seventh street side of the judging rings; the remaining collies, all terriers, bulldogs, toys, beagles and poodles, on the Twenty-sixth street side. The benching is done by the Spratts in the manner adopted by all shows this spring, and certainly has the advantage of adding greatly to the appearance of things. Certainly Madison Square Garden never has seemed so roomy, so light or as well ventilated as at this show.

There are nearly a thousand dogs at the Garden, most of them apparently in good condition, though of course some of them are pretty well worn out by the campaigns through which they have already passed this spring. It is too soon to speak of the quality of the dogs, though a casual glance along the benches seems to show a great many weeds. The mastiffs, as a rule, are poor, and so are the St. Bernards. Collies and spaniels on the other hand seem unusually good. The exhibit of Clumber spaniels seems to attract a good deal of attention and admiration. Among the new dogs was the liver and white pointer Duke of Hessen, which arrived the morning of the opening day, a black poodle, Brigand, which has only recently arrived.

The judging was advertised to begin at 10 o'clock Tuesday but did not commence until about 11. It progressed rathe, slowly, and this, though it seemed to indicate bad management, was really due to the very bad method of benching the dogs out of their order. The result of this was that in some cases the attendants were only able to find the dogs which would be judged after a long and tedious search, and at least one case occurred where an animal was not found at all until long after the judging was over. We have had occasion before to call attention to this inconvenience and delay caused by this concession to owners who desire to have all their dogs benched together, and the occurrences of this show emphasize the necessity of placing the dogs in their regular order.

The attendance on Tuesday was light, but in the evening was better.

AWARDS.

MASTIFFS.—CHAMPION—*Dog:* Winlawn Kennels' Homer. *Bitch:* Winlawn Kennels' Prussian Princess.—OPEN—*Dogs:* 1st, Mrs. L. Belmore Suydam's Prince Waldemar; 2d, R. H. Derby's Pharaoh; 3d, J. L. Winchell's Boss. Very high com., Scarsdale Mastiff Kennels' Hildebert. High com., F. S. Delafield's Vulcan, J. C. Smeton's Kaffir and E. R. Colman's Jag. Com., E. A. D. Maurice's Argus. *Bitches:* 1st, G. & H. B. Cromwell's The Lady Clare; 2d, E. H. Moore's Southern Belle; 3d, J. L. Winchell's Lady Gladys. Very high com., J. L. Hope's German Empress and F. Uhlenhaut's Venice. Com., S. A. Dayton's Gypsey.—PUPPIES—*Dogs:* 1st, J. E. R. Boudrean's Homer, Jr.; 2d, J. R. Trissler's Noble Cautious. High com., E. J. Hawley's Brutus. *Bitches:* 1st, E. H. Moore's Duchess; 2d, H. Boudrean's Topsy. Very high com., R. Boudrean's Belle.

ST. BERNARDS.—ROUGH-COATED—CHAMPION—*Dog:* E. H. Moore's Merchant Prince; 2d, Hermitage Kennels' Duke of Leeds. Very high com., Hospice Kennels' Otho. *Bitch:* Hermitage Kennels' Rhona; 2d, E. H. Moore's Miranda. Very high com., R. J. Sawyer's Swiss Beda.—OPEN—*Dogs:* 1st, W. J. Ehrich's Barry II.; 2d, very high com. and high com., Hospice Kennels' Hadjar, Eiger and Alvier; 3d and high com., D. P. Foster's Barry and Forrester. Reserve, Wells & Zerwick's Pasha. Very high com., W. Graham's Visp II. High com., L. F. Beckwith's Dare, A. B. Hilton's Victor and H. G. Cassidy's Bryan Boru. Com., D. Hamilton's Tell, E. W. Durkee's Barry, A. J. Massey's St. Triphon, J. Ogilvy's Lord Randolph and E. S. Dalziel's Mountaineer. *Bitches:* 1st, Hermitage Kennels' St. Bride; 2d, W. W. Tucker's Duchess of Leeds; 3d, Dr. W. Young's Empress. Reserve, Heathfield Kennels' Recluse. Very high com. and high com., Associated Fanciers' Sheba and Norah. High com., Hospice Kennels' Tromba and Jeanne d'Arc.—PUPPIES—*Dogs:* 1st, Col. A. B. Hilton's Colonel; 2d, withheld. *Bitches:* 1st, W. W. Tucker's Princess; 2d, T. M. Burke's Fideline. Very high com., B. Young's Princess. High com., J. Moore's Comasso. Com., C. S. Warren's Jessie.

ST. BERNARDS.—SMOOTH-COATED—CHAMPION—*Dog:* W. W. Tucker's Apollo; 2d, Hospice Kennels' Hector. Reserve, Hermitage Kennels' Don II. *Bitch:* Hermitage Kennels' Leila.—OPEN—*Dogs:* 1st, W. W. Tucker's Victor Joseph; 2d, E. N. Howell's Lecco; 3d, J. Dunlap's Rigi. Reserve, J. B. Burnham's Bruno. Very high com., Hospice Kennels' Wotan. High com., Hermitage Kennels' Eric. *Bitches:* 1st, E. N. Howell's Belle of Sterling; 2d, W. W. Tucker's Flora II.; 3d, Hermitage Kennels' Alma II. Reserve, E. H. Moore's Gip. Very high com., high com. and com., Hospice Kennels' Queen of Sheba, Apollonia and Kader. Very high com., W. W. Tucker's Bernice. PUPPIES—*Dogs:* 1st, Hermitage Kennels' Peter; 2d and very high com. E. N. Howell's two unnamed. *Bitches:* 1st, W. W. Tucker's Lucy; 2d, J. Thurston's Erminie.

NEWFOUNDLANDS.—1st, withheld; 2d, H. Ullmah's Nicholas. Reserve, R. D. Sullivan's Gypsey. Very high com., J. English's Flora. Com., J. Weiner's Creghton.

GREAT DANES.—1st, Osceola Kennels' Don Cæsar; 2d, Associated Fanciers' Leo; 3d, withheld.

DEERHOUNDS.—CHAMPION—*Dog:* J. E. Thayer's Chieftain. *Bitch:* J. E. Thayer's Wanda.—OPEN—*Dogs:* 1st and very high com., J. E. Thayer's Robber Chieftain and Highland Laddie; 2d, P. C. Ohl's Garry; 3d, C. C. Higgins's Galek. *Bitches:* 1st and 2d, J. E. Thayer's Ramona and Thora; 3d, P. C. Ohl's Lady Biswell.—PUPPIES—*Dogs:* 1st and 2d, J. E. Thayer's Robber Chieftain and King of the Forest. *Bitchics:* 1st and 2d, J. E. Thayer's Thedora and Lorna Secunda.

GREYHOUNDS.—CHAMPION—C. A. Webber's Mother Demdike.—OPEN—*Dogs:* 1st, withheld; 2d, Heatherfield Kennels' Joe Jumper; 3d, Mrs. J. W. Luckey's Beauty. *Bitches:* 1st, E. A. Adams's Psyche; 2d, J. C. Emory's Dora; 3d, Heatherfield Kennels' Satchel.—PUPPIES—1st, E. H. Pyott's Queen in Black; 2d, P. Neary's Maud S.

POINTERS.—LARGE—CHAMPION—*Dog:* Highland Kennels' Robert Le Diable. *Bitch:* No entry.—OPEN—*Dogs:* 1st, F. R. Hitchcock's Tammany; 2d and 3d, Neversink Lodge Kennels' Drake and Neversink. Very high com., D. B. Keeler's Shirley. High com., F. Smith's Joe. Com., P. Dakin's Glen. *Bitches:* 1st, Highland Kennels' Tucka; 2d, Naso Kennels' Belle; 3d, Neversink Lodge Kennels' Jill. Reserve, E. A. Peck's Madge.—SMALL—CHAMPION—*Dog:* No entry. *Bitch:* C. M. Munhall's Patti M.—OPEN—*Dogs:* 1st, F. R. Hitchcock's Duke of Hessen; 2d, Locust Kennels' Vanderbilt; 3d, Dr. J. A. Wells's Puck. Very high com., C. L. Dick's Hamlet Sleaford, J. L. Breeze's Bang Grace and F. Vail's Naso of Devonshire. High com., W. Moller's Bon Ton. *Bitches:* 1st and reserve, F. R. Hitchcock's Penelope and Pocahontas; 2d, L. W. White's Anna Hutchinson; 3d, Field Trial Kennels' Kent Queen. Very high com., A. C. Burt's Nell. High com., D. G. Hartt's Frank. Com., J. P. Cartwright's Rosa. PUPPIES—*Dogs:* 1st, S. S. Banks's Ned B.; 2d, F. Wallrath's Jersey Bang Bang. Reserve, G. W. Waite's Mort of Naso. Very high com., F. Vail's Naso of Devonshire and D. G. Hartt's Custer and Mack. High com., W. T. Payne's Donald V. and D. G. Hartt's Scout. Com., Miss Maud E. Hughes's Gunner. *Bitches:* 1st, D. G. Hartt's Pansy; 2d, Stratford Kennels' Wanda; Reserve, G. Wilms's Mayflower. Very high com., L. W. White's Anna Hutchinson and F. Hoecker's Belle. Com., E. W. Mead's Bess.

ENGLISH SETTERS.—CHAMPION—*Dog:* Blackstone Kennels' Royal Albert; 2d, F. Windholz's Rockingham. *Bitch:* F. Windholz's Cora of Wetheral.—OPEN—*Dogs:* 1st, G. R. Wright's Rollo; 2d, R. T. Kennedy's Prince Royal II.; 3d, E. V. Hale's Pride of Dixie. Reserve, Chautauqua Kennels' Ted's Bang. Very high com., W. G. White's Forest Planter, J. L. Breeze's Gloster, S. B. Duryea's Ned, A. P. Vredenburg's Prince Jester, H. Hartley's Royal Victor and E. W. Jester's Cecil. High com., J. Hathewayn's Blue Jim, F. R. Hitchcock's Swatara, G. A. Robinson's Wood Powder, S. B. Foard's Rock Glen and E. W. Jester's Glen Rock. Com., L. Gardner's Roger. *Bitches:* 1st and high com., Blackstone Kennels' Lulu and Fairy Belle; 2d, G. W. Neal's Daisy Foreman; 3d and very high com., E. W. Durkee's Haphazzard and Chintz. Reserve, G. E. Schofield's Daisy. Very high com., J. H. Work's Queen, Chautauqua Kennels' Chautauqua Belle C., H. McIlwaine's Pandora and E. W. Jester's Wee Clara. High com., O. Rothmaler's Olivette and Compton Grove Kennels' Belva. Com., S. B. Foard's Ada Gladstone and Cannonsburg Cocker Kennels' Lady Rock.—PUPPIES—*Dogs:* 1st, J. O. Herne's Westmoreland; 2d, W. H. Pierce's Bravo. *Bitches:* 1st, E. L. Vredenburgh's Lady Rockingham; 2d, W. Fiske's Donna.

IRISH SETTERS.—CHAMPION—*Dog:* Dr. Wm. Jarvis's Elcho, Jr.; 2d, Max Wenzel's Tim. *Bitch:* Chestnut Hill Kennels' Mollie Bawn; 2d, H. E. Chubb's Zella Glendiff.—OPEN—*Dogs:* 1st, Chestnut Hill Kennels' Begorra; 2d, L. B. Wright's Glencho's Boy; 3d, Blackthorn Kennels' Bismark. Very high com., H. B. Goetchius's Chief II. High com., Max Wenzel's Catfoot. Com., F. M. Bennett's Shot and C. J. Stewart's Rodman. *Bitches:* 1st, J. J. Scanlon's Lulu III.; 2d, Dr. A. McCollom's M'Liss; 3d, W. Graham's Noreen IV. Very high com., H. T. Henshaw's Bessie Glencho. High com., Max Wenzel's Ready, T. J. Farley's Nellie Husted. Com., C. J. Stewart's Meg and Pet Glencho.

IRISH WATER SPANIELS.—1st, Stocky & Chisholm's Patsy O'Connor; 2d, B. F. Lewis's Colleen O'Donoghue.

CLUMBER SPANIELS.—CHAMPION—M. Richardson's Newcastle.—OPEN—1st, Mercer & Hill's Drake; 2d, M. Richardson's Tyne; 3d, J. M. Lawrence's Bateman.

FIELD SPANIELS.—CHAMPION—Compton Grove Kennels' Bandit.—OPEN—*Dogs:* 1st and 3d, A. C. Wilmerding's Newton Abbot and Donuil Dhu; 2d, Miss Beatrice Jones's Nig. Reserve, Compton Grove Kennels' Compton Monk. Very high com., Hornell Spaniel Club's Hornell Mikado. High com., Lieut. Henn's Blue Peter and A. J. Berriar, Jr.'s Bettie Lottimer. Com., R. M. Bull's Black Joe. *Bitches:* 1st, Compton Grove Kennels' Lotta; 2d, A. Laidlaw's Woodstock Nora; 3d, E. M. Oldham's Lady Abbot.

COCKER SPANIELS.—ANY COLOR—CHAMPION—C. H. Nelles's Brant.—OPEN—LIVER OR BLACK—*Dogs:* 1st, Compton Grove Kennels' Compton Boniface; 2d, A. Laidlaw's Master Shina; 3d, American Cocker Kennels' Dixie. Reserve, Hornell Spaniel Club's Hornell Jock. Very high com., Miss Lena Smithson's Jet. *Bitches:* 1st, A. Laidlaw's Woodstock Belle; 2d, Compton Grove Kennels' Compton Gladys; 3d, American Cocker Kennels' Queen Obo. High com., W. J. Fryer, Jr.'s Bella.—ANY OTHER COLOR—1st and reserve, A. Laidlaw's Robin and Rosy; 2d, Hornell Spaniel Club's Hornell Fancy; 3d, Dr. S. J. Bradbury's Loto. Very high com., G. E. Curtis's Gyp. High com., H. P. Lane's Nero and J. H. Davis's Mary. Com., R. J. Scabury's Rex.—PUPPIES—ANY COLOR—*Dogs:* A. Laidlaw's Robin; 2d, A. W. Day's Nonesuch. Reserve, American Cocker Kennels' Dixie. Very high com., J. Stacom's Black Joe and Hornell Spaniel Club's Hornell Dick. High com., W. H. & J. B. James's Racket.

COLLIES.—CHAMPION—*Dog:* Chestnut Hill Kennels' Scotilla. *Bitch:* Chestnut Hill Kennels' Flurry II.—OPEN—*Dogs:* 1st, 2d and reserve, Chestnut Hill Kennels' Dublin Scot, Strephon and Nullamore; 3d, J. Van Schaick's Surbiton. Very high com., J. D. Shotwell's Shirley, W. S. Sanford's Success and J. M. Waterbury's Lad of Pleasance. Com., G. A. Fletcher's Scotson. *Bitches:* 1st, 2d and reserve, Chestnut Hill Kennels' Luella, Spoiled Miss and Gem; 3d, J. C. Vail's Colina. High com., E. E. Sprague's Margaret. Com., H. A. Barry's Aurora, G. A. Draper's Queen Bess and J. M. Waterbury's Lassie of Pleasance.—PUPPIES—*Dogs:* 1st and 2d, Chestnut Hill Kennels' unnamed and Hector. Reserve and high com., J. M. Waterbury's two unnamed. Com., G. Bell's What's Wanted. *Bitches:* 1st and very high com., Chestnut Hill Kennels' Lorna Thorpe and Albe Thorpe; 2d, J. M. Waterbury's unnamed. Reserve, Associated Fanciers' Berlin Lassie.

BASSET HOUNDS.—1st, C. B. Gilbert's Bertrand.

DACHSHUNDE.—1st, L. & W. Rutherfurd's Rubenstein; 2d, C. Westerman's Polico; 3d, F. Houpt's Gretchen. Very high com., F. A. Watson's Kaiser.

BEAGLES.—CHAMPION—*Dog:* A. H. Wakefield's Little Duke. *Bitch:* A. H. Wakefield's Twinkle. OPEN—*Dogs:* 1st, very high com. and com., A. H. Wakefield's Fitzhugh Lee, Leader and Racer, Jr.; 2d, H. F. Schellhass's Trailer; 3d and high com., Somerset Kennels' Jupiter and Goodwood Rattler. Very high com., G. Laick's Rattler. *Bitches:* 1st, A. H. Wakefield's May Belle II.; 2d, Somerset Kennels' Jessie; 3d and high com., H. F. Schellhass's Trinket and Melody. Very high com., F. P. Quimby's Lizzie. *Puppies:* 1st, H. F. Schellhass's Riot.

BULLDOGS.—CHAMPION—*Dog:* J. E. Thayer's Robinson Crusoe. *Bitch:* J. E. Thayer's Britomartis.—OPEN—*Dogs:* 1st, J. P. Barnard's King Cole, Jr.; 2d, C. D. Cugle's Merry Monarch; 3d and reserve, T. W. Mills's Bruce and Guillermo. Very high com., J. H. Sanderson's Gimlet. High com. and com., C. L. Collins's Bendigo and Boss. *Bitches:* 1st, R. & W. Livingstone's Thespian; 2d, J. E. Thayer's Carmen; 3d, J. L. Boardman's Rose. Com., R. & W. Livingstone's Silver Pitcher. *Puppies:* 1st, J. H. Sanderson's Gimlet; 2d, A. Hoysradt's Rocksie. Very high com., T. W. Mills's Monarch.

BULL-TERRIERS.—CHAMPION—W. J. Comstock's Victoria.—OPEN—*Dogs:* 1st, E. D. Morgan's Cairo; 2d, J. M. Cox's Tony; 3d, H. A. Waldron's Silver. Very high com., J. Patterson's Judas. Com., S. Van Vecten's Lord Nelson, C. Powers's Dandy and E. D. Adams's Jack. *Bitches:* 1st, 2d and very high com., E. D. Morgan's Bonnie Princess, Queen of the May and Grand Duchess; 3d, Miss Fannie W. Ogden's Gipsey. High com., Miss Neilson's Rose. *Puppies:* 1st, H. D. & J. R. Steers's Queen Bess.

FOX-TERRIERS.—CHAMPION—*Dog:* F. Hoey's Valet. Reserve, A. Belmont, Jr.'s, Lucifer. *Bitch:* A. Belmont, Jr.'s, Safety. Reserve, A. Belmont, Jr.'s, Marguerite.—OPEN—*Dogs:* 1st and com., J. E. Thayer's Raby Mixer and Raby Jack; 2d, A. Belmont, Jr.'s, Bacchanal; 3d and high com., E. Kelly's Earl Leycester and Shovel. Reserve and high com., L. & W. Rutherfurd's The Warren Spider and Warren Jim. High com., W. T. McAleer's General Grant. *Bitches:* 1st, high com. and com., J. E. Thayer's Richmond Dazzle, Richmond Myrtle and Meersbrook Nan; 2d, reserve and very high com., A. Belmont, Jr.'s, Diadem, Tiara and Verdict; 3d and com., L. & W. Rutherfurd's Lady Warren Mixture, Warren Jostle, Warren Spangle and Warren Lusty. Very high com., E. Kelly's Flame.—PUPPIES—*Dogs:* 1st and com., A. Belmont, Jr.'s, Resolute and Faust; 2d and 3d, L. & W. Rutherfurd's Warren Spider and Warren Swagger. Reserve and high com., J. E. Thayer's Shameless Mixture and Sandy Mixture. *Bitches:* 1st, L. & W. Rutherfurd's Lady Warren Mixture; 2d, A. Belmont, Jr.'s, Tiara. Reserve, Mrs. V. Spader's Biddy. High com., Maitland & Bunker's Tarn.—WIRE-HAIRED—1st, W. M. Conner's Cheshire Laddie; 2d, J. E. I. Grainger's Tyke; 3d, S. Bell's Bristles.

BLACK AND TAN TERRIERS.—OVER 7LBS.—1st, G. Bell's Bessie; 2d, H. Muss's Lady. Very high com., F. Gebhard's Harry O.

SCOTCH AND HARD-HAIRED TERRIERS.—1st, J. O'Neil's Boxer; 2d, E. D. Morgan's Highland Laddie.

DANDIE DINMONT TERRIERS.—Prizes withheld.

BEDLINGTON TERRIERS.—1st, E. D. Morgan's Tees Rock; 2d and high com., W. H. Russell's Sentinel and Elswick Sue.

IRISH TERRIERS.—1st, C. T. Thompson's Geesela; 2d and very high com., J. O. Haine's Eileen and Dennis.

SKYE TERRIERS.—1st, W. P. Sanderson's Lass O' Gowrie; 2d L. H. Spence's Ben. Very high com., A. W. Powers's Tunis. High com., N. V. Ketchum's Teddie.

YORKSHIRE TERRIERS.—*Dogs:* 1st, J. F. Campbell's Sir Colin, 2d, Mrs. J. R. Gildersleeve's Dick. Reserve, A. W. Cabot's Lancashire Star. High com., J. Marriott's Charlie and J. Maddox's Prince. Com., J. Marriott's Niger and T. D. Burke's Bright. *Bitches:* 1st, B. J. Harrison's Mossey; 2d, W. Brooks's Midget. Very high com., D. J. McElroy's Polly and T. D. Burke's Beauty.

TOY TERRIERS.—1st, Mrs. G. Landau's Prince; 2d, Mrs. E. Keeler's Yum Yum. Very high com., Miss K. Nelson's Tiney. High com., M. A. Hanchett's Mousey.

PUGS.—CHAMPION—No entry.—OPEN—*Dogs:* 1st, P. F. Turner's Victor; 2d, Miss M. E. Bannister's Jumbo, Jr.; 3d, G. W. Fisher's Tom Thumb. Very high com., Mrs. H. Montgomery's Click and Dr. H. R. Surles's Rob Roy. High com., Mrs. R. Endicott's Wrinkles. *Bitches:* 1st, 2d and very high com., Mrs. Chas. Wheatleigh's Yuma Yuma, Yum Yum and Victoria; 3d, Mrs. Louisa Reed's Flora. Com., Mansfield & Hinckley's Little Daisy. *Puppies:* 1st, Mrs. F. Senn's Tootsie Sloper; 2d, withheld.

KING CHARLES SPANIELS.—1st, F. B. Fay's Milwaukee Charlie; 2d, W. Phillips's Roscius; 3d, A. W. Lucy's Duke. Very high com., Mrs. Lawson's Charley and Mrs. Kistemann's Champion. High com., Mrs. F. Senn's Prince. Com., J. S. Bacon's Lady.

BLENHEIM SPANIELS.—1st, W. Phillips's King Victor; 2d, Miss Mamie Phillips's King Pippin.

PRINCE CHARLES SPANIELS.—1st, Mrs. Kistemann's Lilly; 2d, withheld.

RUBY SPANIELS.—1st, 2d, high com. and com., King Charles Kennels' Princess Alice, Ruddygore, Red Rose and Red Tycoon.

JAPANESE SPANIELS.—1st and 2d, Miss Eugene Clark's Kobe and Kuma.

ITALIAN GREYHOUNDS.—1st and 2d, Miss Edith M. Van Buren's Fanny and Cupid.

MISCELLANEOUS.—LARGE—1st, Glencoe Collie Kennels' Sir Lucifer; 2d, withheld; 3d, G. H. Watson's Carlo. SMALL—Equal 1st, Mrs. H. T. Foote's Me Too and Miss Helen Dauvray's Chiquita; 2d, Mrs. A Grinnell's Pedro; 3d, W. B. Anderson's Cliquot.

SPANIELS AT PHILADELPHIA.—*Editor Forest and Stream:* In Mr. C. H. Mason's critique on the Philadelphia show, he says of the Clumber spaniels Johnny and Drake that it would "spoil a great deal of fun" were he to inform the "unfortunate gentleman who has never seen a typical Clumber" why Drake is a much better dog than Johnny. Would Mr. Mason have any objections to foregoing the amusement he speaks of by informing your readers in what way Drake beats Johnny and is a much better dog? Three judges—Messrs. Hemingway, Wilmerding and West, all members of the American Spaniel Club—have decided that Johnny is the better of the two, and I happen to know that in his native place (Ottawa) Johnny is considered much the best, and there are good judges of the breed there. Just a word with regard to Drake's much harped on "domed" skull. Mr. Rendle is right, although he uses an unfortunate term to convey his meaning. Mr. Mason need not remind me that the "marked stop" is an important feature in the head of the Clumber spaniel, but Drake's forehead is rather too heavy, and the top of his head is round, not perfectly flat, as it should be. This, I think, is what Mr. Rendle wishes to convey, and he is right. The only fault which can be found with Johnny's head is that it has not quite sufficient depth of brow, and in the opinion of many he does not want even in this particular. Let Mr. Mason refer to the fourth edition of "The Dogs of the British Islands," and turn to the illustration of Bruce, of whom Stonehenge says that he may be regarded a good type of the breed. Let him also look at the illustration in *Le Chenil* of Oct. 14 last of Dot II., one of the Duke of Portland's famous kennel. He will see that neither of these dogs has a deep stop. I do not quote these illustrations to prove that depth of stop is not a desideratum in a Clumber's head, but I think that as these dogs are said to be typical English Clumbers, despite their lack of stop, Johnny, who has far more than they have, is not a long way off the mark. Of course Mr. Mason is obliged to write in the strain he does to palliate his Providence blunder. It is only to be expected. I trust, however, that he will sacrifice his prospective amusement, and enlighten the "unfortunate gentleman" and at the same time your readers. Kindly insert this at as early a date as possible.—A MEMBER OF THE AMERICAN SPANIEL CLUB.

THAT BUFFALO SHOW.—Hornellsville, N. Y., April 29.—*Editor Forest and Stream:* I would say to Mr. Cook, Secretary of Buffalo Kennel Club No. 2, that John Lewis, one of the directors of club No. 1, came here to Hornellsville and engaged me as superintendent. At that time I had never heard of Mr. Chadeayne. I send you part of premium list and catalogue; entry No. 88 was made by and the bitch is owned by the treasurer of club No. 2, so it is likely he knew what he was doing.—J. OTIS FELLOWS.

STANDARDS AND JUDGES.

Editor Forest and Stream:

The dog show season will soon be over and your columns will not be crowded with show reports, and our few capable non-sporting judges will have time to do a little missionary work among us benighted outsiders. I think that Mr. Mason, Mr. Watson and Mr. Barlow would do real service to doggy interests, and I am certain they would contribute to the clear understanding by us Gentiles of judging, if they would give us a "precis" of how judging is done, on what grounds the awards are made, what determines a judge in placing this dog first, that second and t'other nowhere, and how far they take standards into consideration. Remember, I am asking this favor honestly and in good faith, not to put anybody in a hole. I take it for granted that the standard fairly and honestly established by any specialist club for the breed they represent is to be accepted as portraying an ideal of what the breed should be, and, of course, I take mastiffs as an illustration. Here Mr. Mason can answer better than anybody I know, for he has displayed that rare qualification in a judge of detecting real merit where it was not supposed to exist, and putting forward a dog that other judges had treated contemptuously; as, for instance, that great dog Ilford Cromwell getting he.'s, vhe.'s, seconds, and being generally despised, until Mr. Mason put the seal of merit on him at the New Haven show; and, with the exception of Mr. Wallack, Mr. Mason is the only judge that has appreciated just what the merits of Nap are, a dog the exact counterpart of such cracks of the olden time as Turk, Hanbury's Prince, etc., but not of the fashionable type of to-day. It has been so long since Mr. Watson judged mastiffs that I cannot speak in such terms of him, and, besides, he put my dog De Buch first, which he shouldn't have done, as Rover had the pull on him. Nevertheless, Mr. Watson can give us the philosophy of judging as well as anybody, and I hope the pages of the *American Kennel Register* will be ornamented by his philosophizing.

Now the mastiff standard expressly requires that a dog must have a square muzzle, and emphasizes this by strictly defining a "square" muzzle as "forming a right angle with the upper line of nose;" that the loin must be "broad, flat and muscular;" and that the hocks must be "bent." Well and good; the two latter are absolute necessities, not merely to appearance, but to strength, power and even moderate activity. Well, then, if a dog is notoriously deficient in all or any of the three, and thereby expressly contradicts the fixed requirements of the standard, how can it be a good specimen? How can a judge give a first to a dog that is just what the conservators of the breed say the breed must not be? I cannot see how superexcellence in some other direction can atone for fundamental violations in this. Even accept Mr. Wynn's scale as the existing authority (as it probably is, none other being in existence), can perfection, absolute perfection in head, with its 42 points, count as condoning positive contradictions in hocks? Then again, perfection in head requires a square muzzle; how then can a dog whose muzzle is 10 or 15 degrees out of square have a good head? Yet I have seen both Mr. Mason and Mr. Watson recently commend an animal the worst undershot I know of, and with hocks like an elephant's. Now take such a mastiff as we can recall half a dozen specimens of, who have truly square muzzles, broad flat skulls, admirable bodies, good legs, good action, and with heads certainly short as compared with any other breed, say much shorter than Alston's Colonel, whose muzzle was 4½in. to a skull 7½in. long, or Hanbury's Prince, or Turk, still further out of the way, yet not as short as certain "elephant"-hocked, frightfully undershot dogs. On what principle of rational interpretation can such a dog said to be worse than one who contradicts the standard in vital points? If a dog is not perfection in hocks, a bit straighter than we would like, or not as deep and thick in loin as he should be, yet still fairly coming within the definitions of the standard in these points and very much better in head than one that surpasses him in hocks, body and loin, I can see where the first mentioned is the better dog, on the principle of the superior value attaching to head properties; both dogs come fairly within the definitions, and the one excelling in the most highly valued quality is evidently the best. Suppose you would give the mastiff standard to—say Mr. Davidson, ask him to forget that he ever saw a mastiff, but to take this standard, study it thoroughly and form an idea of the dog intended to be portrayed by it and then take it into a show and apply its teachings to the selection of the best dog. Do you not agree with me that he would pass by many and many of our crack winners and say "Why this is'nt a mastiff, it has'nt a square muzzle, its hocks bend the wrong way, it has no loin at all for useful purposes." Then tell the judge that that is the winning type and he would ask "Are you a fool? or do you take me for one?" Yet is not this just what a standard is for? The judge who thoroughly knows the breed doesn't want instruction as to what its characteristics are, and the novice naturally expects, and on the strongest possible grounds of right, that the standard will teach him what is right and what is wrong about various specimens. Of course I do not say that the standard will make a competent judge of a novice; as Mr. Wynn succinctly defines it, "If the judge doesn't know his work *as a judge*, his knowledge of the breed is no use to him;" but it can hardly be denied that the standard should be applied with the same sound judgment and reasonable interpretation, on the same principles of common sense that all law is interpreted by in our courts.

I fear to stir up a hornet's nest about my ears by saying a word about collies, and although I don't pretend to know a good from a bad collie, I think I may be allowed an opinion on collie men and collie standards, as far as the plain English of them goes; and does the winner of to-day answer the requirement of the standard so recently set up of a "moderately wide skull?" Yet didn't the London *Stock-Keeper* lately call the attention of English collie judges to the woeful divergence of their judging from the standard of the English Collie Club? Surely mine ancient foe, "Porcupine," will admit that the *Stock-Keeper* is *the* collie paper.

Further along comes up another question. Which should the judge do, award prizes on the lines that other recognized judges have done, only striving to consistently apply the most obvious deductions from their decisions? Or should he go further back and apply the principles of the standards? It seems to me that the former involves the conclusion that all standards are to be taken in a "Pickwickian sense," and it is significant that the very worst offenders against the mastiff standard are the very lights of the O. E. M. Club who prepared it. They set up the requirements of square muzzle, bent hocks, etc., and then went to work to breed the most conspicuous departures from it that were within the limits of possibility. Setting up a standard and then putting Crown Prince up as a wonder, when he was about as flat a contradiction as well could be; glorifying him as a stud dog, when ninety-nine out of the hundred of his get have hocks as straight as a walking stick. If he ever got another than Debonnair with decent hocks, it didn't come to this side of the water.

The English Collie Club seem to have sedulously emulated the O. E. M. Club in their revival of the ruling principles of the Pickwick Club, but, like most imitators, they are but feeble strivers after their exemplars. Mark you how a real authority acts when he judges; how Mr. Hanbury put Prince Regent over Crown Prince; and how Mr. Wynn put Beau over The Shah when the latter was held a world-beater, and the astonishment Mr. Nichols would give "the natives" would be more panoramic than the results of Mr. Mason's independence about Ilford Cromwell.

To sum it up in two conundrums: Why do not judges give prizes on the lines the standards indicate? Or why do not breeders change the standards to fit the dogs that win under it?

In such an inquiry as I make, it is almost impossible to clearly state it, with full significance, without reference, by name, to judges and dogs. This generally raises a stir from the owners of dogs that may be disparaged, and the judge to whom lack of infallibility is imputed immediately boils over; and as I wish to restrain my question and any discussion that may arise on it entirely to principles, not individuals, I may not have made myself as clear as I would wish to do. W. WADE.

HULTON, PA., April 27.

THE PITTSBURGH JUDGING.

Editor Forest and Stream:

In your report of the Pittsburgh show your reporter has treated me in two instances at least most unfairly, and says what he himself knows are not the facts, and therefore not true. In order that I may not be misunderstood and enable me to more fully explain, I will quote his own writing, viz.; "It is utterly impossible for any man who has not been in a good school for a number of years, to successfully handle one-half of the classes Mr. Goodman undertook to pass on. He himself discovered this before he got through with his work, and asked us to help him out of the dilemma his lack of foresight had placed him in."

Now the fact of the matter is, that I was in no dilemma, as he terms it, although he would have your readers infer that the judging had actually come to a stop, or, in other words, that I was stuck and could not go on without his assistance, when in reality and in fact, the judging had all been finished the day before, except some of the specials. The particular special in which your reporter gave his assistance, and the only one for which he was asked to assist, was the one of $25 for the best kennel of terriers. For reason of my own, not necessary to mention here, I did not wish to make the decision entirely on my own responsibility, and with the consent of Mr. Naylor, one of the contestants for this special, your reporter was asked to assist. This is the extent of his helping me out of the dilemma. It is plainly seen that he is trying to make a mountain out of a mole hill.

The other part of his report, to which I have to take exception, and which is wholly untrue, is where he says I asked the veteran Heald "if both dogs were owned by the popular exhibitor from Lancaster." This, as I said before, is false. I never asked any man (that is either before or during the judging) whom the dogs were owned by. I went to Pittsburgh to judge dogs, and not their owners, and right or wrong, I gave the ribbons to those I thought worthy of them. I find no fault with his criticism on my judging. That I may have made some blunders is possible, but in his preface he would have your readers believe that nearly every dog was wrongly placed, which, however, he fails to prove in his criticism on the dogs further on.

HARRY L. GOODMAN.

AUBURN JUNCTION, Ill.

WORKING AND NON-SPORTING SPANIELS.

Editor Forest and Stream:

I should like to ask the American Spaniel Club "whither are they drifting?" and what kind of a non-sporting cocker they are trying to evolve. It is surely time that this nonsense was stopped or else the club will soon be the laughing stock of the country. The oldest specialty club in America should know better than to foster a dog that looks like a cross of a crocodile and a sausage, with his long back and short crooked legs he is not worth keeping for the work that he can do, only fit to sit on a show bench and exhibit his glossy coat and long feather, and the more of the crocodile-weasel-dachs cross he shows the more prizes he can win.

I helped to make the standard and I know it was not intended to fit the non-sporting cocker of to-day, only an old man's dog that has not grit or life enough in him to pull a "settin' hen orfen her nest." Crippled as I am I could walk down half a dozen of them in a day. The judges are to blame for this, but "it's English you know," and they must follow the style, but if they will read the "Wanderer's" article in *Vinton's Gazette* of April 1, they will then see that English sportsmen are awakening to the fact that show spaniels are not suitable for work, and a judge of spaniels should be a man that knows the work required of a dog.

At Boston they had a great class of spaniels, but the best spaniel trainer in America wrote me that he would not have the lot as a gift to train for work, and he has ordered a pair of working spaniels of me. You see I am forced to breed two kinds, one for the show bench, and one for the field.

I am aware that this will not please many of my friends, and I am also aware of the fact that the cocker before the A. S. Club was organized was a poor, light-bodied, long-legged specimen, but he soon improved under the standard. But why not let well enough alone, or why try so hard to overdo the thing? Does the standard call for the dog that you and your judges have forced to the front? Not much, my dear friends.

In this breeding for long bodies and short legs you have overdone the thing, and you have forgotten all about the working qualities of a cocker, and from a graceful, well-built, active dog you have evolved a nondescript, lumbering, plodding wretch only fit to be looked at and used as a fertilizer.

The standard says "a cocker spaniel should be eminently a well-built, graceful and active dog, and should show strength without heaviness or clumsiness." That does not mean that he should be 6in. at the elbow and his whole length from nose to root of tail 35in.

"Head of fair length, muzzle square, skull rising in a graceful curve from the stop." That does not mean that the head should be as heavy as a Clumber's, with a prominent brow, or skull as flat as a collie's.

I think that will do for this time, and that it will set the boys to thinking; so I hope they will see their errors and reform at once, or else I shall be compelled to tell them what I know about working cockers. J. OTIS FELLOWS.

DETROIT SHOW.—The following changes have been made in premium list: Classes 38, field spaniels; 43, cocker spaniel puppies; 87, champion deerhounds; 88, open deerhounds; 92, champion bulldogs; 107, Scotch terriers; 109, black and tan terriers under 7lbs.; 110, Dandie Dinmont terriers, have been divided into sexes with the same prizes for bitches as for dogs. Classes for bitches being half numbers as 38½, 43½, 87½, etc. We have decided to make classes as follows: 38a, deerhound dog puppies; 88½a, same for bitches; 84½, champion Ulmer bitches. We have added and received about fifty more special prizes. The age of all setter puppies has been changed to 15, and of all pointer puppies to 12mos. The weight of cocker spaniel bitches should read 28lbs. wherever printed 24lbs. in the premium list. We are receiving a good many entries and the applications for additional blanks are coming in by the dozens. It is our aim to be third on the list this year in regard to number of entries, and we have done all in our power to make the show a financial success. Railroad and steamer excursion from all parts of Canada, Michigan and Ohio have been arranged for the week of the show and everything points to an enormous attendance. We have decided to withdraw the classes 1 and 2, extra champion English setters and classes 20 and 21, extra champion pointers, as no provision is made for them in the A. K. C. rules.—CHAS. WEIL, Sec.

PUG DOG CLUB.—The first general meeting of the above club will be held at the Westminster Kennel Club's show at New York on May 4, 1887, at 3 P. M. It is hoped the attendance will be large.

VACCINATION FOR DISTEMPER.

Editor Forest and Stream:

I have been much interested of late in looking over an old bound volume of the *American Turf Register and Sporting Magazine*, published at Baltimore, Md., September, 1830 to August, 1831 inclusive. Its pages, as might be supposed from the title, are mostly given up to the horse, pedigrees, racing, etc., but at that time, as now, there were dog and gun men who had something to say, and I find a great deal both instructive and amusing in their writings; and I imagine, could these correspondents come back and read the sportsman's letters of to-day and find the questions that they themselves had finally settled more than fifty years ago still being discussed, they would surely think that the world had gone backward. How is this? In a note, July 24, 1830, "on the power of game to withhold the odor that betrays them to their pursuers," the *Register* correspondent is of the opinion that foxes have this power as well as quail, while they are permitted to keep their toes contracted. He had seen a fox steal away on his toes, and if he had not been driven out of that gait the dogs would never have been able to follow him.

The percussion gun at this time had superseded the flint, still the old flint had its advocates, just as the muzzleloader has to-day. A correspondent from Prairie du Chien sends a copy of his journal for September, 1830; total 308 birds killed, mostly grouse, the rest pheasant, woodcock, partridges and ducks. He says: "I hunted with a double-barrel percussion gun made by Constable, of Philadelphia. It has never yet missed fire. I was once upset in a canoe and lost it for several minutes in 6ft. of water, nevertheless both barrels fired clear. I have used a percussion gun for the last four seasons, and give it a decided preference over the flint; indeed, I would not for my own use give a quarter of a dollar for the best flint gun ever made." An editorial in the same number notes that a Mr. Gist while shooting received an injury in the forehead by the percussion cap flying off. "We understand an opening has lately been made in the front of the hammer that falls on the nipple to let off any pieces of the cap."

The choice of a gun, length of barrel, size of bore, size of shot, quantity of powder and shot, comparative merits of pointers and setters—all these come in for their share the same as to-day, and one man goes so far as to say in his opinion a gun bored a little smaller at muzzle than breech shoots some closer.

But what struck my eye this evening and prompted this letter to you was an article on vaccination. A correspondent at Waverly, Virginia, May 4, 1831, on "Vaccination a Preventive against Distemper," says: "I would advise your friends in future to vaccinate their puppies, and they will never be again under the necessity of administering their sovereigns for distemper. I shall not endeavor to explain the *modus operandi* of this preventive because I am ignorant of it, but leave it to the speculation of medical men, who can account for it preventing small-pox and whooping cough in children; but this much I know, I have made satisfactory experiments and have no hesitation in pronouncing it efficacious. The best place for introducing the matter I find to be the inside of the ear, which, being pendulous, prevents the dog scratching when the virus has excited inflammation."

I would like to ask if any readers of FOREST AND STREAM have tried, or know of this experiment being tried. It is certainly a simple and inexpensive thing to do, and if a preventive, or will in any degree mitigate the severity of this dread disease, it is well worth a trial. Make the experiment on one or two pups of a litter, and note results. In the fall of 18875 I had two pointer puppies, brother and sister, four months old, and on the strength of this article I took a vaccine point, scarified the inside of the ear, rubbed in the vaccine and covered with court plaster. I do not recollect that either suffered any inconvenience from it; the bitch lived to be two years old, when she tried conclusions with a locomotive on the Boston and Albany Railroad and was killed. The dog lies by my chair now as I write, and is, for a veteran of twelve years, as healthy a specimen as can be produced. Neither of them ever had any sign of distemper. Still I have known many dogs to escape without this precaution, so you must take the article and my experience for what they are worth. "No charge for advice—experiments at owner's risk." I, for one, should like more light on the subject, and any one who has had any part, or should attempt any in future, will report his experience through the FOREST AND STREAM. WM. M. WILLIAMS.

SPRINGFIELD, MASS.

GREYHOUNDS AT PHILADELPHIA.—New York, April 29.—*Editor Forest and Stream:* Replying to Mr. H. W. Huntington's article in your issue of April 28, regarding my greyhounds at Philadelphia, I think it would have been more to Mr. H.'s credit if, before writing or protesting, he had secured the facts relating to the case, as also Mr. C. H. Mason. After thinking seriously over the article mentioned I am led to believe it as a rather sharp trick on Mr. H.'s part to have all my dogs disqualified, that he may have the field entirely to himself. If he is smarting under the defeat of his new importation, Lancashire Witch, he knew perfectly well that she must compete with Mother Demdike, who had beaten her before she ever saw this country, and certainly the climate has not changed her formation. When I entered Pembroke at Boston he had only two first open class prizes to his credit (Newark, March, 1886, and Waverly, September, 1886). I entered him for the Newark show, March 22 to 25, where he secured first prize, and also Boston show, which entries closed March 19. You will readily see I entered my dog at Boston correctly "and in a gentlemanly way." It was therefore the duty of the Boston club to have him transferred to the champion class, which they failed to do. See A. K. C. Rule 9. As to the puppy class I have only to offer the commendable explanation I made at Philadelphia. On Monday, April 18, P. M., one day before show opened, I explained to the gentlemen in charge, "and members of the club," the cause of Stormy Day being absent, and asked if they would give me permission to enter Nick, his litter brother; this they readily did, and crossed the first-named dog off their sheets and placed the name Nick thereon. I ask of the dog public if this was ungentlemanly on my part? I acted honorably in connection with all that was done, not entertaining the least suspicion of fraud on my part. If, through their error, my dog is disqualified, certainly I must not be made to suffer. I am ready at any time to appear before the A. K. C. and state my case, which I believe will, as I have stated, be sustained by that worthy body.—CHAS. D. WEBBER.

BULL-TERRIERS AT PHILADELPHIA.—April 27.—*Editor Forest and Stream:* I would like to make a few remarks upon Mr. Barlow's judging of bull-terriers at the Philadelphia show. First was given to Modjeska, a bitch with a blue eye, and White Violet, a very fair all-round bitch with two dark eyes, was placed second. In 1885 I was showing Young Venom; it is well-known she has a walled eye, and Mr. Barlow placed a weedy, thick-headed, round-eyed one over her. When he handed me the ribbon in the ring, I asked him the reason for making the award as he did. He replied, "I don't like a walled eye and could never give a dog a first prize that has one." He must have changed his opinion very much since that time. In England a dog would be disqualified or put back on that account. The standard calls for black eyes. I should like to hear the opinions of some of the bull-terrier breeders and fanciers on this subject and have this matter settled, so that we shall know what standard to breed to. For instance, how would a fox-terrier or black and tan terrier look with a blue eye and what notice would he get from a terrier judge?—EDWARD LEVER (Philadelphia).

EASTERN FIELD TRIALS CLUB.—There will be a meeting of the Eastern Fields Trials Club at 44 Broadway, New York, May 10, at 3:15 P. M. As this is the last regular meeting until September a full attendance is requested.

KENNEL NOTES.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Pounce. By W. A. Dupee, Chestnut Hill, Pa., for black, white and tan Gordon setter dog, whelped July 7, 1885, by E. L. Dorr's Tom (Shot—Lady) out of A. Dorr's Lassie (Baily's Tom—Fay).

Flirt II. By Alf Watts, Jr., Brantford, Ont., for black, white markings, cocker spaniel bitch, whelped June 3, 1886, by Brag (Wildair—Little Buttercup) out of Ruby (Sport—imported Flirt).

Donegal Boy. By C. P. Doerr, Chicago, Ill., for red Irish setter dog, whelped Jan. 13, 1887, by Glencho (Elcho—Noreen) out of Maid (Brag—Effie).

Hebe Brant. By Mansfield & Hinckley, New Haven, Conn., for solid black cocker spaniel bitch, whelped Dec. 20, 1886, by Brant (Obo II.—Blackie III.) out of Hebe (Obo II.—Belle).

Lady Fay. By Mansfield & Hinckley, New Haven, Conn., for black and tan King Charles spaniel bitch, whelped Oct. 31, 1886, by Alick (Alexander the Great—Nelly) out of Nell Gwynn II. (Jumbo II.—Nell Gwynn).

Maggie Dale. By Wm. P. Mills, Baltimore, Md., for blue belton English setter bitch, whelped Jan. 12, 1887, by Frank Dale (Grouse Dale—Lady Thorn) out of Donna (Royal Blue—Dryad).

Bric-a-Brac and Beauvoir. By Floyd Vail, Jersey City, N. J., for liver and white pointer dogs, whelped April 26, 1887, by Bracket (Graphic, A.K.R. 2411—Bloomo) out of Lady Snow (A.K.R. 3651).

Lady Bracket. By Floyd Vail, Jersey City, N. J., for pointer bitch, whelped April 26, 1887, by Bracket (Graphic, A.K.R. 2411—Bloomo) out of Lady Snow (A.K.R. 3651).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Constance—Blue Cap II. F. B. Zimmer's (Springfield, Mass.) beagle bitch Constance (A.K.R. 2912) to his Blue Cap II. (A.K.R. 4008), April 26.

Goodwood Music—King William. S. C. Graff's (Cadiz, O.) beagle bitch Goodwood Music (A.K.R. 3811) to his King William (A.K.R. 4314), April 23.

Belle—Suil-a-Mor. T. Steward's (Manchester, N. H.) Irish setter bitch Belle (A.K.R. 4086) to Jos. Hayes's Suil-a-Mor (Claremont—imported Dido), April 8.

Nora—Suil-a-Mor. Jos. Hayes's (Manchester, N. H.) Irish setter bitch imported Nora (Cigar—Belle) to his Suil-a-Mor (Claremont—imported Dido), April 28.

Raby Belle—Mixture. John E. Thayer's (Lancaster, Mass.) fox-terrier bitch Raby Belle (Raby Tyrant—Jaunty) to his Mixture (A.K.R. 2697), March 31.

Lady Mixture—Raby Mixer. John E. Thayer's (Lancaster, Mass.) fox-terrier bitch Lady Mixture (Mixture—Warren Lady) to his Raby Mixer (Raby Mixture—Richmond Olivebud), April 3.

Raby Susie—Mixture. John E. Thayer's (Lancaster, Mass.) fox-terrier bitch Raby Susie (Raby Tyrant—Jaunty) to his Mixture (A.K.R. 2697), April 4.

Lorna II.—Chieftain. John E. Thayer's (Lancaster, Mass.) deerhound bitch Lorna II. (A.K.R. 336) to his Chieftain (A.K.R. 3726), April 11.

Jaunty—Raby Mixer. John E. Thayer's (Lancaster, Mass.) fox-terrier bitch Jaunty (A.K.R. 2696) to his Raby Mixer (Raby Mixture—Richmond Olivebud), April 11.

Britomartis—Hillside. John E. Thayer's (Lancaster, Mass.) bull bitch Britomartis (A.K.R. 2594) to his Hillside (A.K.R. 4726), April 9.

Rhodora—Tippoo. John E. Thayer's (Lancaster, Mass.) bull bitch Rhodora (A.K.R. 2596) to his Tippoo (A.K.R. 390), April 27.

Josephine—Tippoo. John E. Thayer's (Lancaster, Mass.) bull bitch Josephine (A.K.R. 388) to his Tippoo (A.K.R. 390), April 8.

Miss Mixture—Mixture. John E. Thayer's (Lancaster, Mass.) fox-terrier bitch Miss Mixture (A.K.R. 4111) to his Mixture (A.K.R. 2697), April 19.

Richmond Olive—Mixture. John E. Thayer's (Lancaster, Mass.) fox-terrier bitch Richmond Olive (A.K.R. 2699) to his Mixture (A.K.R. 2697), April 22.

Carmer—Robinson Crusoe. John E. Thayer's (Lancaster, Mass.) bull bitch Carmer (formerly Patti, A.K.R. 2528) to his Robinson Crusoe (A.K.R. 2397), April 12.

Flossie—Royal Monarch. Locust Grove Kennels' (Manton, R. I.) English setter bitch Flossie (Pete—Lotta) to C. C. Gray's Royal Monarch (Dashing Monarch—List), April 18.

Juno—Memnon. Dr. Geo. Stanton's (Simcoe, Ont.) greyhound bitch Juno to Terra Cotta Kennels' Memnon (Caliph—Polly), April 23.

Flirt II.—Guy. Alf Watts, Jr.'s (Brantford, Ont.) cocker spaniel bitch Flirt II. (Brag—Ruby) to F. Fawkes's Guy (A.K.R. 4537), March 8.

Nell—Don Quixote. Don Quixote Kennels' (Worcester, Mass.) pointer bitch Nell (Ritchie—Nell) to their Don Quixote (Robin Adair—Lady Belle), April 30.

May F.—Beppo III. H. F. Farnham's (Portland, Me.) pointer bitch May F. (A.K.R. 3131) to Graphic Kennels' Beppo III. (Priam—Meally), April 1.

Belgrave Viola—Lucifer. A. Belmont, Jr.'s (Hempstead, L. I.) fox-terrier bitch Belgrave Viola (Belgrave Joe—Viola) to his Lucifer (Splinter—Kohinoor), March 10.

Safety—Lucifer. A. Belmont, Jr.'s (Hempstead, L. I.) fox-terrier bitch Safety (Darkie—Dalcie) to his Lucifer (Splinter—Kohinoor), April 11.

Festive—Resolute. A. Belmont, Jr.'s (Hempstead, L. I.) fox-terrier bitch Festive (Bacchanal—Blemton Arrow) to his Resolute (Result—Diadem), March 14.

Damietta—Resolute. A. Belmont, Jr.'s (Hempstead, L. I.) fox-terrier bitch Damietta (Bacchanal—Richmond Delta) to his Resolute (Result—Diadem), March 24.

Blemton Gingerbread—Bacchanal. A. Belmont, Jr.'s (Hempstead, L. I.) fox-terrier bitch Blemton Gingerbread (Spice—Blemton Arrow) to his Bacchanal (The Belgravian—Bedlamite), April 13.

Marguerite—Bacchanal. A. Belmont, Jr.'s (Hempstead, L. I.) fox-terrier bitch Marguerite (Brokenhurst Spice—Daisy) to his Bacchanal (The Belgravian—Bedlamite), March 23.

Betty Chimer. Chas. Nelles's (Brantford, Can.) beagle bitch Betty (Searcher—May Bell) to Woodbrook Kennels' imported Chimer (Jack—Dandy), April 7.

Tiney—Rattler III. Chas. Stauf's (Baltimore, Md.) beagle bitch Tiney (Trailer—Music) to Woodbrook Kennels' Rattler III. (Rattler—Music), April 11.

Music—Rattler III. Henry W. Archer's (Belair, Md.) beagle bitch Music to Woodbrook Kennels' Rattler III. (Rattler—Music), March 25.

Vixen—Rattler III. Frank P. Quinby's (New York) beagle bitch Vixen (Flute—Queen) to Woodbrook Kennels' Rattler III. (Rattler—Music), March 8.

Lou—Chimer. Woodbrook Kennels' (Baltimore, Md.) beagle bitch Lou (Kino—Fly) to their imported Chimer (Jack—Dandy), April 1.

Madge—Nick of Naso. Chas. Peck's (New York) pointer bitch Madge (Jimmie—Lucille) to Naso Kennels' Nick of Naso (Naso II.—Pettigo), April 13.

Nan—Nick of Naso. Jas. Swain's (Bronxville, N. Y.) pointer bitch Nan (A.K.R. 355) to Naso Kennels' Nick of Naso (Naso II.—Pettigo), April 15.

Belle—Nick of Naso. J. G. Jacobus's (Jersey City, N. J.) pointer bitch Belle to Naso Kennels' Nick of Naso (Naso II.—Pettigo), April 10.

Hawthorne Belle—Memnon. Terra Cotta Kennels' (Toronto, Ont.) greyhound bitch Hawthorne Belle (Doubleshot, A.K.R. 73—Clio) to their Memnon (Caliph—Polly), April 29.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Nell III. F. H. F. Mercer's (Ottawa, Ont.) Clumber spaniel bitch Nell III. (Smash II.—Romp II.), April 25, two dogs, by his Johnny (Ben—Joan).

Lady Snow. Floyd Vail and G. L. Wilms's (Jersey City, N. J.) pointer bitch Lady Snow (A.K.R. 3651), April 26, nine (five dogs), by Graphic Kennels' Bracket (Graphic—Bloomo); one bitch since dead.

Cremorne. J. E. Gill's (Franklin, Pa.) pointer bitch Cremorne (Flake—Lilly), April 26, two, by Wm. Titterington's Trinket Bang (Croxteth—Trinket).

Rue I. Bayard Thayer's (Boston, Mass.) pointer bitch Rue I. (Snapshot—Ruby), April 27, ten (five dogs), by Mr. Perkins's Mainspring.

Minnie B. Naso Kennels' (Ramsey's, N. J.) pointer bitch Minnie B. (Bang Bang—Fan Fan), March 27, five (four dogs), by their Nick of Naso (Naso II.—Pettigo).

Nellie. C. W. Fleece's (New York) pointer bitch Nellie (Jimmie—Temptation), April 10, five (three dogs), by Naso Kennels' Nick of Naso (Naso II.—Pettigo); five since dead.

Thorn II. Woodbrook Kennels' (Baltimore, Md.) beagle bitch Thorn II. (Sport—Thorn), April 25, five (three dogs), by Flute Ringwood (Ringwood—Trinket).

Media. A. Belmont, Jr.'s (Hempstead, L. I.) fox-terrier bitch Media (Arius—Nancy Lee), April 8, six (two dogs), by J. C. Tinue's The Moonstone (Roysterer—Diadem).

Blemton Arrow. A. Belmont, Jr.'s (Hempstead, L. I.) fox-terrier bitch Blemton Arrow (Royal—Blemton Dart), Feb. 1, three (two dogs), by his Bacchanal (The Belgravian—Bedlamite).

Brunette. Chas. E. Bunn's (Peoria, Ill.) mastiff bitch Brunette (A.K.R. 3549), April 12, six (three dogs), by L. Cole's Turk III. (A.K.R. 4049).

Ruby II. C. Tucker's (Stanton, Tenn.) English setter bitch Ruby II. (Druid—Ruby), April 22, nine (four dogs), by P. H. Bryson's Gladstone.

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Van. Fawn, black points, pug dog, whelped Jan. 14, 1887, by Doc (George—May) out of Rosy, by Col. R. J. Hamilton, Springfield, Mass., to Wm. P. Esterbrook, Rahway, N. J.

Nell. Liver and white pointer bitch, whelped April, 1883, by Ritchie out of Nell, by A. H. Aldrich, Melrose, Mass., to Don Quixote Kennels, Worcester, Mass.

Vixen. White and tan beagle bitch, whelped Aug. 11, 1883, by Flute out of Queen, by Woodbrook Kennels, Baltimore, Md., to Frank P. Quinby, New York.

Betty. White, black and tan beagle bitch, whelped 1882, by Searcher out of May Bell, by Woodbrook Kennels, Baltimore, Md., to Chas. Nelles, Brantford, Can.

Little Prince. White, black and tan beagle dog, whelped March 4, 1886, by Rattler III. out of Betty, by Woodbrook Kennels, Baltimore, Md., to Craig W. Wadsworth, Geneseo, N. Y.

Beau of Portland. Black and white and ticked pointer dog, whelped Nov. 18, 1885, by Graphic (A.K.R. 2411) out of Zitta (A.K.R. 1358), by Fred F. Harris, Portland, Me., to H. F. Farnham, same place.

Don Cæsar. Red Irish setter dog, whelped March 13, 1887, by Glenche out of Fanchon (A.K.R. 1845), by Alex. Kirkland, Tarrytown Heights, N. Y., to Frank D. Sturges, New York.

Blue Cap II. White, black, tan and blue ticked beagle dog, whelped 1885 (A.K.R. 4008), by McFarland Bros., Vallonia, Pa., to F. B. Zimmer, Springfield, Mass.

Folly—Black Bess whelps. Black Newfoundland dogs, whelped March 21, 1887, by Wm. W. Silvey, Philadelphia, Pa., one each to Wm. Curlin and C. A. Muth, same place, and one to J. N. Stone, Chestnut Hill, Pa.

DEATHS.

Nell III. Lemon and white Clumber spaniel bitch, whelped July 15, 1884 (Smash II.—Romp II.), owned by F. H. F. Mercer, Ottawa, Ont.; exhaustion from protracted labor.

Rake III. Lemon and white Clumber spaniel dog, whelped Oct. 2, 1886 (Johnny—Nell III.), owned by G. E. K. Cross, Ottawa, Ont.; distemper.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

C. V. H., New York.—Give the dog a thorough purge of castor oil and feed on fluids only for some days. Watch the passages and you will find worms we think. If you discover worms give a half teaspoonful (about 30grs.) of powdered areca nut made into a large pill. A few hours after the pill give full dose of castor oil, two or three teaspoonsful.

O. C. B., Homer, N. Y.—Ans. 1. Distemper. 2. Give 5gr. pill of sulphate of quinine night and morning for a week. Feed fluids only with the exception of a very little raw meat finely minced with the white of an egg (raw) each morning. Add five drops of Fowler's solution of arsenic to the milk or soups night and morning. Stop all other medicines.

E. M., St. Louis.—Can I hope to cure a mastiff pup, 7mos. old, of St. Vitus dance, the trouble being in the muscles of stomach. Please suggest a remedy. Ans. Be sure that your dog is not suffering from worms. If the twitching has become chronic you can use the following:

℞ Ferri et strychnin. sulph..... .....grs. xx.
Fit pil No. x.
Sig. One three times daily.

Keep the bowels regular with syrup of buckthorn in teaspoonful doses. The pedigree is unknown.

W. B., New York.—Please inform me what is the effect of animal carbolic soap on the skin and hair of dogs. Some tell me when using it to wash the dog off afterward as it may injure the coat; others say it can do no harm and use it constantly as they would an ordinary soap, and with good effect. Suppose the dog swallows same of it, can it affect the animal otherwise than perhaps make it vomit? Ans. The soap can do no harm. Any soap should be washed off thoroughly with water after using. What little the dog should involuntarily get in his mouth or stomach would not injure his health. Do not wash the dog oftener than once in two weeks.

A. T. H., Arnprior, Ont.—I gave a cocker puppy a thorough washing in our mill, intending to keep him inside till he was dry; he got out on a very cold day and it was some time before I could catch him again. A short time after he began to lose control of his hind part, and bob his head slightly; it is only when walking or trotting you will notice anything wrong, he does not seem to have full control over his hind part. I have asked every veterinary surgeon here, but they do not pretend to understand diseases of dogs. Ans. Your dog may have organic disease of the spinal cord or membranes, or it may be merely functional. Keep the bowels clear and give the following:

℞ Tr. nucis vom..... ..... ℥ ii.
Syr. simplicis..... .... ʒ ss.
Aq. q. s. ad..... .... ℥ iii.
Mix. Sig. One teaspoonful night and morning.

CITRATE OF IRON AND STRYCHNINE.

The following letter sent to us by Mr. W. Wade, of Pittsburg, Pa., is a copy of one written by Dr. J. Frank Perry, of Boston, the well-known author of "Dogs; their Management in Health and Disease." The original was addressed to a Mr. Arthur Rendle and relates to a prescription given lately in this department. Rendle has printed a garbled extract from the letter and has thus (innocently, we presume, for he is probably ignorant in such matters) made Dr. Perry appear to be guilty of professional discourtesy in criticising another physician. As the complete text of his letter relieves Dr. Perry of such an unwelcome imputation we gladly give it space, although beyond this the letter is of no moment, for it states elementary facts:

"Your letter of the 7th inst. is before me. With a courteous introduction you submit the following problem: 'A dog is troubled with a slight nervous disorder, probably resulting from distemper. We respectfully ask whether in your opinion the following prescription would effect a cure, as we understand it has been recommended. Give the dog a pill of the citrate of iron and strychnine two (2) grains each, three times a day.'

"Permit me in reply to say that interpreting the prescription 'to the letter' as you submit it, the remedy would not, in my opinion, effect a cure. This literal interpretation, however, considering the peculiar nature of the prescription, I cannot assume to be justified, at least it would be stultification did I not qualify it. To make my meaning clear, Ferri et Strychniæ citratis, or the citrate of iron and strychnine is what is termed an officinal, or in other words, a standard preparation, not only in this country but in France and Germany. It is made by wholesale chemists, and rarely is its manufacture attempted by the dispensing druggist. Not only that, but the preparation is found in nearly all drug stores in 'pill form.' The pills of the citrate of iron and strychnine are what are termed one and two grain pills. The proportion of the ingredients, iron and strychnine, vary somewhat in the pills of different manufacturers. Nearly all one grain pills of that combination contain one grain of the iron and one-fiftieth of a grain of strychnine. In some, however, we find one grain of iron and one-sixtieth of a grain of strychnine, and, if memory is not at fault, one manufacturer prepares two grain pills of the citrate of iron and strychnine, in each of which there are two grains of the iron and one-fiftieth of a grain of strychnine. The pills referred to are commonly coated with sugar or gelatine, and are also made by the wholesale chemists, and sold in bottles of 100 each or more to the dispenser.

"While the prescription which you submit, *literally* rendered, calls for two grains of the citrate of iron and two grains of strychnine, considering the facts which I have mentioned, one would naturally construe that a two grain pill of the officinal or accepted combination of those drugs was wanted and a druggist would be justified in dispensing, on that prescription, such a pill and no other.

"That the prescription in question is improperly written is evident, and yet, in all fairness, the error, from the fact that it is so transparent, is really very trifling and scarcely rises to the dignity of the term, and cannot, in any light in which we may view it, appear dangerous.

"This question which you have done me the honor to submit to me is one within the province of the dispensing druggist. I therefore, copied your prescription, verbatim et literatim, and,

sent it to one of the most intelligent in his profession, than whom none are more rigidly exact in their methods. The following is his reply:

"'In answer to your query if I had a call for a number of pills of citrate of iron and strychnine two (2) grains each I would take it for granted that the regular Pil ferri citrat. et strychnia containing two grains citrate of iron and one-fiftieth grain citrate of strychnine was wanted and dispense such; properly they should call for a number of two grain citrate of iron and strychnine pills.'

"I have also submitted your problem and my solution of it to several other chemists, and to two practicing physicians, and they have done me the honor to agree with me. Very truly yours,

"J. FRANK PERRY."

Read between the lines this letter means, "Young man, let pills alone: Stick to putty."

COUGHING: with interludes of wheezing and sneezing, are heard in all public places. Every one ought to know the remedy; and that is Hale's Honey of Horehound and Tar—an absolute and immediate cure of all pulmonary complaints. PIKE'S TOOTHACHE DROPS cure in one minute.—*Adv.*

RANGE AND GALLERY.

MILITARY RIFLE PRACTICE.

THE Adjutant-General of the State of New York issues very complete and detailed orders for the State practice of 1887. As this is the leading State in rifle practice, and the system has had the test of long use, the directions represent the experience of a dozen years or more. Gen. Porter directs:

Classification.—The third class shall consist of all who do not appear on a range for practice. The second class consists of all present for practice, without reference to qualifications in previous years, and the practice in this class will be 5 shots at 100yds. standing, on a third class or No. 3 target, and 5 shots at 200yds. kneeling, or sitting, on a third class or No. 3 target. The first class consists of those who score 25 and upward in the second class, and the practice in this class will be at 200yds. standing, No. 3 target, and at 500yds. lying prone, No. 2 target. A score of 25 and upward in the first class constitutes a marksman, and entitles the maker to receive the State decoration. A score of 42 and upward in the first class constitutes a sharp-shooter, and entitles the maker to receive a silver bar.

First General Practice.—(a.) The practice will commence with class firing in squads. Five consecutive shots will be fired at each distance. In regular class practice no officer or enlisted man will be permitted to fire more than five consecutive shots at any one distance on the same day; except the necessary sighting shots to ascertain elevation, windage and the condition of pieces, which may be fired by officers or well-instructed men, under the inspection or approval of an inspector of rifle practice. Trial practice between classes will not be permitted. At the first distance of either class (i. e., at 100 or 200yds.) a score of 10 or upward is considered as qualifying, and second practice may be allowed to such men as fail to qualify at either distance (as above) provided time will permit; but third practice shall not be allowed in any case. Those who may have qualified at 200 and 500yds., but not at 100 and 200, may make their scores valid by practicing through the second class without shooting in the first again. In regular practice each enlisted man will shoot with the piece issued by the State, and brought by him on the ground, unless the same is declared imperfect by an inspector of rifle practice. In that case the man may shoot with the nearest approved piece in the ranks.

(b.) Volley Firing, 5 Rounds.—Firing in ranks at 100yds. shall then be taken up in the following order, the squad or company being formed in single rank:

Fire by squad [or company], 3 rounds. Fire by squad [or company], kneeling, 2 rounds:

(c.) Firing as Skirmishers:—The troops shall be exercised as skirmishers from 325 to 100yds. and return; firing, on the advance, one round at 300yds., one at 200yds., and one at 100yds.; and on the retreat, one round at 150yds., and one at 250yds.

At the second or voluntary general practice, those present will practice in the classes to which they respectively belong. In other respects the tour of duty will be identical with that prescribed for first general practice, including volley firing and firing as skirmishers.

THE BULLARD RIFLE MATCHES.

Editor Forest and Stream:

In view of the many entries and interest taken in the first series of our matches by the riflemen of the country, we desire to call the attention of all rifle clubs and military companies to our second series called respectively Matches 3 and 4. Match 3 will be a team match of five men, 50 shots each man. The prize will be one of our best detachable and interchangable barrel rifle, fancy pistol grip stock, checked with Swiss buttplate, midrange vernier, and windgauge front sight, with one interchangeable barrel, caliber .22, .32, or .38, as preferred by winners. Match 4 will be an individual match, the highest individual score to win, number of shots 50, prize "The Bullard Champion Off-hand Marksman's Badge," a valuable gold badge to be won by an individual three times before it becomes his private property. To be contested for twice a year, in May and October. Notice of entries and applications for targets should reach us before May 21, in order that we may make the necessary arrangements to supply all with targets in time. Applicants should state whether they enter for one or both matches. The rules governing matches are as follows:

1. Open to all rifle clubs and military companies in the United States and Canada.

2. Teams to be composed of active members of local rifle clubs, or of any regularly organized military company.

3. Distance to be shot 200yds., strictly off-hand position standing; the elbow may rest against the body.

4. Target, Standard American (Hinman).

5. Any team of the National Guard or Regular Army of the United States or Canada using the rifle furnished by the State or Government, and having the regulation six-pound pull and regular open sights as furnished for said military rifles, shall be allowed 5 points for each score of 10 shots. No cleaning between shots.

6. The number of men in Match No. 3 will be five.

7. In Match No. 4 each rifle club or military company may enter as many men as they see fit.

8. All practice shooting necessary allowed before matches.

9. Scoring shots in Match No. 3, thirty; in Match No. 4, fifty.

10. Match No. 3 may be shot on any of the following days: June 6, 7, 8, 9, 10, 11, 1887.

11. Match No. 4 may be shot on any of the following days: July 11, 12, 13, 14, 15, 16, 1887.

12. Teams may select whichever of the above dates is most favorable for making their scores in the matches.

13. Twenty-five shots only will be allowed on each target, the targets and score cards to be signed by the referee and president or secretary of the club, and forwarded by mail to the Bullard Repeating Arms Co., Springfield, Mass., U. S. A., not later than twenty-four hours after completion of match.

14. Practice shots must not be made on the scoring target.

15. No contestant will be permitted to shoot under an assumed name.

16. Any contestant in Match No. 4, using a military rifle as issued by State or Government, six-pound trigger pull, with same sights as issued to said rifles, will be allowed five points for each score of ten shots.

17. The referee will test the trigger pull of all rifles before the matches commence. All rifles must pull three pounds, except military, which will be six pounds.

18. Ties will be shot off and dates fixed by the Bullard Repeating Arms Co.

19. Any sights may be used for target rifles except telescopic and magnifying. Military rifles must use sights issued by the State or Government for military rifles. The maximum weight of target rifles will be 10lbs.

20. The president of each rifle club and the commanding officer of each military company will appoint a referee, who shall see that the above rules are adhered to through each competition. In case of any dispute arising the referee shall decide in accordance with the above rules, and if still under protest the referee and the captain of the team shall submit the matter to the Bullard Repeating Arms Co., whose decision shall be final.

21. Targets will be furnished competing teams and individuals free by the Bullard Repeating Arms Co. on application.

22. The team making the highest score in Match No. 3 will be awarded the extra fine Bullard singleshot detachable and interchangeable target rifle complete.

23. The individual making the highest score in Match No. 4 will be awarded the Bullard championship off-hand gold badge.

1'24. The Bullard Repeating Arms Co. will fix the date in May and October of each year for the competition for the championship badge until it is won three times by the same individual, when it becomes his private property. BULLARD REPEATING ARMS CO.

SPRINGFIELD, Mass.

WILMINGTON VS. BALTIMORE.—The match between the Maryland Rifle Club and the Wilmington Rifle Club resulted in an overwhelming victory for the latter club by 51 points. It was evidently an "off" day for the Maryland Club, although some of the scores of the Wilmington Club were far below their usual standard. The interest of the home club, both in the sport in general and the match in particular, was shown by the unusually large turnout of members to welcome the visitors. Standard target, 200yds., off-hand:

Wilmington Rifle Club.

ST. LOUIS, April 23.—The St. Louis Pistol Club considers itself a good one by the fact that the challenge which it issued a month ago has not been accepted. The club, however, still holds its weekly shoots at the Laclede gallery. At the last shoot Bauer and Perret tied on 112 and in the shoot off Bauer won. The following are the scores made out of a possible 120:

W Bauer	12	12	11	12	11	11	12	12	12	12	—117

NEWARK, N. J., April 30.—The Rutgers and Our Own Rifle Clubs are now the live organizations of the city, and almost every evening there is some match on hand. The Our Own Rifle Club has been divided into three teams, as follows: The first team for the month of May will consist of Drexler, Bertram, F. A. Freiensehner, Condit, Weider, J. M. Kiefer, J. W. Gill, Friedenheit, Weeks, O. A. Kiefer. The team will shoot every Tuesday. The second team is composed of Dietzel, Limberger, Ferd Freiensehner, Knothe, Frank Smith, Klem, Willms, Bauder, Kroeplin and Ochsner, and will shoot on Thursdays. The third team is as follows: Jamoneau, Brothington, Miller, Stentler, Gaertner, Coylar and Vreeland. Monthly averages will be taken, and the teams will change according to the merits of individuals.

The members of Our Own Rifle Club held their weekly shoot for the diamond badge on Thursday, April 28, with the following result: Snellen Team—Condit 97, Drexler 101, Dietzel 100, Kroeplin 96, Willms 107, Klem 99, J. M. Kiefer 103, Brothington 101, Smith 98, Bauder 100, Gaertner 89, Miller 87, Vreeland 100, Iglow 86, Snellen 118, Total 1,485. Ferd Freiensehner Team—Weeks 106, Gill 91, Friedenheit 102, Knothe 103, Limberger 96, Weider 96, O. A. Kiefer 101. Stentler 94, Bertram 101, Jamoneau 91, F. A. Freiensehner 100, Ochsner 90, Seitz 87, Coylar 98, Ferd Freiensehner 105. Total 1,461.

Otto Keifer, of Our Own Club, and Joseph Gocklin, of the Rutgers Club, shot their final match on Tuesday night, and Kiefer won by 42 points. His lead in the three matches is 120 points.

The Rutgers Rifle and Glee Club held its regular monthly meeting on Friday night, April 29, and took in several new members, making a total membership of forty-seven. The weekly shoot resulted as follows: Dietz Team—M. J. McArdle 93, H. Snyder 103, E. McCraith 104, J. Gocklin 96, H. Allen 97, L. Smith 83, W. Black 89, T. H. Gallagher 74, J. Daly 40, Schwartz 96, Dietz 105. Total 985. Hellenbrandt's Team—William Clark 95, G. Meisel 101, J. Dalton 95, W. Frost 89, T. J. Butler 62, J. J. Farrell 94, Wm. Smith 93, T. Osmun 85, C. Snyder 45, Joseph Smith 104, Hellenbrandt 96. Total 980. Dietz team won by twenty-five points.

HOUSTON, April 30.—The following is the list of the scores ending the fourth week of April, made at the Mammoth Rifle Range:

Decimal Off-Hand Match.

W Ford	93	90	89	88	88	87	87	87	86	86	—881

J B Duffy	46	46	45	45	45	44	43				—314

The prizes for the month of April will be awarded to the competitors in different matches May 2.

NEW ORLEANS, April 23.—The following scores were made at Clinton's Shooting Gallery, on St. Charles street:

Rifle shooting, 30yds.; possible points, 60:

William Weiss	166	E W Marlberry	162
P A Duprez	164	George Wilson	162
Capt Burg	164	E R Stone	162
A B Rice	164	Dr Gammon	160
James White	162	Lewis George	160

Pistol practice, 15 paces; possible points, 50:

William Weiss	60	E R Stone	59
George Wilson	60	A B Rice	59

HAVERHILL RIFLE CLUB.—April 30, Badge match:

J Busfield	10	9	7	9	6	9	8	10	7	6—77
R Jones	9	5	6	8	7	7	7	6	6	5—66
S Mitchell	8	5	5	10	7	8	6	5	8	6—68
C B Wright	9	6	6	5	3	7	4	6	6	7—59

Busfield gold badge, Jones silver badge by handicap allowance.

Record Match.

S E Johnson	9	5	9	10	9	7	8	10	8	7—82
J Busfield	9	8	8	10	6	6	9	8	5	6—75
A Edgerly	7	7	6	9	10	5	5	9	7	8—73
R Griffin	0	10	4	10	4	9	4	9	5	6—70
F Merrill	5	3	6	8	11	5	8	4	6	8—69
L W Jackson	4	7	6	6	6	10	6	8	5	6—64
C B Wright	10	4	6	4	7	5	9	4	19	4—63

A very strong wind, shifting all the time, made difficult shooting.

MARKERLESS TARGETS.—Lieut. Patten, U.S.A., will soon have his new self-registering target in operation at Fort Sidney, Neb., and during May the experimental tests will be made. It is to be a very ingenious and simple device for getting rid of markers, and the practice when once begun will go on without interuption.

BOSTON, April 30.—The riflemen had a high wind to contend with to-day at Walnut Hill. Matches B and G came to a close. M. G. Witham won the bronze badge in the State Militia match. Appended are the best scores made and the names of the prize winners in the matches which closed:

Decimal Off-hand Match, 200yds.

W Charles, C	5	10	9	8	6	7	8	9	10	8—84
	5	8	9	7	10	9	7	9	8	8—80

Dr F A Rice	4	8	8	5	7	8	6	5	5	3—59

The club has added as an attraction this season, a revolver match, which promises to be very popular among the members. This sport, which has obviously a higher practical application, is now creating widespread interest among the shooters of the country, and will result in the education in every city of a class of men particularly expert in the use of a weapon of self defense, which is in general use among the masses of the population. The club is anxious to extend its membership to all who are in any way interested in the use of the revolver and extend a cordial invitation to all to visit them at Readmoor and witness the shooting or try their skill. Wednesday, May 11 and 12, are shooting days, and further information will be cheerfully given by any member of the club. Practice match at the range with the pistol, 30yds., Standard American target, possible 100: Hubbard 86, Rice 83, Beardsley 82, W. Wheeler 77, Beers, 75, Barber 68.

"SAN FRANCISCO, Cal., April 24.—Today was a fine one for rifle shooting. The Shell Mound range from the shooting stand to the targets was void of the usual summer sea mist that invariably interferes with the marksman, especially when shooting at the long ranges. The City Guard Rifle Club, First Infantry regiment, N. G. C., was the first body of men to face the targets. It was the company's regular monthly shoot for prize medals. A. F. Ramon won the first-class medal with a score of 45, Edward Lundquist won the second class medal with a score of 31. The third class was captured by C. Bono with a score of 18. The next body of rifle shots to open on the targets was Second Artillery, N. G. C., San Francisco Fusiliers. The following was the order of the shooting at 200yds.:

Champion Class—A Lempcke	4445445445—43
First Class—J Ringem	3555444345—40
Second Class—A Brigg	4354554444—40
Third Class—A Lempcke	4443454424—38

Next came the regular club shoot of the Nationals, Company C, at the 200 and 500yd. ranges. The men shot splendidly as a whole. Johnston and Carson did excellent shooting at either range, the former finishing in the lead by one point. The following is a summary of the shooting:

	200yds.	500yds.
A J Ruddock	4344455444—41	4444554555—45—86
C N Meyers	4454544455—44	4344035544—38—80
A Johnston	5454454455—45	5454555555—48—93
P A Robertson	5454544454—44	5445545555—45—89
C H Brod	3445454443—40	5555424452—41—81
V Dodd	3034444454—34	4455554333—41—75
C L Lodds	4344444544—40	5455535454—43—83
J J Klein	4554544445—43	3444555445—43—86
A P Rayo	4344455444—41	5525444545—41—82
T E Carson	5455445424—45	5555555444—47—92

REVOLVER SHOOTING.—The remarkable improvements in the revolver shooting at Conlin's Gallery, on the northwest corner of Thirty-first street and Broadway, in the past two months is almost past belief. To say that with a revolver a person could split five playing cards placed on edge, or hit the ace of hearts five times in six shots, would have called for a great deal of comment six months ago, but it is an every-day occurrence at Conlin's with the revolver, as it is shot by Mr. Bird, Mr. Collins, Mr. Brennan and many others. It can be seen by the appended scores on the standard decimal target that revolver shooting is on the right road to perfection. The U. M. C. Co. have taken the matter in hand, and are turning out the right kind of ammunition for fine revolver shooting. The Smith & Wessons are also alive to the wants of the shooters, and are now working on a set of sights to be used on their revolvers, the shooting quality of which arm cannot be improved much, if any. When a man can hold six shots in the bullseye on a decimal target together as to have an old rifle shot like Col. R. C. L. Riggs, of the Zettler Rifle Club, ask if it was not made with the rifle, it is very complimentry, both to the shooter and to the maker of the revolver. Such targets have been made by Mr. Collins and Mr. Bird. Many of the shooters are getting ready for the coming season at Creedmoor and other outdoor ranges, it is a sure sign that revolver shooting is "taking holt," as can be seen by the large number of shooters all over the country, who nightly drop in at Conlin's to see and participate in the sport. The following scores are some of the best made on the decimal target, 6 shots, possible 60, shooting strictly off-hand at 12yds.:

George Bird	58	Allen P Kelly	49
J T B Collins	58	Chas F Jones	49
D A Davis	56	C E Blydenburgh	49
Wm M Chase	56	L H Livingston	49
Alfred Brennan	54	Maynard Bixby	49
Pierre Lorillard, Jr	53	A Brennan (at the word one)	48
Frank H Lord	54	Capt F H Swift	48
A M Hamilton	53	W S Bigelow	47
H D Blydenburgh	53	J V Rhoades	47
F Schuchardt	52	H W Wickham (at word)	46
S F Crosby	52	W B Young (at word)	46
J B Miller	49	G L Garrigues	45

A prize shooting tournament will begin May 1.—PRONGTHUS.

ST. LOUIS, May 1.—The score of the Grand Rifle team shoot for the week at the Grand gallery is as follows, with 1-inch bullseye and 50ft. range:

G Pins	4	5	5	4	5	4	5	5	4	5—46
John Lang	5	5	5	4	5	4	5	4	5	5—47
W Black	4	4	4	4	5	5	5	5	4	5—45
F Simon	4	5	5	4	4	4	5	4	4	4—43
Wm Scott	3	4	4	5	3	0	4	4	5	4—41
Wm Morgan	5	5	4	5	4	3	2	3	4	4—40
Chas Sbrig	4	5	5	3	5	5	4	5	5	5—48
Chas Bryan	3	4	2	3	4	4	3	5	4	4—36
T H Hass	4	4	4	5	5	4	5	4	4	4—43
A Hughes	4	5	5	4	5	5	4	5	5	4—47

FOND DU LAC, Wis., April 9.—The Empire Rifle Club of Fond du Lac, Wis., has been reorganized and officered as follows: J. O. Ackerman, President; S. B. Amory, Vice-President; L. M. Wyatt, Cor. Secretary; W. H. Dilts, Treasurer; W. A. Ray, Captain. The club has leased a fine range near the city and has erected a commodious club house and shooting box with targets for short range practice. Regular practice will be given the team during the summer and a creditable record will no doubt be made before the close of the season. The club includes among its members some of the most expert riflemen in Wisconsin and the necessary drill will place the club among the leaders.

When the Nationals had finished shooting the following scores were made by a picked number of men from the company at 200yds:

Carson	5444444444—41	Robertson	4444455544—43
Klein	4455554444—44	Lods	4455445445—44
Brod	5454444344—41	Ruddock	4443544444—40
Dodd	4454444434—40	Townsend	4435444334—38
Johnson	4445454545—44		

The day's rifle shooting terminated with a 200yds. match shoot, two on a side. Summary:

Robertson	5445454555—46	Johnson	4545545544—39
Lods	4444434544—40—86	Brod	3454344444—45—84

At the ribe range at Tacoma, W. T., recently, in the match between Steir and Rowe, the former won, making a score of 54 and Mr. Rowe only 20. McNaughton won first class medal in both rifle and trap shooting. The score was as follows. The totals are standard and Creedmoor:

			S.	C.
McNaughton	2 9 10 5 5 6 8 8 6 6	5—54		43
Bell	8 4 6 7 8 5 8 6 4 8	—66		44

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

MIDDLESEX VS. ESSEX.—The third or return match between these crack clubs, each having won a match on their respective club grounds, drew a large and varied crowd at Marion—the grounds of the Jersey City Heights Club, on Thursday the 28th inst. The day proved anything but a first-class one as to weather, dark and chilly, with rain toward the close; but the enthusiasm of the shooters, the cheerful fire in the club-house, the hot coffee, and magnificent chowder furnished by that prince of chowder concocters, Dave Jarvis (and who of Jersey State fairs, tournaments and other gatherings don't know of Dave's glorious chowder?) put everybody in good humor. The birds were a good lot and there was considerable betting as to the result of the match. Both clubs had their best men on hand. Had the match been confined to 20 men a side instead of 25 we think the Essex would have stood a better show. And then there is always more or less of the unexpected to happen. Cloffey, one of their most reliable shots, good for 10 straight, or 9 out of 10, could grass but 6; for he was laboring under a violent sick headache and it was only by a strong effort that he could hold his gun or see a bird even. Rogers, another good man, went wrong for some reason; as did John Day of the Middlesex, he ought with that gun of his to have killed 8 or 9, but he tumbled but 6. There is great luck in birds; some shooters seem to have all hard birds, divers or twisters; others doffers or hoverers over the traps. These things will happen in all matches. More especially was this the case with Mr. Wm. Clark, every bird but one of his were direct and fast risers and he made some very brilliant kills. Mr. T. H. Force also did some very fine stopping. Everything went off with the best of feeling. These fraternal matches between clubs for glory and a good time are a good thing and they should be encouraged. Previous to the match the following sweeps were engaged in:

Match at 4 birds: Siegler 2, Lever 4, Forest 4, S. G. Smith 3, J. L. 3, D. L. Darby 3, Quinlan 4. All ties divided.

Sweep, same conditions: Siegler 4, Lever 4, Forest 4, S. G. Smith 4, J. L. 2, Brintnal 4, Fricke 3, Quinlan 4, Squires 3, J. H. Force 3, Dickens 3, Keller 2, Creely 4, Manitz 3, Jones 4. Ties divided. Duke did the retrieving in his usual good style.

Match between Middlesex Gun Club of Dunellen and Essex G. C. of Newark, 25 men, 10 birds, Hurlingham rules; Wm. Siegler, referee; Terrel, Keller and Eaton, scorers:

The Canon-Davis match on the J. C. H. G. C. grounds on May 21 is exciting considerable interest.—JACOBSTAFF.

ALTOONA, Pa., April 27.—This afternoon a great number went out near Dempsey's farm to witness a pigeon shooting match. The match was at 19 birds each, 21yds., entrance fee $10, 30 per cent. of which was to pay for the birds, 50 per cent. of the remainder to go to the winner, 20 per cent. to the second and 10 per cent. to third:

W F Tappan	1110111111—9	W Peltz	1110111010—7
W Ford	1111110111—9	W Sands	0011111101—7
F L Brooks	1111111000—8	J E Brooks	1111110100—7

Tappan and Ford tied for first, Brooks second and the others tied for third.

ST. LOUIS.—The Mound City Gun Club was organized last week under very promising auspices, with the following officers: President, W. L. Wells, of the Western; Vice-President, W. H. Horner, of the Western and St. Louis; Treasurer and Secretary, E. Tell Grether, of the Western and Real Estate clubs; Directors—Hunt P. Wilson, W. E. Field and W. S. Brawner. The grounds are those of the old Cote Brilliante track, where live and artificial targets will be used. The National Association rules will govern all contests.

THE DECORATION DAY TROPHY.

SOME QUESTIONS ANSWERED.

CIRCULARS giving full conditions will be mailed on application.

Only the targets named in former announcements will be allowed, *i. e.*, those made by the following concerns:

Ligowsky Clay-Pigeon Co.

Cleveland Target Co., Atlantic Ammunition Co., agents.

Niagara Flying Target Co.

Target Ball & B. P. Co.

The match is open to clubs in any part of the United States. The FOREST AND STREAM would be glad to see the South and West well represented.

The National Gun Association will govern points not covered by printed conditions.

There are no restrictions as to how the different strings must be

FOREST AND STREAM DECORATION DAY TROPHY.

Manufactured by the Whiting Manufacturing Co. for the FOREST AND STREAM. *Solid silver, height 6¼in., diameter, 5¼in.; ebony pedestal, height, 5¼in. Value,* $100.

shot; *i. e.*, a shooter may shoot all straightaway birds before shooting the others or may alternate.

The one-trap rule does not prevent use of more than one trap, so that two or three may be shooting at the same time, to expedite matters, provided one-trap conditions are preserved.

The N. G. A. rule is that all targets to score must be broken in the air before falling to the ground.

As score blanks for this match will be furnished, club secretaries are requested to send in their entries, if convenient, so that they may be received before the date named, May 21.

In all cases of dispute the decision of the FOREST AND STREAM will be final.

The match must be shot on Decoration Day, May 30.

Members of the team must shoot on the same ground.

One score only to be shot, not the best score selected from a series.

A second barrel break counts a whole bird.

Money to be sent through regular club channels, with list of team members.

The TROPHY is now on exhibition in Mr. Henry C. Squires's show window, at No. 178 Broadway.

EAST HARTFORD, Conn., April 27.—Ligowsky clay-pigeons, 5 birds, Ligowsky trap, 18yds. rise, National rules:

Vibert	01111—4	Albee	11110—4
Sterry	10101—3	Riker	10001—2
Prescott	00000—0	Higby	11011—4
Fitton	01100—2	Strong	00110—2
Ensign	01101—3	Stokes	11101—4
H. Burnham	11001—3	Martin	10110—3
Foley	10011—3	Avery	00011—2
O B Treat	10001—2	Manross	11111—5
M White	11101—4	Potter	10101—3
N Daniels	00101—2	James	00000—0
O Treat	11001—3	Hicks	11011—4
M Cook	11101—4	Brogden	11111—5
C Burnham	01100—2	Brown	01011—3
F E James	11111—5	W B Cheney	01111—4
L Francis	01111—4	J Cheney	00101—2
Venter	11111—5	Soper	11011—4

Ties for first and second divided; H. Burnham won third on shoot-off and Treat third.

Match at 3 birds, 18yds.:

C Burnham	011—2	Soper	001—1
Foley	111—3	O Treat	101—2
White	001—1	Avery	111—3
Ensign	111—3	Manross	011—2
Sterry	101—2	Potter	100—1
Marlin	111—3	C Daniels	000—0
Higby	000—0	O B Treat	111—3
Albee	100—1	Cook	001—1
Riker	011—2	J Cheney	000—0
Folsom	111—3	Brogden	111—3
Venter	010—1	Stokes	101—2
Strong	001—1	W B Cheney	111—3
Fitton	010—1	Hicks	011—2
Prescott	110—2	Brown	111—3
Gaines	101—2		

On ties, miss and out, Folsom won first, Gaines second, Cook and Albee divided third.

Six birds, 18yds.: Brogden 5, Hicks 2, Vibarts, 5, Fitton 2, Brown 4, O. B. Treat 3, Strong 2, Sterry 5, Cook 3, McMullen 4, Venter 5, Potter 3, Manross 5, Marlin 5, Albee 6, Prescott 1, White 4, Gaines 2, Ensign 3, C. Burnham 5, Avery 4, Stokes 4, Francis 6, Riker 1, O. Treat 3, Foley 4, Cheney 5. Ties divided.

Six birds, straightaway, 21yds. rise: Venter 4, O. B. Treat 6, Brogden 5, Fitton 3, Stokes 2, Cook 5, Marlen 4, Albee 6, Viberts 3, Foley 5, Hicks 3, Sterry 6, Brown 4, Strong 3, McMullen 6, Francis 5, Manross 2, W. B. Cheney 4, C. Burnham 5, Trager 6, Merriman 6, M. White 2. On shoot-off: Trager and Merriman divided first money, Brogden, Cook, Foley and Francis divided second, C. Burnham and Venter divided third, Fitton won fourth.

Three singles and 2 pair, 18yds.: Vibert 6, Trager 5, Folsom 6, Venter 3, Gaines 3, O. B. Treat 3, Foley 2, Albee 7, Riker 5, Merriman 6, Hicks 3, O. Treat 4, Brown 6, Cook 6, Stokes 4, Marlin 4, Brogden 4, Strong 3, C. Burnham 5, McMullen 6, Ensign 5, Fitton 2, Prescott 4, Melrose 4. Albee won first, Brown won second, C. Burnham won third, Stokes won fourth.

Six birds, 18yds.: Foley 1, O. Treat 4, Venter 3, Avery 4, Higby 2, Brogden 4, Trager 6, O. B. Treat 5, Marlin 5, Albee 3, Daniels 2, Folsom 5, Cook 5, Fitton 1, Ensign 6, Mnnross 4, Stokes 4, Melrose 3, Merriman 5, Sterry 3, C. Burnham 5, H. Burnham 5, Prescott 2, Riker 3, Bull 5, Brown 5, Strong 3, Gaines 4, Viberts 3, McMullen 5. Ensign and Trager divided first, O. B. Treat and Folsom divided second, Manross and Riker divided third, Vibert fourth.

Five birds, 18yds.: Melrose 4, Riker 2, C. Burnham 4, O. B. Treat 3, Brown 4, H. Burnham 4, Ensign 2, Folsom 4, Manross 3, Trager 5, Venter 3, Thomas 2, Cook 4, Marlin 2, Albee 4, O. Treat, Sterry 3, Brogden 3, Hyde 2, Stokes 3, McMullen 4, Avery 3, Soper 3. Brown and Trager divided first, C. Burnham and Folsom divided second, O. B. Treat and Stokes divided third, Ensign, Hyde and Marlin divided fourth.

Ten birds, 18yds.: O. B. Treat 7, Sterry 8, Folsom 9, Trager 10 Albee 5, Merriman 5, Melrose 7, Venter 7, Brogden 8, Brown 9, Hicks 5, Higby 8, Riker 8, Stokes 7, Foley 8, Ensign 7. Folsom and Brown divided second. Albee and Higby divided third. Melrose fourth.

Three pairs, 15yds.: Viberts 5, O. B. Treat 5, Trager 6, Marlin 4, Albee 5, Riker 5, Cook 5, Melrose 3, C. Burnham 3, Merriman 4, Folsom 5, Brown 6, H. Burnham 5, Venter 3, Ensign 5, Hicks 2. Trager and Brown divided first, Ensign and Albee divided second, Merriman and Marlin divided third, Venter fourth.

Miss and out, 21yds.: Trager 0, Folsom 1, Ensign 0, Merriman 2, O. Treat 0, O. B. Treat 2, Brown 1, Melrose 0, Hicks 1, Cook 0, Venter 0. Ties of 2 divided.

TAUNTON, Mass., April 30.—The Taunton Fish and Game Protective Association held their first shoot of the season at the new range on the Bristol County Fair Grounds; blue rocks, 18yds., 5 angles; ties, 3 birds, 18yds., 3 angles. First sweep:

G L Smith	00110—2	C T Snow	01111—4
J T Hall	01000—1	J J Davis	11100—3
W C Hall	01001—2	F S Keith	10010—2

Snow first, Davis second; ties for third: Smith 2, W. C. Hall 3, Keith 3.

Second sweep, 5 blue rocks:

Smith	11110—4	Snow	11111—5
J T Hall	10101—3	Davis	11111—5
W C Hall	01111—4	Keith	00111—3

Snow and Davis first, Smith and W. C. Hall second, Keith third in shoot-off.

Third sweep, 5 blue rocks:

Smith	00100—1	Keith	10110—3
J T Hall	10111—4	A Hardy	00110—2
W C Hall	10110—3	W A Barstow	01011—3
Snow	11111—5	E C Leonard	11111—5
Davis	11111—5		

On shoot-off, Davis won first, W. C. Hall second, Barstow third.

Fourth sweep, 5 bluerocks, Smith 3, J. T. Hall 3, W. C. Hall 5, Snow 5, Davis 2, Keith 4, A. Hardy 3, Barstow 4, Leonard 4. Ties of 5 divided, of 4 and 3 shot off.

Fifth sweep, 5 bluerocks; Smith 2, J. T. Hall 5, W. C. Hall 4, Snow 4, Davis 2, Keith 5, Hardy 3, Barstow 3, Leonard 1. Ties divided.

Sixth sweep, 5 bluerocks: Leonard 3, W. C. Hall 4, Snow 4, Smith 4, J. T. Hall 4, Barstow 4, Keith 4, Hardy 2, Davis 5, W. Davis 3. On shoot off, Davis first, W. C. Hall second, Leonard and W. Davis third.

Seventh sweep, 5 clay-pigeons, 18yds., 5 angles: Leonard 2, W. C. Hall 4, Snow 3, Smith 3, J. T. Hall 4, Barstow 4, Keith 5, Hardy 2, Davis 3, W. Davis 2. Keith first; on shoot off, W. C. Hall second, Davis third.

Eighth sweep, 5 clay-pigeons: Leonard 4, W. C. Hall 3, Snow 5, Smith 3, J. T. Hall 3, Barstow 3, Keith 5, Hardy 3, Davis 4. Keith first, Davis and Leonard divided on shoot off, W. C. Hall and Barstow third. Keith is a lad of 14 years, and used a Shattuck hammerless 12-gauge.

SAN FRANCISCO, April 24.—The first trap meeting of the Seattle Rod and Gun Club for the season, last week, was the largest meeting held on the coast this year. It was a mixed shoot, both live and clay-pigeons being used. There were five clean scores made, Messrs. Terry and Bowman failing to hit one clay pigeon, and Messrs. Clark, McNaught and West not scoring a live bird.

The initial meeting of the Pacific Gun Club at Agricultural Park, Sacramento, was very successful, eighteen members shooting. The birds were good, but the smoke which hung over the score rendered barrels almost useless, except when wood powder was used. The Pacific Club is one of the most active shooting clubs in the State. At twelve live birds, Hurlingham style, handicap, for club medal, won by Mr. Wittenbrock:

Parrott (30)	1010111010110— 7	Graves (28)	1111101111—10
King (28)	1111111000111— 9	Pedlar (30)	1111101001l0— 9
C Flohr (28)	1101111001—1— 9	R Flohr (30)	0001011111001— 6
Kunz (28)	1101011101111— 9	Foss (28)	0101101111l0— 8
Nicolaus (28)	1000110101111— 7	Rush (28)	0101110101l00— 6
Damm (28)	0100111001001— 6	Reiber (28)	1000011100l1— 6
Wittenbrock (30)	1111111111111—12	Phillips (28)	1011110101l0— 7
Vaughn (30)	1010111110l0— 9	Nesbit (28)	1010111011l1— 9
Morrison (28)	1111001011l1—10		

In addition to the number of gun clubs that already figure hereabouts a new trap-shooting club was organized on last Friday evening by the election of Will J. Golcher, president, Major S. I. Kellogg Jr., vice-president, W. G. Crandall secretary, Charles D. Laingo treasurer, H. H. Briggs captain, and W. J. Fox and J. K. Orr directors. The name Blue Rock was adopted, and a constitution and a code of shooting rules submitted. The club will shoot at Adams Point on the first Saturday of each month at artificial targets.

Three members of the Golden Gate Gun Club took a trip to their shooting grounds at McMahons to-day, to decide a fifty-bird match. Clay-pigeons were used, 18yds. rise, from five screened traps. The score made was: S. G. Scovern 32, W. H. Ashcroft 28, R. Schlueter 22.

LIMA, N. Y., April 18.—A few of the members of the Lima Gun Club held their first practice shoot on the 14th inst., at bluerocks, 18yds.:

W M Hyde	0110100111—6	C Laly	0000001000—1
B G Vary	0101000100—3	S T Vary	0001000100—2

Second string:

W M Hyde	0011111110—7	C Latz	0000000000—0
B G Vary	1110101110—7	S T Vary	0111110101—6
J Lochington	0000000000—0		

W. M. Hyde won tie. Third string:

W M Hyde	0100101111—6	S T Vary	1010100001—4
B G Vary	0010101011—5		

Fourth string:

W H Buell	1101010100—5	B A Vatz	1101001011—6
W M Hyde	1011110110—7	J Lochington	1000w —1
F Bailey	0100100100—3	A Beckwith	1110w —3
S T Vary	1100100011—5		

S. T. Vary won tie.—SPORTSMAN.

GALESVILLE, Wis., April 13.—Second shoot of the Galesville Gun Club, 15 Peoria blackbirds, 18yds. rise, for gold badge:

A Kellman	0111101000111—10	Aaron Kribs	1101111111110—13
C Farrand	0010011011111—10	I S Farrand	1111101111111—14
Julius Jensen	1110111111011—13	J Jensen	1000101111110—9
Chas Arens	0101110101110l1—10		

WASHINGTON, D. C., April 30.—Capital City Gun Club. Strong, puffy wind, making "puzzlers." Five American clays No. 1; N. G. A. rules. Sweepstakes. First match:

Cunningham	11110—4	Green	11110—4
Godey	10000—1	Whitman	11010—3
Collison	00100—1		

Green won shoot off for first, Whitman second. Second match.

Cunningham	11110—4	Collison	11110—4
Green	10011—3	Whitman	10011—3
Godey	10110—3	Thompson	00011—2

Collison first, Green second. Third match:

Cunningham	11101—4	Collison	01101—3
Green	01010—2	Whitman	00100—1
Godey	11001—3	Thompson	11001—3

Cunningham first, Collison won shoot off for second. Fourth match:

Cunningham	11110—4	Collison	11110—4
Green	01100—2	Whitman	00010—1
Godey	00001—1	Thompson	10011—3

Cunningham first, Thompson second. Fifth match:

Cunningham	11101—4	Whitman	01000—1
Godey	10110—3	Thompson	11100—3
Collison	11110—4	Green	01000—1

Cunningham first, Godey second.

WASHINGTON HEIGHTS vs. ALGONQUINS.—A match between teams of eight was shot at New Dorp, Staten Island, April 28, 10 live birds each man, Hurlingham rules except weight of gun, 25yds., two traps, left barrel to count ½. Washington Heights scored 51, Algonquins 48 out of possible 80. Best W. H. G. C. scores: VanBrocklen 9, Fox 8. Best A. G. C. score, Edsall 7.

MICHIGAN.—The State Trap-Shooters' Association met on the 21st ult., and in a team match Milford was successful over Saginaw, Pontiac and South Lyon. The new officers for the year are: President, H. A. Whipple, South Lyon; Vice-President, W. J. Mason, Detroit; Secretary-Treasurer, H. H. Field, South Lyon; Executive Committee, A. G. North, Pontiac; M. Loew, Milford; J. N. Snyder, Saginaw.

HASTINGS, Minn.—The second annual tournament of the Hastings Gun Club, May 10, 11 and 12, will be open to Iowa, Dakota and Minnesota. Professionals positively barred; $1,980 in cash prizes.

MONTREAL, Quebec.—First match St. Gabriel Rod and Gun Club for cup presented by President A. W. Morris, to be shot for on Good Friday, Queen's Birthday, Dominion Day, and Thanksgiving day. Each competitor to shoot at 20 Peoria blackbirds. Referee for this match, Mr. Verity of Lachine Gun Club.

C H Wallace	11011011110111111101—16
W McCaw	01011101101111110010—13
L T Trotter	01100110110101001101—11
W Emond	01010011101110100101—11
A H C Walpole	10010111010110100000— 9
J McNab	01011000010001001011— 9
J Hayr	01010100001101110100— 9
J Allan	00001010010001111100— 8
J Sly	00101010001001000111— 8
F Sly	01110001001110000000— 7
D Steel	00000000110000000100— 3
Dr Barnes	00000000000w — 0

On the last ten birds of above match a sweepstake was shot for and won by C. K. Wallace with 8, W. McCaw 7, W. Emond 6. Another sweepstake was also shot:

W Emond	1111—5	W Green	11000—2
J Sly	01111—4	F Sly	10100—2
W McCaw	10110—3	J Ryan	00100—1
A H C Walpole	01101—3	J Allen	01000—1
J McNab	01010—2	T Donnelly	00000—0
L Trotter	00110—2		

PHILADELPHIA, Pa., April 30.—Wayne Gun Club, Ligowsky clay-pigeons, one L. C. P. screened trap, 18yds. rise, Wayne Gun Club rules:

Hugh Kane	1111111111—10	Gus Hessler	0111101111— 8
Graham	1010001000— 3	P F Yost	0110100111— 6
Sam'l Davis	0110111011— 7	F Hessler	0101010111— 6
Jackson	1010000001— 3	A Ulary	1000111010— 5
J W Sidle	1000010010— 3	James Sparks	0010001001— 3
T Scargie	0001101000— 3	Wm Ulary	1111011011— 8

WELLINGTON, Mass., April 30.—The wind seemed to-day as if off a snow drift, yet it did not deter a goodly number from attending the final shoot for the class badges, which were taken as follows: Class A, Shumway; class B, Warren, class C, Perry. The other events were won by: 1. Six pigeons, five traps—Shumway first, Gerry and Sanborn second, Clark third. 2. Six pigeons, five traps—Shumway and Schaefer first, Perry second, Ames third. 3. Five pigeons—Schaefer first, Sanborn second, Clark third. 4. Six blackbirds—Swift first, Schaefer second, Nichols third, Gerry fourth. 5. Five pigeons, five traps—Sanborn and Stanton first, Warren and Swift second, Stickney, Gerry and Shumway third, Schaefer fourth. 6. Ten pigeons—Stanton first, Swift second, Wardwell and Shumway third, Warren and Schaefer fourth. 7. Six blackbirds—Swift first, Warren and Stanton second, Ames third, Shumway fourth. 8. Five pigeons—Shumway and Schaefer first, Stanton, Sanborn and Nichols second, Wardwell and Swift third, Gerry fourth. 9. Six blackbirds—Ames first, Gerry second, Sanborn and Warren third. 10. Six macombers—Swift and Schaefer first, Warren and Wardwell second, Sanborn third, Stanton fourth. 11. Five pigeons, five traps—Swift and Stanton first, Shumway and Brown second, Sanborn third. 12. Three pairs blackbirds—Wardwell first, Stanton second. 13. Ten blackbirds—Stanton and Swift first, Lee second.

CARVER—GRAHAM.—The matches between W. F. Carver and Wm. Graham, to be shot at Erb's, Newark, N. J., to-day and to-morrow, have excited much attention. The match to-day is at 100 birds, Hurlingham rules; to-morrow it will be the same with the Monaco boundary. This is a wire fence about 40in. high, 17 metres, or 18yds. and 21½in., in a straight line from the center trap. The pigeons must be gathered within this limit, or scored a "lost bird." If Graham wins the first match Carver will give him $100, and $200 for winning the second. In the event of Graham's losing both matches he is to pay Carver's expenses. Graham and his backers want to make each match for $1,000 a side, but Carver said he had decided never to shoot for money again, and only went in for the glory of the thing. Carver and Graham have shot matches before in England, but the doctor has never shot a live bird match in the East before.

F. L. LAFLIN.—The death was announced on April 28 of Fordyce L. Laflin at his residence in Saugerties, Ulster county, on the day preceding. Mr. Laflin was a native of Blandford, Hampden county, Massachusetts, where he was born in 1824. For many years Mr. Laflin was engaged in the manufacture of gunpowder. He was treasurer of the Laflin Powder Company, which had several mills in Ulster county, for a long time, and later on when that company was consolidated with the Smith & Rand Powder Company, under the name of the Laflin & Rand Powder Company, he was vice-president of the new corporation.

LIMA, Ohio, April 18.—The West End Gun Club of this place was formed and held its first shoot on Friday the 15th inst. The club is limited to fifteen members, and has the following officers: E. G. Wallace, President; Walter J. Ritchie, Sec.; A. W. Gilbert, Treas.; Chas. Roney, Lieutenant, and P. D. Galarneau, Captain. They hold their snoots on the first and third Mondays of each month at their grounds in West Side using the ordinary clay pigeon and five traps. They are all old shots.

THE CLIMAX SCORE BOOK is a handy blank book for trap shooters, published by the U. S. Cartridge Co.

Canoeing.

FIXTURES.

The Royal C. C. will sail their Challenge Cup Race on Hendon Lake, on June 11, 1887, and invite American canoeists to attend and compete.

6. Oakland, Edwards Cup.

DECEMBER.

4. Oakland, Edwards Cup.

PEARL.—Mr. Tredwen was in the race of the Thames Sailing Club on April 16, doing well with the large boats during the first part of the race, but afterward fouling the buoy and withdrawing. Speaking of her races the *Field* says: "The achievements of the Pearl canoe among the centerboard gigs on the Thames during the last three or four years have on several occasions directed attention to what would be the outcome of a simple sail area rating; and it would seem that the length and sail area rule, even, cannot restrain. The up-river men are consequently much exercised in mind about her, and are already casting about for a new rule for above bridge sailing. The girth rule was, we believe, tried once; but that was much too easy a fit for such a canoe as Pearl, and her clever owner."

RECKLESS CANOEING.—We have frequently spoken of the great danger of overcrowding small and narrow canoes, and, in fact, of the danger attending the use of such craft in the hands of boys and novices. A sad corroboration of our caution was given last week when three boys from Philadelphia set out in a 14ft. canvas canoe, for Beverley, N. J. On the way home, when sailing, the boat was capsized by a squall and one was drowned, the others being rescued from the floating boat after three quarters of an hour. The oldest of the party was 18, the others 16 years. Such a canoe is fit for but one person, and when two or three are crowded into her the blame must not be laid on canoeing, but on the reckless and ignorant who claim to be canoeists.

A. C. A. MEMBERSHIP.—Trenton, N. J., April 29.—Mr. Geo. Wm. Cox, of Newark, N. J., has applied for admission to the A. C. A.—WM. M. CARTER, Sec'y.

FIFTY YEARS OF YACHT BUILDING.

THE following paper was read before the Institute of Naval Architects by Dixon Kemp, on April 7:

It can fairly be said that yachts, such as we are now accustomed to, have been entirely developed during Queen Victoria's reign. Fifty years ago there were probably not 100 yachts in existence above 20 tons, and these were modeled after the brigs, schooners or cutters of the Royal Navy. Their scantlings were somewhat lighter, and their ballasting perhaps not quite so good, as in some cases weight was made up with stone. The brigs were about the size of those of the Royal Navy, and were considered superior in point of sailing qualities. One of the best known of these brigs was the Waterwitch, built by Mr. Joseph White, of Cowes, in 1832, for the Earl of Belfast (afterward Marquis of Donegal). This brig had a great reputation for speed and weatherliness, and beat H. M. S. brig Pantelon about four miles in six hours' sail to windward. This achievement led to the Waterwitch being purchased by the Admiralty, and subsequently to the employment of Mr. White to build other brigs for the Royal Navy, notably the Daring. This vessel and the Waterwich performed the best to windward in a strong wind and head sea in the experimental sailing of 1844.

Although brigs and schooners were occasionally sailed in competition, it was found that the cutter rig was so vastly superior in point of weatherliness that its adoption for almost all yachts intended for racing was a matter of natural selection. At first—that is, between the years 1815 and 1837—there was seldom any time allowed for difference of size, and the result was that with anything like a breeze the largest vessel came in first and won. As there was no tax of any kind on any of the dimensions, there was no inducement on that score to alter the proportions of length, breadth and depth from the prevailing Admiralty type. These proportions was from 3 to 3½ beams to length of waterline, and the greatest transverse section was placed ahead of the middle of length, varying in distance from one-tenth to one-fiftieth of the length. The center of buoyancy was generally situated at about the center of length, and it appears to have been an aim of the designers to keep the displacement of the fore body and after body equal. The upper horizontal waterlines of the bow were short and full, and the load waterline aft was generally full, but the buttock or vertical lines were long and flat. This kind of yacht is familiar to us as the cod's head and mackerel's tail type, and was firmly believed in even by men who took some trouble to investigate the qualities of hull which led to success in sailing. One of these was the late Mr. Fincham, master shipwright of Her Majesty's dockyard, Portsmouth, who designed several yachts for members of the Royal Yacht Squadron, Cowes. One of these was the Fair Rosamond, schooner, built in 1846 by Mr. Camps, of Gosport, for the late Duke of Marlborough. Mr. Fincham, in his papers on "Naval Architecture and Yachts," states that the center of buoyancy of the Fair Rosamond was 10ft in terms of the length abaft the center of length; she won some prizes at Cowes, but Mr. Fincham concluded that she would have performed better in a head sea had her center of buoyancy been further forward. Accordingly in the following year—1847—he designed the Novice, schooner, for the Earl of Desart, and placed her center of buoyancy .01 ahead of the center of length, or, in other words, 9in. further forward than the other's was. Mr. Fincham declared this to have had a great effect on the performance of the vessel, but, judged by the light of subsequent events, there is no doubt that Mr. Fincham was much mistaken in attributing so much subtle influence to slight variations in the fore and aft positions of the center of buoyancy.

About this time the theory of the late Mr. John Scott Russell (that the bow should be longer than the stern) began to be accepted as nearer the truth than the old theory of the cod's head; and in the year 1847, while Mr. Fincham was designing the Novice, a very remarkable vessel was built on the Thames as an exponent of Mr. Scott Russell's theory. This was the Mosquito cutter, of 59ft. waterline and 15ft. 4in. beam, built by Mr. Mare, of Blackwall, and launched in 1848. There is some doubt as to whether Mr. Ditchburn or Mr. Waterman or Mr. Mare designed the Mosquito, but Lord Brassey, in an article in the *Fortnightly Review*, 1883, says: "Mr. Mare was the author of her existence both in idea and in fact." It should be said that Lord Brassey at the time had special means of knowing. The Mosquito was like one of the cutters of the period turned end for end; her bow was long and showed considerable hollow, and her afterbody was short, showing great fulness both in the horizontal and buttock lines. Her midship section was placed 1ft. 6in. abaft the center of length of waterline, and her center of buoyancy was 2ft. abaft it.

According to the old practice, the Mosquito should have had no good qualities at all, especially in strong winds; but the fact is, she excelled in all the good qualities claimed for the bluff-bowed craft; she was faster than any other yacht of her length on any point of sailing, and in a strong wind to windward was a marvel compared with other yachts. However, so strong was the prejudice against the "long, lean bow," and so alarming the predictions—that some day the Mosquito would take a dive and never come up again—that no one could be found to try the experiment on a more extensive scale. It thus seemed likely that the old type would be continued in spite of the Mosquito having, in a superior degree, all the good qualities it was contended a yacht should have.

It will here be convenient to take a glance at what was being done on the other side of the Atlantic at this time. It should be said that the Americans had not as yet settled down to any kind of sport so as to give it a nationality, and had, consequently, evolved no special type of yacht. So far as can be learned the first American yacht race took place just fifty years ago, and it does not appear that any yachts existed in the States before 1835, and those built subsequently, up to the year 1844, were small schooners. In the year named, however, a remarkable vessel was built at Hoboken, named Maria, on the lines of the flat-bottomed coasters. She was 100ft. on the waterline, with an extreme beam of 26ft. 8in., and draft aft of 5ft. 3in. She was fitted with a centerboard which dropped 16ft. below the keel, and also had a small one aft, to prevent her griping. She had a long, hollow bow, and was sloop-rigged, with jib and mainsail only. The foot of her mainsail was 92ft. long and the foot of her foresail or jib 70ft. This vessel may be said to have been the original of the American centerboard yacht, but, although she showed extraordinary speed and weatherliness, there appears to have been a conviction that more depth of body and less beam would be better for good seagoing qualities. At any rate, George Steers, the son of a Devonshire shipwright who had settled in New York, produced the keel yacht America, which was destined to have such an important influence on British yacht building and sail making. In the America the principles so successfully carried out in the Mosquito were embodied with equal success. She had a long and somewhat hollow bow, a short run, and the center of buoyancy was considerably aft of the middle of length, as will be gathered from the accompanying table:

	Mosquito.	America.
Length on l.w.l.	59.2	87.3
Breadth, extreme	15.3	22.2
Draft of water, extreme	11	11.5
Proportion of beam to length	0.257	0.254
Midship section aft center of length in terms of length of l.w.l.	0.076	0.071
Center of buoyancy aft center of length in terms of length of l.w.l.	0.032	0.041

The America visited us in 1851, and achieved a remarkable success at Cowes over our schooners. This success was, no doubt, mainly due to the qualities of her hull, but the unusual flatness of her sails contributed greatly to her fine weatherly qualities. The immediate effect of the America's success was rather startling; almost every yacht in existence at that time was lengthened by the bow, her masts raked, and sails laced to the booms; and the principles which had been so strikingly exemplified in the Mosquito three years before were now adopted as a new discovery of infallible merit. This marked the commencement of a new era in yacht designing, and the subsequent development of yachts into the now fashionable type has shown no considerable departure from the principles observed in the design of the Mosquito.

* Although the Arrow was built so far back as 1882, she has been many times altered, and originally her length on the waterline was 58ft., and beam the same as it is now.

There have, however, been causes at work which have largely influenced the proportions of yachts. Allusion has already been made to the fact that fifty years ago there was no such compensating reckoning to deal with as time allowances for differences of size. As soon, however, as yacht racing became a general summer pastime, a rating for size became a necessity and the size test adopted was simply the registered tonnage of the day or what we know as builders' measurement, which is as follows:

$$\frac{(L-3\text{-}5B)\times B\times \frac{1}{2}B}{94}$$

This measurement took no account of depth, but assumed that it always equalled half the breadth. Frequent competitions and teaching of investigators of naval science impressed yacht builders very forcibly with the fact that the element of size which gives speed is length, and that if two yachts were of equal tons, but one should happen to be longer that the other, then the longer boat would be certain to prove the faster, all other things being equal, such as sail spread, stiffness, fairness of lines, etc. Or if two vessels were of equal length and one measured fewer tons than the other, then her rating would be smaller and she would receive a compensating time allowance.

For a great many years the obvious tendency of the tonnage rule to produce relatively long and narrow boats had little effect, because breadth was so essential to enable a vessel to carry a large sail spread. Naval architects were, it is true, alive to the fact that stiffness could be gained by depth of hull, suitably ballasted, but this untaxed quantity could not be made use of to any great extent, on account of the heavy displacement it involved; consequently down to the year 1870 the racing yacht developed very slowly, and at that time a length of 4¾ beams was considered sufficiently extreme. From the date named, however, length for any given tonnage showed a very rapid increase, while breadth necessarily decreased. Lead keels, it should be said, had some years previously—about the year 1846—been introduced as a means of increasing stiffness after shifting ballast to windward during match sailing had been abolished; but lead keels were regarded with a great deal of disfavor by yacht owners, from the prevailing belief that they made a vessel pitch and roll heavily in a sea; and so up to 1870 no yacht was to be found with more than about a tenth of her ballast on the keel, and the majority had none. Some experiments, however, with small vessels, and a better knowledge of the good effect of concentrating the ballast in the middle third of the length of the vessel rapidly led to a larger quantity of lead being placed outside, until, at last, the whole ballast was placed outside on the keel. This lowering of the ballast, and consequently of the center of gravity, enabled the designer to dispense with a considerable quantity of breadth and add to the length, for any given tonnage, until in some of the smaller yachts the length has been equal to 6½ beams, and in the larger, 5¾ beams.

The power to carry an effective quantity of canvas in narrow yachts has not, however, been entirely due to placing the ballast outside, for any given nominal tons the displacement has been largely added to, as may be gathered from the table which is given herewith.

These large additions to the displacement, while the power for getting through a head sea may have been increased, have had a prejudical effect on the attainment of high speeds, mainly on account of the enormous wave-making it induced. Thus, so recently

as in 1880, the Arrow has been driven in strong winds as fast and sometimes faster than the Formosa or Samcena, and with very considerably less wave disturbance. The principal characteristics of this wave-making is a huge hollow under the weather bilge, although there is a considerable hollow on the lee side as well. The fact, however, that the greatest disturbance is found on the weather side is accounted for by the circumstance that upon heeling over the bulk of the deep displacement is on the weather side of the middle fore and aft line. The lead keel of one of these long, narrow yachts, it should be explained, is in breadth about one-third of the main breadth of the vessel, and in weight is equal to about 0.5 of the total weight present in a yacht like the Galatea, to 0.7 of the total weight in a 3-tonner.

The Americans, it should be observed, did not much alter their centerboard type of yacht, and built keel yachts during the period between 1845 and 1885. The reason of this was mainly due to the fact that they frequently changed their method of rating for competitive sailing, and, moreover, did not pursue yacht racing to the extent we did on this side of the Atlantic. Their yachts for any given length were capable of a greater absolute speed than our yachts in moderate breezes and pretty smooth water, because they were of a much lighter displacement; in very light winds the British type seemed to have the advantage when the sail spread to immersed surface was about the same in each yacht; in strong breezes the shallow American type had the advantage in speed when sailing well off the wind, but when pressed close to the wind the advantage was just the other way. This appears to be principally owing to the fact that the narrow deep yacht has practically an unlimited range of stability, while the shallower and broader yacht of the American type reaches the maximum of her range at an angle of about 30°.

The results of some encounters between small yachts of the United States and those of England during the years 1881, 1882 and 1883, at New York, Boston and other places, led Americans to consider whether some adaptation of their centerboard type to the British type could not be carried out with advantage. It was made plain to them that a British yacht would win a majority of races, but the type was already condemned in England, and Americans could not be persuaded to adopt it without modification. Accordingly, when in 1885 the owner of the British cutter Genesta challenged for the Cup won by the America at Cowes, in 1851, the Americans set to work to produce a compromise yacht, but distinctly more American in type than British. The yacht in section was of the broad V character—very like the America of 1851—with almost twice the draft of water that the ordinary shallow centerboard yacht had. Beyond this she had nearly the whole of her ballast outside, in the form of a lead keel supplemented by a centerboard of considerable area.

This yacht was named the Puritan, and, so far as can be judged, she defeated the Genesta on her merits. The same fate befel the Galatea last year, the Americans having built another yacht of this new type to meet her. They compare as follows:

	Galatea.	Mayflower.	Genesta.	Puritan.
Length on waterline.	87.00ft.	85.07ft.	81.00ft.	81.00ft.
Extreme beam	15.00ft.	23.05ft.	15.00ft.	23.00ft.
Draft of water	13.50ft.	9.00ft.	13.00ft.	8.03ft.
Area of transv'rse sec	114 sq. ft.	85 sq. ft.	.....	.....
Displacement	157.63tons.	110 tons.	141 tons.	105 tons.
Total ballast	81.50 tons.	48 tons.	72 tons.	44 tons.
Ballast on keel	81.05 tons.	42 tons.	70 tons.	27 tons.

The success of the Puritan over the Genesta, and Mayflower over the Galatea naturally produced a great impression on this side of the Atlantic, especially as the two American yachts were the work of one who, at the time, could only be regarded as an amateur at yacht designing. But there is no doubt that Mr. Edward Burgess had made a very close study of both English and American yachts, and his success was as much the result of a correct appreciation of what was required to achieve a certain object as that of George Steers was when he designed and built the America in 1851.

The practical outcome of the victories of the American yachts was that the British Yacht Racing Association realized the situation that while its rating rule (which taxed beam heavily, and depth not at all) might produce yachts which were, in some respects, superior to the American type, yet there are intermediate types of surpassing excellence, so far as match sailing is concerned. The old tonnage rating, it can be said, had assisted in bringing yacht building to a standstill in this country, as no one could be found willing to build a longer, narrower and deeper boat for any given tonnage than those which had already existed, and the rule would not admit of trying experiments with beam.

The rule had been modified to $\frac{(L+B)2 \times B}{1720}$

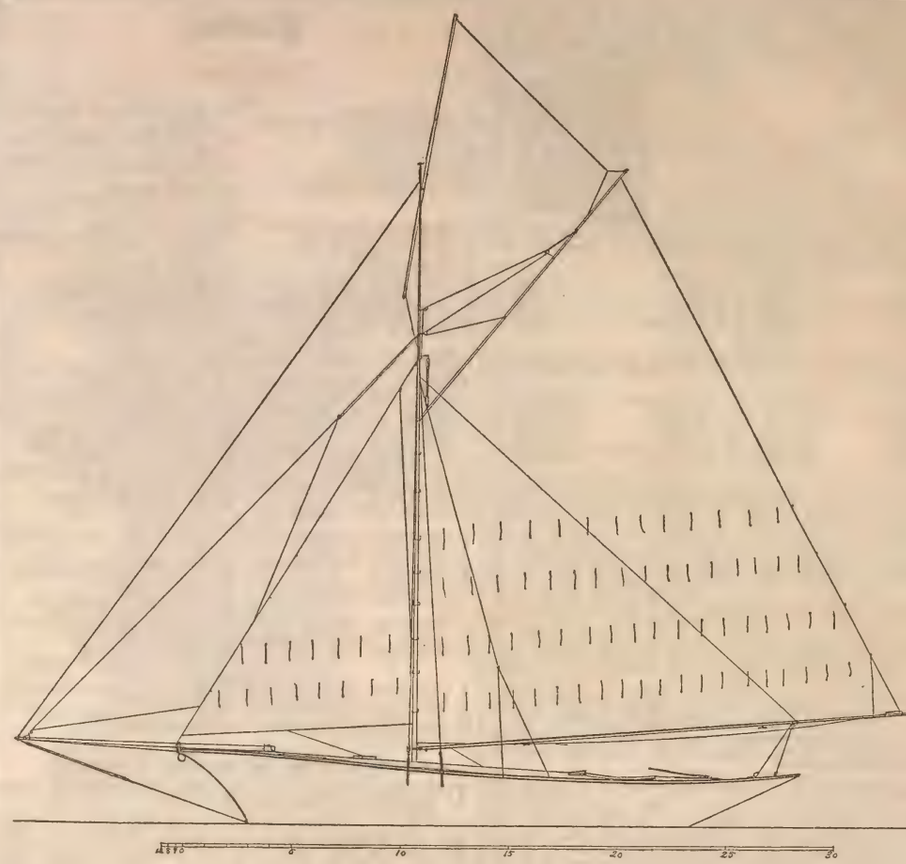
Under these circumstances the Yacht Racing Association appointed a committee to report upon the existing rating rule, and recommend such new rating as might be considered necessary. The committee obtained the opinions of all the leading designers and yacht builders, and these were almost unanimous in recommending that the rating should be in future by length of load line and sail area, the working formula being:

$$\text{Rating} = \frac{\text{Length} \times \text{sail area}}{6000}$$

The first outcome of this rule has been that the new Scotch yacht Thistle, built expressly to compete for the America cup, has been designed of proportions very similar to those of yachts of thirty years ago, before the squeezability of the old tonnage had been discovered. The actual dimensions of this yacht are:

Length of loadline	85.00ft.
Breadth, extreme	20.30ft.
Depth of hold	14.10ft.
Registered tons	100.67 tons.

The apparent large registered tonnage of this yacht is attributable to the fact that she is built of steel, and that her keel is specially constructed to form a kind of ballast box, thus giving great depth of hold. Vide the paper on "Construction and Ballasting of Yachts," in the Translations of 1882, by Mr. T. Phillips.

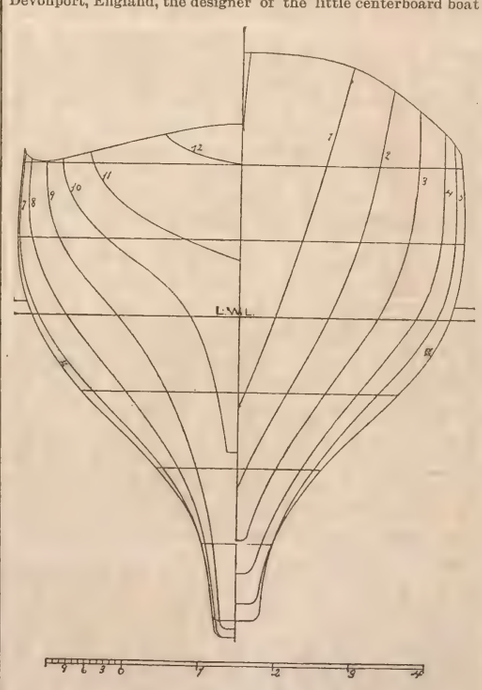


The Thistle, it should be said, has been designed by Mr. G. L. Watson, of Glasgow, and is the first attempt since the Livonia was built in 1871, to meet the Americans on their own lines. She will probably have to encounter one of the powerful centerboard sloops, and it is contended, with some reason, that a contest between a keel yacht and one fitted with a centerboard cannot be considered a satisfactory trial of merit. So far as sailing by the wind is concerned, the board does not appear to hold the yacht to more advantage than the fixed keel does the modern yacht with a deep cross section; and often if, as the Americans say, the centerboard is outpointing the keel yacht, the feat is probably more attributable to the sit and trim of the sails than to the board, unless, of course, the keel yacht has a deficient area of longitudinal vertical section. Where the centerboarder has the advantage is in lifting the board for sailing off the wind. By housing the board in a yacht like the Mayflower, a reduction of about 10 per cent. is at once made in the area of immersed surface, and the effect of this is always manifest, especially in light winds or at low speeds. However, as far as the Thistle is concerned, it may be granted that Mr. Watson, while providing her with sufficient area of longitudinal section for lateral resistance, has so fashioned away the ends that she will give a good account of herself in any contest with American yachts, whether on or off the wind.

A CHALLENGE TO OPEN BOATS.

The open boat Cruiser (20ft. 6in.) would like to sail a number of matches during the month of June with boats under 22ft. Should any of your readers who are interested in sport of this character desire such a contest, a communication to the following address will receive attention. CRUISER,
114 East Twenty-second st., New York.

YACHTING NOTES.—Cyprus, cutter, arrived on the steamer Richmond Hill last week....Dolphin, steam yacht, Howard Jaffray, has been sold to Major W. B. Wetmore, who will use her on Lake Champlain....Henrietta; this fast launch has been sold by Norman L. Munro to E. S. Jaffray. Mr. Munro has a new launch building at Herreshoff's....Marie, keel sloop, has been bought by W. O. Gay, Dorchester Y. C....Helen, sloop, has been bought by C. E. Hodges, who will give her a new outfit of canvas....May A., cutter, of Boston, has been bought by J. T. Richardson, of Stratford, Conn....Mabel, sloop, has been sold to go to Havana....Ione, sloop, is having a lead keel of 4,700lbs. bolted on....Puritan is fitting out at Naushon, and she and Mayflower will probably be in the New York regattas....J. S. Poyen. This sloop, once well known about Boston, is now in Australia, having been sent out on the deck of the ship Roger. She has lately sailed against some of the home yachts and beaten them, though the race seems to have been a fluke.



MONATIQUOT Y. C.—A club under this name has lately been formed at Weymouth, Mass., starting with seventy-five members. A club house will be built, courses laid out, and races held during the season.

SAIL PLAN OF CUTTER "DAWN."

THE SINGLE-HANDER DAWN.

THE little yacht shown in the accompanying drawings is of the same general class as the Windward, illustrated in the FOREST AND STREAM of Feb. 8, 1884, but is of greater displacement and draft, besides being much longer on deck owing to the clipper stem. The Dawn was designed for Captain James, R. A., by Captain Robert Barrington Baker, R. N., of the Royal Gun Wharf, Devonport, England, the designer of the little centerboard boat

BODY PLAN OF CUTTER "DAWN."

Pollywog. The general specifications were much the same as in the Windward, a boat that would accommodate two men, but that could be safely sailed by one; the extra 2ft. of length, however, allows a small forecastle for a 12-year-old boy, leaving the cabin for the owner. The dimensions of the Dawn are as follows:

	As Designed.	As Sailed.
Length over all	28ft. 9in.	
Length on L.W.L	20ft.	20ft. 5in.
Beam	6ft.	
Draft	4ft. 3in.	4ft. 6in.
Ballast, keel, long tons	2.25	2.5
Ballast, inside	.25	.50
Ballast, total	2.50	3.00
Mast, deck to hounds	20ft.	
Pole	8ft.	
Boom	23ft.	
Gaff	15ft. 6in.	
Bowsprit, outboard	7ft. 6in.	
Topsail yard	13ft.	
Spinaker boom	25ft.	
Area mainsail	304sq. ft.	
Area staysail	85sq. ft.	
Area jib	56sq. ft.	
Area yard topsail	102sq. ft.	
Area, total, lower sail	505sq. ft.	

The keel is of English elm, sided 14in., moulded 6in.; stem sided 3½in.; sternpost 4in., the timbers are of English oak, sided 3in., moulded 4 to 2½in. and spaced 2¼in. Between each pair are two steamed timbers, 2x1½in., of American elm. The planking is of ⅞in. red pine. There are four iron floors, each 2ft.x2½x⅝in. All the fastenings are of copper. The cost of the yacht was as follows:

Hull, lead, spars and steel wire rigging	£125
Cordage, blocks, anchor and chain	15
Sails—mainsail, foresail and two jibs, Lapthorne	15
Two spinakers and topsail, home-made	3
Sundries, lamps, etc	7
	£165

The entire cost was only $825.00, very much less than the boat could be built for in America. It will be noticed that there is no cabin house but only a flush deck, but under this there is from 4 ft. 4 in. to 4 ft. 10 in. headroom, owing to the great crown of the deck. The seats in cabin have flaps for sleeping and there are lockers everywhere in cabin and cockpit. The sail locker is in the counter. The Dawn has proved herself an excellent seaboat and has been out in some very heavy weather, including the gale last September, in Torbay. The gain in deck room by the clipper stem is shown by the dotted lines in the plans, which represent the outline of the deck with a plumb stem. In so small a boat deckroom forward is of first importance, and it is obtained by a proper use of this feature. The stem is built out to the full length, the rabbet being carried out to the extreme end, a very different construction from that employed in this country, where a large filling knee is bolted outside the stem, projecting several feet outside the rabbet. In the latter case there is useless wood and weight on the end of the boat with no corresponding gain; but if the stem is worked as shown in the Dawn the construction is at once light, strong and graceful, there is no superfluous material and there is a substantial gain in deck room.

THE LAUNCH OF THE SHAMROCK.

MONDAY last was a great day for Ireland, at least that part of it which lies adjacent to Bay Ridge, it was just like having two Patrick's days in one year. The occasion of this rejoicing was the launch of a new vessel, Shamrock by name, bright green of bottom, and with a tattered green flag aloft on a jury mast. This vessel is not, as some might suppose, the latest addition to the Irish navy, but belongs to the pleasure fleet of the Atlantic and several other yacht clubs, having been built for her owner and designer, J. Roger Maxwell, by John Mumm. At 3:30 P. M. all was ready, and a few minutes later the dogshores were slipped and the Shamrock slid into the water, while a regular wild Irish yell echoed across the Bay from Owl's Head to Toad Hill. The Shamrock has been described previously in the FOREST AND STREAM, but we give her leading dimensions again:

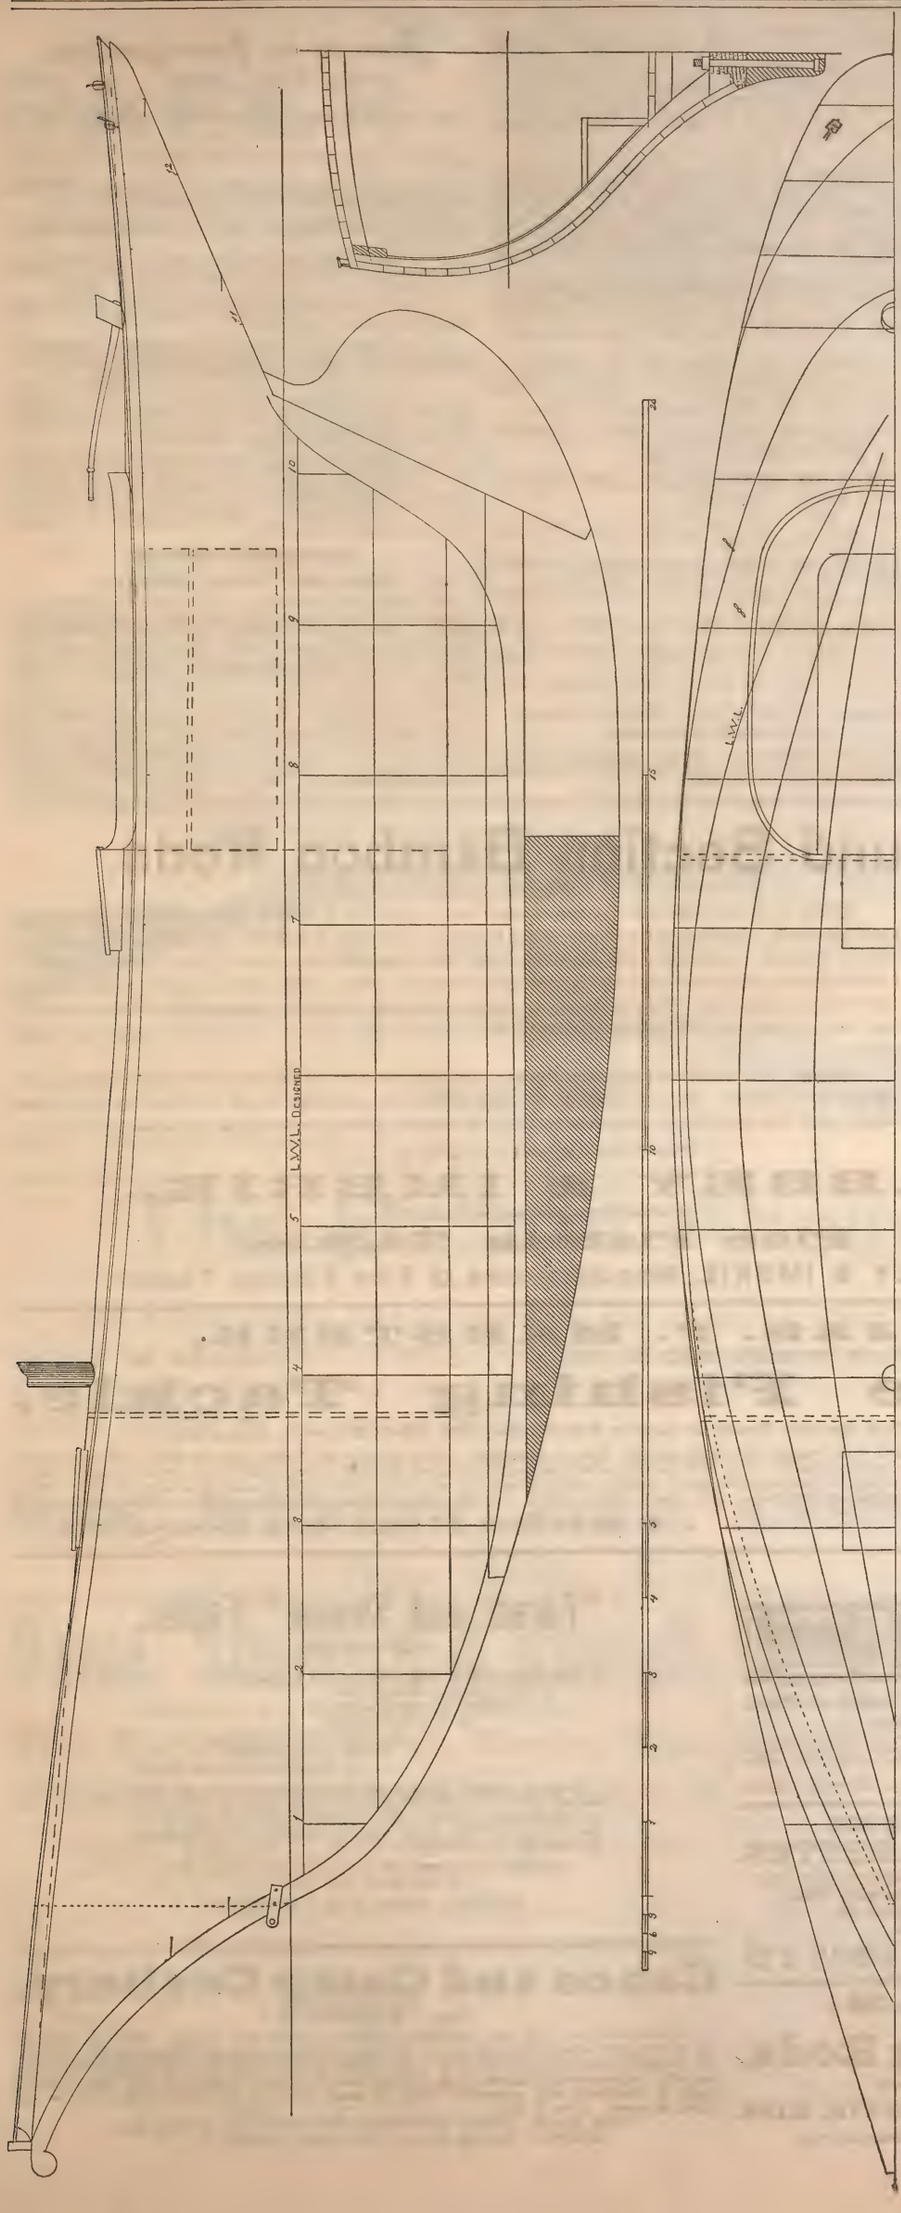
Length over all	78ft. 3in.
Length, l.w.l	66ft. 9in.
Beam, extreme	20ft.
Beam, l.w.l	19ft. 3in.
Depth to bottom of keel	10ft. 6in.
Depth of hold	8ft. 2in.
Draft	7ft. 6in.
Least freeboard	2ft. 10in.
Hoist of mainsail	47ft.
Main boom	67ft.
Gaff	42ft.
Bowsprit outboard	32ft.
Spinaker boom	65ft.
Ballast, inside	5 tons.
Ballast, keel	24 tons.
Displacement	68 tons.

On launching, with 5 tons inside, floors and tanks in place and bowsprit stepped, the yacht floated about 1½in. below her loadline aft and 7in. above it forward. The mast has yet to be stepped, which will bring her down by the head, but it looks now as though the lead keel had been carried too far aft. It runs to heel of sternpost.

CEDAR POINT Y. C.

THE Cedar Point Y. C. was organized at Saugatuck, Conn., on April 30, under the most favorable circumstances, and its future prospects are very promising. Eighteen yachts are already on its list, and it is expected that the number will be very materially increased during the coming season. The following officers were elected: Commodore, Francis Burritt, sloop Teal; Vice-Commodore, J. H. Jennings, cat Annie; Secretary, E. S. Wheeler, cat Go Softly; Treasurer, P. G. Sanford, cat Peggy; Treasurer, S. S. Dayton. Regatta Committee, Francis Burritt, P. G. Sanford, J. H. Jennings.

The opening regatta of this club will be held on Decoration Day, May 30, over the club course off Cedar Point, Conn. Open to all boats owned in and between Bridgeport and Stamford, Conn. Classes as follows:



Class C—Boats 31ft. and under, waterline, sloop-rigged, no restriction as to sails.

Class D—Boats 25ft. and under, waterline, jib and mainsail only.

Class E—Boats 21ft. and under, cat-rigged.

The time allowance schedule of the New Haven Y. C. was adopted.

Liberal prizes will be offered for the opening regatta, and all boats owned between Bridgeport and Stamford, eligible for the above classes, are cordially invited to enter. E. S. WHEELER, Sec.
SAUGATUCK, Conn.

SINGLE-HANDER "DAWN."—Designed by Capt. R. Barrington Baker, R. N.

THE AMERICA'S CUP RACES.

THE following letter was received yesterday, and the accompanying reply sent by ex-Commodore J. D. Smith of the Cup Committee:

SECRETARY'S OFFICE, ROYAL YACHT CLUB, GLASGOW, APRIL 21.
DEAR SIR—I have to acknowledge receipt of Mr. Krebs's letter of 4th inst., announcing that the papers relating to the challenge of the Thistle had been found by the committee having charge of the arrangements for contests for the above cup to be all in proper order. As requested by Mr. Krebs, I have pleasure in addressing this communication to you as chairman of said committee.

Mr. Bell is very glad to learn that the arrangements proposed have been so favorably received by your committee.

As regards the date of matches, Mr. Bell desires to bring before your committee the necessity for having this important preliminary arranged now. The business and other arrangements of Mr. Bell and a number of his friends, and doubtless also of many yachting men on your own side, will have to be so arranged as to fit in with the date of these matches, and whatever dates are fixed for the contest, the Thistle will be dispatched from here in ample time to make the voyage and be in New York three or four weeks before the date of the first race. Deferring, however, as far as possible to your wishes, Mr. Bell is willing that the contest take place any time between the 6th September and the 4th October, inclusive, but must ask you to fix definitely the days for the matches within this period, and he will esteem it a favor if you will bring this matter before your committee at the earliest possible date for definite settlement.

Number of Races.—In view of the expression of your committee's opinion, Mr. Bell is satisfied to let the result of the contest depend upon three trials.

I understand from Mr. Krebs's letter that the courses are held to be settled, viz., the same as in the Galatea matches.

Umpire.—Your remarks regarding the umpire are entirely concurred in by Mr. Bell. It is unlikely that any difference of opinion can arise as to the construction of terms, but it was thought that Mr. Schuyler's name should be inserted in our first letter, so as to limit, as far as possible, the points for correspondence.

Patrol Steamers.—Mr. Bell desires to thank the committee for their general approval of his suggestions on this subject. Minor details, as you suggest, may be left until his arrival in America, which will probably be about a fortnight before the date fixed for the first race.

Mr. Bell would also thank the committee for nominating Mr. Lloyd Phœnix as their representative on board the Thistle as well as for their kind offer of assistance in making arrangements for the Thistle's arrival in America. Trusting to hear from you by an early mail, I remain, dear sir, yours truly,

WILLIAM YORK, Secretary.

J. D. Smith, Esq., Chairman America Cup Committee, New York Y. C., 23 Broad street, New York.

NEW YORK, May 3, 1887. DEAR SIR—I am in receipt of your esteemed favor of the 21st ult., and note with pleasure that Mr. Krebs's letter to you of April 4 was satisfactory to Mr. Bell.

In relation to his request as to the date of matches, which is now the only point to be settled, on behalf of the committee I have only to say we did not intend to make objections to the dates of the matches proposed by you on March 16, viz.: October 4, 6 and 8, our ideas being that these dates could be mutually agreed upon after the Thistle arrived here; but inasmuch as you now state that Mr. Bell desires to have the dates for the matches fixed upon, at any time between the 6th of September and the 4th of October, we will make the dates Sept. 27 and 29, and if a third race is necessary, Oct. 1 next, providing that the clause in the latter part of your letter of March 16 last, in which we agreed, remain in force, viz.: "that in case of accidents happening at any time, either yachts shall have the time necessary for repairs, providing that no race shall be sailed after the close of the yachting season, as prescribed by the club rules."

The committee desire me to say that they have been anxious to have these international races made, in all respects, upon fair and honorable terms, within the spirit of the deed of gift, and that we shall be happy to welcome the Thistle and her owner upon her arrival in America.

I have the honor to be very faithfully yours,

JAMES D. SMITH,
Chairman of the America Cup Committee.

To William York, Esq., Secretary Royal Clyde Y. C., Glasgow, Scotland.

SOUTH BOSTON Y. C.—The programme for the open regatta of the South Boston Y. C., on May 30, has been issued. The regatta will be open to yachts of any recognized yacht club. The classes are: First, all yachts measuring 28ft. and under 38ft., two cash prizes of $25 and two of $15; second, yachts measuring 23ft. and less than 28ft., two cash prizes of $20, two of $12 and two of $8; third, centerboard yachts measuring 19ft. and less than 23ft., and all keel yachts under 23ft., two cash prizes of $20, two of $12, two of $8 and two of $5; fourth, centerboard yachts of 15ft. and less than 19ft., first prize $15, second $10, third $5; fifth, all boats measuring 12ft. and under 15ft., first prize $1, second $5. Schooners will sail at seven-eighths actual measurement. The start for all classes will be from anchor. At 1:30 P. M. the preparatory gun will be fired and the club flag hoisted on the judges' yacht, which will be the signal for all classes to form into line between flags bearing the number of their class. Yachts will be started at the following time and signal for the respective classes: 2 o'clock, second gun and lowering of club flag for first, second and third classes; 2:05, third gun and hoisting of club flag for forth and fifth classes. If, in any case, there should be a failure to fire the gun, the specified lowering or hoisting of the flag will be the signal to start. The judges are William Morris, chairman; Thomas Christian, C. McKenna, G. F. Clark, W. H. Godfren, J. P. Bullard and Herbert Pope. The Regatta Committee consists of Arthur Fuller, chairman; A. Henry Hall, Fred G. Conley, J. W. Sherman, jr., Frank T. Christian, James Bertram, W. J. McArdle and J. J. Bligh. Entries must be made in writing, giving name of yacht, owner, club, rig, centerboard or keel, length over all, on waterline, and after overhang, if known, and must be sent to G. F. Clark (Boston Yacht Agency), 43 Milk street, Boston, where numbers can be obtained on or before 12 M., May 28. There will be no restrictions on ballast or sails. The time limit will be four hours. No sharpies or catamarans will be allowed. The courses for the different classes are respective 14, 11, 9 and 6 miles.

SAILING BOATS FOR OPEN WATER.—Baltimore, April 18. *Editor Forest and Stream:* I have a boat that I think will just fill the bill for "Albatross." She is a lapstreak cedar boat, built by Conover, of Atlantic City. She is sharp at both ends and decked over fore and aft, with a coaming and 3in. deck all around. She is 18ft. long with 65 to 70in. beam, she is rigged with two lateen sails, one mast being stepped well forward and the other through the after deck. The tiller just clears this mast. The sheet of the dandy is run through a block on the rudder head and belayed to a cleat on the tiller. I have a pair of Lyman's bow-facing oars and a Radix centerboard. The boat is extremely safe and handy, and is the admiration of all who see her working, either under sail or with an ash breeze. I use this boat on the Gunpowder River, 18 miles from this city, for fishing and sailing. The river is very wide and is noted for the ugly sea it gets up on the least provocation. I fish eight or ten miles from my boat house, where the river is very deep and wide, and have frequently been out on the bay with her when it has been blowing quite fresh. I have been caught down the river on several occasions in the most terrific blows, and the good little boat has always carried me home safely. When it blows hard I take in the dandy and use only the mainsail, which is ample to carry the boat on a dead beat to windward. I have to pass under the P. W. & B. R. R. bridge, also a line of telegraph wires that are strung near the water and I accomplish it with great ease. It is but the work of a moment to take in the sails and unship the masts. I am sorry I cannot give "Albatross" accurate measurements of sails, masts and boat, but I cannot trust to my memory to do so. However, if he should wish them, you can give him my address and I will send them to him.—E. A. R.

THE QUEEN'S JUBILEE RACE.—The following notice has been sent out by the Royal Thames Y. C.: "The race is open to the world without any restriction as to rig or build. The course is round the United Kingdom, leaving the mainland of Great Britain and Ireland on the port hand; starting at Southend and finishing at Dover. H. R. H., the Commodore, has graciously intimated his intention to enter his yacht the Aline, and to start the race in person at noon on June 14. The sailing directions have been completed and entries will be received at the clubhouse between May 1 and June 7 inclusive. The entrance fee is 7 guineas, returnable to all members of the Royal Thames Y. C., whose yachts compete in the race. The first prize will be 1,000 guineas, and the owner of every yacht that duly sails the course will be entitled to a commemorative gold medal. The allotment of other prizes will be decided on the completion of the subscription list. The arrangements for a passenger steamer to accompany the race are in the hands of a special committee, and full particulars will shortly be published."—THORNTON SCOVELL, Sec. R. T. Y. C." A long subscription list accompanies the notice.

NOTES FROM THE DELAWARE.—*Editor Forest and Stream:* Another week will see the Delaware in full bloom so far as yachts can be said to blossom—their crews noses will blossom the week after. The Minerva has been on the railway and is now bending sails. Carrie Z. will try to swing her big spread of canvas again this year, she has been refastened and completely overhauled. Maggie has had a log waist put on and is ready for the water. Susie is on the railway and will be slightly overhauled, she has changed hands and her new owner is a young addition to yachting. Monarch has not yet started, she is offered for sale. Sunbeam is at Norfolk, Va., but will be back for the races. Venitza is overhauling at Market St. Helen has just returned from Florida and is dismantled for overhauling. Avalon, with Valette and Ellis on board, in now in New York waters to return for the races. Igidious, formerly Shackamaxon, has been rebuilt and will show what is in her next week. Thomas has had a new well and a general overhauling. Lillie has changed hands and is now in the water. Kate has also changed hands. Olga is in the water in her usual good shape, and Dr. Howell's yawl Sea Gull will go off soon, while his son's new cutter has shipped her spars and is ready to show her mettle. Flyaway has had all her work and rigging overhauled and is almost ready to go over. Gretchen was the first yacht over and has been laughing at the slow ones for eight weeks, she has shipped her racing rig and goes on the railway for a lead keel. The Minerva of Trenton has just come off with a new iron keel.—CHAS. L. WORK.

AN IMPROVED YACHT'S ANCHOR.—A modificatian of the stockless anchor has been introduced in England. It consists in constructing the anchor in only two pieces, the arms and crosshead being in one and the shank pivoted through same, the whole forming a very compact and serviceable anchor with an entire immunity from fouling. These anchors have been adopted in every class of pleasure boat, ranging from the tiny canoe to Mr. Vanderbilt's leviathan, the Alva, of 1,300 tons. Several steam yachts have recently been fitted to stow these anchors up the hawse pipes, a simple method which entirely dispenses with all catting and fishing gear, and a system which the leading shipping companies are adopting everywhere for their new vessels.

QUEBEC Y. C.—A yacht race under the management of the Quebec Y. C. will take place during the Queen's Jubilee celebration on May 24 and 25, open to all the Dominion of Canada. There will be two classes of yachts and two prizes in each class. The yachts will start above Quebec, at Wolfe Cove, and will go round Beaumont Buoy, finishing at the Custom House wharf. All entries, with names of yachts and residence, must be made by May 15. The race will be governed by a committee of members of the Quebec Y. C. This club is the only one in America which prohibits centerboard yachts, by compelling them to seal their boards.

GEN. PAINE'S NEW YACHT.—The spars for the new yacht have been roughed out, the mast being 86ft. heel to cap, 19in. at partners, 19½ in jaws of gaff, and 18 at hounds. The boom is 82ft. long, 14in. at middle and 13⅝ in slings. The gaff is 50ft. The bowsprit is 53ft. over all and 15in. diameter. The topmast is 43ft. heel to hounds. The keel, which is now ready, is a trough of ¾in. steel. It runs well forward and aft of trunk, and the stem and sternpost are scarfed to it. The former is 6 x 1¼in.

DOMINO, sloop, is having a ton of lead bolted on her keel.

CRUISING CUTTER FOR SALE.—One of the most interesting yachts described in "Small Yachts" is the cutter Surf, advertised in another column. Built solely for cruising she has been all about the coast between Mount Desert and New York for four seasons, besides which she has won several races. Her two owners now wish to sell her, as business does not allow both to use her together. Those who wish to know more of her will find a full description in "Small Yachts." She has a good cabin, ladies' cabin aft and full 6ft. headroom.

A NEW BOOK FOR YACHTSMEN.—The Forest and Stream Publishing Company will publish next week a new book for yachtsmen and canoeists, under the title of "Yachts, Boats and Canoes," by C. Stansfield-Hicks. The book covers a wide range, including small yachts and single-handers, canoes large and small, and model yachts, with practical instructions for building and rigging them. It is very fully illustrated with woodcuts and large plates. The book makes an octavo volume of 380 pages, the price being $3.50.

MISCHIEF.—The iron sloop Mischief has just been sold by J. R. Busk to Messrs. Auchincloss, of New York, at one time owners of cutter Madge. The sale has given rise to the report that the new steel schooner that A. Cary Smith is at work on is for Mr. Busk, as he had in contemplation for some time the construction of such a yacht.

VERA.—This little cutter, advertised in another column, is well-known about Marblehead and Beverly, where she has raced for several seasons. She was built by D. J. Lawlor, and is 22ft. 2in. over all, 19ft. 2in. l.w.l., 6ft. 4in. beam, and 3ft. 2in. draft.

POCAHONTAS is afloat again, and has shipped some handsome mahogany skylights. Her bowsprit has been converted into a round stick, and her spars have been scraped.

CINDERELLA came to anchor off Staten Island on Saturday fresh in a coat of white paint. Mr. C. S. Lee and Oriva's old crew will sail her in all races this season.

ATLANTIC.—The P. of B. R. was hauled out at Mumm's on Monday for more lead. Her rail has been shaved down a little aft, and she is now painted white.

MAUD A.—The latest addition to the Rochester Y. C. will be launched this week. She is 20ft. over all and 5ft. beam.

CORONET.—The cable reports that Coronet passed the Lizard on April 30, bound for New York.

REGINA, sloop, Mr. Ralph W. Ellis, was at Newbern, N. C., on May 1, bound for New York.

INDIAN RIVER Y. C.—The annual regatta of this club was set for May 3.

FORMOSA, the famous old cutter, is being converted into a yawl.

SHONA, cutter, will have a new suit of sails from Lapthorne.

THE TRAVELERS of Hartford advertises what it HAS DONE, not what it is GOING TO DO; it HAS PAID over $11,200,000 to Policyholders in settlement of claims.—*Adv.*

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

W. B. R.—We do not know dates of publication nor cost of service.

H. W. T.—Laverack setters are a strain of English setters and are exhibited under that class at bench shows.

B. D. N.—The hairs are not necessarily a sign of poor stock; probably they will disappear. We do not know any breeder to refer you to.

C. L. S.—There is a variety of small targets for rest shooting at short distances. The large targets are used for both rest and off hand shooting.

G. W.—1. The book might be picked up at some of the second hand stores. 2. For coursing see "Stonehenge on the Greyhound," which we can supply.

W. L. C.—The gun can probably be so repaired by a gunsmith as to make it all right again. Take it to a competent repairer. It is difficult to pass an opinion on it without examination.

G. W., Concord, N. H.—1. Canoes are allowed to cross the boundary as a matter of courtesy to visit the A. C. A. meets. They are dutiable, however, and must pay duty if brought into the United States permanently. 2. Take the single shooter. 3. The recoil is not excessive. 4. No. 4 Exchange place, Boston.

H. E. M., Hazelton, Iowa.—What is this bird, a stranger to us? Full length 7in., bill ¾in. long and ⅝in. broad and thick at base, and of a light canary color; strip of bright canary-colored feathers ¼in. wide extending across front of head and back over eyes; top of head black, neck dark, brown gradually fading to canary on body; tail black, 2½in long.. Ans. Apparently an evening grosbeak (*Hesperiphona vespertina*).

MAN AND OTHER ANIMALS.

Col. White's experiments on the resistance offered by a bank of snow to a rifle bullet, which were made recently at Ottawa, were most interesting. It was found that the Martini bullets fired into a bank of well packed snow were completely spent after traversing a distance of not more than four feet. Snider bullets, in hard-packed snow mixed with ice, but not hard enough to prevent digging into it with a sheet-iron shovel, did not penetrate more than about four feet; in perfectly dry snow, packed by natural drift, but capable of being easily crushed in the hand, a bullet penetrated about four feet, and in loose drifted dry snow less than seven feet, though fired from points only 20 or 30 yards distant.—*Montreal Witness.*

Round Section Bamboo Rods.

Having been the pioneers in the manufacture and introduction of Section Bamboo Rods, we have always taken great pride in securing and perfecting every improvement in order to maintain our position as the makers of the very best rods. Knowing not only theoretically, but also by long experience, that a properly made round rod is the only absolutely perfect rod, we have invariably refused, and still do refuse, to put our name to any but our "Best" round section rods. While our prices for these round rods are only a trifle more than the prices asked by any other makers, the rods are widely known to be *incomparably superior* and *guaranteed* in the most liberal manner.

We have just finished and put on the market a *new caliber* round rod, 10 feet long, and weighing with the solid reel seat only 7 ounces. This rod has stood the most severe tests, and found capable of killing the largest black bass. The many expert anglers who have handled this rod pronounce it the *best balanced and most perfect rod* in the market.

A WORD IN SEASON.

Readers old and new of the FOREST AND STREAM may be pleased to know that the paper is now at the close of 1886 enjoying the support of a wider circle of friends than at any former period in its history. This is an interesting fact, for it proves, with the best possible demonstration of success, the sound sense of the theory long ago adopted by editors and publishers, and steadfastly adhered to, that there is room in this country for a journal treating the subjects embraced by our departments, and depending for its support wholly upon what have been accepted by the conductors of the FOREST AND STREAM as legitimate journalistic methods. In other words, we have kept faith with subscribers by devoting our reading columns exclusively to honest reading matter, and have not given up our pages to extended paid puffs of railroad routes clumsily disguised as accounts of sportsmen's travel, nor alluring descriptions of wonderful agricultural regions, all paid by the column. The conviction that a sportsman's journal for sportsmen could be conducted without resorting to such questionable makeshift expedients have proved quite correct.

The tone and high character of the journal, as one fit for sportsmen to receive into their homes, will be jealously maintained. As there is nothing in the recreations of field and stream inconsistent with the highest type of manhood, so, the editors are convinced, there should be in a journal like the FOREST AND STREAM nothing to offend good taste.

The FOREST AND STREAM will be, in the future as in the past, thoroughly representative of the best field sportsmanship of America. It will maintain its position as the chosen exponent of those who seek recreation with gun or rod, rifle, canoe or yacht. Its character will be scrupulously preserved, and readers in 1887 may expect a rich fund of sporting sketches and stories, suggestions, bright sayings, prompt, reliable news, and interesting discussions. Angler, shooter, dog breeder, canoeist and yachtsman, may be assured that whatever is of interest in these respective fields in 1887 will find its way into the columns of the FOREST AND STREAM.

The Sportsman Tourist

columns are filled with bright sketches of travel, camp life and adventure, the reflected experience of a host of outers.

Natural History.

Papers descriptive of bird life, chapters of animal biography, notes on the ways of field, forest and water creatures as observed by sportmen, anglers and naturalists, make up these pages. The special work of the past year has been the establishment of the Audubon Society for the Protection of Birds, begun in February, and having now a membership approaching 20,000.

Angling and Shooting.

Time was when a single journal sufficed in this country for adequate discussion of all the heterogenous pastimes and practices dubbed sport. That time has long since passed away Some of the sports have been outgrown or put under a ban, others have developed to such a degree that each class requires a special organ. The particular fields chosen by the FOREST AND STREAM are those of angling and shooting. The pages given up to these topics are rich with the freshest, brightest, most wholesome, entertaining and valuable open air literature of the day. They have the sunlight and woodsy odor of the haunts of game and fish; they picture nature as seen by sportsman and angler. One has not long to read the FOREST AND STREAM before learning its attitude with respect to game and fish protection. The editors believe in conserving, by all legitimate methods, the game of fields and woods, and the fish of brook, river and lake, not for the exclusive benefit of any class or classes, but for the public. They are earnest, consistent and determined advocates of strict protection in the legal close season, and in restricting the taking of game both as to season and methods, so that the benefits of these natural resources may be evenly distributed.

The Kennel.

This department has kept even pace with the growth of the interest of breeding field and pet dogs. Reports of trials and shows are usually given in the FOREST AND STREAM in advance of other publications, and being prepared by competent writers their intelligent criticisms are of practical utility. This journal is not hampered by personal animosities. It has no judges to "kill." It does not decide a dog's merit by asking who the owner is. It treats all kennel subjects without fear, favor or ulterior motives, and in consequence enjoys a degree of public confidence and esteem denied to such as stagger beneath the incubus of malice and flounder in the bogs of ignorance.

Rifle and Trap Shooting

records scores of meetings and matches, discussions of topics pertaining to the butt, gallery and trap. Secretaries of gun and rifle clubs are invited to send their scores for publication.

Canoeing.

This country is a land of magnificent water courses, and Americans are just beginning to appreciate the canoe as a means of enjoying the delectable charms of river and lake, and bay and canal. The men who are making fortunes by making canoes know best how rapidly the ranks of canoeists are multiplying. Novices and old hands will find in the FOREST AND STREAM canoeing columns, in charge of a practical canoeist, accounts of cruises, lines of new craft, and hints and helps and suggestions without number. Closely allied is

Yachting,

in which the FOREST AND STREAM is the only competent, all-the-year-round, intelligent exponent. Our reports of races are full, prompt and accurate. The numerous illustrations of lines of new yachts make an invaluable record of the development of yacht building.

Weekly, $4 per year; $2 for six months.

Forest and Stream Pub. Co., 39 Park Row.

For Sale.

CANADA.

PROVINCE OF NEW BRUNSWICK.

FIVE AND TEN YEARS'

Fishing Leases.

IMPORTANT TO OWNERS OF VALUABLE DOGS.

ASHMONT'S BOOKS.

DOGS: THEIR MANAGEMENT IN HEALTH AND TREATMENT IN DISEASE, is absolutely indispensable to you. It is the acknowledged authority, advising you how to properly care for your dog when well, and treat him when sick. *The Sporting Life* says: "It is credited on both sides of the Atlantic as being the best work on the subject ever published." Price, $2.00.

PRINCIPLES OF DOG TRAINING, By W. C. PERCY (Kit Kilbird). Says *The Trap and Trigger*: "This book as it now appears, retouched by ASHMONT, is readable as a novel. Its style is compact and conspicuously clear. This work covers the ground of training a dog for the field completely, and, at the same time, briefly. It is invaluable to field sportsmen." Price, 50 cents. These books sent postpaid on receipt of price.

ANSWERS TO CORRESPONDENTS.

THIRTY-TWO PAGES.

Four pages are added to the usual twenty-eight, and this issue of Forest and Stream consists of thirty-two pages.

THE FARMER'S BOY.

A BILL has just been passed by the Massachusetts Legislature to permit the snaring of ruffed grouse by land owners and their families, from Oct. 1 to Jan. 1. Several of the Senators spoke in favor of the bill on the ground that the farmer's boy must be protected in his rights; and there was quite a display of codfish eloquence about the constitutional privileges enjoyed by the farmers of Old Massachusetts from earliest Colonial times, and not to be overthrown now in favor of men who want to kill grouse with guns. Much of this talk had evidently been inspired by the suggestions of the Rev. Dr. Barrows, of Reading, a retired clergyman, who has turned his attention from other fields of labor to busy himself with securing to the farmer's boy the privilege of trapping.

We have not at hand the figures to show how many thousands of farmer's boys there are in Massachusetts; but we quite agree that every mother's son of them should have his rights. It is by no means clear, however, that the license to snare ruffed grouse is one of these rights, nor is it any more clear that the farmer's boy is asking for the trapping privilege. The real demand for grouse snaring comes from the professional snarers who snare the birds for market. The professional snarer is one of that class of fellows who do no regular work for a living, but resort to all sorts of lazy shifts to keep themselves alive without honest labor. The market snarer is the man who wants this law, and it is for the market snarer and not for the farmer's boy that the Rev. Dr. Barrows and the members of the Legislature are interesting themselves when they restore snaring; the true object for which they are striving is to fix the law so that the Boston markets may enjoy unrestricted license to sell the snared grouse of Massachusetts and other States.

GAME IN MONTANA.

MONTANA is now the best and most accessible hunting ground for big game in all the Western country. The inhabitants of that Territory realize that their game is worth more to them alive and running free over the prairies and the mountains than it ever can be when converted into meat and hides. They are shrewd and far-seeing enough to understand that as long as there is game to be had, tourists from the East will flock into the Territory, will buy supplies and hire men and outfits, will spend money and make business good in many a little railroad and mountain town.

Realizing all this a special effort has been made this year by the Rod and Gun Club of Bozeman and by other enlightened citizens to arouse public sentiment on the question of game protection. The result of this effort is seen in the new Montana game law which we print in another column. This law is satisfactory in many respects, but its passage does not necessarily mean any great change in the methods of game destruction which have been going on for years in Montana, and which have practically exterminated large game in more than one Western State and Territory. To accomplish anything this law must be enforced, and if the Bozeman Gun Club and other public spirited citizens of the Territory will make it their business to see that this is done, they will not only earn for themselves the gratitude of all who are interested in the large game of the West, but will perform a great service for themselves and for Montana.

SNAP SHOTS.

FIDDLEDEEDEEING with game and fish legislation is still the order of the day at Albany. Governor Hill has displayed the alacrity we gave him credit for in signing Park Row saloon-keeper Finn's short lobster law repeal. Nothing else was to have been expected from a Governor who signed the deer hounding bill and on whom the game and fish clique wire-pullers rely for approval of every vicious measure to further their selfish interests. There was no reason under heaven why the lobster law should have been repealed except that certain dealers in this city, against whom suits for violation of the law were pending, decided that it would be simpler and cheaper to "put up" for the repeal than to stand trial and pay their fines.

James, the man arrested some time since by Captain Harris for killing game and trapping fur in the Yellowstone Park, has been escorted outside the reservation. Is it not a pitiful and humiliating spectacle that a great government like that of the United States should have no means of punishing a man who robs the people of their property? We owe this disgraceful state of things to the Honorable House of Representatives, elected by the people to take care of the people's interests. As things stand at present, any one can hunt in the Park, and the only penalty is expulsion.

The managers of the World's Trap Shooting Carnival, at Wellington, near Boston, Mass., are making preparations for a large gathering of shooters. The bruited British-American match will not be shot, as Great Britain has mustered no team to meet the Americans; but there will be a big time just the same, and if the projectors realize their expectations, the Hub will be enveloped in a pall of gunpowder smoke from Monday morning to Saturday night. It is announced that teams desiring to compete for the FOREST AND STREAM DECORATION DAY TROPHY will be provided with the facilities to do so.

The sport of pigeon flying is assuming vast proportions in this country; it is carried on very much after the manner of horse racing; pools are sold on the different birds; the flyers in the air like the flyers on the track have their records; and a multitude of people are interested in the flights. Pigeon racing has come to be a well developed system of gambling. Not infrequently when a homer fails to return to the loft it is found to have been shot by some gunner who might have devoted his ammunition to a better purpose.

The impulse which sometimes impels an individual about to commit suicide to kill the members of his family before making away with his own life, had a curious illustration in Connecticut last week, when a man shot his favorite dog before shooting himself.

The National Rod and Reel Association prize list is unusually full and the classes are numerous. The class for experts in single-handed fly-casting, where distance alone counts, is always the one on which the interest of the visitors centers, and this class has usually been left for the last in order to hold the attendance until the close. In fact the interest in all the fly-casting contests is confined to the trials for distance, as can be seen by the groups watching the distance casting, while at the same time at another point the contestants are competing for delicacy and accuracy with few besides the judges to look at them, and the casters pride themselves on their length of line more than on any other point; and it has often been questioned if distance should not be the only point taken cognizance of in a tournament. We have often thought so, because we find that it is the main thing in the minds of those who cast. When a man has beaten another by five feet and the judges award him a lower place on the prize list because his rival has more points in either delicacy or accuracy, or both, he often feels a disappointment which he may or may not express. As we have before announced, the tournament will take place on Harlem Mere, Central Park, New York city, on Wednesday and Thursday, May 25 and 26, and the officers hope to begin at 10 A. M. There will be no postponement on account of weather.

When a South Sea Island savage, who has had the misfortune to fall into the hands of his enemies, notes that his captors are solicitous about his appetite, and realizes that he is taking on fat, his cannibal sense at once tells him that there is to be a feast somewhere in the vicinity, at which, duly fatted, he will be present. In very much the same way, when the spaniel dog Compton Brahmin reluctantly enters upon a course of physic and fasting, his dog sense tells him that there is to be a bench show at which, duly emaciated, he will be present.

A Fort Edward, N. Y., jury has disagreed in a case where a man was charged with deer hounding out of season. That the accused was not acquitted must be due to his lawyer's lack of enterprise. It would not have been difficult to subpœna a score of Dr. Wards, Dennys, Paul Smiths and other like eminent deer sharps for the defense to testify that a deer cannot be hounded out of season. The Hudson River may run up hill, and the Adirondack Mountains themselves dissolve in lava, but a dog follow a deer in close season never.

They do not put a high value on the life of a game warden in Maine. Graves, the deer-dogger who in cold blood murdered game wardens Niles and Hill, was last Tuesday at Calais found guilty of murder in the second degree, and it will be remembered that his accomplice, Macfarland, was let off without any punishment at all. This looks like a gross miscarriage of justice. The logical result will be the murder of other game wardens if any shall be found brave enough to try to do their duty in enforcing the deer law.

A correspondent writes to this effect: "Please look up date of paper in which you published New York trout law, as I have a bet on the season and want the number to refer to." We are always glad to give information that will help people, but we are not engaged in the business of hunting through newspaper files for the purpose of deciding bets. Life is too short.

The new regulations of the Yellowstone Park, printed in these columns a short time ago, have been posted up in various places in the National Reservation. In future, therefore, no one will be able to plead ignorance of the law as an excuse for any violation of it. For their own protection tourists who purpose visiting the Park during the coming season will do well to study these regulations with care.

The Massachusetts lobster law is undergoing revision, and by the time the Legislature is through with it, if the designs of those at the bottom of the business succeed, it will be worth very little as a protective measure. The proposed insertion of a clause requiring prosecutor to prove "intent" of lawbreaker will take from the law all its usefulness.

The Great Dipper points but the Dog Star sets.

The Sportsman Tourist.

THE SONG OF THE FLOOD.

OH, a glorious sight is a field of ice
In the sunlight all a-glitter,
When the river is fast in a giant vise
And the wind blows keen and bitter.
But hurrah for the earth-stained, raging stream,
When the river runs bank full;
With a slippery clash as the ice cakes flash
Like the eyes of a maddened bull!

When the white plain breaks in a million cakes
With a shock like planets shaking,
And the crash of the fragments piled in flakes
Sets the granite ledges quaking,
Then hurrah for the earth-stained, raging stream,
When the river runs bank full,
And the ice fiend 's loose down the frightful sluice
With the roar of a maddened bull!

JOHN PRESTON TRUE.

THE OLD AND THE NEW.

BY OLD MORTALITY.

"Alas, poor Yorick, I knew him well."

THE arrangement for a shooting trip, in "the good old times," was a matter for considerable thought and involved some trouble, but the time and trouble were generally well rewarded. Game was plentiful, and it only required the "know how to do it" to insure success. To the eastward of Havre de Grace, across the waters of the bay, lies a strip of land divided from the main shore by a narrow inlet; this is known as Spesutia Island, or as we always called it, "Pesusi Island." Only a very small portion of it was at all suitable for cultivation, the most of the tract being composed of marshes overgrown with tall reeds, and cut up and intersected with small streams, ditches, channels and thoroughfares, a veritable wilderness on a small scale, and a favorite haunt for wildfowl of all descriptions. To thread this wilderness in a light skiff required as much "craft" and skill as does that of the hunter, who follows the trails of the forest with unerring precision. Among these wild marshes the savage swine roamed, the old boars, emerging from the brake, greeting the passing boat with a loud snort and showing their tusks viciously at having their solitude disturbed. Among these wilds I have spent many days of sport and pleasure in the olden time. In the bow of the frail skiff, with ammunition box in front of me and my No. 11 muzzleloader at a ready, and my dear old friend and companion of many hunts at the paddle, which he twirled in the water so skillfully that nothing could be heard of our advance but the whispers of the ripples as they parted from the bow. Ever and anon a teal, with bright blue or green wing, a gaudy mallard or a black duck, would spring from the reeds at the sides of the channel and often drop as quickly at the report of the No. 11. The echoes would startle numberless flocks of different kinds of ducks from the ponds and ditches, and these would circle about and then settle again and resume feeding or repose. To reach this favorite spot it was requisite to put our skiffs and traps on board of the propeller bound for Baltimore, and in the early morning or in the evening we were put off opposite the Narrows and made our way to McGraw's, who occupied an old mansion situated on a high bluff just above the landing. McGraw was a most peculiar man, both in appearance and habits. He had the infirmity of stuttering, and the contortions of his countenance during these paroxysms made him appear frightful; more so when he was angry or out of humor, which was quite a common occurrence. He had two stalwart sons and a most amiable and beautiful daughter; these, with the niggers and dogs, made up the household. Ah! what splendid times I have had in that old mansion, and how the trials of the day have vanished "in wreaths of smoke, the well-cracked joke and fumes of apple toddy."

On a crisp evening in November, many years ago, an old friend of mine, who had shared my pleasures on many occasions with rod and gun, together with myself, two gunners and my two dogs, launched our skiffs from the steamer, when near Turkey Point, and hurrying in the traps, pulled away for McGraw's landing. The sun had disappeared, leaving behind the glorious autumn halo that bathed the west in a flood of crimson and tinged the far-off clouds with orange, purple and gold. We old sportsmen have witnessed the glories of the sunrise and setting that would thrill with delight the heroes of the Alpenstock, or the Mt. Washington tourist. The gloom had settled down over the water and the marshes ere the prows of our boats grated on the sandy beach of the landing, and the lights from the windows of McGraw's twinkled like stars to guide us up the bank. A chorus of fierce howls and barkings announced our arrival, and the boys came out, lantern in hand, to quiet the dogs and give us a hearty welcome. Having provided Dash and Juno with good warm beds in the barn, we prepared to do justice to Sally's odorous buckwheat cakes, the aroma from which had whetted our appetites to a ferocious degree.

Now in this little sketch I propose to give my readers some idea of the ways that we enjoyed sport in "the olden time," when game, although plentiful, required skill, judgment and a level head to secure it. The breechloader was unknown; for every shot you were obliged to go through the motions with horn and pouch and wads and caps; and when ducks were flying around you, the bluewing darting with the velocity of a rifle ball at your decoys, a man needed to be cool to get through the operation without a bungle.

After discussing the good supper, although tired, we had to await digestion before retiring, which gave us an opportunity to talk over the chances for the morrow and the inevitable game of seven-up. Having arranged matters and got out the guns and traps, we all started for bed and much needed rest. "Breakfast by candle-light" is the duck shooter's motto, and the sun had not even tinged the leaden clouds ere we were off for the day's sport. As we left the house we could hear Dash and Juno whimpering in the barn, full of disappointment at being left at home; but keep quiet, good dogs, your turn will come before we return to town. After pulling our light boats over the sands and putting the decoys snugly away, we bad eone another good bye and wished good luck, and each boat pointed in a different direction. I had in my boat my old friend and companion, Dan Wills. I have designated him as a gunner, and while he was a gunner in every sense of the term, he was at the time a most jovial and welcome companion. There must be very few old sportsmen in this section who have not heard of or did not know Dan Wills. He was a famous shot, a capital boatman, and, indeed, up to everything that pertained to sport. He was also an accomplished naturalist and taxidermist. What Danny did not know about sport was not worth the knowing. He was a short, stout man, with small, dark, piercing eyes; quick as the lightning with his gun, and could shoot equally well from right or left shoulder. He was considered by many to be the best snap or cripple shot in this country. I have seen this man perform some wonderful feats at shooting during the many trips I have been with him. Years have passed since we put him to his final rest and his shooting days were over. Nothing could please Danny more than to place one of his friends in a first-rate position in the cripple, where he could see all around him, while Danny went into the deep thicket to start the woodcock. He was indeed a lucky man who would get down a bird to his gun, for with the whir of the cock would come Dan's cry of "Mark!" a little cloud of smoke in the bushes, a report, and down would go the bird with unerring certainty before our friend could get his gun to his shoulder. About the time Dan would have the bird in his capacious pocket you would hear him inquire in the most innocent manner, "Did he drop?" He used to fool me in this manner until I got to know him, when I gave up standing outside watching for chances, and pitched in with my dog, or I would never have got a bird. I was considered a pretty fair shot; but, in all candor, there was scarcely a trip that we took together, either at quail, woodcock or snipe, that Dan would not double me in spite of all my endeavors. I never beat him but once in my life, and that was at rail birds. Dan pushed his own boat, gathered his birds and shot with one hand, while I had Dennis Welsh, one of the best pushers on the Delaware, and had hard work to beat him at that. But I am getting into biographies, and forgetting that the morning is breaking in the east and we are out for duck shooting.

After rowing noiselessly through the maze of crooked channels, we halted for our morning's work at a point where two streams met, forming an open space of water, giving us plenty of room for our decoys. While putting them out we could hear the faint whistle of the wings of the flocks of redheads and baldpates as they passed swiftly overhead toward their favorite feeding grounds on the flats. Decoys being arranged satisfactorily, we pushed our boat among the reeds at the point and bent over the tallest ones toward us, so as not to interfere with our shooting. Having loaded up, we were ready for business. It seems to me that anticipation and expectation have nearly as much to do with the enjoyment of a sportsman as realization. We crouch in our little boat, eye and ear on the alert, and the heart throbs with a feeling of joyous expectancy, eager to hear the first sound of the soft whistle of the wings or the faint cluck or quack, or to catch the first glimpse of the little flock as they double with graceful movement toward the decoys.

We had not long to wait, for without warning and with a splash, in bounced a little bunch of teal close to the decoys. It was scarcely light and I could not distinguish them as they scurried away upon our rising to shoot. Not so with Dan, for with the double report from his gun, down came a pair, struggling for a moment on the surface of the water, and then floating quietly, dead, toward the shore. After a little wait three fine mallards came along, and I dropped a pair of them, Dan doubling up the other, a little cloud of feathers floating down on the wind, proving the certainty of his aim. And so we kept on until the sun had gotten about two hours high, and the flight seemed to have ceased. We had secured sixteen ducks, including two redheads. We then concluded to change our quarters to a spot some half mile away, where we had observed several bunches of ducks go down. Up came our twenty-five decoys, and we pulled away and soon had them out again. We waited here some time without a shot. Dan had been taking a look around for chances, when he suddenly crouched down in the boat, and pointed, with a chuckle, up the thoroughfare. By peeping cautiously out from among the reeds, I could distinguish our two friends in their boat, the one lying closely with his gun pointing over the bow, the other paddling noiselessly as they rounded the point so as to get a shot at our decoys. Before they arrived too near Dan gave them a hail, which put an end to their dream of a big shot, and we had a good laugh over their mistake. They thought from the report of our guns we were far away, and made an error that many duck shooters have made before and since. After consultation we concluded to occupy the rest of the day in paddling, so putting the decoys on shore we started for the ditches and thoroughfares. It was really wonderful to see Dan handle a paddle. Without any seeming exertion he would urge a skiff along noiselessly and steadily, and he could be on a duck before the timid creature was aware of the proximity of an enemy. Frequent reports of the guns of our friends gave promise of a fair bag, and thus the time wore away and the shades of evening were upon us ere we realized the day half gone, and we pointed our way toward McGraw's again. The boys met us and helped us with our load, which proved a good bag of forty-one ducks, five snipe and a muskrat. And now, my reader, let me ask you this, Did you ever sit over a plate of hot "corn dodgers" after a hard day's shooting? It seems to me that the boys had much better appetites in the olden time than now in the new. To be sure, we used to work harder, and my fingers have ached many a time from handling my loading rod, and from putting those infernal caps on the nipples that were a size too small for them. We have it easier now. The smooth and neatly made cartridge slips into the chamber, and with a snap the gun is ready for work. The old brown table cover, the steel knife and fork, and the imitation "Delf" china and bowl for coffee are now replaced with white china and plated ware. But I fancy the appetite is no better, and I am confident that "corn dodgers" never look nor taste as well from a white china plate and silver fork. Sally could make corn cakes, certain, and she had a company of hungry boys on that night that could put them away. Dash and Juno had a good supper also, and they pranced and barked and clung around us, giving us a welcome that only a faithful dog can express.

On the morrow Dan and myself arranged for a quail shoot on the mainland, and our friends were to try the ducks again and take a tramp on Black Island, where it was said some snipe had been seen. We made an early start. The dogs were wild with delight at the prospect of a hunt, and we bent our way to the ferry, crossed over by the old rope boat, and Dan and I and the dogs started for our day's hunt. Dash was a red setter, of Irish blood, and a very superior dog in all respects, the best dog I ever owned. He was a powerful dog and no brier patch was too thick for him. He was a great ranger, had a fine nose, and was as staunch as a rock. Juno was a pointer bitch, probably as beautiful a creature as could be produced in dog flesh, white and liver color, and slightly speckled. She was from the celebrated Cadwallader stock, and a present to me from Dan. She was a little too delicate for rough hunting, but was a perfect picture when on a stand or backing, her whole form trembling and her long whip-like tail bending a little at the point, her nostrils distended, and her eyes standing out like two balls. Juno could scent a bird further than most dogs, and it made her a little too careful. She would always approach a covey with a graceful, cat-like movement, while Dash would march up with a confident air, seeming to say, "There they are;" and he had a fashion of quietly turning his head a little to see if you were coming, and then would resume his statue-like position. Ah! my good dogs; what sport I have had with you in "the good old times."

We were soon among the birds, and Dash had a covey close to a dense thicket, from which they had come to take their morning sun-bath and meal. Juno was backing him, as usual, trembling with excitement. We were well aware that what was to be done with that covey must be done quickly. We walked up each side of the dogs; the birds sprang toward the thicket with a loud whir; the quick reports of our guns followed; and the smoke for a moment hid from our view the little bunches of floating feathers that proved that we had "pointed right." We had only fired two barrels, and two fine cock birds lay struggling among the leaves of the thick bushes.

It was of no use to follow this covey, quail were very plenty in these times, and our good dogs soon had another covey, Juno this time having the honors and Dash on the back seat. And so the day wore on, until we reached the ferry again on our way home with fifty-two quail and two woodcock, and a pair of tired dogs. We found our friends at McGraw's, and they, too, had a good account to render, they having killed twenty odd snipe without a dog, and several duck. So my reader can observe readily that with a little hard work it was comparatively easy in the olden time to have plenty of rational and lawful sport. But alas, the times have sadly, woefully changed. You might scour these fields and meadows now, and you could not find three coveys of quail or a half dozen snipe. What think you of a day's sport such as this, that a friend of mine and this same Dan Wills had a few miles from Philadelphia, starting in their wagon in the morning and returning for supper: 3 teal, 2 black ducks, 18 woodcock, 98 rail birds and 9 dozen reed birds? I saw this bunch of game. Such were the chances for sport in the old times, when breechloaders were unknown and other modern contrivances were not thought of, at least they were not used, and sport was carried on in a legitimate style.

And now, as we have talked over the old, let us have a little chat over the new. My first experience in sinkbox shooting was to me one of the most uncomfortable and tiresome modes of getting ducks that I could conceive of. I started, with one of the Bond boys, from the wharf near the Hartford Hotel at Havre de Grace, about 2 o'clock on a chilly November morning, many years ago. The little scow moved slowly from the wharf, the sail filled with a light wind from the northwest; nearly the entire deck and hold of the small craft were occupied with the decoys and sinkbox, a clumsy affair in those times. Our crew consisted of one colored man who was to attend us, with the boat which was towing astern. There were but few of these sinkboxes around Havre de Grace at that time, and even at this early date they had created a feeling of disgust among the "old sports" and punt-shooters, as being inhuman contrivances of market-shooters to murder the fowl on their feeding grounds. But canvasbacks were worth a dollar a pair and the Bond boys and Jake Poplar were wont to ship barrels of them to the game dealers and "Uncle John" Krider for sale, consequently sinkbox shooting and punt-gun shooting became the chief vocation and business of the half of the enterprising citizens of Havre de Grace. As our scow approached the vicinity of the flats, great ricks of ducks would get up with a noise of a passing railroad train. Having arrived at the ground that Capt. Bond had selected, we dropped anchor and unshipped the sinkbox and put out the decoys. The scow was then towed away some half a mile, and Bond was left in the box to take the early morning shooting, as I was a novice.

With the first gray of the dawn I saw the quick flashes and heard the boom of his gun. And the darky, who was still on board, proceeded to unloose the boat and ventured the remark, "that he had better be off, as Capt. Bond was knocken 'em." My attention was soon drawn to the flashes of the guns of other shooters far away, and the deep boom or faint report would come over the water. As it grew lighter I could take in the whole situation, and see the great flocks of wildfowl as they passed from place to place, disturbed by the cannonading on their feeding grounds. Bond gave signal to the man to bring me to the sinkbox, and after some trepidation and a ticklish balance on the side, I was safely ensconced in the "coffin," and awaiting my maiden effort. I will not go through the story of the day. We got lots of ducks and I considered it regular murder, and became heartily tired of it. I shall ever remember my feelings the next morning. My neck felt nearly dislocated, my poor back ached, my ankles were swelled from the strain, and on the whole I was pretty well used up. No more sinkbox shooting for me.

A short time ago a valued friend invited me to visit his newly purchased place on Spesutia Island. I gladly accepted, as it would give me an opportunity of again seeing my old favorite haunt and revive the glad memories of old times. On our arrival at Havre de Grace we were met by the captain, the commander of the "scow." Now in calling the present style of craft owned by wealthy

New Yorkers and Philadelphians scows, I must not be understood to mean canal boats or some other sort of clumsy craft. By no means. They are broad, flat-bottomed, well built vessels, with square ends sloping toward the water, large and roomy cabins, and furnished with every convenience that money and taste for luxury can provide. Our captain led the way to a neat little propeller, the property of my friend, that was moored at the wharf with steam up. In this we started for the island, and as we passed the lighthouse and approached the Narrows, I could readily perceive how vastly matters had changed from my old remembrance of the place. Now a beautiful modern cottage had replaced the old homestead, and instead of being ushered into the old dining room with its wide fireplace and blazing, crackling logs and aroma of buckwheat cakes and flappers, we walk into an elegantly appointed mansion, and the heartfelt expressions of hospitality is the only thing that serves to mitigate the disappointment of the scene. At the dock was moored the large and trim scow, which was in waiting to take us to the flats, her large white sail flapping in the wind. Servants were busied in carrying on board the essentials for a good time and a "good feed." There seemed nothing of the old left, and as I stood upon the bank in the twilight I pictured to myself the old scenes with Dan and Dash and Juno. We left from the wharf about twelve o'clock, and in response to my inquiry of surprise at so early a start I was informed that it was necessary to "get on the line," so as to pounce upon a place on the flats as soon as the legal hour should arrive. On the scow was a double sinkbox and six hundred decoys. Now this abominable modern contrivance will hold two men, each one of whom has two double breechloading guns, and there are some twenty of these "infernal machines" at Havre de Grace. Can any sane or sensible man, who is at all conversant with the habits of wildfowl, possibly expect these timid, wary creatures to frequent any feeding ground, however rich with their favorite food, for any length of time, surrounded and harrassed with such contrivances as these? And what is the natural result of such a course? Just the luck my friends experienced on that day. The pleasant northwester continued, just the wind for the flats, and all hands expected a big day. I was impelled to leave the round table in the roomy cabin by the sound of the clanking of the chain, which suggested that the anchor was being lowered and we had arrived at the border line. Coming on deck I inquired of the Captain "What in the mischief he wanted to run so close to the town for?" for all around us were lights seen in every direction. The Captain suggested that I had probably been inspecting a little too much of "Mumm's Extra," and that my vision was clouded. But I pointed to the numberless lights and he at once appreciated my meaning. "Oh," said he, "those are the lights of the different scows awaiting a chance for a place at 2 o'clock." "Good Lord," said I, "if there are any ducks on these flats two years from now, I do not know what the habits of ducks are." We secured a good place and the double box was launched and decoys placed in position. As the morning light permitted a view of the surroundings, I eagerly watched our friends in the sinkbox and many others that were within easy sight. But they were rewarded with very few shots. Bushwhackers were around, and were paddling on every little bunch of ducks that attempted to light; and there were numerous boats banging away at cripples. Such was the true condition of matters on this, my new visit to the flats. For be it known to you, that now canvasbacks are bringing three dollars a pair, and the agent at the station is ready to buy all that are offered. This is somewhat different from the olden time, when the cranky old steamer, with its load of passenger cars, would bump up to the landing at Perryville. There was no bridge then, nor any agent to buy ducks.

I was ruminating in this wise when I was aroused from my reveries by a shout from some friends, who had called to pay us a visit from a neighboring scow. They were grand good fellows, and although much younger than myself, they claimed me as "a chum," and I confess to a little vanity for young company, as I do not want to get old. I remember the glorious days of my young manhood, when I was full of vigor, and could follow my dogs over fields and fences and through the tangled brake; could climb the hills and mountains, thread the forest, and be thrilled with the bay of the hounds. How my young blood burned when I hooked the trout, as I waded the chilly, pure waters of the Beaverkill, or struggled with the springing bass on the bosom of beautiful Lake George. I have had some genuine sport in my life, and I want to keep young in spirits and not get old. These young companions insisted that I should visit their scow and partake of their hospitality. Ducks were scarce—and no wonder; so the time must be occupied in fun and not in shooting.

They rowed me over, and a jolly good time we had of it. There were four in their party, and they also had the inevitable double sinkbox. I shall never forget the amusing episode that occurred during this visit, and I am confident that you will enjoy its recital. Among their party was a real good fellow, who was a novice at sinkbox-shooting. Like many others of the human family who are fond of good living and good company, he was of a rather corpulent frame; in fact, his measure around the waist was considerably larger than that of any other part of his body. I arrived at the scow just about the time he and his friend were returning from the sinkbox, and, from his appearance, he looked somewhat used up. I inquired the reason for his distress, and he replied he would not give a continental cuss for such sport, if a man had to lie in a coffin for two hours, with a 75-pound weight on his belly, and see no ducks; he did not call that sport, and he wished he were home. It appears that his friend, who was a great wag and always up to some kind of deviltry, when he lay down in his side of the box put a wooden decoy on his corporation, and told Charley that his belly stuck up so high that it would frighten all the ducks, and that he also must comply with the recognized custom. Charley finally, after much persuasion, consented, and they placed on his belly one of those 50-pound iron decoys that are used to ballast and balance the box. And there lay poor Charley for over an hour, balancing this weight on his corporation. At last, however, human nature could stand it no longer, and Charley declared that if a man had to balance a hundred pounds on his stomach for two hours to kill ducks, he'd be darned if he would ever make a duck shooter. I came very near tumbling overboard for laughing, and, although we had a good time, I could not help thinking it was pretty rough on Charley.

I returned to our scow and sail was hoisted and we started for home, but the wind gave out and the sweeps were resorted to. Within a mile of home the propeller met us and towed us to the dock, and we were again in the beautiful mansion and among kind friends. The result of this day's shooting was thirteen ducks, mostly blackheads. What a change from the old time when Captain Bond could kill 200 canvasbacks and redheads in a single day on these same flats with a No. 10 muzzle-loader.

The evening was spent in conversation and cards, and I went over the scenes of the old times and compared them with the new. How the surroundings had been improved. But I could not fail to believe that modern improvements were rapidly destroying sport. I started for town the next morning and on my arrival home in my comfortable evening chair, I reflected over what was and what is. Of course, with the growth of great cities and the consequent improvement to the outlying country, game of all kinds will forsake their old haunts and seek the more quiet wilderness. But there are many places where nature has placed a bar upon improvement, and it is in such places that game should be rigidly protected against those who seek only to destroy, and who pursue and harrass the fowl by every conceivable device that man can adopt. Oh! if the scroll could be unrolled to the wondering eyes of the present generation of sportsmen. Could they behold the once teeming lakes and streams of the Adirondacks, and the dark, wild forest with its wealth of deer; and beautiful Lake George, a pearl dropping among the green hills, a lovely solitude, so still that the sound of the oars, as we trolled around those lovely islands, awoke the echoes from the hills. The years that have passed, the "good old times." And then compare them with the new. What a contrast!

To us who have passed the summit and are rapidly approaching the end of the journey, to us the memory of these olden times lends a sweet fragrance to hours of meditation and repose. We have had our share of the good times and we are deeply grateful. Life to me has been a blessing, and I cannot fail to join in the sentiment of that gifted poetess who wrote in closing her "Ode to Life:"

> "Life! we've been long together,
> Through pleasant and through cloudy weather:
> 'Tis hard to part when friends are dear;
> Perhaps will cost a sigh, or tear.
> Then steal away, give little warning,
> Choose thine own time,
> Say not good night, but in some brighter clime
> Bid me good morning."

HALCYON DAYS.—V.

THE season was well advanced when Chip Mason took up his abode with old Shack, and a few days afterward the weather began to change. Howling winds and driving snows were succeeded by colder days and freezing weather until at the expiration of a month it was generally accepted as a fact that winter had fairly set in. The stove in the little store began to receive patronage by day as well as by night, for now the farmers had more time to spare, and the business of bartering for the winter's supply of boots and shoes and clothing brought them more frequently and in greater numbers to the dingy little shop, where affable Waxy Latin, whose harvest began as the farmers' ended, stood ready to welcome them and bestow his smiles in proportion to the custom he received. If one could judge by the beaming countenances and hearty salutations of those who gathered there, the season had been a bountiful one as well as a busy one. Some there were who, while not distant neighbors, met for the first time in many days, and the general inquiry concerning the welfare of one and another and their families, coupled with the invitation to "come over 'n' see us naow, du," was most frequent. Altogether it was an epoch in the life of the little village, which, occurring but once a year, served to relieve the monotony and furnish food for days of gossip.

I had made frequent visits to the shanty and each time found some improvement in the camp, until its occupants were comfortably situated and well prepared to stand the siege of winter. The shanty had been partially rebuilt and enlarged; the side walls were repaired and the chinks between the logs were filled with a mixture of mud and grass; a door had been added and a new roof of bark replaced the old leaky one, so that the shanty now presented the appearance of a comfortable hut. The little stove was taken from the scow's cabin and set up in the center of the room, and a bunk on either side well filled with straw, made them comfortable beds. Chip had provided himself with a pair of old blankets and a quilt from home, and there was every indication of solid comfort in the surroundings.

The trapping season had fairly opened, and that the trappers had not been unsuccessful was proven by an inspection of the anterior of the scow's cabin, which showed numerous bundles of dried pelts and others still stretched and drying. Conspicuous among the peltry thus displayed and which Chip took especial pride in exhibiting, were two of large size and darker color than any of the rest. They were those of the fisher, or as Old Shack calls them, "cats," the capture of which caused no little pleasure and satisfaction to the trappers, for aside from the removal of their thieving depredations among Old Shack's traps, their fur was valuable, many times more than that of their common quarry. One of these was what Chip had seen and taken for a black mink, the true character of which Old Shack saw fit to keep him in ignorance of until he was fortunate enough to capture them. Chip's gun proved a valuable auxiliary to the camp, for as long as the nuts lasted squirrels were plentiful. Rabbits could be had for the shooting, and until winter had fairly set in they were able to shoot woodchucks in the mornings and evenings. These, with the fish they easily caught, baked "taters" and corn cakes, interspersed with an occasional partridge when Chip could get a "settin' shot," made them good fare and was indeed better than Chip had been used to at home. Old Shack never left the camp except to visit his traps, but Chip made occasional visits to the village to replenish their store of "Injun meal" and tobacco, and in his brief, characteristic way, had told the story of their manner of living, and if his stories were somewhat embellished, it was because of his enthusiasm.

It was while he was on one of these errands that I dropped into the store one bitter cold morning and found him hugging the stove while waiting for his supplies. For better protection against the cold he had borrowed one of old Shack's coats, and while his broad body was nearly sufficient to fill it one way, it reached nearly to his feet the other, and the sleeves being too long were turned up in a thick roll about his wrists. On his head an old slouch hat, the brim turned down over his ears and held there by a woolen comforter that was brought down under his chin and tied around his neck in several folds with a large knot in front, did not add any attractiveness to his appearance, but it kept him warm and he "didn't care nothin' fer style, eny way." A simple "hello" greeted me as I entered and drew up to the stove beside him, while Snap, who was lying at his feet, looked up good-naturedly and tapped the floor once or twice with his tail, in token of recognition. To my query as to how things were going at the camp Chip replied: "It's bully. W'en yer comin' up agin?" and without waiting for an answer added, "Say, come 'n' go back with me this mornin'; we ain't goin' ter do nothin' to-day but set 'round 'n' maybe ketch some fish through the ice. Shack's makin' some snatch hooks 'n' said it 'ld be a good time to ketch 'em." There was nothing to prevent, and after a little more conversation, during which Chip manifested a slight impatience to be going, I decided to accompany him. Putting on his woolen mittens and holding them to the fire for a last warming, he gathered up his few packages and we started.

In his visits to the village Chip had not once been home, and as we had to pass there on our way I thought he would want to stop for a moment; but he seemed to avoid the place and hurried by. I was quite well aware that his home was none of the pleasantest from the fact that his stepfather was a shiftless fellow and given to drink, who, when in his cups, was ill-natured and sometimes brutal. On more than one occasion Chip had been the victim of his inequitable passion, even to the extent of bodily injury and temporary expulsion from home; and since his elder brother, who seemed to have a restraining influence, had left home to provide for himself, Chip's life had been anything but a pleasant one. It was not strange, therefore, that he should harbor a feeling of resentment toward the man who was the cause of his adversity. However, he had a tender regard for his mother, who was a passive, delicate woman; but her gentler influence being lost on her husband's callous disposition, she could offer but little protection to her boy, and while she would have been only too glad to keep him at home, her better judgment prevailed, and she knew that he was better off almost anywhere that would afford him shelter and food. So when Chip had approached her with the proposition to go and stay with Old Shack, she made no objection, but supplied him, as far as possible, with extra clothing from their scanty store. All this Chip had previously told me in confidential moments, and my heart warmed in sympathy for him. After we had passed the house I ventured to inquire why he did not stop. Quickly turning, he stopped, facing me, his eyes flashing fire as if offended, but for a moment; then moving on more slowly, he said:

"Won't yer tell nobody ef I tell yer somethin'?" I assured him that I would not. "I ain't goin' home no more; I'm goin' ter stay up 't the shanty this winter 'n' Ole Shack's goin' down ter the lake in the spring, 'n' ef I can't git a job down there I c'n git one drivin' on the canal anyway, 'n' next fall wen I come back I'll have some money 'n' me 'n' Old Shack's goin' into partnership. I'm goin' to learn all I kin 'bout trappin' this winter 'n' then Ole Shack says it'll be more ekill like, 'n' we'll do better."

"But what will your folks say?" I inquired.

"Darn the folks!—no, I don't mean mam either." His eyes softened. "But the ole man c'n git along without me, darn 'im! I never done nothin' to him, 'n' I ain't goin' ter stay 'n' be kicked round eny more. I got a chance to do somethin' fer myself now 'n' I'm goin' ter do it! I seed mam in the store the last time I was down, 'n' she said the ole man was gittin' worse 'cause I want ter stay with Ole Shack 'n' 's goin' ter set me to work 'n' make me pay up for it in the spring. I'm goin' to work, but by gol! I ain't goin' ter work fer him! Mam said I couldn't do any worse, 'n' mebbe I c'n help her a little too. Ole Shack ses I c'n git ten dollars a month drivin' 'n' ef I have a steady job I c'n make 'bout seventy dollars 'n' it won't take much ter keep me. Then we'll buy a lot o' new traps 'n' go up the river 'n' stay all winter." Having thus delivered himself, his feelings breaking out in alternating flashes of indignation and pleasant anticipation, he quickened his pace, letting me further into his plans for the future as we proceeded, cautioning me, as we neared the camp, "Don't yer tell nobody, 'cause the ole man 'll do somethin' agin it ef he knows it."

We had now approached so near to the camp that the blue smoke from Old Shack's fire was seen ascending in a straight column in the still, cold atmosphere, and no more was said on the subject. Chip's spirits revived as we neared the door, and opening it, found Old Shack just finishing an extra snatch hook which, as he gave a last turn to the lashing, he prononnced the best he had yet made. Holding it up for inspection, a long, slender withe of ramrod-like proportions, with four large hooks firmly lashed back to back to one end, Chip inquired, "How yer goin' ter ketch fish with that?"

"Didn't ye ever see it done? Wal, I'll tell ye, 'n' after ye git good 'n' warm I'll show ye. There's 's much in the makin' o' the tool 's there is in the usin' on it. Some fellers 'll take a stick 'n' pull the bark off 'n' finish it up fancy like, then they'll tie on three 'r four big hooks 'n' imagine they've got the best rig 'cause it's purty, 'n' when they git tu fishin' they wonder why they can't ketch fish. Wal, the reason is, that when a fish comes along 'n' sees a white shiny stick stickin' down in the water, it kinder shies away f'm it 'n' ye can't reach 'em. I always leave the bark on, 'n' the rougher it looks the better it is, 'cause it's more nat'ral; 'n' I file the barbs off 'm the hooks so 't when I git a fish out o' the hole I c'n shake it off without any foolin'. Up near the head o' the river, where I used tu live, there's a big pond where the water spreads out sumthin' like this, only it's a good deal bigger. Every winter a lot o' us 'ld git together 'n' hev a big time fishin' through the ice. Sometimes we'd use tip-ups 'n' live bait, but when bait was scarce we'd use snatch hooks like this, 'n' it's a heap more fun tu, besides ye c'n

jerk out yer fish, 'n' ef a little one comes along ye needn't take it ef ye don't want tu. We'd cut a long row o' holes in the ice, 'r sometimes in a big circle, 'n' throw in a lot o' white beans so 't we c'ld see the bottom 'n' anything 't passed over it, 'n' them 't wasn't fishin' 'ld run 'round stampin' 'n' poundin' the ice with axes 'n' clubs tu keep the fish movin'. When a fish runs under the hole, ef ye'r' quick enough, ye c'n snatch 'im out 'fore he knows what struck 'im. Wal, I guess ye'r' warm enough now, 'n' we'll go down 'n' see what we c'n du."

Picking up his axe, Old Shack led the way down to the eddy where, selecting a place to his liking, he cut a hole in the ice, thrust his hook down into the water, and placed himself in a kneeling position over it, while Chip and I did duty as drivers by running about, stamping and pounding the ice with clubs. Presently Old Shack bent lower over the hole, peering intently into the depths below, and cautiously moving his rod a little to one side, poised a second, then with a quick jerk hooked and brought forth a tolerably good-sized fish which, with a grunt of sat sfaction, he shook off and poised his rod for the next victim. Soon another lay kicking beside the first, and in this manner, varied only by an occasional miss, he continued to draw them out until a goodly number of various kinds and sizes lay scattered and frozen about him. enough to supply the camp for several days, and he arose satisfied.

Chip wanted to try his hand, to which no objection was made, and taking his place over the hole Old Shack coached him: "When ye see one comin' don't be in too big a hurry, but wait 'til it gits near enough so 't ye don't hev tu move ye'r hooks much 'r ye'll scare it away. Then move it careful like to'rds 'im, 'n' when ye git yer hooks under 'im, yank up. Ye'll git the hang 'f it after ye've fished a while." Saying which he took his turn at driving, while Chip waited a little impatiently for his quarry. He did not have long to wait, as was evinced by a violent jerk and an excited "gosh!" when he realized that he had missed his aim. He was more careful the next time but not quick enough, and only succeeded in catching a slight hold near the tail, and as he brought it to the surface the fish shook itself loose and darted away, much to the surprise of Chip, who had half risen, and losing his balance, tumbled over on his back. But after a few more trials he began to get the knack, and succeeded, between many failures, in adding half a dozen more to the pile.

This was considered sufficient for that day, and, gathering up the frozen fish in our arms, we repaired to the shanty. It was long yet until the dinner hour, but our morning's walk and exercise while running about over the ice had sharpened our appetites; so we set about preparing an early dinner. Chip had been an apt pupil and now needed no direction from his tutor in beginning operations. He had been long enough in the camp to lose what timidity he had at first felt as guest, and now with a feeling of independence he assumed the duties and responsibilities of partial host. His assistance in the menial labors of the camp he rightly considered an offset against Old Shack's capital; and Old Shack had come to regard his services as of considerable value, for Chip was willing to do a little more than his share of the drudgery, and, with the prospect of semi-proprietorship in view, he took no little pride in keeping things in order, while it relieved the old man of a great deal of work that was better suited to younger hands. With such appetites as ours, aggravated by the permeating odor of its cooking, it seemed like a long time while dinner was preparing; but at last the welcome announcement that everything was done and ready to be served caused us to move up to the rude table that stood against the wall, on which was soon placed the several dishes of potatoes boiled with their jackets on, fish fried with bits of pork, corn cakes and tin cups filled with steaming hot coffee, and for a time, which must have seemed interminable to Snap, who sat looking wistfully on waiting for his turn, there was little else but the sound of smacking lips and gurgling coffee, as it was supped in dainty swallows out of respect for its hotness. Old Shack finally arose satisfied, leaving Chip and me, who seemed to have a greater stowing capacity than he had, to finish, and, after lighting h s pipe, settled himself into a comfortable position to enjoy it.

Then a long interval of silence, superinduced by that feeling of indolence that always follows an over indulgence of the appetite, was broken by the tapping of Old Shack's pipe against the bunk on which he had been reclining, as he rose to knock the ashes from it and refill it, aroused us from our lethargy. "Ye'd better git some more wood in, boys," he said as he picked up the last chunk and put it in the stove, "it's gettin' colder out 'n' it'll be more comfor'ble with a good fire." We soon had enough piled up beside the stove to last the rest of the day, then after washing up the dishes and giving Snap the remnants of the meal there seemed nothing more to do but "set 'round," as Chip had said, and toast our shins before the fire. But Old Shack found employment for himself in looking over some of his traps that needed repairs. Some of the chains required fixing, the kinks taken out and broken links replaced, and as he proceeded with his work, assisted by us whenever there was anything we could do, we kept up a constant fire of questions concerning his business and past life that would have exhausted the patience of one less amicable. But Old Shack was enduring and seemed to take as much pleasure in satisfying us as we did in listening to him.

Thus the day passed in varying conversation until it came time for me to go, when Chip, who must have reserved the subject for the last, made known to the old man the fact that he had informed me of his intention to go with him in the spring. "Wal," he said, "I'm glad ye told him, 'n' I wish ye didn't hev tu keep it from yer pap. Ef he'd behave hisself I think ye'd be a good deal better off tu hum. Ye'll find it a purty tough kind o' life when ye've seen 's much 'f it 's I hev. But ye never will tho', fer trappin' 's playin' out mi'ty fast, 'n' 'fore ye git half 's old 's I be there won't be nuthin' tu trap. 'Taint always 's nice 'n' easy 's this, 'n' I guess you'll find it out 'fore the winter's over, so ye'll hev plenty o' time tu back out."

J. H. B.

MANSFIELD VALLEY, Pa.

MASSACHUSETTS TRAPPING.—The Massachusetts Legislature has passed a bill permitting "trapping or snaring of ruffed grouse, hares or rabbits by an owner of land upon his land, or by a member of the family of such owner if authorized by such owner, between the 1st day of October and the 1st day of January."

FROM CAYENNE TO PARA.

NOT being a regular correspondent of yours, but merely an ex-commodore of a canoe club, an ex-purser of a Brazilian mail steamship, and a full-blown incumbent of South American and West Indian malaria, I offer you the following, knowing that if it misses the waste-paper basket it only does so close-hauled. During my knockings about I naturally met fellows who had made some wonderful trips in all sorts of waters and in (sometimes on) all sorts of crafts. I am going to tell you about a voyage which was taken by Mr. Charles Backus, ex-American Consul at Para, Brazil, in the month of March, 1886. He is a marble sculptor of no little fame, and also a civil engineer. His home is at present somewhere in Mexico. The stone works and docks at Para were built by him, and it was in his endeavor to collect his dues from that procrastinating people, the Brazilians, that he chanced to make this trip.

Mr. Backus, hearing that there was an opportunity of being squared up with (he being in Rome at the time), hove anchor and set off for Para via England and St. Thomas, West Indies. Unfortunately, on arriving at the West Indies, the W. S. and B. mail steamer was found to have left just one day previous; Mr. B. thus missing connections.

Backus was not to be balked by a little thing like this, but at once took passage in a French steamer for Cayenne in French Guiana, thinking that the old line of steamers still plied between that port and the mouth of the Amazon. At the time of the venture yellow fever and every other sort of tropical disease were raging at Cayenne, and the French convicts and soldiers were dying and moving away by hundreds every day. Once arrived at Cayenne, what was the amazement and disgust of our friend to find that there were no steamers from there to Para and not a chance of getting anywhere from this infernal hole for some time. Determined not to be beaten nor to retrace a single step, a canoe was chartered and its three dusky and highly odoriferous hands instructed to "*Vam vam a Para.*"

A start was at once made and grub for a twelve days' outing carefully stowed away. I must remind you that the words "grub" and "canoe" do not convey to any one who has been in Brazil the idea of a beautiful little pleasure craft, all water-tight and fitted up with no end of tins of potted meats and soups and fruits—no such luxuries here. First, a craft dug out of a log, about 20ft. long by about 4ft. wide. This is built up with boards, or rather slabs, very rough, from 3in. above the waterline, and caulked with gum and grass. The bow runs away up into the air, like the bend of a stovepipe, and is quite round, tapering off to a point like a pencil. There is a rough slab deck over all, except aft, where a hole appears, down in which the passenger and crew used to take their turns of sleeping. A few bamboo rods are laid thwartships, and on these is a "'tween decks," made of the same material, stretched fore and aft. Not a very snug craft, I assure you. The main deck is about a foot from your nose when lying down, and if one's feet are big his chances of comfort are few. These boats generally have a rudder, which is a huge affair, swung at the angle 67° with the keel. The tiller is a work of art, if clumsiness and size go for anything. The mast is of hard wood—like everything else in the boat—and is a tough young tree with the branches and bark removed. To this is swung a very large lugsail, with which the natives are really wonderfully expert. The sail is never bent to the boom, but merely stretched out by it from the mast to the clew.

Paddles vary very much; they are always of hard wood, always single, and frequently are made like snow-shovels, or if you take a short stick, say 3ft. long, and fasten the bottom of a bucket to one end and a 3in. piece of wood for the hand to grasp at the other, you have it. Of course, on gongadas and catamarans the paddles are very much the same as we use here in North America; they are generally longer, though.

The grub, or bill of fare, consisted of dried fish, dried beef, the fruits of the season, and farinha, but principally farinha. The first few days was not so dreadful, but when the novelty wore off and a storm came on and land was entirely lost to view, it required no end of pluck and determination to make the three Indians work at all. They even refused to bail. The craft by this time was more like a basket than a boat. The old muzzle-loading gun was here called into requisition, and it looked so fierce that order was soon restored and the mutineers soon resumed their duties.

For four days not a sign of land could be made out, and, not having a compass, it was no easy task to navigate. The sun itself almost refused to give any light or to announce when it came up. However, more by chance than anything else, land was sighted, and as the grub was almost out, they put ashore.

The canoe was run up the Sucouju River, and no sooner had it got up a piece than an awful roaring was heard astern and a wave like the side of a mountain came boiling in with dreadful speed and certainty. This was the tide—called the bore—which rises like this every day during new and full moons, and God help any poor fellows who chance to get caught; it is all up with them. Luckily, once more the canoe was favored as though by Providence. It escaped the crest and lumpy part of the wave and only came in for the swell.

Mr. Backus found it necessary here to look out for more food, and so a hunt was made. He only had six charges for the old gun, and game was not very plentiful. However, out of five shots four monkeys were bagged, roasted and put into the larder for future supply. Mr. B. got on all right for a few days on roast monkey till he saw one of the Indians, knife in hand, sitting on the deck of the canoe enjoying a head. The brute was scooping away at the brain, then the eyes, then the cheeks. This was too much for our ex-American Consul, and he swore he rather starve than touch a morsel of anything so human-like again. Monkey was menu for several days, when suddenly about ten pounds of farinha were discovered concealed under one of the slabs of the deck. The third hand had stolen this, anticipating a famine in the land, and had actually kept it for himself and had been consuming it at night during his watch below. Mr. Backus almost threw the wretch into the sea, and I think would have done so had he not had an eye to his working powers and skill with the paddle. The mouth of the Amazon was at last reached and then the city of Para. The trip from Cayenne to Para took just eighteen days, and must have been an awful one, judging from the color of the Consul's skin and the amount of good things he enjoyed when he came on board our ship. At Para he told the proprietor of the hotel to give his three men anything they should want both to eat and to drink for one whole day. It is needless to say that they had but one meal, that, however, was a terror, lasted twelve hours and cost Mr. Backus quite as much as he expected. The three Indians remained as full as eggs for a couple of days, and I certainly can't see how they could ever be hungry again.

Mr. Backus was successful in making his collections, and left for New York with us the following day. He cannot bear the sight of even a monkey tied to an organ. Merely an organ grinder alone sets him thinking, no doubt of the missing link.

A ROLLING STONE.

INDIOS MANSOS.

SHORTLY after the Spanish occupation of Mexico the Indians living in the country were divided by the newcomers into two comprehensive classes, "Indios bravos" and "Indios mansos," or wild and tame Indians. The boundary line between these two classes was fluctuating. Some bands, like the Papagos in the north, once rovers, at last settled into peaceful and placid citizenship; but there were tribes whose desert homes held out no temptation to settlers, and who thus, free from the pressure of a stronger race, kept up their predatory habits.

Peaceful Indians and persons of mixed Indian and Spanish blood form the bulk of the Mexican people today. Spaniards and persons of pure or nearly pure Spanish blood are important more by their prominence than their numbers.

If you should be in doubt about the race of a stranger you happened to meet on the road, and should ask him whether he were an Indian or not, he would probably tell you he was "a man of reason," and perhaps be indignant at the question, for the Spanish distinction which classed Indians with unreasoning brutes still lives in the speech of the people; but it may well be doubted whether the qualities of the native races are not in many points more valuable, when looked at with regard to the interests of civilization, than the qualities of the men of mixed blood. The latter are the quicker and of brighter intellect, but their lack of persistent application seems incurable.

In the United States we have, besides those tribes like the Seminoles and Creeks, who have been changed from warriors to laborers, examples of tame Indians in the Pueblos and Zuñis of New Mexico, people that have lived by regular industry from the time of their earliest discovery; but our settlers have never largely amalgamated with the dwellers on the soil, and the contrast between our methods and theirs is so great that the Indians are looked on with contempt and sometimes with hatred.

A rich and energetic Mexican is probably harsher and more tyrannous toward his inferiors than almost any American would be, but in Mexico the slower current of life gives a better chance for backward and ill-developed parts of the population to unite in the country's movement, and therefore, in Mexico, we find that not only have the tame Indians survived best, but we can even say that without them Mexico would be a crippled State.

A prominent feature of the Indian character is its lack of adaptability. They change slowly, and for that reason their true powers are undervalued.

A short acquaintance with these people on their own ground will convince an observer that for patient, enduring effort, for the power to work on the smallest fare and with fewest comforts, few men can compare with natives of Mexico; and that they are steadfastly courageous can be proved by numberless instances. These Indians will get drunk occasionally but not habitually, and as for their honesty, there are doubtless thieves among them, but you will rarely find instances of robbery, except the highway robberies common in time of popular commotion.

Let us come down from glittering generalities and relate a few facts tending to show the industry, the abstemiousness and the courage of the tame Indians.

We must first dismiss the notion that because a method is primitive it is simple enough for any one to practice without effort.

Let any one who has not tried to do it, make an arrowhead out of flint without metal tools to work with. Perhaps it would be better to begin with metal tools and try the other way afterward.

When one becomes an expert in the manufacture of flint arrow heads he can think with respect of the amount of work needed to make the stone mortars and pestles dug up by the hundred in southern California, and the stone "metates," or corn grinders, turned out still in great numbers in central Mexico.

No, primitive methods may be caused by poverty, by lack of intelligence or, often, much more often than is thought, because they are really cheaper and better in the particular surroundings. Rarely are such methods the result of laziness.

We smile when we hear of people scratching the earth with a crooked stick, but the style of plowing thus described cannot be done by a child with the first forked root he meets. Timber must be chosen with the right curve and the point jutting in the right place, and then hewn by an expert hand, perhaps for several days before the tool is ready, and this plow, in light friable soil, does good work.

The tools of the Indians are almost always primitive; sometimes they can work with nothing else, but usually the reason for getting poor tools is the want of money and knowledge. That the large amount and good quality of work they do can be turned out with these things increases one's respect.

Among the pines and spruces of the Central range you see lumbermen with only a narrow bladed axe like a large tomahawk; no saw, no broadaxe, hewing beams and boards and shipping them off on donkeys; boards that would look far better than sawn boards, true and straight as a level could have made them, and with the scoring of the blade scarcely visible.

From the Arizona line to the City of Mexico you find simple red pottery made without tools and baked in the

open air. In many places, besides this unglazed ware, you find glazed jars and pitchers with coarse, curious coloring and of original forms.

In the market places in the City of Mexico you can buy these pretty jugs for two, three and six cents at retail. Even strangers can get them for that price; heaven knows what the natives pay. Usually a whole village will have a specialty of manufacture. One village, for instance, making pottery with all the artistic waywardness and variation that the hand alone can give and that production by machinery loses forever. Another village will be famed for its corn-grinders; another for its mats, and so on.

Through this nearly roadless land a large amount of freighting is done by men. Donkeys and mules carry the heavier merchandise, but you will meet troops of men with a kind of three-storied cane cage ("huacal") on their backs, towering high over their heads, and filled to the brim with fragile wares.

The earlier miners used no hammer and drill, but a long steel "vara," which answered both purposes. A bar of ¾ steel 5 or 6ft. long, would be pointed at one end to use as a pick, while the other end had two teeth cut in it called a "boca." The miner braced himself and swung the bar like a churn handle at the rock. The writer has seen 14ft. of porphyry drilled in half a day by a man armed with this tool.

Drill men and hammer men are now common, as well as those skilled in the use of the "vara." And men as good as any Swede or Cornishman who ever used a hammer in Leadville get fifty cents a day for their work.

At a large mine in the State of Mexico the highest wages paid are less than seventy-five cents a day for miners, and the bulk of the men, such as ore carriers, etc., get from twenty-five cents to thirty-seven and a half cents a day.

But the "peones" on the farms have the most work and the least return of created men on this continent. Six and a quarter cents a day are fair wages in central Mexico, and benighted Americans sneer at the lack of modern machinery.

Not all these laborers are pure Indians to be sure, but the vast majority have more Indian blood in them than anything else. And with this labor and these returns the life of the people must of force be simple. White cotton drawers and shirt, a straw hat, a serape and a pair of rawhide sandals will meet the requirements of the usual dress. A little dirt-floored adobe house, or a still humbler dwelling called a "jacal," made of wattles, and sometimes daubed with mud, is what they live in, while two devices called a "tepesh" and a "petate," the one being a frame of canes and the other a mat, usually of palm leaves, do duty for a bed when a bed is needed.

Their food is the unleavened "tortilla," with jerked meat at times, and beans and fruit in their season. The writer has known an entire village to live for weeks on the "pitaya" cactus alone. Yet so poor as a class, the Indians are not without spirit. Look at the Yaquis in Sonora. Two rivers, the Yaqui and the Mayo, run into the Gulf of California, from Sonora, near its southern end. The flats around the mouths of the rivers are held by two tribes, of which the Yaquis are the more considerable. These Indians form the best laborers in Sonora. They built, for the most part, the Sonora railroad. They are everywhere engaged as the most reliable workers in the country, but they still keep their tribal organization, return periodically to their homes and forbid the entrance of intruders therein. Last year the Mexicans endeavored to enter in and possess the land. The Yaquis under their chief Cajeme, gathered together and inflicted a stunning defeat on the invaders, returning afterward to their peaceful ways.

Another much smaller band of Indians, living in the mountains near Pinos Albos, are so renowned for their courageous devotion and honesty that to their hands was intrusted for years all the bullion carried from the mines, with never a loss. Nor do the Indians remain always in low places. Of the many distinguished Indians perhaps Benito Juarez is the most prominent. He was not, however, as is sometimes thought, taken directly from his hut to rule the State. Juarez began life as a lawyer, and was a judge of the Supreme bench and a noted politician before his election as President. He may be well compared to Santa Ana to illustrate the difference between the Creole and the Indian character. Santa Ana, treacherous, selfish, of enormous energy and resource, but lacking dogged persistence; Juarez showing in a coarse mould many of the traits of Washington, and in particular the unwearied stubbornness that makes up for so many defects.

These few examples will be enough to show the capacities of the Indian races for modern life and the traits that enable these races to flourish under conditions that would discourage more ambitious men. You find none of the fanciful heroes, such as Cooper drew, lamenting in poetic style the downfall of their nation before the greed of the cruel whites, and occupying themselves with deeds of romantic generosity in the pauses of oratorical pathos; but you do find a great, laborious population, working uncomplainingly and well for the scantiest returns; a population without whose strong arms and patient toil Mexico would cease to be a State. H. G. DULOG.

THE GRASS PLOVER'S CRY.—To-day I heard the cry of a grass plover, a voice that I had always believed asserted the final and firm establishment of spring in this region. But the cold lowering skies and chill north wind, the fields almost as drear this 30th day of April as they were in the last days of November, and the Adirondack peaks white with snow, almost shook my faith, and I feared the bird was lying or woefully mistaken, till to-night, when I saw Split Rock shining again, and knew that the lake was clear of ice once more, and was assured that the plover knew whereof he had affirmed.—AWAHSOOSE.

WILD GOOSE HYBRIDS.—I winged a wild goose with a rifle, in the air, took it home and turned in with my tame flock. The wild bird was a gander. It bred with a domestic fowl, and though they produced young yet the young would no longer breed, neither with the tame goose nor the wild gander, nor with each other. They were to all intents and purposes of breeding mules. I cannot tell of what species the wounded gander was. Some of these mule geese are still living, they lay eggs, but the eggs do not hatch.—AMATEUR.

THE PREJUDICE AGAINST SNAKES.

I HAVE another snake problem which I should very much like to have Miss Catherine Hopley's views upon, as she is possessed of more snake lore than any one else I know of.

I was not fortunate enough to see the snake myself which I describe, but it was examined and described to me by Mr. C. H. Purvis, an assistant engineer, whose statement is perfectly reliable.

About April 1 he found the snake, which had been recently killed by levee laborers, lying on the levee in Coahoma county, Mississippi. It was about 5ft. long and quite thick through the body, with blunt tail. But the striking feature about it was the colors. All of the upper part, back and sides was of a uniform brilliant black, resembling jet (Purvis says the blackest snake he ever saw), while the under part was in alternate transverse bars of red and white, each about half an inch wide, the colors bright and clean cut. He examined its mouth and found no fangs and only one row of small teeth on each side in the upper part.

I never saw nor heard of such a snake before, though I notice carefully every snake I see.

The more my snake observations are extended the more I am convinced that very many varieties of snakes which are generally supposed to be venomous are really non-venomous. And it is remarkable that the harmless snakes are for the most part much more pugnacious than the poisonous varieties. All of the adders and chicken and bird snakes are ever ready for a fight, and strike viciously when disturbed, but they have neither fangs nor poison. There is a notable difference between these snakes and the dangerous ones in their manner of striking. The rattlesnakes and moccasins coil themselves in spirals, and when disturbed strike from that position. But the harmless snakes when made angry assume the "serpentine" shape of Ss and then straighten out the body in striking.

In the Southern swamps the bayous and ponds are infested by a great many large, ugly, rusty-looking water snakes, which are, in the popular mind, considered very deadly. I found one a few days ago which had been recently killed, and on examination found no fangs nor poison sacks in its mouth. I believe they are non-venomous, though they are called "water moccasins," and bear very bad reputations.

Last summer, while making a survey through a canebrake and battling with a horde of pestiferous mosquitoes, being a little way ahead of the party, I discovered a bird snake, one of the tree climbers, a grayish mottled snake, about 4ft. long. I put my foot on it, and taking it by the neck allowed it to coil itself about my arm and hand. I approached George Robinson, one of the party, holding the snake behind me, and told him I had found something that would keep off mosquitoes. George was much interested in the discovery and came up to see it, when I suddenly thrust out my hand toward him. He was greatly startled by the proximity of the snake and wondered at my temerity, and also at my permitting it to run away instead of killing it.

There is a great deal of senseless prejudice against the whole snake tribe, most persons being disposed to kill them all without discrimination. By far the greater number of snakes that are commonly encountered are quite harmless and, indeed, are very beneficial in destroying vermin, and it is a superstitious barbarism which prompts the ignorant to kill them all without mercy.

It is a curious fact that the constrictors and other non-venomous snakes strike at their enemies as do the venomous kinds, though they are not provided with weapons to be used in that manner. COAHOMA.

MEMPHIS, Tenn.

MR. SUTRO'S AQUARIUM.—Mention has been made in the newspapers from time to time of an aquarium that Mr. Adolph Sutro intended to build out upon the ocean beach, near the Cliff House. Those who have been out to the Cliff House and have descended the steps that lead to the beach will doubtless have noticed a little cove sheltered between two high rocks about 100ft. from the steps. In this cove the aquarium is now being built. The aquarium will consist of a round wall of rock 50ft. in diameter, 15ft. thick and 14ft. high, and will be roofless. The flooring will be made in a unique way, according to Mr. Sutro's plans. Solid pathways of rock will be built around the interior of the aquarium, and between them there will be little ponds of water that will be 3 and 4ft. deep at low water. The water will come into these ponds from the ocean with fish and other marine objects in the following manner: A tunnel 300ft. long and 8ft. high will be bored through the rock between the ocean and the aquarium, and at the seaward side of the tunnel there will be wire-screen gates, which can be opened and shut. At high tide the gates will be suffered to remain open, so that the water and the living objects in it can come freely into the aquarium. At high water the whole aquarium will be flooded—the pathways and everything—and no one can go in then. When the tide begins to recede the gates are shut, and only the water can flow through them. The living objects will be retarded, and will seek the comparatively deep water in the ponds, and thus they will be caught as in a trap. When the waters have receded sufficiently from the pathway the public will be admitted inside the walls. Sea anemones, devilfish, angel fish, starfish, crustaceans, shells, all varieties of large and small fish, and perhaps even occasional seals may be caught in this aquarium. At low tide there will always be something interesting to see there.—*San Francisco Call.*

A STRAY PELICAN.—Oakland, Md., May 7.—*Editor Forest and Stream:* An immense pelican was shot and killed by a fourteen-year-old boy in this county on April 31. The head was cut off and sent to this place, where it was mounted. The bird measured from the tip of its beak—which is about 16in. long—to the end of its short tail, 5½ft. Its extended wings covered 9ft. The pouch underneath its lower bill would hold at least a gallon. It is of the species *Pelicanus erythrorhyncus* of North America, having a horny excrescence developed upon the ridge of the upper bill, which is peculiar to the males of this species in the breeding season, and is said to fall off when it is over. The probabilities are that this bird escaped from some traveling menagerie and wandered off to where it was killed, as its species have never been seen in this vicinity before.—SPORTSMAN.

CAPTURED BUFFALO.—St. Paul, Minn., May 2.—Having business at LaMoure, D. T., last week, I made inquiries about the small herd of buffalo reported to have been seen in that vicinity last fall. I found that a party of hunters were out in the hills, thirty-five miles west, hunting antelope and small game, when they accidentally run into a herd of seven buffalo, five old ones and two calves. They killed one old bull, wounded a second, and captured alive one bull calf. I drove out seven miles to Grand Rapids and saw him. He is a fine specimen of a yearling, as tame as if he had never known anything else. The owner is out West looking for a mate for him, he having heard of one owned by some Sioux Indians, and if successful in getting one intends to raise a herd.—F. A. K.

CAPTURE OF A GANNET.—Bridgton, N. J.—A farmer drove in town a few days ago with a large bird of a species never before seen in this vicinity. It is about the size of a large black brant, is of snow white plumage except the tips of the wings, which are black, and the top of the head a dingy yellow. The bill is long and pointed and steel colored. The eyes a steel blue, feet dark and webbed. I suppose it is an adult gannet. Can you tell me what it is? The farmer found it in a spring by the side of a much traveled public road, and was able to secure it before it could take wing. He sold it for $5 to a shoemaker here, who exhibits it at five cents admission and is making money. His advertisement is worth the price of admission. It is "White throat Guarnett of the Meditranian." —C. [No doubt a gannet (*Sula bassana*).]

RECENT ARRIVALS AT PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased—Two roe deer (*Cervus capreolus*) ♂ and ♀, one white-throated capucin (*Cebus hypoleucus*), one Indian antelope (*Antelope cervicapra*) ♀, one echidna (*Tachyglossus hystrix*), two red-headed ducks (*Fuligula ferina americana*), one black-footed penguin (*Spheniscus demersus*), two skylarks (*Alauda arvensis*), and one snowy owl (*Nyctea nivea*). Presented—Two opossoms (*Didelphys virginiana*), one gray squirrel (*Sciurus carolinensis*), one red-tailed hawk (*Buteo borealis*), one bald eagle (*Haliaetus leucocephalus*), one screech owl (*Scops asio*), two turtle doves (*Turtur risorius*), one European thrush (*Turdus musicus*), one great horned owl (*Bubo virginianus*), four alligators (*Alligator mississippiensis*), and one green snake (*Cyclophis vernalis*). Born in Garden—Two Virginia deer (*Cervus virginianus*), two Angora goats, one eland (*Oreas canna*) ♂, one buffalo (*Bison americanus*) ♀, 1 zebu (*Bos indicus*) ♀.

JACK RABBITS AND ANTELOPE.

LAST November found me in Berlin. I had crossed in July and so long as we kept on the move my hunting instinct lay dormant. True, in Scotland, there was a constant watch kept among the hills for grouse, and stray salmon fishers with magnificent fly collections created a momentary excitement. Traveling through deer forests (so called, an Irish-American of our party suggested, because there were no trees in sight, nor deer either), we kept a sharp lookout for the stag of ten, but not even the Trossachs gave us a view of one, though doubtless there were deer hid from our sight in some of the hollows of that really picturesque region, which also rejoices in some pretty woodland. By the way, had Fitz James read the articles on hounding that frequently appear in the FOREST AND STREAM and its contemporary, he would have hesitated before turning loose those hounds of black St. Herbert's breed, and consequently when the stag rose from his couch, sprang forward and stood for an instant the "unerring shaft" of the royal huntsman would have speedily converted him into cold venison; and several distressing incidents that add interest to Scott's verse would have been avoided, to wit, first, death of gallant Gray; second, attempted mash of the fair Ellen; third, difficulty with Roderick Dhu—all favoring still-hunting vs. hounding.

In Switzerland we saw several chamois; and of course in London saw the Zoo and the animal collection of the British Museum, each magnificent; Paris with its Jardins, and finally Berlin, where the Zoologische Garten claimed many days; but in a museum on the Friedrich Strasse we saw a living walrus; small indeed, about 5ft. in length, but unmistakably a walrus, shivering and evidently miserable. In an adjoining cage were three beavers, and I wondered if they were blood relatives of those I had seen on the Jim River in Dakota a year before.

Thinking I would stay in Berlin through the winter, I sent for the FOREST AND STREAM and the London *Field*. Here began trouble. From waiting impatiently each week for the papers, I began to grow uneasy to be once more afield. Often in the evening I would walk through the Thier Garten, a large wooded, uninclosed park, to the little lakes, and, sitting on the bank under an old linden tree, watch the wild mallards come through the thickening dusk till it became too dark to see them, and only the whistling wings gave notice of their approach. Again, remembering my strolls through our home markets in the game season, I would visit the stalls where wild boars, stags, roe deer, pheasants, hares and the little striped European quail were displayed. All this tended to bring about the final result, and about the 15th of November I wrote to an old hunting chum in the States, telling him that I was coming over and wanted him to join me, if possible, for a protracted hunt. Early in December I reached home and found a letter from Dan (my hunting friend), dated from Syracuse, Kan., and reporting "lots of jack rabbits, a good many coyotes, a few gray wolves, antelopes quite plentiful." He inclosed a clipping from a paper printed in a town not far from Syracuse, reading as follows: "J. C. Youngblood has just come in from a ten days' trip. He brought in seven antelope, ten wolves and five buffalo." I had given up hopes of killing buffalo, and nothwithstanding the fact that an Austrian count on board the Fulda frequently repeated the phrase, "I kill bif-fa-lo"—the only English that he possessed—I hadn't the slightest idea that he would do so, especially as he was going to Florida. I had supposed the animal to be extinct in the United States, excepting in the National Park, northern Montana and in Dakota, where a few strays have been killed each year.

However, jack rabbit coursing with greyhounds promised excitement, antelope shooting would be decidedly novel, and with a coyote chase occasionally would serve. I have forgotten to say that Dan said he had been out the

week before, when the dogs caught a swift and killed a large wildcat. He further said: "If you can get a couple of good trailing hounds or a couple of greyhounds, bring them along." So the day before Christmas, a little before daybreak, I was on the depot platform at Syracuse, gripsack and two guns in hand, while three dogs, a greyhound, a trailer and an English setter were winding their chains around my legs. A setter is at present of no use in this country excepting as a retriever, there being no quail nor chickens here, or at least not in sufficient quantity to afford sport. I have heard of one lock of quail having been seen, and it is said there are a few chickens in the sandhills. The country is settling up very fast, and when grain fields become plenty the chickens will no doubt be here. Dan met me at the depot and divided the impedimenta with me. That day we went over to his cousin's place, Mr. Alexander Rinehart, a thorough sportsman, an accomplished story teller and a pleasant gentleman. His dogs were as follows: Fanny, a black, smooth greyhound, slim and tall, a great rustler and said to be able to run just as fast as she wanted to, but sometimes quit; next is Belle, Belva A. Lockwood, for short, a grayish brindle, rough greyhound, not so fast as Fanny and only eighteen months old, but a stayer. Then the trailers Buster, a very business-looking tan and black foxhound, and Gal, his litter sister, both rather below the medium size, but with the right look. The stock had been kept in the Rinehart family for many years, in central Iowa, where coons, foxes, wolves and wildcats had been the game they followed. Here there is enough game, but the ground is usually too dry to hold the scent.

The next day, Christmas, Aleck, Dan and myself went out for a hunt. My dogs, of course, being tenderfeet, did not show off to great advantage. The greyhound, Blue Bob, kept close to us. The trailer seemed to think it the dryest country she had ever struck, but the setter, a son of Bob Lincoln out of Cora, only a year old, ran to his own complete satisfaction; there were no fences to bother, and the fact that there were no birds larger than shorelarks didn't seem to trouble him in the least.

We rode over the prairie till 1 o'clock without striking a rabbit, though both my friends declared there were plenty of them about, and there are. Finally a jack jumped out of a bunch of long grass and ran directly back through the crowd of dogs. At first it ran with that hop, skip and kick style of going peculiar to the animal, while its ears were held erect, but as the dogs got straightened out its ears were laid down flat and it took that gait that is such a puzzler to the best greyhounds. Belle had a very good start and at once ran by the bird dog and trailers. Fanny had been off at one side rustling, and when she saw the chase joined, and running low to the ground, caught up with and passed Belle, and when she might have easily caught the rabbit, stopped and stood indifferently, while the more honest Belle kept on running till the jack reached open ground and got out of her sight. The trailers staid back, working out the track, while Bob, who had run over a hill out of sight, had got lost and rattled, and when we finally got sight of him was nearly a mile away and going in the opposite direction. By calling and shooting we finally drew his attention and called him back. About 3 o'clock we saw four antelope feeding a mile away. Getting behind a ridge we rode till within a quarter of a mile; then leaving horses and dogs, we crept forward to the top of the ridge and sighted the band about 350yds. away. We began to shoot, and could see the lead from the 45-75s cut the dirt "all around them," but they went on, as did the dogs, which, hearing the shooting, had come up. A coyote was running a half mile to the right, but the dogs were past recall, and when they came panting back, the wolf had gone. Another jack chase, in which the rabbit again got into rough ground and escaped, and we rode back to town. My friends were disappointed in the outcome of the day, but I was satisfied, for I was very new in Western hunting, and had never seen either jack rabbit or antelope wild.

The week following we were out several times, and the dogs killed four or five jacks. In fact, nearly as often as Black Fan decided to run she caught a jack. My dog was beginning to get the combination, though on straight, long runs he could by no means hold his own with the trained dogs. New Year's day four or five others joined our party for a day's hunt. The day was windy and cold; during the forenoon the dogs only jumped one rabbit, and that holed. The additional members of the party began to think of dinner and rode home. One, a young fellow of 19 or 20, staid. An hour after the others had gone we jumped a jack, and then began the prettiest chase of the season. Fan for once ran honestly, with Belle a good second. The jack started for a straight run, but Fan soon turned him, then Belle turned him again, and he ran back through the trailers; again and again he doubled; often he would start on a straight course as if to go clear, but in answer to our shouts Fan would gain on him and he would double again. Finally, when we had almost given him up and the dogs were running in that heavy, dogged way that greyhounds show near the end of a long chase, Fan coursing close, the jack essayed to dodge, but she was too quick and killed. When we came up with our ponies the dogs were lying down exhausted and refused to eat the rabbit. Of course when we saw those who had gone back early in the day we painted the glories of that chase in the brightest colors.

Two weeks were used in chasing jack rabbits, trying for antelope, and getting ready for our trip into the southern country, where Youngblood had evidently found his buffalo, and where we reasoned there must still be a few left. None of us had ever seen a wild buffalo, and at least one of the party had remarked that he would walk 200 miles barefoot to kill one. The old-timers of Syracuse warned us that there would be great danger from blizzards that might catch us out on the fields away from water and where the snow would cover the cow chips that would be our fuel supply, and that winds might blow so that it would be impossible to pitch our tent or that would tear it loose when pitched; but like the misguided and unfortunate youth whose motto adorns so many patent contrivances, we paid no attention to words of wisdom, but our cry was not excelsior but buffalo.

Alex Rinehart agreed to go and take his wagon and team of stout mules. Nig was, as the name indicates, black. He was high-lived, gamy and "mighty uncertain." It was a feat calling for much careful diplomacy to climb into the wagon behind Nig; those of you who haven't climbed into a prairie schooner, behind a flighty mule, cannot appreciate the delicate nature of the undertaking. The foothold afforded by the double-tree is insecure and liable to start a rattling that will set in motion the kicking apparatus of the aforesaid mule. Then the hand hold afforded by the bow is not firm nor convenient, and you are conscious at the moment that you swing around to get under the projecting cover that the bow is liable to let loose and drop you in a helpless heap on the long-eared and light-footed creature. We generally went around to the other side of the team and crawled into the wagon behind old Bill, no older in years than his mate, but of a sedate and gentle nature, and with that gravity of demeanor that is popularly associated with advanced age. Alex also took along his riding pony Willie, rather taciturn and reserved in appearance, but warranted to track, catch, throw, skin and eat a buffalo against time.

The 6th of January we started south, we took provisions for three weeks (and staid five); eight dogs followed the wagon, four greyhounds, three trailers and the bird dog. When we came back four followed still.

Our trip took us through the No Man's Land and into the Pan Handle of Texas, as far as the South Canadian River.

J. W. ANTHONY.

SYRACUSE, Kansas.

BRUIN IN THE FOLD.

OF one way that bears hunt sheep I can speak; and in stating that method I am bound to ascribe a large measure of intelligence to this apparently dull, doltish creature. The bear can certainly calculate and plan and carry out in most admirable perfection the conception of design. Whether a bear can catch a sheep in straight chase, but prefers an easier method, or whether he overestimates the ability of a sheep to hold out in a run, cannot with certainty be averred; but tactics that would do credit to a military general he can handle to completion.

It is to be presumed that he at first approaches with inten to take one. The flock, however, flee upon his near approach. He then cuts the shorter arc of the circle which the flock describe as they run, for, if inclosed in a given field, the frightened sheep will run around and around close to the fence.

The bear, making a loud, shrill noise, between a blow and a whistle, hastens into the course of the fleeing flock and waits for their approach. It need not be said that a flock of sheep will stop every 100 to 400yds. to look back, turn around and stamp a cowardly defiance or "Please don't you dare to come for me." This halt gives bruin time to place himself or to crawl up from the rear as they are faced about. The flock, after standing from one to ten minutes, will turn tail and run again. Oh! the racket that 100 sheep can create, the noise is much like distant thunder—on, on they go, and upon the enemy they surge—but this is a mistake, and very obv ously so to the Miss Sheep in the front rank which the cruel catcher does take—a sad mistake.

Many were the nights that I participated in the exciting work of warding off the bear. For hours we ran and stood and listened and tried to house the fold. Frequently we could have shot into the bulk of the bear had we been certain that he was himself. On such a night as this the bear will come out for field work—never when there is a good moon—it is risky business to attempt shooting in a field where from half a dozen to a score of men and boys are scattered, all peeping at what may be the "bar," some squatting and peering, seeking advantage of the uncertain light to be able to see the brute and say "Oh! boys, I viewed him square."

On one of those evenings I returned home at, say, 9 o'clock, in early autumn. At varying distances from the old farm back to the big woods lay a solid one hundred acres in primeval grandeur. These wild lots were the connecting links for the bears. Upon driving up to the house that sound as of a distant waterfall mingled with heavy foot falling, resembling, somewhat, a whirlwind passing quickly a pile of empty barrels, that sound already more than familiar, frightened the team and excited me.

The first person to come out in answer to my "Hello there" was greeted by "Grab them by the heads, they're frightened at something"—which grabbing the foreman of the farm did, saying, "Whoa, whoa there, what in thunder's got into you—hold on there, you—by gosh, it's the bear—come and hold your own team—say, it's danged mean to—whoa, you confounded—I say, I'll let them go to—gosh! if I'm agoin' to be bucked like this—oh! what a blasted sham—wa'n't I fooled by his dogoned 'Grab their heads'—I never thought of"—the appeal and the soliloquy combined was ended so far as I was concerned. My anxiety was to hasten in and secure my pick of the armory, doing which I bolted out followed by half a dozen men and boys, all armed, calling "Jim, which way did—oh! thunderashion, what tripped me?" The next man stumbling upon the sprawling heap exclaims: "My conscience, you scared me—I thought sure I was the lucky fellow to find the bear, and I wanted to swap off my luck, too." The hindmost coming up wants to know: "What have you fellows found, anyway?" Then "Hello Jim, I say, where's the tar—." "Hush, hush, I say, you fellers, I say, be quiet," interrupted a voice, as the owner of it steered off, according to his own guess, knocking his bootsoles against every protuberance on the sod. Running, stopping short, creeping and peering, advising and whispering in hoarse goose voice; more running and falling occupied the first quarter of an hour. A man falling and quickly scrambling up imitated quite closely the noise made by a bear catching a sheep and the sheep kicking desperately in struggles to break away. Hence a man's falling was always listened to with eagerness, and indeed, such a one sometimes produced quite a panic.

During harvest the fire had defaced the surface of this lowlond pasture, gouging out hollows many inches deep. There, scattered as we were, we stood gazing and wondering whether our quarry had gone, when my cousin Jack, the most adventurous and I dare say the most fearless of the outfit, made noises indicating that he was about in the middle of the meeting. He had ventured alone and unarmed toward where the flock had come in their circling; where the flock stood stamping, staring, bleating and constantly changing places, moving, if possible, into a more compact bunch. The ground was bestrewn with rails, the cross fence having been snatched down ahead of the fire's encroachments. Carefully stepping over rails, into and out of those burnt patches, Jack pressed forward among that quivering mass of terror, staring into the dim foreground as the sheep were doing. Each sheep that he approached gladly welcoming him as deliverer, crowded back to press against Jack's hand or leg, as it. bleating low and trembling, stares steadily forward. Meanwhile Jack had gained the front with half the flock at each side, those nearest rubbing their heads trustingly against him, the bold deliverer. Peering away into the gloom with hands on knees, Jack fails to locate the crouching or crawling beast of prey—nothing bears even a semblance to a black bear, unless those burnt places, one of which is within two yards and almost directly in front. A timid person might have made a whole "flock of bears" out of those spots, but not so Jack. He did not imagine some or all of these dark spots live beasts crawling forward—no, he wasn't worth a cent on imagining. See! hasn't that one slid closer there in front? No, why should it—how could it? What do those excited sheep smell or think they see? Alarmed beyond control the foremost turn to flee again as that black burnt spot rises, as Jack is now more eagerly straining his eyes to see far beyond it what causes the late alarm, glides forward with a single leap and lights upon the sheep which is standing jammed against Jack's leg.

Oh! what a rattle of fleeing feet amid the scattered rails, of the struggling sheep in the arms of the bear, both flat upon the ground, and of Jack expressing himself just as he felt and in utter absence of premeditation. The hideousness and blood-curdling effect of that guttural roar makes my flesh creep yet when I think of it. His profanity and prayers were mixed with a shocking distinctness. Not a man in the field breathed or had the power to move while this unearthly bellowing lasted, then every one ran excitedly to where we hoped to rescue Jack if he was not hugged to death, or scraped bare to the backbone or devoured quite. The hope was like that of Uncle Lisha's rescuers to deliver him and put back enough of his "innards to do a spell." Jack, ashamed of his outcry, was now so silent as to increase our misapprehension. He supposed that we knew how matters were; that he was unhurt; and we supposed that matters were as his sounds made them seem to be. With palpitating hearts we gathered to where we all expected poor Jack was being appropriated.

The anxiety and suspense of those moments in which we supposed Jack was being gobbled, and the nervous haste with which we did a week's wishing in a minute, touching the exact whereabouts of the unfortunate Jack, cannot be put on paper.

When found he swore. "The brute knocked me down and tramped all over me, and rolled on me, tryin' to gather me and a sheep at the same time. I do' know how I'm scratched, but I guess there isn't anything broke."

Whether Jack's roaring frightened off the bear, or whether the sheep's activity explains the escape, no one can more than guess. The excitement, however, was doubly thrilling throughout the next two hours while we were housing the fold. The escape of the sheep Jack explained by saying, "O, boys, he was a big, greedy devil; he wouldn't be satisfied with one of anything." We laughed heartily at Jack's classification of himself. Although he unintentionally put himself into the sheep class, he felt sheepish enough, indeed, over the ado he made as a witness of the attempt at sheep stealing. When one teased him about roaring more in a minute than several bulls could, Jack became aroused to an extent where he lifted his voice slightly again—because to hint at his being cowardly or frightened was to touch his tender place—but the more justification offered for trying to scare off the beast from the struggling sheep, and the surprise connected with the ground rising and coming straight at one, the worse, each attempt being rewarded by a fresh chorus of laughter. Jack was doubly "took down."

HURON.

GAME IN THE NORTHWEST.

SAINT PAUL, Minn., April 30.—Up here in this new Northwest my mind is continually reverting to my old home in northern New York, and I feel a little of that old inclination to look over my kit and get everything in readiness for my annual spring fishing trip among the Adirondacks, and I cannot help including in my thoughts many familiar faces who have as regularly as the season came put in an appearance for the sport, and all eager for the fray. My last trip was up Bog River to Mud Lake and surrounding water, and it will always carry with it my pleasantest recollections of the Saranacs proper. I have had much finer sport at Lake Placid with a troll than in any other Adirondack waters, for my trips there were always in company with a congenial spirit who was never too tired to fish, who never grumbled at the weather, and who was always satisfied. I am now seeking "greener fields and pastures new" in the "Middle West," and being sure that I am the gainer by the change, so far as variety in the sport is concerned, I feel a spirit of generosity pervading my being, and I am going to say to my friends in the East, read my letter, or letters, as the case may be, and then decide if I am not the gainer, and if you are satisfied that I am, come out here and enjoy it with me. I will give you such information and such references that I shall not be obliged to say, as some of the writers upon Adirondack stories have said, "Ask John" (Rev. W. H. H.) and "Ask Cort" (L. J. S.) to prove myself reliable as an authority.

This is not written to benefit any railroad or set of guides. It is simply for the benefit of those who wish to try some other locality, where they can kill not only white-tailed deer, but blacktails, elk, moose, cinnamon, silver tip, grizzly and black bears and cougar or mountain lion. From October until late wild geese and ducks are very plenty along the line of the N. P. Railroad. At Dawson you come into the goose belt, where they have their cover when flying north or south, and there is a roosting or resting place there where geese stop to rest, and they can be seen from the train. A method is employed here by the natives for getting them, which is this: They wait until after dark, and then approach them stealthily and kill what they wish with a club. They scatter some, but not far, and though the practice has been employed since the road was built, they have not been frightened enough yet to give up resting there. It would furnish magnificent sport with either shot or ball when they were preparing to alight. Shooting deer by jack light is tame work, as is also clubbing them to death after they have been driven to water by dogs, and it is no satisfaction to a true sportsman to kill nothing else but deer year after year. Here the game is so plenty that one can get any variety he chooses and several kinds in a day's tramp.

I know how well one feels when going into a new section to have some one in whom he can rely, not only to guide them but to advise them, and I can answer any of my Eastern friends or sportsmen friends, wherever they may be, that any information you wish will be furnished you willingly by Chas. F. Lee, General Passenger Agent of the N. P. R. R., or by his First Assistant, Joseph Marsh, at St. Paul. I can also cheerfully recommend for guide to the best resorts in the northwest, J. W. Proctor, who is thoroughly posted upon all these matters, and what is very agreeable in a guide, he is reliable, honest and truthful. He does not require liquor as part of his compensation, nor is he profane. He is a typical frontiersman, 6ft. 6in. high, weighs 190lbs., wears the regulation buckskins, sombrero, two huge navy revolvers and a bowie. He is accorded to be the best shot in the Northwest, and what is best of all he is not too officious. Any one can, with plenty of time, be thoroughly satisfied with a trip under his guidance. He has now under his control here in the city four black bears, one grizzly and two cow buffalo.

A little incident occurred at his ranch a few days ago and had a very unfortunate termination. One of the buffalo got out and made off. With the assistance of another buffalo, which is a pet, and aided by a cayuse and two veritable cowboys, she was headed and returned to the corral; but not wishing to go in, she made a break, and nothing but the swift-footed little cayuse, guided by the cowboy, could turn her. She was driven back several times, but would get a start every time, until finally she was secured. It had all the elements of a genuine buffalo hunt in it, minus the shooting, but the result was just the same, for within a half hour she was dead. Whether she broke a blood vessel or not could not be determined, but it is a sad loss. Her skin, head and legs to the knees and gambrels were carefully saved, and they will be preserved for mounting. The pet buffalo will drop a calf in about a month or so. The sire is a bull which belonged to the Major, but which, straying off one day, was seen by the soldiers of Fort Snelling lying down by a hay stack, and they went and shot him.

In my next I will give information that will enable any one to get an outfit in either Montana or Idaho, thereby saving much expense and getting all that one needs, besides giving points where fine sport with both rod and gun abounds in plenty. DR. T.

I left St. Paul in the early part of April for a month's outing, and have so far met with a good run of luck. After spending a few days at Aberdeen, Dakota, with more or less luck, the geese flying very high, I left for Webster, Da., and found the best of shooting. Between Webster and Waubay are innumerable sloughs full of ducks. I would advise any one to visit these points in the fall, as I have always found plenty of ducks and geese whenever I have been there. At Webster may be found a good hotel, and within a mile are the shooting grounds. Milbank is another good point. At Big Stone City I stayed several days and could not complain. Ortonville, Minn., is a famous summer resort, much frequented by St. Paul sportsmen, at the foot of Traverse Lake, a splendid sheet of water and a good feeding ground for ducks and geese. Fishing with hook and line has not yet begun, but spearing is good, pike and pickerel being taken. From Ortonville I went to Granville and from the car windows saw innumerable flocks of ducks. The sloughs are just full of them. At Graceville are Toka and West lakes. Plenty of ducks were swimming in the water, and as the game laws were enforced, no shooting was allowed. In company with some of the townsmen I took a row around Toka Lake. We spied a pelican in the water, and as its wing was disabled, caused by a shot, we finally captured it after a hard struggle. We placed it in a coop in company with a turkey. In the space of five minutes there was as pretty a fight as one could see, and we took the turkey out more dead than alive, and with very few feathers. From Graceville I went to Brown Valley, situated in a valley between Big Stone Lake and Traverse Lake, a natural duck pass. Owing to the pass being on the Minnesota side, I could do no shooting, but I can assure you it would have been a temptation, if I had a gun in my hands, to see flocks of ducks and geese continually passing over one's head. Spearing for pike and pickerel was very good, a 22lb. pickerel being speared in my presence. I am now on my way to Devil's Lake, where I expect to make a prolonged stay, as shooting is reported good in that vicinity. Fishing is good in the Red River here, mostly pickerel.

YOUNG SPORT.

WAHPETON, Dakota.

WHAT KILLED THE DEER?—The location was Beaver River a few miles above Stillwater, at the first pond on the south side, situated about 100yds. from the river. Wardwell's best dog was making it warm for something and coming down the river, as the sound indicated. I was not connected with that hunt, and so ran my boat ashore, that I need not turn the game; and none too soon, for a fine buck, about three years old, came in sight nearly as soon as I was secreted. He was swimming, but would cut the bends short and run in the shoal water, and was breathing heavily, as I could plainly see and hear. The dog ran past me down stream, but made no sound except with his feet. He was followed by his master a few moments later, using a double-blade paddle with the vigor of an athlete. The pine dugout yielded as only a fine model can. I was just stepping into my own boat when he said, "Have you seen the deer?" I replied, "Yes, and he is just a few rods ahead of you." I soon heard the report of his heavy rifle and the sharp bark of the dog running back up the river toward the pond, and then his "water call." I landed and walked across the short carry as soon as I could get there, and saw the dog following around shore, but no deer swimming. When Wardwell came back I called to him to take a look at an object near the center of the pond that must be the deer dead. We carried a boat across to the pond and he went out, returning with a very fat buck still warm. But there were no bullet marks, and Wardwell was not satisfied about it, but said he only had a broadside shot at the back of the skulking deer nearly under water in the alders. Dr. W. L. Collins, of Turin, Lewis county, who "put out the dog," after carefully removing the skin and finding no mark, asked how Wardwell looked when chasing it. I replied, "Eyes like peeled onions." "That's it. He scared it to death." But the Doctor found the lungs filled with blood.—NED NORTON.

NOTES FROM MICHIGAN.

Editor Forest and Stream:

Geese have been flying for the past ten days. The ice left Green Bay April 23. An occasional flight of ducks has appeared for a few days. A few pigeons are seen. Too much cannot be said in praise of our present Legislature for abolishing our spring shooting. Wisconsin followed suit. It has been a blot upon both States allowing spring shooting. Our open season for deer is from Nov. 2 to Dec. 1. In the Upper Peninsula snow usually comes early in November, and it will have a tendency to keep people of weak constitution, who usually came here in August and stayed until froze out or driven out by snow, away from here, as cloth tents are a very poor protection up here. Three game wardens in each county will try and enforce the laws against shipment out of the State, hide hunters and the festive trout hog, who come at the same time that the flies, gnats and other vermin. At times he claims to be a tourist in search of health, but we know him as one whose only inspiration is to destroy any and all things in season or out of season. The days of worrying deer in Michigan are passed, any one finding a dog running in the woods can shoot him, and any one claiming him is liable to $100 fine for hounding deer. Our lumbermen will also, perhaps, suffer for want of meat at times, as nearly all camps keep hunters during winter. Deer only costs $35 per month, the cost of the man hired to keep the camp in meat. I am pleased that we have gained our rights, which we have tried for years to get. Judge Holmes and his co-workers should receive the thanks of all reputable sportsmen in the land for their untiring energy. S. E. B.

MENOMINEE, Mich., May 1.

Editor Forest and Stream:

The warden system is meeting with great success in the State, and the people seem to have taken hold of it with a vim, giving our deputy every encouragement possible, and game protection bids fair to become as popular as base ball. Here in Saginaw county, since the appointment of Connors, there has been an offender yanked up nearly every day. W. B. M.

EAST SAGINAW, Mich.

A DEER ON THE SAN PEDRO.

NACOSAN, the little mining town where I am, is in the Sierra Madre Mountains. Whitetail deer, turkeys and jack rabbits are plentiful near here, and a few miles up in the mountains are bears, mountain lions and bob and civet cats. There are also several different kinds of skunks or pole cats. My trip from Arizona down here was most of the way through cañons in the mountains. Near the San Pedro River, before we struck into the cañons, we saw several bunches of antelope. Along the Tronteriza River we saw large flocks of ducks, out of which I distinguished black ducks, mallards and green-winged teal.

One afternoon we camped about 5 in a cañon in some foothills. We wanted some meat. Shouldering my repeater I started up a small cañon that led off into the hills and followed the cañon a short distance, and then went up on to the hills. The sun was sinking below the tops of the mountains. After walking a short distance, I reached the top of a small hill and looked down into a little valley. There were a few scattering live oaks, and as I looked between two trees I saw three deer walking slowly along, about 350yds. away; and as it was quite dusky, I thought that I would get nearer so as to make a sure shot. One of the deer, a fine buck, was 20yds. in advance of the other two. I got down on my hands and knees and commenced to creep down to them, keeping behind a tree as much as possible. After creeping about 200yds., I raised myself up and looked for the deer. The buck was not in sight and the other two had stopped and were looking directly toward me. I raised my rifle carefully, but before I could get aim they started on a run up a little knoll quartering to the left from me. Following along with my rifle I pulled, and the bullet made the dust fly a few yards behind the deer I aimed at.

The two deer disappeared over the knoll, and as I threw back the lever and reloaded, I looked about and saw the buck going with a jump up a hill in the opposite direction. I fired one shot at him, but he kept on. I started on over the knoll in the direction the two deer had gone. When I got to the top, on a sidehill 200yds. away, I saw one of the deer standing under a small tree and the other walking slowly along. It was so dusky by this time that I could not see my sights, but I judged as well as I could and fired at the one standing under the tree. The deer that I had shot at ran about 50yds. and stopped, and the other disappeared over the hill. I reloaded and walked toward the deer that had stopped. It was now so dark that I had to shoot by guess work. I fired again at the deer, which was about 100yds. off; it slowly walked about 25yds. and stopped again. I got up to within 50yds. and pulled. There was a click. The cartridge did not go. Throwing out the poor cartridge I raised my rifle and pulled again, and the second cartridge missed fire. I pushed the lever back to throw out that cartridge, but it stuck, and by the time I did get it out the deer was gone. It was quite dark so I turned about and started for camp. After walking a short distance I heard two pistol shots from the direction of camp; I walked on and after nearly falling down a hill crossed a cañon up the side of a second hill, and reaching the top looked down into a cañon and saw the camp-fire, 100yds. away. The side of the hill toward the camp was very steep, but it was too far to go back and down the other side, and the thought of the supper awaiting me was enough to nerve me for anything, so I turned down the hill. It was dark and the hill was steep and rocky. I got about half way down safely and thought I was almost down; grew careless, my foot struck a round stone that gave way, and down I went at railroad speed, but succeeded in keeping my feet until I struck the foot of the grade, and there I succeeded in making an impression in the ground with the end of my nose.

Thankful to have escaped so easily, I made all possible speed to camp, and was soon engaged in eating my supper and relating to Nick my hunt. He thought it a queer deer that would not run away after I had shot at him several times. As we rolled ourselves up in our blankets after supper I remarked that I should get up at daybreak and go out and see if I could not be more fortunate. After that as I lay there thinking it struck me, and I wondered I had not thought of it before, had I not wounded the deer and that was the reason he did not run away. I rose very early in the morning, and started for the place where I had shot at the deer on the sidehill; I was fortunate enough to find the place without any trouble, and looking carefully about found the spot where the deer had jumped after I fired; and near by on the leaves saw some drops of blood. Following along the drops became thicker, and I reached the spoot where the deer had stopped the first time. Here there was quite a pool of blood dried on the leaves and grass. I went on 25yds. to the place where the deer had stopped when my shells missed fire. From this place the trail of blood was fainter and the drops were far apart; and I had decided not to follow any longer when they became more numerous and led up the side of a hill. Looking a short distance ahead under an oak tree I saw the antlers of a deer above the grass. With my rifle ready I reached the tree and found my buck just alive. The bullet had entered his right hindquarters and ranged along into his stomach. I raised my rifle and put a bullet through his heart, and then cut his throat and dressing him, proceeded to tote him to camp. It was about two and one half miles to camp, and when I got to the top of the first hill I chopped the deer. I then made up my mind that I did not want the whole of him, so I cut off the head and neck and the two hind quarters, and slinging them on to my back I started a second time for camp, which I reached with the sun one hour high. CHESTER.

NACOSAN, Mexico.

CARIBOU NOTES.

SMYRNA, Me., May 1.—Some time ago there were several articles in your columns in regard to female caribou having horns, and as I had the good luck to secure a specimen which had a nice set, I would like to hear from brother hunters as to what their experience has been. Is it common or is it of rare occurrence? Mine was shot in December, and was one of two killed by one shot and already briefly alluded to by one of your correspondents.

My partner and I were on a round to our traps, and were crossing the upper end of a large open bay, when looking down it we saw four caribou coming toward us and perhaps a quarter of a mile away. The wind being in my favor, I was not long in getting my 45-60 Winchester off my hand sled and getting to a friendly stump. They came up on a gallop to about twenty rods of me and stopped. I drew bead on the one nearest me and pulled the trigger. There was only a dull clink. The lock was frozen. Without stopping to examine I threw in another cartridge, and this time she responded and I saw one drop. The others, not knowing where the shot had come from, came toward us and passed within 50yds. when we saw one was badly hit. Going a short distance further she sank down and was dead when we got to her. The bullet had entered just forward of the foreshoulder, passed obliquely through and came out back of the other shoulder, passing just over the heart and cutting the large vein, which soon bled her out. On turning our attention to the first one that fell, we found the shot had broken the back of a yearling buck which stood behind the other. Only one shot was fired and here were two dead caribou. When we were skinning them out, one of those remaining came out of the woods and stood within 50yds. of us some time, and at last trotted off with that gait peculiar to them. It was near dark, and we had to hurry up to make our camp about a mile away, and we were soon discussing the events of the day by the warmth of our little sheet-iron stove in Camp Fisher. On our return trip we took the meat out to our homes in the settlement.

The past winter has been hard on game and good for the Province lumbermen, and if your correspondent "Special" doubts that they kill out of season he would do well to make a tour of the camps of Upper Aroostook in crusting time and see for himself. A few such winters and the moose will be a thing of the past unless the law can be enforced in the lumber camps. SPRING-POLE.

MASSACHUSETTS ASSOCIATION.

THE regular monthly meeting of the Massachusetts Fish and Game Protective Association was held on Thursday evening last, April 5, between fifty and sixty members sitting down at the hospitable boards of the Tremont House. After supper the following-named gentlemen were elected members: Chas. D. Appleton, Lyman Stickney, N. S. Jones, Chas. F. Sprague, William J. Fegan, H. W. Tenney, Jos. R. Scott, F. M. Tupper, Henry L. Roberts, H. B. Thayer, W. S. Shepard, H. J. Johnson, F. W. Dickinson and Geo. W. Williams.

Although business was by no means slighted, still the major portion of the evening was devoted more especially to social intercourse; and there were few who did not enjoy the evening thoroughly.

Many were the tales of fishing and shooting experiences, and also of projected trips the coming summer in quest of trout and salmon in Maine and Canada lakes and rivers. But of all present, the one most complimented and congratulated was the veteran sportsman Warren Hapgood, for more than fifty years a devoted sportsman, and who can still bring down his bird, and who prides himself in having been a member of the party recently commented upon in the Boston papers as having shot at Monomoy, Cape Cod, the wonderful score of 172 brant and Canada geese—of that number 112 being secured in one day (April 19)—the equal of which has not been known for over twenty years.

Several persons spoke in regard to certain proposed changes in the Massachusetts game and lobster laws, and the following resolutions were unanimously adopted:

WHEREAS, The Legislature of Massachusetts in the session of 1886-7 enacted a wise and consistant law for the protection of our game and insectivorous birds, a law that can be enforced, and if enforced will give the protection that is so much needed. In view of this it is

Resolved, That it is the opinion of the Massachusetts Fish and Game Protective Association that any change in the provisions of the law would be detrimental to the objects for which it was designed.

Resolved, That this Association most earnestly protests against any change in the existing law that will permit the snaring of the ruffed grouse (a partridge).

Resolved, That it is the opinion of this Association, with the abundant evidence that we have, that such change would surely lead to the extermination of the bird in the localities where snaring is practiced.

A BIRD IN THE HAND.—Franklin, N. H.—Charlie H. and James O. were out for a little tramp. Charlie took his dog and gun along, but James only went for the tramp and to see the fun. In crossing a field where there was but little cover, the dog came to a point near a ground hemlock, and at Charlie's suggestion James walked up to flush the game, while Charlie took position to shoot. On nearing the bush James told Charlie that he could see a partridge lying very close. At the same time he gave a dive, frog fashion, and captured the partridge unharmed. Now Charlie, who can shoot four out of five partridges in quite thick cover, felt sure of hitting the bird, and proposed that they go to an adjoing field where James should throw the bird up for Charlie to shoot at. James readily assented; but as they walked along he thought of the old proverb of the "bird in the hand," etc., and thought how good partridge stew was, and, hugging the partridge tighter under his left arm and pinching his throat with his right hand, he mentally resolved that the partridge would be unable to fly by the time they reached the shooting place. "All ready," said Charlie; "throw him up toward the east." James, drawing him from under his coat, exclaimed, "He's dead!" "So he is," said Charlie. "I have heard of birds and animals dying of fright before." James had partridge stew for supper.—FACT.

GLEEN LOTTMAM, a frontier character, was in the city Sunday, reports a late date Denison, Texas, *News*. Gleen has been a hunter, guide, scout and trapper for a number of years. He has fought Indian and bear when Texas was an independent republic. He is from the headwaters of the Brazos, which he states is the finest game country left on the American continent. There are places which no white man has ever yet penetrated. Deer, bear, turkey, Mexican lions are so plentful that you can't go amiss of them. He states that the mountain streams are full of speckled trout. Lottman killed last year twenty-one bears, nine Mexican lions, and a number of panthers. He has a pack of about thirty dogs, which go with him on hunting trips and keep at bay dangerous animals. In a fight with a mountain lion last November he lost nine dogs before the beast was killed. Gleen has an express rifle which was presented to him with 1,000 cartridges by the late Gen. Ord. He has a Mexican wife, his sole human compaiion. She is quite as good a hunter as her husband. Lottman's nearest neighbor is twenty miles distant. He is sixty years of age and states that the only time he was ever sick was at San Antonio, when he mixed beer and ice cream together. He is en route to Arkansas to visit a brother who is a hunter on Black River.

HOUNDING OUT OF SEASON.—"The office of Justice R. O. Bascom at Fort Edward," says the Glens Falls *Times*, "was thronged Saturday with an interested crowd of spectators. Over twenty citizens of Fort Ann were present in the capacity of witnesses and sympathizers. Wilbur, it will be remembered, was charged with violation of the game law. The specific charge brought against him was that of hounding and killing deer out of season. The case went to the jury at 5 o'clock. After being out some hours they sent notice to the court that they could not agree. The jury were discharged. The defendant, Wilbur, was then arraigned on the charge of hounding deer. He pleaded guilty and was fined $15, which he paid. It is said by persons in authority that other parties, residents of Fort Ann, will shortly be arrested and tried on similar charges." The deer was hounded in Washington county, near Lake George. Three other men have pleaded guilty in this county, and three are under $500 bail for appearance.

CURE FOR THE BLUES.—Lewiston, Ill.—I sat in the office discussing the tariff Saturday. Half the county yelling for free trade, the other half for protection, and the scattering ones for tariff for revenue only, makes the manufacturers look blue and feel blue. Some one rang the telephone and one of my friends wanted to know if I wanted to go sniping. Well, I thought I did, and promised to join him at 1 o'clock sharp. We drove to the ground, found the birds and the mud, too; and such mud, all the way from 4in. to 1ft. deep. Birds wild, getting up 35 and 40yds. We went around to get the wind on our backs and went at them. A snipe likes to get up against the wind. He will not fly far with the wind. It was a miss and a kill, with more misses; and after three hours we counted up and found we had eighteen nice birds. We got back to the team feeling as if we were broken in two in half a dozen places, but after a pleasant drive and our supper we were cheery and chipper.—L. G.

DOGS ON RAILROADS.—Newport News and Mississippi Valley Company (Eastern Division), Office of the General Baggage Agent—Richmond, Va., April 29.—Baggagemen are instructed to receive and carry, free of charge, in baggage cars, at the owner's risk and without checks, bicycles, light equipment of sportsmen, their dogs and game, when accompanied by owners on same train holding first-class tickets, owners to load and unload their own property. Dogs, other than those accompanying sportsmen on hunting trips, must be turned over to the express company.—C. LORRAINE, General Baggage Agent.

A CHANCE SHOT.—Hawkinsville, Fla.—I was out hunting one day in a dense Florida hamak when my dog started a small buck. I saw it through the trees and palmettoes about 50yds., and held my gun to shoot it as it passed a small char place, but the gun was very easy on trigger and went off by accident. I dropped down, not dreaming the deer was touched, when to my surprise I saw it coming toward me with a broken leg and I shot it with the other barrel. When the gun went off the deer was out of sight and I did not intend to shoot.—MAYO DADE.

GROUSE AND LOCOMOTIVE.—Conneaut.—I was railroading in the locomotive department on the L. S. & M. S. R. R. Leaving Erie one stormy night, and having gone about three miles west, we came to a place where there is a thick hemlock woods on each side of the track. All at once the headlight went out. I went around at once to see what had caused the trouble, and found a large ruffed grouse inside. Being attracted by the light, I suppose it had flown against the glass and smashed it, and caused its death.—W. W. B.

INDIAN NAMES FOR ANIMALS.—If chipmunk or chipmuck is an Indian name for our little squirrel, I am quite willing to give up my idea of the origin of the name. Being of Rhode Island stock, anything Indian is better for me than anything Puritan. I am thankful, if not proud, that my Quaker ancestors would not have been permitted to come over in the Mayflower if their sect had been founded then. Speaking of Indian names, and I wish more of them had been preserved, is not "skunk" one of them? The Waubanakees call him "segunk," and the change from that to skunk is slight. What is it White of Selborne calls him? I have not that earliest and always delightful outdoor book at hand, but if my memory serves me aright, he calls *Mephitis* "stonk," and comes within a letter of getting near enough to it.—AWAHSOOSE.

CALIFORNIA GAME LAW.

THE game law of the State, as just enacted, is formed by amending sections 626, 631 and 636 of the Penal Code, and reads as follows:

SECTION 1. Section 626 of an act entitled "An Act to establish a Penal Code," approved Feb. 14, 1882, is hereby amended so as to read as follows: 626. Every person who in the State of California, between the 1st day of March and the 10th day of September, in each year, hunts, pursues, takes, kills or destroys quail, partridges, or grouse or rail, is guilty of a misdemeanor. Every person who, in any of the counties of this State, at any time takes, gathers or destroys the eggs of any quail, partridge or grouse, is guilty of a misdemeanor. Every person who, in this State, between the last day of January and the first day of June in each year hunts, pursues, takes, kills or destroys doves, is guilty of a misdemeanor. Every person who between the 15th day of December in each year and the 1st day of July in the following year hunts, pursues, takes, kills or destroys any male antelope, deer or buck, is guilty of a misdemeanor. Every person in the State of California who has in his possession any hides or any skins of deer, elk, antelope or mountain sheep, killed between the 15th day of December and the 1st day of July is guilty of a misdemeanor. Every person who shall at any time, in the State of California, hunt, pursue, take, kill or destroy any female antelope, elk, mountain sheep, female deer or doe, shall be guilty of a misdemeanor. Every person who shall at any time hunt, pursue, take, kill or destroy any spotted fawn, is guilty of a misdemeanor. Every person who shall take, kill or destroy any of the animals mentioned in this section, at any time, unless the carcass of such animal is used or preserved by the person taking and slaying it, or is sold for food, is guilty of a misdemeanor. Every person who shall buy, sell, offer or expose for sale, transport, or have in his possession any deer, deer skin or hide, from which evidence of sex has been removed, or any of the aforesaid game at a time when it is unlawful to kill the same provided by this and subsequent sections, is guilty of a misdemeanor.

SEC. 2. Section 631 of the same Act is hereby amended so as to read as follows: 631. Every person who shall at any time net or pound any quail, partridge or grouse, and any person who shall sell, buy, transport or give away or offer or expose for sale, or have in his possession, any quail, partridge or grouse that have been snared, captured or taken in by means of any net or pound, is guilty of a misdemeanor. Proof of possession of any quail, partridge, or grouse which shall not show evidence of having been taken by means of other than a net or pound, shall be prima facie evidence in any prosecution for a violation of the provisions of this section that the person in whose possession such quail, partridge or grouse is found, took, killed or destroyed the same by means of a net or pound.

MONTANA GAME LAW.

AN act to amend sections 1, 2 and 5, of an act entitled an act "to protect game, furbearing animals, and fish, approved March 8, 1883. Be it enacted by the legislative assembly of the Territory of Montana:

Sec. 1. That any person or persons who shall wilfully shoot, or otherwise kill or cause to be killed, any buffalo, moose, elk, white-tailed deer, black-tailed deer, mountain sheep, Rocky Mountain goat, or antelope, between the first day of December and the fifteenth day of August of the ensuing year, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined in any sum not less than twenty dollars nor more than fifty dollars for each offense committed.

Sec. 2. That section 2 of an act entitled an act to protect game, furbearing animals and fish, approved March 8, 1883, be amended to read as follows: Sec. 2. That any person or persons who shall willfully shoot or otherwise kill or cause to be killed at any time any of the animals mentioned in section one of this act for the purpose of saving the head or hide only, or for speculative purposes or market, or for sale, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined in any sum not less than fifty nor more than two hundred dollars, or by imprisonment in the county jail not less than one month nor more than six months, or by both such fine and imprisonment.

Sec. 3. That section 5 of said act be amended to read as follows: Sec. 5. That any person or persons who shall wilfully shoot or cause to be killed any grouse, prairie chicken, pheasant, fool hen, sage hen, partridge or quail, between the fifteenth day of November and the fifteenth day of August of the ensuing year, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined in any sum not less than twenty-five nor more than fifty dollars, and all persons are hereby prohibited at all times from killing any of the birds in this section for speculative purposes or for market or for sale, and any person or persons who shall hereafter kill for speculative purposes or offer for sale any of the kinds named in this section shall be guilty of a misdemeanor, and upon conviction thereof shall be fined in any sum not less than twenty-five nor more than fifty dollars for each offense committed.

Approved March 9, 1887.

NEW YORK GAME LAW.

THE Senate has passed Coggeshell's bird bill so amended that it allows the killing of woodcock in August (as the law now is), and prohibits the killing of wild duck, geese and brant in April, except in the waters of Long Island Sound, where they may be killed in that month.

Also Coggeshell's bill to restore the 6in. restriction (stricken out last year) relative to brook trout, speckled trout, salmon trout and landlocked salmon.

Also Vedder's bill making the quail season Nov. 1 to Jan. 1, and the hare season Nov. 1 to Jan. 1.

The Assembly has passed Ennis's bill exempting owls, night hawks, etc., from the song bird act of 1886.

Also Fort's bill forbidding the possession of snares, etc., on waters inhabited by salmon, lake trout, etc., in close season.

Also Collins's bill making the salmon season from March 1 to Aug. 15.

Also Brundage's bill prohibiting the catching of trout in Steuben county except in May, June and July.

The Governor has signed Finn's bill repealing the act for the preservation of lobsters.

Considerable progress may be reported during the past week in regard to game legislation. Of course much of this legislation is all moonshine, and it would be a great deal better if it were not passed at all. But there are so many men who come to Albany expecting to make a "record," that it is no wonder that they take the game laws and try to make a record there.

During the past week the Assembly passed the following bills: Hall, relating to Forest Commission; Hogeboom, forbidding shad fishing in the Hudson on Sundays, amended so as to add, in Section 1, after the word "river," the words "past the northern boundary of Westchester county"—thus limiting the space in the river devoted to the operation; Sims, authorizing boards of supervisors to audit bills of game and fish protectors.

The Senate has passed Bulkley's bill prohibiting fishing at Cape Vincent except by angling; Moore's, amending the song bird act in the interests of science; and Brundage's amendments especially applicable to Steuben county. The Senate has also passed the Hogeboom shad bill noted above, and it has gone to the Governor for his signature.

The Assembly Game Committee has reported Senator Coggeshall's six-inch trout bill; Mr. Sweet's bill allowing fishing with nets in certain parts of Cayuga Lake, and Mr. Reeves's bill for the preservation of moose, etc.

Erwin's bill has been amended to permit robin and blackbird shooting on Long Island and Staten Island, Nov. 1 to Jan. 1.

COUGHING, with interludes of wheezing and sneezing, are heard in all public places. Every one ought to know the remedy; and that is Hale's Honey of Horehound and Tar—an absolute and immediate cure of all pulmonary complaints. PIKE'S TOOTHACHE DROPS cure in one minute.—*Adv.*

Camp-Fire Flickerings.

"That reminds me."

213.

QUITE a party of fishermen had gathered at the old dam one day, trying their luck for bass, and several had very fine strings. Whenever any one got on a bass they would yell, and they all would watch with interest until it was safely landed, held up for inspection and placed on the string. Among the fishermen was William S., who had been in the habit of catching "awful big bass," with no one but himself for witness, and some of the boys asked him if he was going to catch any big ones that day. He replied, "Just wait and I'll show you a bass that beats them all; he has been biting my hook for some time." A few minutes later we heard an awful yell from "Bill." "I've got on a bass, and a big one, too," we heard him say. It certainly looked like it, for his light rod was bent nearly double, and the line would dart first one way and then another; again it would make a dive down, and Bill would let out line until it nearly reached bottom; then he would slowly reel up, the bass diving and plunging all the time, but never once coming to the surface. And all the time Bill stood there cool as ice, letting out line and reeling up again for nearly half an hour, but it did not seem to be affecting the bass in the least. The boys in the meantime had been offering suggestions as to the capture, putting bets on the weight and whether it would be safely landed. Bill was now growing tired, and concluded to land the monster. His companion stood ready with the net, and Bill slowly reeled up, the fish darting back and forth as he came near. All eyes were turned on Bill, and as he slowly brought it to the boat and carefully placed the net under—a large tin pail cover—as he held up his prize in one hand and wiped the sweat from his brow with the other, a shout went up that could have been heard a mile. The hook had caught in the handle in the center of the cover, and that was what made it dart. P.

THE FLY-CASTING TOURNAMENT.

THE committee of arrangements of the National Rod and Reel Association met Friday, 6th inst., at Mr. E. G. Blackford's laboratory, in Fulton Market, this city. The committee on grounds reported having obtained permission from the Park Commissioners for the use of Harlem Mere, May 25 and 26. The committee on rules reported having amended the rules, which appear hereafter. The committee on prizes reported having obtained gifts from forty donors, who have given or agreed to give sixty-two prizes, which, with those given by the Association will make an aggregate of seventy prizes with a value of $850. Three members of the Association contributed each $25 in cash toward the purchase of the gold medals to be given as first prizes. The president was authorized to place such prizes as might come in after this meeting in such classes as seem to him best.

REVISED RULES FOR 1887.

1. All persons competing for prizes shall pay an entrance fee at each contest as follows: Members, two dollars; non-members, five dollars. Memberships may be obtained on the grounds from the secretary.

2. No one shall be permitted to enter an amateur contest who has ever fished for a living, who has ever been a guide, or has been engaged in the manufacture or sale of fishing tackle.

The judges in the different classes shall appoint a member to see that the tackle is at all times in accordance with the rules and requirements of the Association during the contests. The judges in any particular class, on appeal, shall have power to decide in all matters relating thereto, and their decision shall be final.

3. No single-handed fly-rod shall exceed 11½ft. in length, and it shall be used with a single hand.

4. In single-handed fly-casting any style of reel or line may be used. A leader or casting line of single gut, not less than 8ft. in length, will be required, to which three flies, one stretcher and two droppers shall be attached.

5. No allowance of distance shall be made for difference in length of rods; but in the contests with light rods of 5oz. and under an allowance of 1½oz. will be made in favor of all such rods as have solid reel-seats.

6. Persons entering these contests shall draw lots to determine the order in which they will cast, and must be ready to cast when called upon by the judges.

7. Each contestant will be allowed fifteen minutes in which to cast for distance, and will then stand aside until called in his turn to cast for delicacy and accuracy. In casting for distance, each contestant shall inform the judges of the contest when he intends to begin to compete. His time allowance of fifteen minutes shall then begin to run, and shall continue to run without interruption until its expiration or until the contestant voluntarily withdraws from the stand. Should, however, the contestant's rod break, time to replace the broken joint shall be given him. No allowance of time shall be made to any contestant for any other reason whatever, it being the intent and purpose of this rule that each contestant shall abide by his own accidents, except as herein specified.

8. The distance shall be measured by a line with marked buoys stretched on the water; said line to be measured and verified at least once each day of the tournament, by two or more officers, to be designated by the president or secretary. A mark shall be made on the stand from which the buoy line shall be measured, and the caster may stand with his toes touching this mark, but may not advance beyond it. Should he step back of it, unless directed to do so by the judges, the loss in distance shall be his.

9. The stretcher fly must remain at the end of the casting line in all casts. The others are not deemed so important.

10. Delicacy and accuracy shall be contested and adjudged at the same time and as follows: Each contestant shall be allowed twenty-five casts at an object in or on the water, 40ft. distant from him. For the purpose

of this tournament absolute delicacy in casting the fly shall be considered to be casting the fly or flies upon the water in such a manner as to disturbe its surface to the least possible extent. He who most nearly approaches this shall be adjudged the superior in delicacy. He shall be adjudged to be the superior in accuracy who, on an average of all his casts, places his stretcher fly nearest the mark. Twenty-five points shall be credited to him who is adjudged the superior in delicacy, and twenty-five points to him who is adjudged the superior in accuracy. The other contestants shall be awarded lower scores in accordance with their comparative excellence.

11. The ultimate scores of the various contestants shall be determined as follows: To the distance in feet each has been adjudged to have cast, shall be added the scores assigned for delicacy and accuracy, and prizes will be assigned in accordance with this aggregate.

12. To prevent fouling the measuring line and accidents to the spectators in the fly-casting contests, the points of all fly-hooks shall be broken off below the barb.

13. In the absence of an appointed judge the president or secretary shall fill the vacancy.

14. *Salmon Fly-Casting.*—The foregoing rules shall govern: Rods may be used with both hands and only one fly shall be required. Delicacy and accuracy casts to be made at a mark 70ft. distant from the contestant.

15. *Black Bass Casting.*—All general rules which do not conflict with the following special rules shall govern. No rod shall be more than 10ft. in length. Any reel may be used, but all casts must be made from the reel. Lines shall not be of less caliber than No. 6 (letter H) braided silk, nor No. 1 sea grass, or corresponding sizes of other materials, and be of uniform size throughout. The weight of the sinkers shall not exceed ½oz. (these to be furnished by the contestants). In casting but a single hand shall be used. Each contestant shall be allowed five casts for distance, the average to count, and five casts for style and accuracy; the latter points to be ascertained by casts made at a stake or mark 60ft. distant from the caster, and the judges to give points in accordance with the nearness with which the sinker approaches the said stake or mark. Style and form to be determined by the ease and grace of the caster.

16. *Heavy Bass Casting.*—Rods shall not exceed 9ft. in length and may be used with both hands. Any rod may be used, but the line shall be of linen, not less caliber than the trade No. 9, with twelve threads throughout its entire length. The casts shall be made with sinkers weighing 2½oz. (these will be furnished by the committee). Each contestant will be allowed five casts, his casts shall be measured, added and divided by five, and the result shall constitute his score. No allowance will be made to any contestant for the overrunning or breaking of his line.

17. *Light Bass Casting.*—Same rules as in heavy bass casting to apply except that the weight of the sinker is limited to 1½oz. (these will be furnished by the committee), and any line of uniform caliber may be used.

PROGRAMME—MAY 25.

I.—Single-Handed Fly-Casting—Class A—Amateur.

Judges—Francis Endicott and Hon. James Geddes.
Rev. H. L. Ziegenfuss, Referee.

Open to amateurs under Rule 2, who have never taken a first prize in any tournament of this Association. Rods not to exceed 11½ft. in length. Except as to medal, winners to have choice of prizes in the order of their merit. Scale of points—Distance, actual cast, delicacy and accuracy, 25 each. Delicacy shall be judged by the lightness with which the flies fall upon the water, and accuracy shall be determined by the judges. The casts for delicacy and accuracy shall be made at the same time. VALUE.

1. Gold medal, given by the National Rod and Reel Association.....$25 00
2. Premier split bamboo rod, extra tip, German silver mountings, given by A. G. Spalding & Bros., 241 Broadway, New York..... 25 00
3. Greenheart fly-rod, extra tip, German silver mountings, given by J. B. Crook & Co., Fulton street, New York.. 20 00
4. Rubber and German silver fly-reel and case, aluminum spool, given by Ed Vom Hofe, 97 Fulton street, New York..... 18 00
5. Greenheart fly-rod, independent handle, extra tip, German silver mountings, given by George C. Masters, 389 Fulton street, Brooklyn..... 15 00
6. "Fishing with the Fly" and assortment of flies, given by C. F. Orvis, Manchester, Vt..... 15 00
7. Patent net ring and handle, given by G. L. Bailey, Portland, Me..... 2 50

II.—"Switch" Fly-Casting.

Judges—H. F. Crosby, Dr. Van Geesen, Fred Mather.
James Benkard, Referee.

Open to all. Single-handed rods, not to exceed 11½ft. in length. Distance only to count. Casting to be from shore unless otherwise agreed by contestants. No cast to be counted on which the fly goes behind the caster. Except as to medal, winners to have choice of prizes in the order of their merit.

1. Gold medal, given by the National R. and R. Association.$25 00
2. Split bamboo rod, given by Harry Pritchard, 90 Fulton street, New York..... 25 00
3. Order for one silk hat, given by R. Dunlap & Co. 181 B'way, New York..... 8 00
4. Polished cherry tackle box, given by the Levison & Lamb M'f'g. Co., 287 Broadway, N. Y..... 4 50
5. One year's subscription to FOREST AND STREAM, given by Forest and Stream Pub. Co..... 4 00
6. One year's subscription, given by W. C. Harris..... 3 00

III.—Salmon Casting.

Judges—Col. Locke, W. Winchester, James C. McAndrews.
Capt. Wm. Dunning, Referee.

Open to all. See Rule 14. No limit as to rods. Distance only to count. Except as to medals, winners to have choice of prizes in the order of their merit.

1. Gold medal, given by the National Rod and Reel Association.....$25 00
2. Gold medal, given by the National Rod and Reel Association..... 15 00
3. Cash, given by the National Rod and Reel Association..... 10 00
4. Acme tackle box, given by H. F. Price, 29 Murray street, N. Y..... 6 75
5. One year's subscription, given by the Forest and Stream Publishing Company..... 4 00
6. One year's subscription, given by W. C. Harris..... 3 00

IV.—Minnow Casting for Black Bass.

Judges—Wm. C. Harris, Hon. H. P. McGown.
D. W. Cross, Referee.

Open to all, as per Rule 15. Score: Average distance in feet. Accuracy and style, 25 points each. Casts for these points to be made at the same time and at a stake or mark 60ft. distant. A stand 12in. high in front and 6in. in rear and of suitable size will be provided, to be used at the option of the caster. Winners to have choice of prizes in the order of their merit.

1. Lakeside rowboat complete, 15ft.x38in., given by R. J. Douglas & Co., Waukegan, Ill.....$45 00
2. Hand-made minnow-casting rod in case, given by F. D. Devine, Utica, N. Y..... 20 00
3. Split bamboo minnow-casting rod, given by B. F. Nichols, Brookline, Mass..... 16 00
4. One dozen bass and one dozen trout bugs, given by Chas. Plath & Son, 130 Canal street, N. Y..... 10 00
5. Pocket tackle case ($1.50), given by H. F. Price, 29 Murray street, N. Y., and set of German silver guides and agate tips and agate guide ($5), given by Chas. Koehler, 65 Clinton street, N. Y..... 6 50
6. Bray fly-book, given by A. G. Spalding & Bros., 241 Broadway, N. Y..... 5 00
7. One year's subscription, given by the Forest and Stream Publishing Co..... 4 00
8. One year's subscription, given by W. C. Harris..... 3 00

V.—Single-Handed Fly-Casting—Expert.

Judges—Dr. A. Ferber, C. Van Brunt.
L. Dinwiddie Smith, Referee.

Open to all. Distance only to count. Rods not to exceed 11½ft. in length. Except as to medal, winners to have choice of prizes in the order of their merit:

1. Gold medal, given by the National Rod and Reel Association.....$25 00
2. Amateur photographic outfit, given by E. & H. T. Anthony & Co., 591 Broadway, N. Y..... 10 00
3. Cash, given by the National Rod and Reel Association..... 10 00
4. Epauleted ventilated rubber coat, given by the James J. Byers Epaulet Ventilation Co., 274 Broadway, N. Y..... 7 00
5. 100 "Forest and Stream" cigars, given by Ed. Eggert, 245 Pearl street, N. Y..... 6 00
6. One pair No. 3 canvas leggings, first quality, given by John D. Bethel, 124 Chambers street, N. Y..... 4 00
7. One year's subscription to *Outing*, given by the Outing Publishing Co., N. Y..... 3 00
8. One year's subscription, given by W. C. Harris..... 3 00

PROGRAMME—MAY 26.

VI.—Single-Handed Fly-Casting—Class B—Amateur.

Judges—Eugene G. Blackford, Hon. R. B. Roosevelt.
Louis B. Wright, Referee.

Open to amateurs under Rule 2 who have never taken a first prize in any tournament of this Association. Rods not to exceed 11½ft. in length. Winners to have choice of prizes in the order of their merit.

1. Leonard split bamboo fly-rod, given by Wm. Mills & Son, 7 Warren street, N. Y.....$35 00
2. Silver-plated net ring and handle, given by James Reed, Cambridge, Mass..... 15 00
3. Split bamboo fly-rod, presented by the Syracuse Split Bamboo Fish Rod Co..... 8 00
4. Automatic fly-reel rubber, given by A. G. Spalding & Bros., N. Y..... 8 00
5. Six dozen assorted trout flies, given by James Raunbottam, Freeport, N. Y..... 6 00
6. Patent net ring and handle, given by G. L. Bailey, Portland, Me..... 2 50
7. One year's subscription, given by W. C. Harris..... 3 00

VII.—Salmon Fly-Casting.

Judges—John A. Roosevelt, Edward Weston.
J. S. VanCleef, Referee.

Open to all except winners of first and second prizes in prior salmon fly-casting contests of this Association. Rods not to exceed 16ft. in length. Distance, delicacy and accuracy to count. See Rule 14. Winners to have choice of prizes in the order of their merit.

1. Split bamboo ebonized grilse rod, given by Jas. Reed, Cambridge, Mass.....$22 00
2. Ash and lancewood salmon rod, given by Wm. Mills & Son, New York..... 18 00
3. Double taper waterproof silk salmon line No. 2, 120yds., given by John Shields & Co., Brookline, Mass..... 10 50
4. Solid leather tackle case, given by Hoff Bros. & Herring, 87 Fulton street, New York..... 7 50
5. Levison fly-book, given by Wm. Mills & Son, New York.... 7 00
6. One year's subscription, given by Outing Pub. Co., N. Y.... 3 00
7. One year's subscription, given by W. C. Harris, New York 3 00

VIII.—Single-Handed Fly-Casting—Expert Light Rod Contest.

Judges—James Benkard, Rev. H. L. Ziegenfuss.
J. S. Van Cleef, Referee.

Open to all. Rods not to exceed 11½ft. in length nor 5oz. in weight. All rods with solid reel-plates will be allowed 1¼oz. Distance only to count. Except as to medal, winners to have choice of prizes in the order of their merit.

1. Gold medal, given by the National Rod and Reel Association.....$25 00
2. Handsome smoker's stand, given by T. B. Stewart & Co., 21 East 17th street, New York..... 15 00
3. Cash, given by the National Rod and Reel Association.... 10 00
4. Epauleted ventilated rubber coat, given by the Joseph J. Byers E. V. Co., New York..... 7 00
5. 1,000 satin straight-cut cigarettes, given by Wm. J. Kimball & Co., Rochester, N. Y..... 7 00
6. One year's subscription, given by the Outing Publishing Co., New York..... 3 00
7. One year's subscription, given by W. C. Harris..... 3 00

IX.—Heavy Bass Casting.

Judges—Martin B. Brown, John A Roosevelt.
James C. Vallotton, Referee.

Open to all under Rule 14. A stand 12in. high in front and 6in. in rear, and of suitable size, will be provided, to be used at the option of the caster. Except as to medal, winners to have choice of prizes in the order of their merit.

1. Gold medal, given by the National Rod and Reel Association.....$25 00
2. Silver King multiplying reel, given by Thomas J. Conroy, N. Y..... 35 00
3. Silver Queen multiplying reel, given by J. Kopf, 51 Scholes street, Brooklyn, N. Y..... 35 00
4. Ash and lance combination rod, four rods in one, given by James F. Marsters, Brooklyn, N. Y..... 6 00
5. One year's subscription, given by W. C. Harris..... 3 00

X.—Fly-Casting for Black Bass.

Judges—G. M. Skinner, Francis Endicott.
Capt. Wm. Dunning, Referee.

Open to amateurs under Rule 2. Single handed rods, not to exceed 11½ft. Only one fly required (to be furnished by the committee, tied on No. 2 Sproat hooks). Distance only to count. Except as to medal, winners to have choice of prizes in the order of their merit.

1. Gold medal, given by the National R. and R. Association.$25 00
2. Split bamboo minnow casting rod, given by the George Karup M'f'g. Co., Trenton Falls, N. Y..... 20 00
3. Meerschaum segar holder, given by Kaldenberg, 371 B'way, New York..... 10 00
4. Single-barrel breechloading rifle, .28cal., given by H. C. Squires, 178 Broadway, N. Y..... 10 00
5. Gold and silver-plated assorted spoons, given by G. M. Skinner, Clayton, N. Y..... 10 00
6. One year's subscription, given by the Forest and Stream Pub. Co..... 4 00
7. One year's subscription, given by W. C. Harris..... 3 00

It is possible that several other makers of tackle may yet send in prizes, in such cases they will be apportioned to the above classes, under the authority given to the president, and due notice of such additions will appear.

FARMER BROWN.—Concerning Farmer Brown's trout perhaps some of us were a little harsh in our comments on the method of his taking off. But I for one would be glad to hear from Farmer B. himself. Doubtless he was fond of his pet, and doubtless he had been frequently tormented by poachers who were not honorable sportsmen and who had designs on his trout, and being a dull clod of a farmer he was not discriminating and did not know a canoeist from a fish thief. It is a lamentable fact that the majority of anglers and shooters are too regardless of the farmer's rights, and feel a sort of enmity toward him. The farmer is not a saint, though there are possibilities of his becoming an angel, and he reciprocates the feeling. Both parties are too selfish and too unconciliatory. Being a farmer and a lover of rod and gun I am unprejudiced, or at least my prejudices ought to neutralize one another. —AWAHSOOSE.

ROCKY MOUNTAIN RESORTS.

Editor Forest and Stream:

Perhaps a word from one of the greatest and best known trout fishing places in the Rocky Mountains would be of interest. This point is well known to all visitors to the great Yellowstone National Park as one of the most excellent trout fishing places along the line of the Northern Pacific Railroad. At this time of the year the grayling is easily taken, while our anglers get a good sprinkling of the larger size trout, weighing from 2lbs. to 5lbs. Mr. Pierce Hoops, Jr., of Bradford, Pa., took twenty-seven nice large trout one day last week in two hours. A pleasant party, consisting of Messrs. S. L. Wallace, of Washington; C. J. Cornell, of Oshkosh; Judge J. A. Savage and Supt. Richmond, of this place, went to a point on the Yellowstone River in the cañon, about five miles from here, last Saturday and made a catch of 129 trout and grayling during the afternoon.

It is rumored that parties are using nets and dynamite in the river near here, taking trout for the market, and strenuous efforts will be made to apprehend the guilty parties. The several gun clubs throughout the Territories are taking active steps to suppress this lawlessness and hope to overcome it. It would really be a great pity to spoil our excellent fishing by such unlawful modes, and local anglers are interesting themselves to suppress the practice.

The Yellowstone River affords immense pleasure for fishermen. Artificial flies are used entirely this time of the year; minnows are sometimes used to advantage, especially on cool days. More anon. C. G. H.

LIVINGSTON, Montana, April 13.

Editor Forest and Stream:

On or about July 15 the Northern Pacific Railroad will become connected, and trains from St. Paul and Tacoma will cross the Switch Back instead of going via Portland. Many of your readers may wish to take a trip through this country when they learn that the trout fishing in Green River (along which the road runs for twenty miles) cannot be beaten anywhere upon the continent. The fish run from ½ to 3lbs., and it is a poor fisherman who cannot get all the sport he may desire. The banks of the river and streams are all heavily wooded, so that one has to wade the river to find it.

The game in this section is not plenty, but we have bear, cougar, black cat, and a few mountain goats. Three goats were killed by one of an engineering party last fall. Nearly every stream emptying into Green River is dammed in places by beavers, but they are themselves not very plenty. Those of your readers who have never been West cannot spend their time to greater advantage than to take a trip over the Northern Pacific, stopping at the National Park, where, of course, they cannot hunt, and then come on to Tacoma, from there by steamer along the coast to Alaska. Those desiring to hunt should lay over somewhere in Montana. Fishermen should come over here. Still there is excellent fishing in the Yellowstone, the East and West Gallatin, the Madison and other rivers and lakes through Montana and eastern Washington. Of course there is no need of speaking of the numerous prairie chickens, grouse, etc., that are found anywhere and everywhere west of the Mississippi River. J. M. L. B.

EAGLE GORGE, King County, W. T.

Editor Forest and Stream:

Have any of your readers lived for ten long months walled in on every side by mountains and for three of these months looked at these mountains covered with snow, preventing at all times that clear bright color and their towering peaks looking down on man's diminutiveness; and have any of the same readers, after this long siege, early in the morning climbed the rough sides of one of those lofty mountains, and as the sun rose, first tinging with gold every peak and then gradually coloring every low butt and at last sending sunshine into the valleys, looked over and beyond the furthest peaks, to see there a world beyond? If none have then I could make them understand the feeling of freedom and relief I experienced a few evenings since.

To come down to every day life—our fishing is now at its best; every one is getting his fill of trout. The hotel will be open in about thirty days and then every day will find parties on piscatorial pleasures bent, and I venture to say not one party will return without something to show for the day's sport. When that time comes I will endeavor to give you the experiences of some one else besides my own, in and around Lake Pend d'Oreille. F. T. A.

HOPE, Idaho.

DULUTH FISHING RESORTS.—Mr. C. F. Johnson, an enterprising newsdealer of the "zenith city of the unsalted seas," has offered two prize rods for the largest brook trout and black bass respectively caught by a sportsman of Duluth or vicinity in adjacent waters. Mr. Johnson has also prepared the following list of distances in miles from Duluth to angling waters: *To North Shore Fishing Resorts:* Lester River 5, French River 12, Sucker River 15, Knife River 20, Two Harbors (Agate Bay) 27, Tower (Vermilion Lake, by rail) 96, Stewart River 30, Encampment Island 35, Gooseberry River 40, Split Rock 45, Beaver Bay 50, Palisades 56, Baptism River 58, Maniteau River 66, Pitit Marais 69, Two Island River 82, Cross River 84, Temperance River 86, Grand Marais (Hotel Mayhew) 106, Devil's Track 111, Brule (North) River 120, Grand Portage 150, Isle Royale (Washington Harbor) 160, Port Arthur, Canada, 200, Lake Nepigon 290. *South Shore Resorts:* Amnicon 15, Brule 30, Apostle Islands 80, Bayfield 100, Pike Lake (Jeff. Daniels), Swan Lake Road, 14 miles from Duluth. *N. P. East, & St. P. M. & O.:* Brule 30, White Birch 40, Gordon 42. *Northern Pacific West:* Spirit Lake 7, Fond du Lac 18, Thompson and Dalles St. Louis 24.

A TWO-POUND TROUT disports itself in an elaborately gotten up aquarium in the show window of A. G. Spalding & Bros., 241 Broadway, this city. This trout and his fellows—a dozen of them—are playing the part of Tantalus, for there are scores and hundreds and thousands of gaudy and inviting flies in the vicinity.

MENOMINEE, Mich.—Should any of the "Kingfishers" come my way I will show them where they can get their fill of the finest fishing. We have black bass, big and small mouths, and the pumpkin seed and 'lunge.—S.E.B.

IN THE LAURENTIDES.

ST. ELIE, County St. Maurice, Quebec.—The Laurentian Mountains, or the Laurentides, are the backbone of the historic Province of Quebec, and are a perfect paradise for the lover of nature and the sportsman. Perhaps the most beautiful portion of the range, as it is certainly the most accessible, is immediately north of the old town of Three Rivers, distant by rail ninety miles from Montreal. Opposite Three Rivers the St. Lawrence is narrow, deep and swift, and here the dark and turbid waters of the St. Maurice, fostered and reared in the kindly Laurentides and their crystal lakes, flow into the St. Lawrence and add to its ever continuing march to the broad and mighty gulf below Quebec. The confluence of the two rivers is marked or divided by the presence of two islands, which form three channels, thus leading the old discoverers of "La Nouville France" to surmise that three rivers entered the St. Lawrence at this point.

Journeying northward from here—the Peles Railway can be used for about thirty miles of the distance, if desired, though many prefer to take a modest buckboard for the whole distance—successive ridges of land are met clothed with scrub pine, the ever present poplar, and various deciduous trees; the ridges bear evidence to the claim of a glacial epoch and to a gradual subsidence of the waters of those cold, distant, mysterious days. By gradual ascents, winding road and under clear blue skies and in a bracing pure air, full of health and appetite, at last the rocky nature of the ground, the precipitous cliffs and innumerable lakes show we are in the Laurentides, where nature's heart beats strong among the hills. These are said by geologists to be the oldest land in existence, and the marks of drifting ice are seen at various points; the face of the cliffs is scarred; boulders of many tons weight lie in impossible places, and mounds of drift gravel, showing the action of water, and seashells can be found almost everywhere. It was the first land to appear after the geological deluge. Here the village of St. Flore is reached, not far distant from the exquisite Shawenegan Falls. The Shawenegan Falls are most picturesque and at the same time grand and majestic. A view of them is alone worth far more than the trouble of the trip, and the splashing and surging of the waters is a continual hymn of musical rhythm and a grand lullaby to the communer with nature. Musing, the moments fly by unnoticed, one is absorbed in the majestic stillness and silence of the forests and the music of the waters.

While the scenery in the Laurentides is magnificent, there is yet a certain grandeur and variety that is most striking and beautiful. It is not on the same extensive scale of heights and distances as the Rocky Mountain scenery, and though of a different type, it is charming and exquisite in its own way. The forests are, as is usually the case, of varied character, though large areas are covered with symmetrical spruce, yet large growths of deciduous trees are of sufficient occurrence to vary the monotony, and trout lakes, possessing a soft loveliness all their own, are met with on every hand, in chains, in groups and in solitary beauty, so that surprises meet the lover of nature in the most charming way. The waters of these lakes are of varied and varying hues; some will be found of that deep brown tinge so common to Canadian forest rivers, others reflect an emerald green, others a deep blue sapphire shade, glinting with every ray of the sun. All are deep and clear and perfectly alive with speckled trout and lakers; some are the homes of bass and pickerel. Rocky are the shores, and spruce and tamarac people the cliffs like an array of silent sentinels; here and there the darker green of the more massive umbrageous pine is seen, a remnant spared by the ruthless lumberman. Across the waters of each large lake echo the cries of the wary loon, changing ceaselessly from a tone of thrilling and piercing sadness almost human in its apparent despair. Paddle your canoe into one of the little bays o'ershadowed, and shallower waters tempt the speckled beauties in here to feed. Cast your fly and you'll have lovely sport, as these waters teem with the *Salmo fontinalis*, and no angler has yet visited them. What! A big one! Aye, a two-pounder and not by any means rare, and sometimes you deceive a three-pounder with the cruel fly, and there are many more. Paddle, paddle over the crystal waters and say not too proudly that Venice was wedded to the Adriatic, the Laurentian lakes are fond mothers to the canoes, and carry them as gently as ever a fondest mother carried a favorite child. The camp-fire glows brightly and cheerily as the sun sinks in the west—a glorious phantasmagoria of color, the beautiful death of day, grand and sad, yet full of hope for the morrow—the shadows creep up as the lingering rays tinge less and less the distant mountain tops and die out, the trees and the waters of the lake look dark and black, and we appreciate the warmth of our camp-fire and its cheeriness. Throw on another log and see the golden stars and bright flames chase and jump in gladsome glee. Sleep on couch of odorous sapin after hearty meal of boiled trout and ham, toasted biscuits, tea and a luxurious pipe, and forget the close confinement and narrow walls of the cities.

This region is fast becoming appreciated. Some years since its only visitors were a few Montreal citizens who had each purchased a lake and erected hunting lodges and passed a couple of the hot months every year with their families away from the dust and smells of the city. Within the past few years, however, several clubs have been formed which have secured fishing properties here, have erected club houses and made most enjoyable retreats for their members. One of these, the Winchester Club, composed of New York, Boston, and three or four Canadian gentlemen, has a number of lakes, a fine club house, excellently equipped, and keeps up a pretty exclusive state of things. The Shawenegan Club is composed of about fifty members, they own a large number of lakes, have built an excellent club house, boat house and ladies' house, and are full of enthusiasm and are very hospitable, having a large number of guests during the season. They have made an excellent road to their property so that one can drive to it without the least trouble, and yet be in the heart of the woods and in complete communion with nature. Membership in the Winchester Club costs $250, and in the Shawenegan $100. Many private gentlemen have erected fishing lodges the past two years and purchased fishing rights. A new club was formed last year, the Laurentian, which has probably the largest membership, and has certainly very valuable fishing rights, as the writer knows by actual experience. The lakes belonging to the Laurentian Club lie within an area of about 150 square miles, the property being bounded on the east by the river St. Maurice, on the north by the river Mattaurin, and on the southeast by the Peche lakes. The lakes of the club are divided into four distinct groups, the most accessible being the Peche lakes and tributaries, about thirty in number. They are exceedingly well stocked with trout of large size. At the first Peche lake two substantial houses have been built for the accommodation of members of the club. The third and fourth Peche lakes, otherwise called Lac Clair and Lac du Français, are pretty little sheets of water and swarm with speckled trout, and these lakes are not more than five miles from the Peles railway station. No more accessible fishing grounds can be found anywhere. Other lakes belonging to this club are Lac Bouchard and Lac la Truite. This is a lake of considerable size and nearly two miles in diameter, its waters are remarkably bright and clear, and contain numbers of large speckled trout as lively and gamy as any angler could desire. Another group of lakes, named after the central and largest one, which is appropriately called Lac Fou, lies some distance to the north of the Peche group. Lac Fou is about four miles long and of very irregular shape. Its most remarkable features are the number of deep bays which radiate in all directions from the main channel, and the near approach of the opposite shores at several different points, affording, to a person seeing it for the first time, a succession of surprises as each new portion, previously unseen, comes into view. It is worthy of notice on account of the number and size of speckled trout it contains. Of sixteen fish caught successively not one was less than two pounds. The other lakes of this group are about eighteen in number. The Laurentian Club has a group on a stream called the McLaren Creek, of five lakes, in which the trout run from ¼ to 2lbs. in weight. The lakes of the fourth group, seventeen in number, are known as the Lacs des Cinq. Their waters flow into the Matawin River, about five miles above the junction of the latter with the St. Maurice. They are unrivaled with regard to the numbers of speckled trout they contain. The membership fee of the Laurentian Club is $25.

Camp life in the Laurentides is a most glowing, healthgiving and glorious experience. All are up at sunrise, and if you want to see a most beautiful and gorgeous sight, come into these regions of hills and lakes. The vault of heaven grows brighter in hue, brighter and warmer to the eye; the tall trees on distant higher levels are welcoming the golden rays, and soon Old Sol himself, with his gladdening power of life and hope, shines down upon our little camp and bids us welcome to regions hitherto his alone. A dip in the clear waters of the lake, a hearty breakfast, and we are off in our canoes exploring the lakes and testing and seeking the best fishing places till near sundown, to return for the hearty meal. In some lakes the markings and color of the trout vary considerably; said to be due to differences in the feeding grounds and bottom. And so the days come and go, till we are forced by other cares and duties to break asunder from this enjoyable existence and return to more practical matters.

The caribou and moose wander about these regions, affording noble sport to those who love the rifle, and the nut brown partridge and wary, gentle woodcock are numerous enough to test one's skill. A bruin can be met with occasionally; so this Laurentian range may truly be designated as a paradise for sportsmen and the lovers of nature. So make up your mind, gentle reader, to see them the coming season.

The fishing in these lakes being the exclusive right of the clubs owning them, the trout are carefully protected during the spawning season, and market-fishing being at all times prohibited, the supply can never be exhausted; so that the members can at all times depend on filling their creels.

W. H. P.

NEW ENGLAND WATERS.

THE salmon in the Penobscot River at Bangor, Me., still refuse to rise, though the most tempting of flies are being hourly thrown for their amusement. Boston sportsmen are getting a little anxious, and the hint has been thrown by the less hopeful that it is possible that last year was the first year and the last year of that sport there. But it is well to take the conditions into the account, though the salmon are eight or ten days late. In the first place the river is still very high, and the ice went out with a remarkable freshet that threatened to take dam and all with it. But the water is now subsiding somewhat, though still surcharged with the results of melting snow. The remark of a waiting sportsman yesterday is doubtless true, "The water is hardly a degree warmer than clear icewater." Warmer water will doubtless "set the salmon running."

There are no reports of the Sebago Lakes yet being clear, though the ice has started from the shores in many places. It is safe to assume that there will be no landlocked salmon fishing there this week, at the best. Reports of strings of brook trout begin to be heard from different sections of Maine, but there are still reports of snow and ice in the northern and eastern portions. Moosehead Lake is still fast in the ice of winter, though the latest reports speak of the rapid action of the recent warm days on the ice. Still it is not expected that the lake will be clear before the 20th of May. The waters of the Androscoggin Lakes are still ice-bound. I saw Mr. J. B. Straw, superintendent of the Union Waterpower Co., which controls the flowage of these lakes, yesterday, and it is his hope that Richardson Lake and Mooselucmaguntic will be clear by the 20th—10 to 15 days later than last year. Mr. Straw has had many years of experience at the Upper Dam, and his opinion is worth remembering. His is backed up in his notion by several of the older dwellers on these lakes—Capt. Fred C. Barker and Capt. Hewey. Boston sportsmen are getting impatient for these lakes to clear.

Mr. C. P. Stevens, the projector of the Vive Vale camp, built at the Narrows, Richardson Lake, this spring, of which the FOREST AND STREAM has already had an account, was on the grounds where his camp now stands, with rod in hand, last year by May 1. This year he and his partners in the camp do not expect to get started before the 18th to the 20th. Mr. Mark Hollingsworth, the artist, who goes to the Upper Dam every year, will not start this year till well into June. Artist Griggs, who has usually accompanied him, will go to the Adirondacks this year. Dr. Haddock, of Beverly, Mass., is waiting for the ice to get out of the Androscoggin lakes. His tackle is ready. He caught an 8-pound trout last year. But the fun of the case was that his brother sportsmen were guilty of a wicked pun that any schoolboy might have made. They said that "the haddock must have been weighed instead of the trout." J. Parker Whitney, the owner of the splendid camp at Mosquito Brook, Lake Molechunkamunk, is about to sail for Europe, so that his jolly face, on board his steam launch, will be missed on that lake the first of the season, at least. He has been a regular visitor there for nearly thirty years. Mr. Sam Betton, another resident or camper on the lake for nearly thirty years, is to be in Philadelphia the first of the season. The Tuttle party, who make up a jolly visit to that splendidly equipped camp, Lake Point Cottage, Rangeley Lake, is about ready to start. The most of the company will leave Boston on Saturday next.

Most of the hotels in the lake regions expect a full run of guests this season, but there is one growing feature they will have to take into account. A good many of the old guides in Maine have, within a couple of years, become camp keepers. They have built camps and furnished them. One of them I have in mind, has written letters to about every sportsman he has ever guided the past winter, telling them of the merits of his new camp, and boasting among other things spring mattresses, and offering to take good care of all who may visit him. The worst feature for the old time hotels is that these guides offer entertainment, including guide, boat and board of both fisherman and guide, for about $4.50 per day, whereas the old price at the regular hotels, including guide, amounted to about $7 per day. Jock Darling, of defying warden fame at Nickatous Lake, has written some of these letters to his former patrons. One of such letters I saw the other day. The gentleman who received it admitted the killing of a deer in the water and acknowledged "that they don't mind the game laws down there." He says that a couple of deerhounds were furnished, he knew not from whence, and the deer was run into the water. Mr. Darling's letter to this gentleman, while it does not propose openly the same sort of sport this year, says that "game will be very plenty" and invites Mr. —— to "come down at any time and we will take good care of you." But Mr. Jock Darling has reckoned without his host this time, or rather without his guest, for the gentleman declares that he has had all of such sport that he wants, and that he never again will be guilty of so cruel a butchery as to kill a deer in the water, driven there by dogs.

SPECIAL.

THE FLOUNDER.—A reporter of the New York evening *Sun* has been interviewing several persons on the subject of flounder fishing. Among others the poet Geoghegan was interviewed and the following is given as the result: "The poet has thrown his brown-hackle and red-ibis upon the surface of complaining brooks in Delaware county; he has lured the long-nosed pickerel from shady pools in the Neversink; he has yanked the juicy bluefish from his environment of blue water; but the catching of all these require action, and the poet is not active. He is dreamy, contemplative, introspective. His favorite haunt is Gowanus Bay. Here he hies him with a pint of bottled bait and angles for the wily flounder. Just where Gowanus Canal ripples into the bay is his favorite spot. Here he sits and makes mental note of his impressions. He has kindly consented that the following beautiful poem, written on the margin of Gowanus's water, should be printed:

"Whin care and noise oppress me,
An' politics makes me sick,
To th' woods I go like a bumble bee
An' whittle a bit iv a sthick.

"An' whin I have it whittled fine
On its end I tie a string,
An' thin this gallus fishing line
In Gowanus Bay I fling.

"Then the flounders come to meet their fate,
While th' bay is soft an' c'am,
An' gobbles me bate, so clane an' so nate
Shure I always fish wid clam."

NEW YORK WATERS.—Two salmon were taken at the eastern end of Long Island on Monday, May 9. They were captured in Fort Pond Bay, which is a few miles west of Montauk Point. The fish weighed 10 and 12lbs., and were sent to Fulton Market. There is no stream near the bay, and the salmon were probably on their way toward some of the rivers of Connecticut, or possibly seeking the Hudson. Last Sunday, May 8, Messrs. Van Dwyer and Smack, shad fishermen of Stapleton, Staten Island, New York Bay, caught in their nets a 15lb. salmon.

A NEW FLOAT.—Mr. Levi W. Clark, of Nashua, N. H., has devised a new buoy or float which has a gripper in the head, from which the line is easily detached, allowing free play while the buoy floats on the surface. The buoy can be adjusted to any length of line, to suit depth of water, and can be taken off without removing sinker or hook.

THE PASSAIC COUNTY FISH AND GAME PROTECTIVE ASSOCIATION, of Paterson, N. J., sends us its printed constitution and by-laws. This society is doing excellent work. The secretary is Mr. Chas. A. Shriner.

"SABLE ISLAND SUPPOSITIONS."

Editor Forest and Stream:

My attention has been called to a paragraph in your issue of May 5, entitled "Sable Island Suppositions," in which, referring to my article, "An Ocean Graveyard," in the May *Scribner's*, you suggest that I have been guilty of plagiarism from Osgood's "Guide to the Maritime Provinces."

Permit me to say in reply to your charge, which you apparently sustain by quotations, that I am not aware of ever having had a copy of Osgood's Guide in my hands or of ever having encountered quotations from it. As to the resemblance between the passage quoted from my article and the paragraph attributed to Dr. Gilpin, the explanation simply is, that in my MS., as first submitted, due credit was given to Dr. Gilpin for the assistance his graphic account of a visit to the island had afforded me. Editorial exigencies, however, required the compression of the article, and in doing this the passage referring to Dr. Gilpin was omitted.

Asking your early publication of this, I remain, sir, yours very truly,

J. MACDONALD OXLEY.

OTTAWA, May 7.

[To show that his uncredited Gilpin extracts were not taken from "Osgood's Guide," Mr. Oxley might have added that his *Scribner's* paper contained more Gilpin matter than is given in the "Guide." This, on further examination, we find to be the case. It makes really no difference where the reprint portions come from; the quotation marks at least should have been retained, and we advise Mr. Oxley in future to insist that his editor must do this in spite of the most exigent call for compression. We suppose that a better regard for quotation marks would have prompted the author of an article on "Sable Island" in *Harper's* for January, 1883, to have given credit for matter there borrowed from Mr. Oxley's *Scribner's* paper of May, 1886.]

Fisheulture.

Address all communications to the Forest and Stream Pub. Co.

PROSPECT PARK TROUT PONDS.

IT is proposed to stock some of the lakes of Prospect Park in the city of Brooklyn with brook trout, and then allow a limited amount of fishing when the fish are grown. To this end the Park Commissioners invited Fish Commissioner Blackford and Supt. Fred Mather to inspect the waters on Friday last. The "trout pool" is fed by a large stream of cool water which is pumped from the artesian well and which tumbles over rocks in its descent to the pool. Below this are two other lakes in which trout may thrive. Next season a small hatchery may be put up to show how it is done, as well as to keep up the stock. An inspection of the trout pool showed no sign of animal life, which was accounted for by its having been dry all winter, and having a new gravel bottom put in it. Mr. Mather promised to send down water plants and crustaceans from Cold Spring Harbor, and Mr. Blackford assured the park officers of the hearty co-operation of the State Fish Commission.

A visit to the great lake showed the same lack of vegetation, and also that several gentlemen prominent in political life were taking small perch with rod and line and then returning them to the water. A haul of a small seine brought in some large goldfish, white perch, yellow perch and sunfish; one angler took a black bass with a worm for bait. The fish were small and thin. The white perch were spawning and Mr. Mather took some eggs, impregnated them and left them with the engineer to hatch, if they will. A formal report will be made to the Park Commission by the experts, and their suggestions will be adopted soon. A dinner at the Casino was given to the invited guests and plans for the future of fisheulture in the park were discussed.

SHAD IN THE HUDSON.—With the increase in population and the facilities of transportation the shad in the Hudson River would have been among the things of the past had not artificial propagation stepped in. The efforts of the State of New York in stocking the river have been supplemented for the past four years by the general Government, and in addition to the fish hatched on the river there has been one or more millions of fry sent from the Potomac or Chesapeake by the U. S. Fish Commission. Last week the city markets were so full of shad that no man now in Fulton Market can remember such a catch. On Tuesday May 3, there were 70,000 shad caught between Sandy Hook and Yonkers, and on the next day 75,000 were taken. Mr. Blackford gives us the figures, and assures us that the market never had such a surprise within his memory.

THE DELAWARE COMMISSION.—The term of Commissioner Enoch Moore expired on April 23, and the Governor has appointed Mr. Elwood R. Norny, of Odessa, to fill the vacancy. An appropriation for purposes of fisheulture has also been granted and this, with the assistance of Dr. Shortlidge, who has been carrying on some hatching operations at his own expense, will give the State a start in the right direction. Mr. Norny is interested in seven nets near Port Penn, and proposes, with the assistance of the U. S. Fish Commission, to hatch sturgeon the present season.

CALIFORNIA COMMISSION.—Los Angeles, Cal.—You gave the new Fish Commission for State of California in your issue of April 14, but made a mistake as to the officers. Joseph Routier is the President; Thomas J. Sherwood, Secretary; and I am the other member.—J. DOWNEY HARVEY.

New Publications.

VERPLANCK COLVIN'S BOOK.

ALBANY, April 30.—The most unique report of the many that have come to the Legislature this season and been printed at the expense of the State is Verplanck Colvin's Adirondack State Land Survey. This is a sort of perennial institution that started in 1872 with an appropriation of $1,000, has being going on ever since, and is not finished yet, another appropriation being asked from the present Legislature to continue it. The total cost so far has been $71,775. It is the oldest of the State commissions. The maximum amount expended was $17,500 in 1880, and it has been tapering off since, though $15,000 is now asked for.

The report itself is prettily got up and has a lot of pictures of lakes and mountains and Verplanck Colvin surveying them in it. It is about ten inches by six, and two inches thick, bound in blue cloth, and well printed. On the outside of the cover is stamped a picture of Verplanck Colvin on the top of a frame observation tower. The name of Verplanck Colvin appears at the top of every other page, and "Verplanck Colvin, superintendent" is printed at the top of pictures of lakes and mountains. Colvin is a handsome young man with a fascinating look that any girl would take to at once. His hair is black and curly, his complexion is dark, his moustache curly, and his black eyes have a sad, yearning expression. He is the whole survey, and the report is a sort of annual story of how he spent the last year in the Adirondacks. Here is a sample of a few days' experiences:

HOHEN RANCH.

Nov. 2.—The dry fog which has so plagued us for years still obscures the horizon and cuts off all view of distant signals. Was there ever such provoking weather? If it were summer the guides would say it is "smoke," and advise me to defer observations until "cold weather." Now it is cold weather they have nothing more to say.

Nov. 3.—There are indications of a thaw. If the atmosphere can get thoroughly moistened and we can then have some strong gales the smoke may be cleared away and observations made. I am left with but one man now. The other could remain no longer. It is almost impossible to get men to encamp upon the mountain tops at this time of the year.

Nov. 4.—The haze begins to break away, and I shall get some observations.

Nov. 5.—The last man has deserted, and thus I am alone in camp. Cold and snow were too much for this fellow. Paid him off, and was glad to have him go.

Got some fine observations, although, being alone, I had difficulty in securing the canvas observatory against the high wind which arose at nightfall. Descended, however, at dark to the camp with the work at last accomplished, but had to cut wood, cook my own supper (thawing snow for water), and found housework after dark, with very limited knowledge of the location of utensils, rather difficult. Put out the light at 9 P. M., wrapping up in soft and comfortable blankets, stretched myself on a deep couch of evergreens, and rested well until morning, regardless of catamount or lynx, which had so recently been the discussion of the camp.

There is more like this. At one place the report tells of the red snow that fell. In another chapter he tells of climbing the mountain and camping out. Interspersed as illustrations are photographs of Indians, tripods, signal stations, and rural inhabitants. There has been a big demand for the book, and no wonder, for it is a story of Adirondack adventure printed at State expense. It is hard to see just where the surveying and official part of it comes in, but, the children of all the farming constituents, to whom country Assemblymen send their copies, read it like a real story book.—*Correspondence New York Sun.*

FISHING TACKLE, ITS MATERIALS AND MANUFACTURE. By John Harrington Keene. New York: Ward, Locke & Co. This book of Mr. Keene's is not up to the standard of his former publications, and bears evidence of being hastily written and well padded. In attempting to cover all sorts of fishing tackle, he gives illustrations on pages 30 and 31 of all those barbarous spring hooks which no man pretending to be an angler would use, but modifies the indorsement which he gives them in calling attention to them by saying that some American inventions are "questionable from a sportsman's point of view;" and the question naturally arises, why then does he allow them a place in his book, these spring hooks being only for poachers? He even recommends, Figure 42, the barbless arrangement with a spring point to hold a fish as one which is desirable to dress flies upon. Outside of these exceptions, his article on hooks contains much that is worth reading. Mr. Keene makes a subtle distinction between "reels" and "winches;" the former, he claims, refers exclusively to such contrivance "for winding in the line as are made from substances other than metal, such, for example, as wood, ebonite, vulcanite, etc.," while the winch, on the other hand, is generally composed of metal, a distinction entirely unknown on this side of the Atlantic. In Chapter IV. he makes the assertion that eels are summer spawners, a statement which will be news to all who are familiar with the habits of the eel. The chapter on fly-making gives very plain directions for this art, and, as Mr. Keene is a professional fly maker, it is here that he is at his best. In the matter of rods, he does not approve of the split bamboo rods, notwithstanding the great work done by them at the tournaments, but in their place he recommends a steel-centered rod, with the reel inside the butt, and favors that most abominable contrivance, a spike on the butt of a fly-rod, whereby it may be set in the bank or elsewhere. Our anglers on this side of the water will be slow to accept Mr. Keene as an authority on rods. Anglers will find many good points in the book, notwithstanding the fact that they might have been boiled down in lesser compass. It is profusely illustrated, the figures covering many things that are useful as well as much that is otherwise, and for the few useful hints which the book contains many anglers will think it worth perusal.

FIXTURES.

DOG SHOWS.

May 24 to 27.—Inaugural Dog Show of the Michigan Kennel Club, at Detroit, Mich. Chas. Weil, Secretary, Newberry and McMillan Building, Detroit, Mich. Entries close May 10.

Sept. 1 to 3.—Inaugural Dog Show of the Pacific Kennel Club, at San Francisco, Cal. J. E. Watson, Secretary, 516 Sacramento street, San Francisco, Cal.

Sept. 12 to 17.—First Show St. Paul and Minnesota Kennel Club, St. Paul, Minn. W. G. Whitehead, Secretary.

Oct. 12 and 13.—Stafford Kennel Club Show, Stafford Springs, Conn. R. S. Hicks, Secretary.

FIELD TRIALS.

Nov. 7.—Third Annual Field Trials of the Western Field Trials Association. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 21.—Ninth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

December.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4968.**

EASTERN FIELD TRIALS DERBY.

ENTRIES FOR 1887—DOGS BORN IN 1886.

GUYMARD (J. M. Cochrane, Philadelphia, Pa.), liv&w pointer dog, June 25 (Croxteth—Gwendoline).

GO-BANG AND MERRY LEGS (O. W. Donner, Coosaw, S. C.), liv&w pointer dog and bitch, Feb. 18 (Graphic—Leach's Bloomo).

FOXCHASE (Richard V. Fox, Harrisburg, Pa.), liv&w pointer dog, July 16 (Mainspring—Lady Beaufort).

STANTON (Ed. Dexter, Boston, Mass.), liv&w pointer dog, March 12 (Kinney's Spot—Shieffer's Dora).

JACK MODOC, b&w setter dog, July 25 (Buckellew—Ida).

COUNTESS POPPET (Sanborn Kennels, Philadelphia, Pa.), bw&t setter bitch, Jan. 9 (Count Noble—Lit).

OSSIAN (P. I. Madison, Indianapolis, Ind.), liv&w pointer dog, May 8 (Croxteth—Amine).

CHIEF (John B. Downing, Middleport, O.), liv&w pointer dog, April 4 (Croxteth—Trinket).

TRINKET'S COUNTESS (Paul Francke, St. Joseph, Mo.), liv&w pointer bitch, April 4 (Croxteth—Trinket).

DASHING JOE (H. E. Hamilton, Hackensack, N. J.), bw&t setter dog, July 6 (Count Noble—Dashing Novice).

GLADRIGO (J. O'H. Denny, Pittsburgh, Pa.), bw&t setter dog, April 3 (Count Noble—Gladys).

LULU C. (Sanborn Kennels, Pittsburgh, Pa.), bw&t setter bitch, July 22 (Count Noble—Dashing Novice).

GLADYS NOBLE (S. L. Boggs, Pittsburgh, Pa.), bw&t setter bitch, Aug. 3 (Count Noble—Gladys).

SIM BONDHU (A. M. Tucker, Charlestown, Mass.), bw&t setter dog, June 1 (Gus Bondhu—Bo-Peep).

DAVE R. (James F. Fisher and R. M. Dudley, Nashville, Tenn.), lem&w setter dog, April 13 (Gath's Hope—Daisy F.).

MISS DUDLEY (Middle Tennessee Kennels, Lawrenceburg, Tenn.), bw&t setter bitch, June 1 (Gath's Hope—Lady M.).

RUSTIC (D. S. Gregory, New York), lem&w pointer dog, July 19 (Bracket—Lucia).

MERRY GIRL (H. S. Barney, Ashland, Wis.), bb setter bitch, May 12 (Count Noble—Blanche Gladstone).

ROMEO (John S. Wise, Richmond, Va.), liv&w pointer dog, June 28 (Graphic—Seph G.).

CLARA (Seelin & Porter, Harrisburg, Pa.), bw&t setter bitch, June 20 (Roybel—Lucy).

BRAVO (W. H. Pierce, Peekskill, N. Y.), o&w setter dog, May 22 (Dash Dale—Dot B.).

PRIDE OF M. (Robt. M. Hutchings, Galveston, Tex.), lem&w pointer bitch, April 14 (Bang Bang—Zannetta).

LATANIA, HECTOR, NOBLE DIDO, BILLY B. (W. B. Shattuc, Cincinnati, O.), bw&t setter bitch and three dogs, May 21 (Count Noble—Dido II.).

LIT II. (W. B. Shattuc, Cincinnati, O.), bw&t setter bitch, July 21 (Rodney—Lit).

ROGER WILLIAMS, ANNA HUTCHINSON (L. W. White), lem&w pointer dog and bitch, Aug. 20 (Bang Bang—Lalla Rookh).

DEXTER, LIZZIE LEE (Highland Kennels, Red Bank, N.J.), liv&w pointer dog and bitch, April 7 (Nick—Tuck).

TERRY OF KEYSTONE (Highland Kennels), liv&w pointer dog, Oct 17 (Robert le Diable—Beau Beau).

CINCINNATUS (J. E. Doyer, Toledo, O.), bw&t setter dog, May 22 (Count Noble—Dido II.).

TOLEDO BLADE (J. E. Doyer, Toledo, O.), bw&t setter dog, May 21 (Roderigo—Lillian).

ALF NOBLE, BOYD NOBLE, ZORAYA (Dr. R. I. Hampton, Athens, Ga.), bw&t setter dog, b&t dog, and bw&t bitch, Aug. 17 (Count Noble—Belle Boyd).

CINCH, ROD'S ROWDY, MISS THOMPSON (Memphis and Avent Kennels, Memphis, Tenn.), bw&t setter dogs and bitch, June 2 (Roderigo—Bo-Peep).

CLAUDE, JOEY B. (Memphis and Avent Kennels), bw&t setter dogs, May 20 (Roderigo—Lillian).

BELLE MANDAN, PEARL MANDAN, ROSE MANDAN (R. B. Morgan, Akron, O.) lemon belton and black belton setter bitches, June 25 (Mandan—Prairie Belle).

LADY ZEAL (Jno. E. Gill, Franklin, Pa.), liv&w pointer bitch, May 8 (Croxteth—Amine).

SUNSHINE, TEMPEST, NORA (Latonia Kennels, Covington, Ky.), bw&t setter bitches, Jan. 8 (Count Noble—Lit).

DON (Ramapo Kennels, Mahwah, N. J.), o&w setter dog, Feb. (Clifford—Jersey Queen).

DALGAROOKY, DAGABURT (Chas. H. Odell, N. Y.), lem&w pointers, Aug. 20 (Bang Bang—Lalla Rookh).

NASO OF DEVONSHIRE (Floyd Vail, N. Y.), liv&w pointer dog, May 15 (Nick of Naso—Devonshire Queen).

FROLIC BONDHU (Jno. P. Gray, Utica, N. Y.), b&w setter bitch, March 19 (Gus Bondhu—Model Druid).

MAYFLOWER (Geo. L. Wilms, Jersey City), o&w pointer bitch, May 8 (Nick of Naso—Temptation).

DAN PETREL (W. Tallman, N. Y.), lem&w setter dog, Feb. 5 (Don Juan—Petrel III).

WALLINGFORD (Jess. M. Whaite, Newton, N. C.), b&w setter dog, July 4 (Sam Sterritt—Flora Bee).

LADY MINGO (J. M. Whaite), bw&t setter bitch, July 9 (Mingo—Zoe W.)

MINGO II., NELLIE W. (W. H. Wallingford, Newport, Ky.) b&w setter dog and bitch, July 9 (Mingo—Zoe W.).

BERTRAM (Philip S. P. Randolph, Philadelphia, Pa.) liv&w pointer dog, May 9 (Guess—Viola).

POTEEN, BRIAN BORHUE (T. S. & F. W. Parrott, Bridgeport, Conn.), red setter bitch and dog (Gerald—Judy).

COUNT NOBLE, JR. J. OTTO DONNER, DAISY FAIR OAKS, GEORGE E., WATERFORD, SMOKE, LADY (Pittsburgh Kennels, Pittsburgh, Pa.).

MARS (F. R. Hitchcock, New York), b&w pointer dog, April 10 (Bang Bang—Modesty).

AEROLITE (F. R. Hitchcock), liv&w pointer bitch, Aug. 5 (Bang Bang—Moonstone).

LITTLE GIFT ((Bert Crane, Chicago, Ill.), bw&t setter bitch, May 12 (Roderigo—Queen Bess).

RODERIGO'S ACE (Jas. H. Trezevant, Dallas, Texas), bw&t setter dog, June 7 (Roderigo—Countess House).

LALLA CROXTETH (Greenfield Kennels, N. Y.), liv&w pointer bitch, June 25 (Croxteth—Lady Gwendoline).

COUNT NOBLE, JR. (Ohio Kennels, Washingtonville, O.), bw&t setter dog, June 25 (Count Noble—Delle).

BANG SO (Francis F. Lane, New York), liv&w pointer dog, (Bang Bang—Underhill's Jane).

DELL B. (A. P. Gardner, Hamilton, Mass.), bw&t setter bitch, April 9 (Roderigo—Gypsey Maid).

BONITA (A. P. Gardner, Hamilton, Mass.), o&w setter bitch, Feb. 9 (Buckellew—Jolly Daisy).

GLEN OF NASO (Robert Garrett, N. Y.), liv&w pointer dog, May 8 (Nick of Naso—Temptation).

HUGUENOT (Neversink Lodge Kennels, Guymard, N. Y.), liv&w pointer dog, July (Croxteth—Lady Gwendoline).

W. A. COSTER, Secretary.

WHY DOES A DOG TURN ROUND?

Editor Forest and Stream:

Apropos of the discussion touching the canine habit of turning about and trampling before lying down, it may be well to cite the great authority, Darwin, who, in his "Expression of the Emotions in Man and Animals," says: "Dogs, when they wish to go to sleep on a carpet or other hard surface, generally turn round and round and scratch the ground with their forepaws in a senseless manner, as if they intended to trample down the grass and scoop out a hollow, as no doubt their wild parents did, when they lived on open grassy plains or in the woods. Jackals, fennecs, and other allied animals in the zoological gardens, treat their straw in this manner, but it is a rather odd circumstance that the keepers, after observing for several months, have never seen the wolves thus behave. A semi-idiotic dog—and an animal in this condition would be particularly liable to follow a senseless habit—was observed by a friend to turn completely round on a carpet thirteen times before going to sleep."

As confirmatory of Darwin's theory, another authority, Mr. Jesse, says in his *Gleanings* that dogs in a wild state "seek long grass for their beds, which they beat down and render more commodious by turning round in it several times," and attributes the same habit in domestic dogs to instinct, *i. e.*, to inherited tendency.

If a layman in such matters may presume to supplement these opinions, I would say that dogs doubtless seek to "scoop out a hollow" in order to produce a bed which is comfortable both by reason of its form and because it affords some grateful protection from cold at one season and heat and annoying insects at another. And again, in turning and trampling the feet of the animal are likely to come in contact with objects—such as stones, sticks and stubble—that might render the bed very uncomfortable; and if they prove too large or immovable another place may be selected before lying down. But it is to be noted this formality and precaution are not observed if the dog happens to be very weary, for he then throws himself down where a place offers, regardless of everything but the much-coveted rest.

It is the common impression that the habit referred to is confined to dogs, wild and domestic; but all who are familiar with the habits of horned cattle must have noticed that they too sometimes practice it; but whether solely for the same reason is possibly open to some doubt.

That habits are often persisted in uselessly by both man and the lower animals after the causes that gave rise to them have ceased to exist, is a fact so easy of proof that no one can sensibly question it. The above-mentioned cases are evidence in point. POTOMAC.

The most plausible explanation I have ever met for the dog's turning around before lying down I have not yet seen given in the FOREST AND STREAM. It is that in a state of nature the wild dog usually made his bed in the tall grass or rushes and that he was accustomed to turn about several times to construct a "form" in which he might lie by trampling the grass and weeds under his feet and bending them about him. Now, although he no longer makes his bed in the long grass, instinct still leads him to follow the old habit. JAY BEEBE.

BOGUS PEDIGREES.—This is a sweet note, and it would be sweeter if we had permission to give the name of the St. Paul, Minn., man who sent it: "No. 32 Mannheimer Block, St. Paul.—*Dear Doctor:* Can you give me any name for Belle, which will show her pedigree? I can find a dog fancier here who wants her to breed from, but a pedigree is desired. If it was a fictitious one it would answer. If you cannot give her pedigree, can you give the name of some kennel of Laveracks from which a dog like her might have come? and if not can you give me any clue to follow so that I may get her pedigree?"

SPANIEL STANDARDS.—Hornellsville, N. Y., May 7.—*Editor Forest and Stream:* "I take it for granted that the standard fairly and honestly established by any specialist club for the breed they represent is to be accepted as portraying an ideal of what the breed should be."—W. WADE, in FOREST AND STREAM, May 5. Judges and members of all specialist clubs, especially the Spaniel Club, cut the above out and paste it in your hat, for the expression has sufficient merit to become, and mark my words it will become, classical.—J. OTIS FELLOWS.

THE NEW YORK DOG SHOW.

THE eleventh annual dog show of the Westminster Kennel Club closed on Friday night, having had good weather and a very fair attendance throughout. It is said that the show more than cleared expenses.

In many respects this show stands out prominently among others which have been held in New York. On the one hand, the benching and all the interior arrangements were far better than we have ever seen before at New York. The attendants were more civil and obliging, and seemed to take better care of the dogs; there were none of the unseemly exhibitions of horseplay and skylarking on the part of these men which have taken place in former years, and which have made it seem that the persons selected to care for the animals had been picked up from the streets. The men were attentive and active, though they were heavily handicapped by the absurd system of benching, which permitted an exhibitor who happened to be the owner of a fox-terrier, a pointer and a mastiff to bench all his dogs together, an arrangement which of necessity hid two of the dogs far away far from the remainder of their class, and made it difficult, if not impossible, to find them when the time came for judging the classes to which they belonged. Of this system we said a year ago: "This method has to recommend it only the fact that it saves a keeper a few steps in caring for the animals, and that it pleases the owner, who likes to see his dogs together. The men whose duty it is to take the animals into the judging ring suffer, however, and the reporters, who also have to find the dogs, and above all the intelligent visitor, who desires to compare certain dogs in the class, is greatly inconvenienced by the confusion. This sort of thing should not be tolerated. The dogs should be benched in order, the classes and the numbers following one another in regular rotation." What we said then is just as true now as it was last year.

The garden was light and well ventilated. Some unpleasant odor was noticed for a little while on Thursday afternoon, but it soon passed off. We have never seen better arrangement for cleanliness and for exercising.

The catalogue called for 976 dogs, and of these over 80 were announced as not for competition in the regular classes. This reduced the number of competitors to less than 900, from which must be taken the absentees. A comparison of the catalogue entries can be made from the following table:

COMPARATIVE TABLE OF ENTRIES.

BREEDS.	1877	1878	1879	1880	1881	1882	1883	1884	1885	1886	1887
Mastiffs	26	18	20	36	24	36	61	40	42	44	36
St. Bernards	17	16	14	33	24	52	64	97	73	92	104
Berghunde	..	..	..	..	..	8	5	5	..	..	..

Great Danes	..	..	..	..	..	..	..	..	..	11	6
English bloodhounds	..	..	..	..	..	..	..	..	..	..	1

Of the above, 1 mastiff, 14 St Bernards, 32 pointers, 8 English setters and 25 collies were entered as not for competition in the regular classes.

Just how many absentees there were we do not know, but we understand that out of the 113 pointers entered only 62 competed for the prizes. As nearly as we can get at it the number of dogs present and for competition was between 725 and 750—nearer the former than the latter.

After a very brief and superficial examination of the spaniel classes on the opening day of the show, we stated that these were good. A more critical inspection of the dogs obliges us to reverse this statement, spaniels were poor, worse even than at Hartford.

It seems inevitable that we should have bad judging at New York. Last year it was as bad as bad could be, this year it was scarcely better. Many of the classes were slaughtered. Pointers, setters, St. Bernards, spaniels, deerhounds and others suffered. Of course we expect mistakes to be made, but it will not do to have all the awards wrong. It is curious, as well as unfortunate, that so many of our judges are unable to stick to any one type of dog. They seem to have in their mind no clear idea of what a perfect dog of any special breed should be, but select for first prize a dog of one type, give second to an animal of another, and distribute their other prizes in a sort of haphazard way, which cannot fail to be very confusing to exhibitors who depend on the judges' decisions for their ideas of the type of dog which they should strive to breed. We had striking examples of this at New York in some of the classes, while in others—notably the fox-terrier class—the judge, with some of whose decisions we are obliged to differ—certainly kept to his type throughout.

At this, the last of the important shows of the year, it seems proper to speak of an abuse which is beginning to creep into our shows. At Hartford and Philadelphia the pointer Naso of Kippen was taken away, after he had won his prizes, on a veterinarian's certificate. At Hartford a beagle was taken out the same way, and it has been stated that these dogs were taken out in order that they might be conditioned for coming shows. If this is the case a manifest injustice is done other exhibitors. If a dog is really sick there is no reason why he should not be permitted to go home, but no certificate should be given unless the owner is really entitled to it.

MASTIFFS—(MR. MEAD).

The quality of these classes—thanks to Mr. Moore—was somewhat better than last year. Homer, the home-bred son of Cato, and Ilford Caution, the grand-headed son of Crown Prince, were the entries in the champion class for dogs. The blue ribbon was given to Homer, and we scarcely need say that it should have gone to Caution. The Melrose dog outscores his opponent so very many points in head, size and character, that the Winlawn Kennels' representative cannot fairly regain the lost points with his better loin, quarters and hocks. Prussian Princess probably scored her last win in the champion class at this show, and must soon make way for The Lady Clare, Lady Dorothy and one or two other better ones. A good bitch always, but never quite first-class, she has had a successful career in this country. Prince Waldemar, who has not been exhibited since he made his *début* at Boston two years ago, was correctly placed at the head of the open class for dogs. He shows considerable true mastiff character, but is too small and is rather deficient in muzzle, eyes and bone. He has neat ears and excellent coat and color. Pharaoh, that should have been second last year, equalized things this year by taking the prize from a better dog, and is now even with the New York judges. His place on this occasion should have been occupied by Orion. This gigantic son of Boatswain and Nelly has many points to commend him. His muzzle, while too long, is square in outline; he has plenty of ear, is too flat in rib and would do with more bone. His skull is much above the average, loin and quarters excellent, legs straight as gun barrels, capital feet. Boss, third prize, got more than he deserved. He is not of correct type, and was shown very much too fat. We would have placed Waldemar first, Orion second and Pharoah third, with Boss vhc. Hildebert, vhc., is still very light and shelly; he would have been plenty for him. Vulcan, hc., was vhc. last year. Duke is not a show dog—very poor head. Kaffir, hc., is leggy and light, has a bad head, and shows very little character. Jag, hc., has a domed skull and heavy ears; in fact, a very houndy head. He was a lucky dog. Argus, c., has a long, houndy head and very poor coat; he should not have been noticed. Minting was entered in this class, but did not compete. He came on to take care of the Mastiff Club's challenge cup for the best mastiff dog, and won it, with many points to spare. This is a magnificent specimen of the modern mastiff, and keeps on improving. He outclassed everything in his class. First in the bitch class was fairly won by The Lady Clare. This good-looking bitch was very fully described in our Philadelphia report. Her condition was a credit to those who have her in hand. Leaving Lady Dorothy out of the question, she is the best mastiff bitch in America. The judge very properly reversed the Boston decision by placing Southern Belle over Lady Gladys. Her ladyship is now a cripple and should be retired. We are surprised that her owner should have thought that a breeder of mastiffs would indorse the Boston award in her favor. We were the first in this country to say a good word for this bitch's many sterling qualities, but dogs must be judged as they are and not by what they may have been in the past or may be in the future. Southern Belle is well known to your readers. Lady Dorothy was absent. German Empress, vhc., should have been third instead of Lady Gladys. She is fairly good in skull, but lacks volume of muzzle, and would do with more bone. Gypsey, c., is houndy in head and her heavy ears are not black. She is also light of bone and leggy. Puppies, as usual, were a poor lot. Who will be the first American to breed a high-class mastiff? At present the odds are in favor of Boston. Homer, Jr., first prize in the class for dogs, will not develop into a good one. His head is not first-class and his ears are much too large. In body he is fairly good at present. Noble Caution is not good in head and ears, neither is his body first-class. Bruno, hc., will not make a show dog. His long houndy head will always put him on a back seat. Duchess, a daughter of Ilford Caution, was the best puppy shown; she was first at Boston. Topsy, second prize, is sister to the winner in the dog class, and has the same defects.

ST. BERNARDS—(MR. MORTIMER).

The quality of these classes was about the same as last year, when Mr. Tucker judged, but the dogs were not nearly so well handled, and considerable dissatisfaction was manifest. It was conceded that the classes should have been better judged than on any previous occasion, seeing that the judge received the entries and had the dogs' records before him, as well as the opinions of competent authority. We hope the judge's memory failed him or that he got badly mixed, as we would be sorry to think such awards were made after careful consideration. Mastiffs and St. Bernards are very large classes, and a large sum of money is invested in them, and for these reasons, if for no others, only judges of acknowledged experience and ability should be intrusted to handle them. The blunders made in these classes emphasize the opinions recently expressed on such questions in these columns. Merchant Prince, Otho and Duke of Leeds competed in the champion class for rough-coated dogs, and the prize was given to the former. We protest most emphatically against this and the like awards as not being in accordance with the requirements of any standard that has ever been adopted or suggested. That Merchant Prince and Otho are good dogs, and able to hold their own in keen competition, is well known, but they are not of the same class as Mr. Hearn's magnificent dog, and the latter was shown in superb condition. In loin and quarters Merchant Prince is better than Duke of Leeds, and in carriage of tail he is decidedly better. We must not be understood as meaning to convey the impression that Duke of Leeds is bad either in loin or hindquarters, for such is not the case. He is very good behind the back ribs for so large a dog, but Merchant Prince is better. In head, eyes, chest, coat, color, markings, forelegs, expression, character and quality the Duke of Leeds is clearly ahead of Mr. Moore's good looking dog, and should have won hands down. Before the withers Otho can beat either Duke of Leeds or Merchant Prince, but he fails behind. Rhona, Swiss Beda and Miranda competed in the champion class for bitches, and Rhona was properly given the prize. They are well known. Barry II., a white and brindle dog, shown by Mr. W. J. Ehrich, was the best dog in the open class and was given first. He is deficient in muzzle and stop, carries his tail very badly and is not well marked; he also stands back a bit at the knees, and is not first-class either in eyes or expression. In other respects he is a good dog. Hadjar, second prize, has put on flesh and was rightly placed second. But whatever the judge could see in the third prize winner is a mystery to us. The dog does not show a particle of St. Bernard character. He has wretched head, ears and eyes, and is as bad behind as he is in front; coat and color all wrong. To make matters worse he has not a tooth in his head and was shown as fat as a pig. There were at least twelve better dogs in the class. Third should have gone to Eiger, with Visp II. and Alvier next in order of merit. Rex, unnoticed, while faulty in head, legs and feet, is a much better dog than the third prize winner, and so is Bronze. Ajax, who was not mentioned, is deficient in head and is not straight in front, but a much better dog than the third prize winner, and Lord Randolph, c., fairly outclassed him. This dog deserved another letter. He is faulty in head and tail and his coat is not good; still, he beats the third prize winner, and Dare, Mountaineer and St. Triphon. The quality in this class was not good for a large show. In the bitch class St. Bride, in nice form, was the best, but why second was given to Duchess of Leeds we cannot say. She has a very poor head, is light of bone, and her markings and tail are certainly not correct. Leaving points entirely out of the question, her condition alone should have kept her back. Norah, hc., and well known, was about the best bitch in the class. Sheba, vhc., in same ownership, is not so good a bitch. Recluse, reserve, is not so good as Norah. These bitches are well known to our readers. Puppies were very poor; not a good one in the lot. Apollo, Hector, Montrose and Don II. were the entries in the champion class for smooth-coated dogs and as was expected the former won. Hector has improved on his puppy form, and while not so large as Apollo, he outclasses him in head, is better in loin and quite his equal in other respects; he should have won with several points to spare. Apollo's houndy head does not improve with age, and heavy work in the stud has weakened his loin and quarters. He does not transmit his hound qualities and is still a valuable stud dog, but we fail to understand how a judge of the breed could place him first in the company he met on this occasion. Victor Joseph, a dog of altogether different type, was selected for the blue ribbon in the next class and was well placed first. He is in the same ownership as Apollo, and if the latter was the best dog in the champion class Victor Joseph was clearly not entitled to the prize in this class. There is not a particle of consistency in such work and the award of first to Victor Joseph, if just, and we are sure it was, is evidence conclusive that Apollo was not the best dog in his class. Victor Joseph is a young dog of more than ordinary merit. His muzzle would be improved by depth and squareness; his back is a trifle slack and his ribs might be carried further back; good chest and quarters; forelegs not quite straight, has lots of bone and excellent feet. His body marking is not correct and his coat is too long. With the exception of coat, color and markings, he is a much better dog than Apollo. Lecco, second prize, is not first-class in head, and is a trifle slack in back; good chest and loin, quarters and hocks straight, forelegs not quite straight and light of bone. He was closely pressed by Rigi, who is well known. Wotan and Eric have been fully described in these columns. Belle of Sterling, Flora II., Alma II., winners in the bitch class, are well known. Peter, first in the class for dog puppies, is not good in head, and not likely to develop into a future winner. The unnamed puppy, placed second, is too young to say much about, but we fancy he will make a better dog than the first prize winner. A poor class. The winner in the corresponding bitch class was sold the first day of the show and taken out of the building. We wonder when this sort of thing is to be stopped; it should not be tolerated at a well-conducted show. The second prize winner is not good in head and will not be found in the van next season. These were the only entries in the class. A poor showing. Mr. Haines made quite a large entry, but his kennel did not compete for any of the prizes.

NEWFOUNDLANDS AND GREAT DANES—(MR. BARLOW).

These classes were poorly represented. In the one for Newfoundlands first prize was properly withheld and second given to Nicholas, a very ordinary specimen. He is good in coat, back and loin, but his snipy muzzle, faulty eyes and straight hocks will always keep him back in fairly good company. Gypsey, faulty in muzzle, eyes, quarters, tail and coat, was second. The others were a wretched lot—black dogs and nothing more. Don Cæsar is many points ahead of Leo and easily won the ten dollars offered for the best Great Dane. There were some very seedy looking specimens in this class.

DEERHOUNDS—(MR. PIERSON).

The judge was all at sea with these classes, except when it was impossible for him to get wrong. Chieftain and Wanda, as usual were the champions. In the open class for dogs Robber Chieftain, carefully handled by his owner, took first, and second was given to Garry. He has heavy drop ears, light eyes, is down at shoulders, long cast, rather straight in hocks, very wide in front and heavy in shoulders, with legs badly placed and very crooked—not a show dog. Galck was third. He is an undersized dog with no pretensions to show form. Highland Laddie, vhc., is worth a hundred such dogs as the second and third prize winners. Bras was absent. Highland Laddie should, of course, have been second. The judge appeared to know the winners in the bitch class and the first and second were properly placed. Lady Boswell, given third, is not a show bitch. She has a bad head, short neck, is down at the shoulders and not well sprung in the ribs, flat in loin, travels with her hocks close together and is light of bone and undersized. Her coat is fairly good. Six puppies were shown and the prizes went to Mr. Thayer, who showed Robber Chieftain, King of the Forest, Theodora and Lorna Secunda. We shall hope another year to see these classes handled by a competent judge.

GREYHOUNDS—(MR. PIERSON).

There was only one entry (Mother Demdike) in the champion class, and the open classes were filled with the worst lot of weeds we have seen this year. The management is alone to blame for this falling off in quality. First prize was withheld in the open dog class and second given to Joe Jumper, who is not a show dog. Third prize was given to Beauty, also a bad one. There were three entries in the class. First in bitches was given to Psyche, probably on account of her color. She is a "prick-eared one" with light quarters. Dora, second prize, while not a show bitch is better than the winner. Her head won't do for the bench. Satchel, third prize, was second at Boston and is also a poor specimen. Queen in Black, second at Hartford (first withheld for want of merit), was first in the puppy class. Maud S., second prize, is a better bitch, but will not make a good one.

POINTERS—(MR. DONNER).

In champion dogs over 55lbs., Robert le Diable, in the absence of Nick of Naso, had a walk over. He was in good condition; better than at Boston. In the heavy weight bitch class there were no entries. In the open dog class Tammany took first. Our opinion of him has often been given. Drake, second, is a strong, coarse dog, and was not in good condition. The same is true of Neversink, who is wide in front and very throaty. Shirley, vhc., Joe and Captain Fred, hc., and Glen, c., deserve no special mention. This was a very rough class. We thought the prizes well placed. In bitches over 50lbs., first went to Tuck, transferred from Class 39. She was undoubtedly the best in her class, though not a first-rater. Belle, second, has rather a coarse head and neck, but is otherwise a fair bitch, and deserved the reserve card. Jilt, third, deserved her place. Madge, reserve, transferred from Class 39, should have been second. Jewel and Lady each c. In the light weight dog class, first went to Mr. Hitchcock's new dog Duke of Hessen. He is in many respects a good one, but has light eyes, neck not clean, is a little faulty in quarters and has a bad tail. Third went, and rightly, to Vanderbilt, weak-headed and with badly carried ears. Puck, a pretty bad one, deserved third. Naso of Devonshire, vhc. reserve, was described at Newark. Bang Grace, vhc., is not so good as Bon Ton, having bad head and bad shoulders. The latter is coarse in head, but a better dog. Penelope, who took c. at Boston, was first here. She is weedy and snipy, but has good quarters, legs and feet. Kent Queen, third, snipy, legs badly placed, should have been first. Anna Hutchinson, second—whose name in the puppy class is Williams—seemed to have a deformed chest, but was taken away before we had an opportunity to examine her closely. Pocahontas, vhc. reserve, is very coarse in head. Nell, vhc., is weak in head, wide in front and rather light of bone. She deserved her card in this class. Frank has a poor head. In dog puppies, Ned B., fully described in our Hartford report, took first. Jersey Bang Bang, second, has a poor head, is bad in shoulders, forelegs and feet, has a fairly good body and straight stifles. He was worth about hc. Naso of Devonshire, vhc. reserve, well known, should have had second. The others were not worth mention. In bitch puppies, Pansy was first. She should have changed places with Mayflower, who was third, and was described at Newark. Pansy is faulty in head, leggy and light. Wanda, second, has a poor head, light of bone, bad feet, and lacks substance generally. She was not worth more than hc. It is a fitting commentary on the quality of the pointers at this show to allude to the fact that Tuck, first in her class at New York, took hc. Boston, and Penelope, first in hers here, took c. at Boston.

ENGLISH SETTERS—(MR. DONNER).

In champion dogs, Royal Albert, transferred from the open class, met and defeated Rockingham. He has been fully described in our previous reports, but was looking bet

ter than we have before seen him. We preferred Rockingham for first place. Royal Prince II., transferred from the open class, was in good condition. In the bitch class, Cora of Wetherall won easily. In open dogs, Rollo, who won first, has already been described. He was entitled to third. First ought to have gone to Roger, who got c. He has a short head and light eyes, but good neck, shoulders, legs and feet, good back, loin and stifle, and well-sprung ribs, with fair depth of chest. Prince Royal II., second, has a fair head and neck, good feet, legs, shoulders and loins, and his ribs are fairly well sprung, but his chest is not deep enough. We thought he deserved a reserve card. Second ought to have gone to the unnoticed Dashing Rover, whose good head, neck, shoulders, feet and legs, fair back, loin, thighs and stifle should have carried him so far, notwithstanding his rather flat ribs. Pride of Dixie, third, was in bad condition. He has been already described. He did not deserve more than he, in such company. Blue Dan, hc., was in fair condition, and deserved another letter. Cecil, vhc., deserved his card; 349 in this class was a pointer. In the bitch class first went to the Blackstone Kennels' Lulu. She should have had a vhc. card. Daisy Foreman, often described in our reports, got second, and we thought deserved the place. Third went to Haphazard, a better bitch than either of the foregoing, who should have had first place. She has a good head and neck, fairly good chest, shoulders, feet and legs, but is a trifle low in the back with rather flat ribs. Coat and color good. Chautauqua Belle, vhc., ought to have had the reserve card. She has a fine head and neck; good chest, shoulders and back; fair legs and feet; is a trifle flat in ribs and droops a little in quarters. She will probably be heard from again. Third prize should have gone to Saddlebags, unnoticed, whose fair head and neck, fairly good shoulders, chest, legs and feet, well sprung ribs and good back and loins ought to have brought her over the lucky ones that came in ahead of her. Wee Clara, bad at both ends, deserved her vhc. card, and Lady Rock, c., was certainly entitled to another letter. In dog puppies Westmoreland, second at Pittsburgh, took first. He was the best of the lot. Second went to Bravo, a strong, fairly good puppy, correctly placed. In bitch puppies Lady Rockingham deserved the first, which she got, but Donna, second, was far too liberally dealt with, as she is a bad one.

[IRISH SETTERS—(MR. PIERCE).

In champion dogs first was given to Elcho, Jr., who is well known. He was shown in good form. Second was given to Tim. The awards were correct. In champion bitches first went to Mollie Bawn, often described. She should have been content with second place, and Laura B., transferred from the open class, ought to have had first. Zella Glenduff took second. Open dogs were a poor class. Begorra, first, fairly deserved his prize in this company, but the same cannot be said of Glencho's Boy, second, whom we should have placed third. He has a coarse head and neck, good shoulders, back and loins, long, poor legs, with good feet, coat and color. Bismarck, third, is a better dog. His head, though rather heavy, is well shaped, and his shoulders, legs, feet, back, loins and quarters are good; stifles well bent; his color is poor. Chief II. well deserved his card. Open bitches were a poor lot. Lulu III., the winner, has a fairly good head and neck, with shoulders too short and upright, fair legs and feet, good back and loins, fair quarters with excellent coat and color. She was properly placed. Second went to M'liss, a large, strong bitch, good in color and coat. She got all she deserved. Noreen IV., third, is a strong, good bitch, but rather coarse. Bessie Glencho, vhc., is weak in head and very leggy. Nellie Husted, vhc., has been already described. Irish Laddie, first, and Andy, second, have been described before. They were properly placed. Chieftain, vhc., is weak in head, with good shoulders, legs, feet, chest, back and loin; his color is good. He deserved his card. Jack Malone, hc., is a strong, coarse puppy, in poor condition. Ruby Glencho, first in bitch puppies, has not a good head and neck, but her shoulders are excellent, and her feet, legs, back, loin, quarters, stern, coat and color are good. She deserved her place. Red Belle, second, is weak in head and a little light in bone, but has fair neck, shoulders and chest, and good back and loin. She is light in color. Hazlenut III., third, has good head and neck, poor legs and feet, is light in chest, has fair back and loin, poor thighs and stifles, good coat and color.

BLACK AND TAN SETTERS—(MR. PIERCE)

In champion dogs or bitches Royal Duke, already described, was shown in good condition and had a walk over. In open dogs there were but four entries. Don (Day's), first, is a dog of few weak points and has excellent coat and color. Don (Friedlander's), second, has neither the form nor color of the winner. His tan is too dark. He deserved the place. Bruce, third, has grown too wide in front and has lost his form. We would have given him a reserve card and third to Bush, a strong coarse dog lacking quality. In bitches first went to Madge. She has a good head and neck, fair shoulders, good legs and feet, good back and loins and a fair chest; she is too light in thighs and her tan is too dark. Vic, second, has a flat skull and wide eyes, not a first-rate neck, shoulders heavy, feet and legs good, back and loin good, coat on stern curly, tan rather dark. Jessica, third, is weak in muzzle, has fair skull, heavy shoulders, good legs and feet, good back, loin, color and coat, but bad tail; deserved vhc. Rose, vhc., already described in previous reports, deserved third. The only entry in black and tan setter puppies, dogs or bitches, is too young to express any opinion about. He took first.

SPANIELS—(MR. WINSLOW).

There were seventy-five entries in the spaniel classes, a slight falling off from last year, whereas the entries should have shown an increase. Messrs. Willey's and Hemingway's good dogs were conspicuous by their absence. In fact, the American Spaniel Club was but poorly represented, and taking them all in all, the quality was the poorest we have ever seen upon the show bench, considering the number of entries.

The Irish water spaniels numbered four. Patsy O'Connor and Coleen O'Donoghue were the best in the class.

In the clumber champion class Newcastle and Johnny faced the judge. The former won. Johnny was shown in much improved form. He has in a measure lost his tucked-up appearance. We have described these dogs before. In the open class Drake was an easy winner.

In champion field spaniels Compton Bandit had a walk-over. The open dog class witnessed some very peculiar judging. Blue Peter, one of the best in the class, was almost entirely overlooked. He was meted out to him. He should certainly have been second in the class, and but for his poor condition, his shortness of head and his front legs, which were a bit crooked, we would have placed him first. Newton Abbot, in the pink of condition, took premier honors, with Nig, a nice, well-made little cocker, overweight, second. This was wretched work and clearly showed the judge's inability to handle the classes. Nig is a typical cocker and should never have been entered in this class. Donuil Dhu, third, we have described before. Dash II., hc., a good long-bodied dog, ears a bit short and not quite right in muzzle, should have been nearer the top. He might have had third place and Donuil Dhu the reserve card. His tail needs docking. The bitches were not a strong class either in quality or numbers. Lotta was placed first. She is not a clinker. Woodstock Nora, second, belongs properly to the cocker class, where she won everything last year. Lady Abbot, third, we have described before. She did not show well in the ring. They were placed right.

The class for champion cockers was headed by Brant and Doc, with Little Red Rover, Hornell Silk and Brahmin bringing up the rear. Brant took the ribbon with Doc pushing him in great style. Shown in smooth coat and in better trim we believe Doc would win. Wherever there were three entries in a champion class a silver medal was given as second prize. In this instance it went to Doc.

Class 65, for liver or black dogs, was another class badly handled. Though with far too much coat, and a flat, spreading foot, Master Shina, second, was a clear and easy winner. He is a good little dog, taking him altogether, and will be heard from again. Hornell Jock got the reserve card. Jet, vhc., should have been satisfied with one letter. Cocker bitches were led by Belle, an easy winner, with Compton Gladys second. She is poor in head and high on her legs, but has a pretty coat. Queen Obo, third, is snipy in muzzle.

A new pair of reds were brought out by Mr. Laidlaw, in the other color class. Robin, first, was the best. He is high on his pins, short of ear and lacks feather. Rory, reserve, should have had second, and Hornell Fancy third. Fancy is good in body, low on legs, but is short in the back and faulty in head. Little Red Rover, looking well, but apparently close to the limit of weight, was transferred to the champion class.

The puppy classes were, with few exceptions, a weedy lot. Robin was again to the fore in the dog class, with Nonesuch close at his heels. The latter will let down with age and improve generally. Dixie got the reserve card. In bitches Bella Keno won handily. Black Princess has many bad points. She is bad in muzzle, ears set on too high, eyes light, and high on legs. Topsey, hc., and Mopsey, c., are two promising puppies. This should have been reversed, as the latter is much nearer the ground and equally as good as the former in other points. Pixie, c., was deserving of better notice.

COLLIES—(MR. TERRY).

The quality of these classes was better than last year, but the entries were rather light. The judge entered twenty-five dogs, and as most of them were absent, it looked as if they were put in to pack the catalogue. Scotilla was the only dog shown in the champion class for dogs, and his kennel companion, Flurry II., represented the ladies. Dublin Scot won in the open class for dogs, and Strephon was second. We liked Surbiton, who is rather strong in head, equally as well as Strephon. The judge has always shown a weakness for soft coats, which will also account for Nullamore taking the reserve card and Scotson only being commended. Luella and Spoiled Miss, first and second in the bitch class, are well known. The award in favor of Gem over Clifton Maid was a bad blunder. Gem has a soft coat. Both bitches are well known. Puppies were not nearly so good as we expected to find. Lorna Thorpe, first at Providence, was best of the lot. Mr. Terry's way of handling a dog does not give one much confidence in his ability, but he may have been a little nervous, which would easily account for his awarding several prizes without even having felt the dogs' coats.

POODLES—(MR. PIERSON).

First in the class for black dogs went to Styx, a truly grand dog, well built, good in head and ear and superb in coat, excepting that it is getting a bit rusty. Brigand, not so good in coat as his kennel companion but an excellent specimen, was second. If those who took exception to our comments in these columns two years ago will compare their dogs with Styx and Brigand, they will find ample proof that we were not far wrong when we said their exhibits were "not first-class." Only one black bitch was entered and we did not see her. Caro, the Newark winner, was first in the class for dogs or bitches of any other color. He is not up to the form of Mr. Sandford's cracks. Morton, second prize, is fluffy in coat and short in ear; not a good one. Daisy, third prize, is a little mongrel and should not have been noticed. This was a poor class.

BASSET HOUNDS AND DACHSHUNDE—(MR. BARLOW).

There were two entries in the Basset class. We failed to find Bergman. Bertrand, well-known, took the prize. There was no fear that Mr. Barlow would repeat the Philadelphia blunder and place Gretchen and Flirt over Rubenstein. The latter, of course, won with consummate ease, and was at least twenty points a better dog than anything in the class. Polico, not a good one, was second, and third was given to Gretchen. It would have been better to have withheld second and third prizes for want of merit, as outside of Rubenstein there was not a show dog in the class. Waldman, unnoticed, is a better dog than Gretchen.

BEAGLES—(MR. STREETER).

The beagles showed a decided falling off in number from the exhibits of previous years, and could not be compared with most of the recent shows. The quality of these classes was not up even to Hartford's display of this breed. As Mr. Ashburner at Philadelphia, so did Mr. Streeter, the judge, make a number of blunders, which are bound to prove detrimental to the beagle interest in general. We cannot approve of this experimenting with judges, for generally the exhibitors suffer by it. We have a number of judges who have proven that they fully understand the breed, and under whose judgment the right dogs and type are placed where they belong. It is but fair for exhibitors to refuse to enter their dogs under these "experimental" judges as they did at Philadelphia and again here. In the champion classes the judge could not go wrong, Little Duke having a walk over and Twinkle beating Bush, and should also have beaten Fitzhugh Lee for the special; Rattler, vhc., should have beaten Trailer for second place. We must congratulate the owner of Trailer on his success in getting his dog over the affection from which he suffered at Hartford, and which necessiated his removal from there immediately after the judging. He was apparently yet in low spirit here, for it was only with the aid of a piece of meat that he would show to advantage. Racer, Jr., should have exchanged places with Leader, and Tony Weller was good enough for at least two letters. Goodwood Rattler should have had another letter added. Duke, the remaining entry in this class, is a poor one, bad in forelegs, decidedly out at elbows, open feet, long cast, weak in loin, poor coat and brush, and decidedly off in head and ears. In the bitch class, we think Jessie can just beat the winner, both are well known, as are also the next two, Trinket and Melody; Lizzie, deficient in drop, has rather short ears which are badly carried, eyes small, out at elbows, light of bone and deficient in coat and brush. In the puppy class only one entry was present, who received the award. This puppy has been described in our report of the Newark show, and has not improved since then.

FOXHOUNDS—(MR. STREETER).

In this class the judge came nearer the mark. Rebecca, commented upon in our report of the Boston show, was the best in the class and received the award. Dashwood, third, might have exchanged places with Vinegar, second, whose mouth is entirely gone and who shows age. Dancer and Ringwood are both very good hounds; the former should have had reserve added to his vhc., as he beats Ringwood in head, coat and feet. Gipsey is long cast and stands too low on her pins and lacks in coat and brush. Dan, the remaining entry, looked a fair specimen of a harrier.

BULLDOGS—(MR. BARLOW).

Robinson Crusoe and Boz competed in the champion class for dogs. It is a close thing between them, and Crusoe won. They are good ones. Britomartis, the queen of the short-nosed race, had no competition in the corresponding bitch class. The first and second prize winners in the open class for dogs are well known. Bruce, third prize, is not a first-class specimen. Hillside, Tom Ball and Boz II. were absent. The winner in the bitch class is faulty before the eyes. Carmen, second prize, has been previously described. Rose is not good in head. Josephine was absent. Gimlet, first in the puppy class, was fully described in our Philadelphia report. He beats Rocksie and Monarch in front. The class was not a good one.

BULL TERRIERS—(MR. BARLOW).

Cairo, the great English champion, made his first appearance on the bench in this country and we venture the opinion that notwithstanding his excellent record he is an overrated dog. We think when he was a young dog he may have been one of the very best of his breed ever seen, but he is growing very cheeky and he always must have been a trifle faulty before the eyes. With the exception that his back is rather slack he is a grand dog behind the head. He was in very bad condition, and had the judge pegged him back on that account he would have been indorsed by us. Tony, second prize, is also a new one and is a dog of more than ordinary merit. He has a nasty coarse tail, his worst fault; is a trifle full in cheek and rather lippy. He, too, was in no condition for the bench. Silver and Judas, well known, were in good condition, and seeing that bull-terriers and white English terriers above all others must be in decent condition to compete for a prize we would have thrown Tony and Cairo out and left Judas and Silver to fight out the battle. First in bitches went to Bonnie Princess, a new one and a good one. She is rather full in cheek and not quite right before the eyes; back a trifle hollow and forelegs not quite straight. The second prize winner was described in the Hartford report. Our choice for first was Grand Duchess, who got vhc. Three of the six puppies entered were absent and Queen Bess, who has been very unlucky all through the season, scored her first win. She was second at Newark and Providence.

FOX-TERRIERS—(MR. PERCY REED).

The quality of these classes was excellent throughout and the judge did his work in a most consistent way. We cannot agree with several of the awards, but in each case there was plenty of room for difference of opinion, as the dogs were very close together in points of merit. Valet, Lucifer and Old Royal were the pick of the champion dog class, Splauger and Belgrave Primrose being outclassed in such company. The blue ribbon went to the good-headed son of Venetian. We are not disposed to cavil over the decision, as there is lots of room for difference of opinion. Valet beats Lucifer in head, muzzle and eye. Lucifer beats Valet in loin, shortness of back, size and coat, and shows more character and quality, and for these reasons would we have given him the prize. First in the bitch class went to Safety, but Richmond Olive is so vastly superior in legs, feet and bone, that we thought her just about good enough to win. Safety has the pull in head, and is of better size and has more liberty. Raby Mixer, Bacchanal and Raby Jack were again present in the open class for dogs. At Philadelphia Mr. Kelly gave Bacchanal first, Raby Jack second and Raby Mixer third, and in our report of the show we said that Mixer should have been first, Bacchanal second and Raby Jack third. Mr. Reed indorsed that opinion, but gave Raby Jack only commended, Earl Leycester, also well-known, being third. Warren Jim, Shovel and General Grant, all well known, were commended. Shovel continues to thicken in head, and Earl Leycester is a better dog to-day. We thought the class very nicely handled. In bitches, Richmond Dazzle, of nice quality and character, was well placed first, and Diadem was next best, with Mr. Rutherfurd's Philadelphia purchase third. We heard some "kicking" over the decision, but had we been judge the dogs would have been placed exactly in the same order. The owner of Verdict is overrating her. She is not so good in head as she was and is likely to get worse. Flame, vhc., is a daughter of old Belgrave Joe, and should prove a valuable acquisition to Mr. Kelly's kennel. Cheshire Laddie, first in the class for wire-haired dogs or bitches, is about the best dog we have seen in this country. Trap, well-known, was second, and Bristles, described in our Buffalo report, was third. We did not see Meg and conclude she was not shown. We were unable to devote more than a very short space of time to the puppies, and as the competition was close and keen it will be better to leave them over until we can do full justice to them. In dogs Mr. Belmont was first with Result, a son of the English champion Resolute, and the Messrs. Rutherfurd were second and third with Warren Spider and Warren Swagger. Mr. Thayer, with Shameless Mixture and Sandy Mixture, had to take a back seat, which he could well afford to do, as the prize list will show.

OTHER TERRIERS—(MR. BARLOW).

Bessie, in a poor class of black and tans, made an example of Lady, who is very faulty in fore face, wide in skull and not good in tail; coat, color and markings better than the average. Harry O., vhc., is not good in head. Boxer, first prize in the Scotch and hard-haired terrier class, is a cross between an Irish terrier and a Scotch terrier, and should have exchanged places with Highland Laddie, a fair dieharD. Dandies were a poor lot and the prize withheld. Three Bedlingtons were shown and were placed as at Hartford. Geesela was again first in the Irish terrier class. The first time this bitch was shown we said she was the best ever exhibited in this country, and the clean sweep she has made of the prizes this spring goes to indorse that opinion. Eileen, second prize, is of nice type, but not so good in head as Geesela. Skyes were poor. Lass O' Gowrie scored an easy win over Ben, who is faulty in head and too short in body.

TOY DOGS—(DR. CRYER).

Yorkshires, as usual, were a poor lot. Sir Colin, first prize, was about the best of them. Too leggy, body color too dark, leg color good, head color not clear, short of coat. Dick, second prize, is not a good one either in color or quality of coat. Lancashire Star, vhc., gets worse with age and was never first-class. In bitches, Dolly, second at Boston, was first and Beauty second. The latter is fairly well put together, leg and head color much too light, coat not quite straight. She has better length of coat than the majority, but is not a good one. First and second in the toy class went to a couple of little mongrel blue dogs. We would have given the prizes to the best of the black and tan terriers. Pugs were not well represented. Victor, not first class in head and deficient in markings, size, coat and carriage of ears, was first. He is good in wrinkle and better in muzzle than the balance of the class. Jumbo, Jr., is of better size than the winner, but is long and pointed in face, ears too large and not well carried, trace not well defined, stands down at the shoulder and is not straight in forelegs, nails not black and color not good. Yuma Yuma, for once in a time, was made happy, and there was peace in the pens of the pugs. Yum Yum, not good in head, was second, and Flora, described in our Boston report, third. What's That was not shown for competition. Tootsie Sloper, first in the puppy class, is fairly good in body and limbs but deficient in head properties. A poor lot. These classes were well handled. The winners in the toy spaniel classes are well known and have been fully described. The competition between Roscius and Milwaukee Charlie was keen, and Boston, who is in luck just now, won. Charlie never looked better in his life.

ITALIAN GREYHOUNDS—(MR. PIERSON).

Only two were shown, but the judge got wrong. Cupid, placed second, should have won. Fanny was all out of coat.

MISCELLANEOUS, OVER 25LBS.—(MESSRS. BARLOW AND PIERSON).

This class was badly judged. Sir Lucifer, first prize, and well known, was as good as anything in the class, and after him or on equality with him should have been the smooth-coated sheepdog Earl Percy II. Carlo, given third prize, is

a mongrel. We put in considerable time trying to ascertain his breed or one-half of it, but he beat us and our note book contains the following comment on him. "A large black, tan and white dog with long coat and yellow eyes." He can be bought for $350.

MISCELLANEOUS, UNDER 25LBS.—(MESSRS. BARLOW AND PIERSON).

MeToo and Chiquita were given equal first prize. The latter is a mottled bitch, and has considerable hair on her legs, feet and tail and some on her muzzle and head, she also has a butterfly nose, and appears to be a cross between a Mexican hairless and a Chinese crested. Pedro is not hairless and is very short in the legs, and long cast, and his head and ears are not good. We thought Clicquot, 3d prize, and MeToo the pick of the class.

SPEICALS FOR BEST EXHIBITS.

Eastern F. T. Club's for dogs with field trial record.—Pointer dog, Robert le Diable; bitch, Malite; English setter dog, Foreman; bitch, Manitoba Belle; Irish setter dog, Tim; bitch, Yoube. Westminster K. Club's for kennels.—Mastiffs, E. H. Moore's; St. Bernards, Hermitage Kennels; deerhounds, J. E. Thayer's; pointers, F. W. Hitchcock's; English setters, Blackstone Kennels; Irish setters, Max Wenzel's; field or cocker spaniels, A. Laidlaw's; brace of beagles, Fitzhugh Lee, May Belle II.; fox-terriers, A. Belmont, Jr.'s; collies, Chestnut Hills; bulldogs, Robinson Crusoe, Britomartis; bull-terriers, Victoria, Jubilee. American Foxterrier Club's—Champion fox-terrier dog, Valet; open, dog, Raby Mixer; bitch, Richmond Dazzle; puppy, dog, Resolute; bitch, Lady Warren Mixture; terrier whelped in 1886, Lady Warren Mixture; in show, Richmond Dazzle; dog in show, Valet; team of three, A. Belmont, Jr.'s; brace, J. E. Thayer's; exhibit, A. Belmont, Jr.'s. Mastiff Club's cups—American-bred in show, Homer; dog (members only), Minting; bitch (members only), The Lady Clare. Beagle Club's—Beagle dog, Fitzhugh Lee; bitch, May Belle II.; beagle in open class, Fitzhugh Lee. Bull-terrier, Victoria; pointer dog in open class, Duke of Hessen; collie in open class, Dublin Scot; King Charles spaniel, Milwaukee Charlie; Blenheim spaniel, King Victor; Japanese, Kobe; toy, ruby or Prince Charles spaniel, Lilly; Italian greyhound, Fannie. Kennel of English setters, Blackstone Kennels; kennel of pointers, F. R. Hitchcock's; kennel of St. Bernards, Hermitage Kennels; bull-terrier, Victoria; Clumber spaniel, Drake; liv&w field spaniel, Dash II.; brace field spaniels, A. C. Wilmerding's; get of Black Prince, Lady Abbot; get of Jimmie, Madge; get of Bang Bang or Naso of Kippen, Penelope (Bang Bang); English setter and stud dog and one of get, Belthus with Rockingham; mastiff, Minting; spaniel kennel, A. Laidlaw's; bulldog, Britomartis; English setter stud dog and two of get, Foreman with Daisy Foreman and Haphazard; pug, Victor.

DOGS AND JUDGES.

CLUMBER SPANIELS AT PHILADELPHIA.

Editor Forest and Stream:

There is something very clever in asking a man to give information on a question he has promised to say nothing about. Messrs. Wilmerding, Hemingway and West have too much common sense to suppose that the "unfortunate gentleman" alluded to in my report was aimed at them. Two of these gentlemen have owned and bred dogs for a number of years, and of course have gained knowledge in that time. The individual I referred to is just out of his swaddling clothes, and while quite a good fellow in his way and a nailing good judge of beefsteak and Bass ale, and of other things calculated to keep out the weather, he knows nothing at all about spaniels beyond that the dogs he owns are black. An infant astride his papa's walking-stick imagines himself a Fred Archer or an M. F. H. And the beginner when he buys his first dog, which is almost certain to be a rank bad one, not infrequently gets into his head the idea that he is owner, breeder, judge, reporter, editor, author, etc., etc. Fifteen years hence the lad who to-day rides a willow cane may steer an Ormonde to victory on Epsom Downs or successfully pilot a Colonel over the dangerous Aintree course; and the Mr. Rendle of to-day, if he works hard, has a natural love for dogs and an eye for beauty (I think he has the latter), may know something about dogs. Bagman judges and no-record owners are little thought of to-day except by themselves.

The evidence advanced by a member of the Spaniel Club to show that "Mr. Rendle is right," is as follows: "Messrs. Hemingway, Wilmerding and West, all members of the American Spaniel Club, have decided that Johnny is the better dog of the two." I most positively deny their having done anything of the sort. Mr. Hemingway has told me that it was purely owing to a blunder in taking down the numbers that Johnny got the prize at Newark. He was compelled to leave the show soon after the judging, and did not discover the error until long after the prizes had been paid, but, of course, as the dogs were in the same ownership no harm was done beyond leading people to suppose he preferred Johnny. Mr. Winslow not only considers Drake a better dog than Johnny, but has just placed him over Newcastle, and it is well known that Mr. Watson, when shown the two dogs (Johnny and Drake), pointed to Drake and said, "That is my dog." Nobody will deny that Mr. Watson is one of the best judges of a spaniel we have in this country, and he has the advantage of having inspected a number of the prominent English winners. In 1871 (fifteen years before Mr. Rendle blossomed forth as an exhibitor) I owned and exhibited as good a Clumber spaniel as we had at that time, and since then have seen and reported on the Duke of Portland's magnificent kennel, and carefully inspected the best dogs shown by Messrs. Bowers, Langdale, Arkwright and others, and while I do not consider myself a judge of the breed, is it not probable that I am just as liable to be right as Mr. Arthur E. Rendle? I am told that Mr. Wilmerding is not at all sure in his own mind that Drake is not the better dog; therefore, as the case now stands, it is Watson, Winslow, Hemingway and Mason versus Rendle and West. Mr. West is a recent acquisition to the fancy. If there is any evidence in all this to show that "Mr. Rendle is right," I fail to discover it. It was quite natural that Mr. Rendle should indorse Mr. Hemingway's decision at Newark seeing that he is entirely in ignorance as to the points of the breed, and it begins to look as though Messrs. Hemingway and Wilmerding have set a trap for the Broadway novice out of which he is not likely to escape until he has again clearly shown that his knowledge of dogs is entitled to as much respect as his knowledge of pills.

FOX-TERRIERS AT PROVIDENCE.

"Our Special Reporter" for the Babylon and Broadway firms, writing in a Chicago comic weekly, says: "Gretchen was the only entry in the puppy class; she is a good-fronted little bitch, with fair body and ears, but however any fox-terrier judge could place this little undersized, weak-faced bitch over Richmond Dazzle or Marguerite, is a mystery we have been endeavoring unsuccessfully to fathom." If the Jack-of-all-trades of the dog fancy had attended the Providence show, he might have seen or been told that Richmond Dazzle, who had just arrived from England, was all out of condition, and that Marguerite had just come out of a fight with a kennel companion, who had evidently had the best of it. Hempstead is not a great distance from Babylon, and had "Our Special Reporter" given Mr. Belmont a call he would have ascertained why Marguerite was put back; and a note to Mr. Thayer would have elicited the reply that Dazzle was out of condition, and that the judge informed her keeper in the ring that if she had been in shape she would have won. Now that the "mystery" is "fathomed" and a great load removed from "Our Special Reporter's" fertile brain, perhaps he will kindly tell us "however any fox-terrier judge could place" Valet vhc at Hartford last year in a class headed by Splanger, and possibly he may be able to muster manliness to apologize for his statement that your reporter could not "recognize fox-terrier character" because he refused to indorse such lamentable ignorance. And without allowing his blood to rise above 98, perhaps "Our Special Reporter" will explain why at Hartford a wretched specimen was placed over the best Italian greyhound that has been shown this year, and why vhc. was given to a mongrel black and tan in the same class, why Lady Dorothy was given third in the mastiff bitch class at Boston, why Merchant Prince was placed over Duke of Leeds at New York, and why Apollo beat Hector at the same show. In the event of "Our Special Reporter" failing to "fathom" the above and a host of other apparently unaccountable blunders I will cheerfully lend him aid by directing his attention to the direct cause.

Something must be done to save the sinking ship; the water is pouring in from all sides and the cranky carpenter's supply of putty is well nigh exhausted. In order that certain unfortunates be not altogether lost sight of, I will respectfully suggest to their few friends the formation of specialty clubs with the no-record-individuals for officers. If this is done before the show season comes around again the clubs will be in a position to write dog show managers that "we won't show our dogs" unless the pot-images we have created are put up for judges. When that time comes the bench show committees may be relied upon to "call for the record."

THE PITTSBURGH JUDGING.

I cannot withdraw my statement that Mr. Goodman asked Mr. Thayer's man if both dogs were owned by Mr. Thayer. My informant is a thoroughly reliable person and I cannot leave my point.

Mr. Goodman denies being placed in a dilemma. Let us see! When judging the mastiff dog class, he took down a bitch's number and was just on the point of giving her handler the second prize, when somebody called his attention to the fact that a bitch should not win a prize in a class for dogs. If a man who cannot tell a dog from a bitch is not in a dilemma when he enters the judges' ring I shall be pleased to have a definition of the word. Mr. Goodman gave first prize in the mastiff bitch class to one of the worst specimens in the class, and decorated The Lady Clare's stall with the hc. card. I call that being placed in a dilemma. There is evidence to show that some of Mr. Goodman's friends also thought him in a dilemma, and one of them, in trying to get him out, has again shown that his columns are wholly unreliable.

Here is the report: "She (The Lady Clare) was undoubtedly intended for first, but in some way overlooked afterward." I know this statement to be false, for I happened to be in the ring and close to the judge when the class was judged, and as soon as Mr. Goodman had taken the dogs' numbers and handed out the ribbons he turned to me, and, pointing to The Lady Clare, said, "I don't like that bitch's legs." Perhaps Mr. Goodman can explain why the Chicago editor concocted such a slippery statement if not to keep him out of a dilemma. Mr. Goodman clearly contradicts himself and indorses me when he says, "For reason of my own, not necessary to mention here, I did not wish to make the decision entirely on my own responsibility." In other words, he was "in a dilemma" and wanted to get out of it. Mr. Dole, of Philadelphia, certainly shewed the best kennel; but Mr. Naylor, the owner of another kennel and a friend of Mr. Goodman, went on from Chicago expecting to win the kennel prize ($25). Is it not possible, and even probable, that the "reason of my own" was that Mr. Goodman did not have the moral courage to give the prize against his friend, and, therefore, requested me to "help him out of the dilemma?"

PATTI M.

Mr. Munhall takes exception to my comments on his pointer bitch, and advances in support of his argument that I am wrong and he right the flimsy facts that Patti M. has beaten Vanity, King Bow and others. In judging of a pointer's merits for the bench Mr. Munhall evidently has his mind's eye on such dogs as Meteor, Vanity, King Bow and the like, whereas I have in mind Hamlet, Rap, Wagg, Sancho, Flirt, Bow Bells, Bang, Beaufort, Graphic, etc. Vanity, King Bow and Patti M. in the same class, I would give first prize to Patti M.; and in reporting the show would probably say: "Patti M., who is only a second rater, scored rather an easy win over Vanity and King Bow." But Patti M. in a class with any two of the dogs I have named would not be noticed. The difference of opinion is easily accounted for. We did not graduate from the same school. Mr. Munhall innocently enough calls a spade a silver trowel, whereas I call it a spade, and if it is not clean I call it a dirty spade.

It is not quite clear to me what the card placed over Beaufort has to do with my notes on Patti M., but as Mr. Munhall evidently has a weakness for such things I will suggest his borrowing the one written out by a Mr. Munson and nailed up over his Robert le Diable at the New York show of 1886. Here it is: "Winner of the pointer sweep-*steak* at Pittsburgh, 1886." Patti M. looks like doing justice to such a steak.

CHARLES H. MASON.

ST. BERNARDS AT NEW YORK.

Editor Forest and Stream:

The best authorities in this country and in Switzerland consider Hector a better dog than his sire Apollo. That is quite sufficient for me and there is no necessity of my entering into a long-winded argument on the subject.

At the New York show Mr. James Mortimer places the sire over the son and repeats his former mistake by putting Merchant Prince over Duke of Leeds. He also gave third prize to Barry over Bronze. These decisions prove that Mr. Mortimer knows very little about St. Bernard quality, and that he is not competent to judge that breed.

In the case of Hector, he further states that he does not know his own mind, for at the Waverly show last fall where, under him, Apollo took the champion prize and Hector first prize in the open class, he himself told me that if we had had a special for best smooth-coated dog, he would have given it to Hector.

Like Mr. John E. Thayer and some other exhibitors I shall not show under Mr. James Mortimer again. K. E. HOPF.

ARLINGTON, N. J., May 7.

IRISH SETTERS AT PHILADELPHIA.

Editor Forest and Stream:

Your reporter at the Philadelphia show must have been guessing about how Blarney has grown very coarse in neck and heavy in shoulders, as Blarney was at my kennel in Manton, R. I., and did not go to Philadelphia, neither has your reporter had a chance to look him over since he was at Newark, as he was taken out of the Providence show the first day, being taken sick. He need not be afraid to stick to his first opinion of him. Blarney as he is to-day is the best Irish dog in this country, even if Messrs. Pentz, Glover & Co. do beat him with old Chief and Elcho, Jr.; and any man who knows an Irish setter on bench or in the field that is disposed to be honest will say so. They all seem to judge the man holding the dog rather than the dog.

T. M. ALDRICH.

MANTON, R. I.

COLLIE SWEEPSTAKES.—Philadelphia, May 5.—Will you kindly inform your readers that the time of closing entries to the semi-annual sweepstakes of the Collie Club has been extended to June 1.—GEO. A. SMITH, Secretary.

AMERICAN KENNEL CLUB.

THE annual meeting was held May 4 in this city, President Smith in the chair. The following clubs were represented: W. K. C. (J. O. Donner, del.), Philadelphia K. C. (J. H. Winslow, del.), Cincinnati (L. G. Hanna, prox.), Pittsburgh (E. Gregg, del.), N. E. K. C. (J. Grosvenor, del.), Cleveland (C. M. Munhall, del.), N. J. K. C. (C. J. Peshall, del.), Hartford (A. E. Rendle, prox.), Rhode Island (N. Seabury, del.), Hornell (J. Watson, del.), Fox-Terrier (T. H. Terry, del.), Michigan (J. H. Newbury, del.), St. Paul (H. T. Drake, del.). New Haven, National Field Trials and Wisconsin absent.

Minutes of last annual meeting read and approved. On motion of Mr. Peshall, Mr. Child was nominated as President. Mr. Hanna nominated E. Smith, Mr. Seabury nominated T. H. Terry. Result: Smith 6, Child 3, Terry 1.

For First and Second Vice-Presidents. Mr. Donner nominated Mr. Child, Mr. Munhall nominated General Shattuc. Child elected First Vice-President, Shattuc elected Second Vice-President.

Mr. Peshall moved Mr. Vredenburgh be elected Secretary and Treasurer by acclamation. Carried. Adjourned.

At the Executive Committee meeting the minutes of meeting Dec. 6 were read and approved. Treasurer reported receipts, $169.15; disbursements, $103.42; balance, $65.73.

Committee on discipline reported on Pittsburgh medals, submitted all the evidence in the case, and on motion of Mr. Munhall report was accepted and the matter laid upon the table.

Special committee reported on Sensation and Watty award at Boston, 1885. After hearing all the evidence Mr. Watson moved that the prize won by Sensation be retained by the W. K. C., as it is the opinion of this Association that the dog was not properly entered. Carried. On Mr. Peshall's motion the Watty matter was laid on table. Committee discharged. On motion by Peshall it was voted to recognize follow shows given previous to A. K. C.: St. Louis, Massachusetts, Baltimore, Washington (two shows), Meriden, Conn., Chicago, 1876.

In appeal against Watson's protest, delegate Peshall was sustained.

Rendle appealed from decision of R. I. K. C. in disqualifying Brahmin. Peshall moved to refer the matter to local delegate. Lost. Watson moved that it was duty of judge to weigh on official scales. Lost. Local delegate reported sustaining decision of bench show committee. Moved by Munhall that the judge have no right to weigh a dog on private scales. Adopted, and the R. I. Club was ordered to pay prize. Adjourned.

At the adjourned meeting, May 5, the constitution, by-laws and rules were adopted as amended, to go into effect Sept. 1.

Munhall moved to reconsider vote of Dec. 6, 1886, on his protest in Beaufort-Patti M. matter on ground of illegality (an officer of Association voting on proxy).

By Munhall—That decision of delegate Peshall be reversed in above matter. Carried by 6 to 4.

Communication from J. O. Fellows referred to Hornell K. C. with information that Buffalo is not a member of A. K. C. Voted that N. E. K. C. was not inconsistent in compelling a deposit of $5 with protest.

CLUMBER SPANIELS.—River Beaudette.—*Editor Forest and Stream:* Being an ardent admirer of the Clumber spaniel, although not owning, at present, a specimen of this, the aristocrat of the spaniel tribe, and conceiving from the tone of the critics in the various sporting papers that a false impression of this breed of dog exists in the United States, I am prompted to submit the following: It does not seem to be generally known in the United States that the Clumber has greatly increased in size of late years. "Idstone," in his book on "The Dog," speaks of the weight of a Clumber spaniel as averaging 40lbs. or less, whereas Vero Shaw mentions their weight as averaging between 57 and 65lbs. for dogs. The former does not mention the height at shoulder of the typical Clumber of his day. In your notes on the Newark show, you speak of the Clumber spaniel Johnie, winner of first in open class at that place, as being much too high; and one of your contemporaries in criticising the same show says that he is much too large all over. Now I happen to know what Johnie's measurements are, also those of champion Psycho, unbeaten champion Clumber of Great Britain; and to demonstrate that Johnie is not too large, will give his and Psycho's measurements, also those of Lapis, owned by Mr. T. B. Bowers, who was selected by Mr. Vero Shaw to illustrate his description of this breed in "The Illustrated Book of the Dog."

	Psycho.	Lapis.	Johnie.
	In.	In.	In.
Height at shoulders	18½	18	18
Girth of chest	32	29	32
Length of body (from root of stern to occiput)	32½	—	34½
Girth of skull	19½	18½	18½
Length of head (from stern to occiput)	9¾	10½	9¼
Girth of muzzle	11¾	—	11½
Weight	68lbs.	60lbs.	67lbs.

From the foregoing it will be seen that Johnie is not by any means too large. To be sure he is slightly longer in body, but that is a point in his favor, not against him. In an account of a show in England, Crystal Palace or Birmingham, I forget which, where Psycho won, I recollect reading that he, Psycho, only beat one of his competitors by his superior size. Does not this go to show that size is a greatly sought after desideratum in the Clumber spaniel? Great Britain should be allowed to dictate what a Clumber spaniel should be until there is a much larger number of them in America than there are at the present time.—JAMES T. HUGHES.

SALE OF RANCOCAS KENNEL.—Mr. Pierre Lorillard's Rancocas Kennels have been broken up. The dogs were sold at auction in this city last Saturday to the following purchasers: Dashing Monarch to Geo. L. Pollock, cost $1,000, sold for $80; Lavalette to Pierre Lorillard, Jr., cost $1,500, sold for $150; Petrel II. to J. G. Heckshser, cost $400, sold for $60; Countess Mollie to P. Lorillard, Jr.; Madonna and four pups to W. Tallman; Nancy Roke and Glen Ada to W. Tallman; Pequest to J. C. Barron; Glen Lass to T. Lyons, Dashing Monarch—Countess Mollie pups, four to J. G. Hecksher; one to A. Lehman; Dashing Monarch—Nancy Roke pup to J. R. Murphy, Gypsie to G. E. Pollock. A lot of Hempstead Farm Co. collies was sold as follows: Twig and Meg to Joe Brown, Elspa and Lothian to W. J. Diffenderfer, Ronald to G. H. Turner, Twilight to A. K. Murphy, Daylight to W. P. Brock.

PUG CLUB.—The first meeting of the newly organized Pug Dog Club, held at Madison Square Garden, N. Y., May 4, resulted in the election of the following officers: President, Mrs. Charles Wheatleigh, of New York City; treasurer, Dr. M. H. Cryer; secretary, Mr. T. F. Rackham, of Grovestend, N. J.; executive committee, Miss M. Bannister, of Cranford, N. J.; Mrs. E. A. Pue, of Philadelphia; Miss H. H. Whitney, of Lancaster, Mass.; Mr. H. C. Burdick, of Springfield, Mass.; Mr. G. W. Foster, of Catawissa, Pa.; Mr. W. A. Peck and Mr. J. A. Seely, of Bridgeport, Conn. The club has adopted the English standard of excellence.

NEW JERSEY KENNEL CLUB.—The New Jersey Kennel Club will hold its annual meeting for the election of officers May 19, at Taylor's Hotel, Jersey City, at 8 o'clock.

KENNEL NOTES.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Bravo, Sentinel, Clinker, Passion and Honor. By F. B. Zimmer, Springfield, Mass., for three fawn, black points, mastiff dogs and two bitches, whelped May 4, 1887, by Boss (A.K.R. 2218) out of Lillie (A.K.R. 2981).

Rim II. By L. D. Guerin, Morristown, N. J., for black, white and tan English setter dog, whelped Dec. 6, 1886, by Rim (Roderick —Nerna) out of Fannie.

Betsa. By George Laick, Tarrytown, N. Y., for white and tan beagle bitch, whelped June 7, 1886, by Laick's Rattler (Chancellor —Careless) out of Laick's Rye (Ringwood—Roxy).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Lill—Fairy King. E. B. Clark's (Orange, Conn.) English setter bitch Lill (Ranger II.—Coin) to G. E. Osborn's Fairy-King (Foreman—Jessie), May 4.

Boqueen—Flect. Detroit Kennel Club's (Detroit, Mich.) pointer bitch Boqueen (Sleaford—Dawn) to their Fleet (Bodine—Ruby Croxteth), April 6.

Flash—Little Jim. Detroit Kennel Club's (Detroit, Mich.) fox-terrier bitch Flash (Trojan—Fannie) to their Little Jim (Wasp—Fannie), April 26.

Victory—Pride of Dixie. Detroit Kennel Club's (Detroit, Mich.) English setter bitch Victory (Count Napier—Roigh) to E. V. Hale's Pride of Dixie (Gladstone—Countess Druid), March 24.

Jet Obo—Ranger. W. J. Furness's (Ogdensburg, N. Y.) cocker spaniel bitch Jet Obo (A.K.R. 4810) to his Ranger (A.K.R. 4502), May 4.

——*—Mainspring.* Dr. Field's (Red Bank, N. J.) pointer bitch (Croxteth—Lady Gwendolin) to Jos. T. Perkin's Mainspring (Mike —Romp), May 4.

Clover—Graphic. Clifton Kennels' (Jersey City, N. J.) pointer bitch Clover (King Bow—Dot) to Graphic Kennels' Graphic, May 9.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Ruby. Kilmarnock Collie Kennels' (Braintree, Mass.) collie bitch Ruby (Carlyle—Westmoreland Lassie), April 30, twelve (seven dogs), by their Bute (Rutland—Noisy Girl).

Ruby III. L. K. Mason (Hastings, Ia.) Chesapeake bitch Ruby III. (A.K.R. 1913), April 29, eight (five dogs), by Geo. E. Poyneer's Gowrie (Sunday, A.K.R. 1408—Nellie, A.K.R. 1112).

Belle Boyd. Dr. R. L. Hampton's (Athens, Ga.) setter bitch Belle Boyd (Gladstone—Kate Claxton), April 6, eight (five dogs), by B. F. Wilson's Count Noble (Count Windi'em—Nora).

Lady Edith. Chas. C. Doty's (Providence, R. I.) Irish setter bitch Lady Edith (Rory O'More—Lady Berkley), April 21, six (four dogs), by Wm. H. Pierce's Glencho (Elcho—Noreen).

Doris. S. R. Hemingway's (New Haven, Conn.) cocker spaniel bitch Doris (A.K.R. 2767), April 20, eight (three dogs), by J. P. Willey's Black Pete (Obo, Jr.—Phœnix).

Ruth. S. R. Hemingway's (New Haven, Conn.) cocker spaniel bitch Ruth (A.K.R. 4241), April 28, seven (four dogs), by J. P. Willey's Obo II. (Obo—Chloe II.).

Judy. Detroit Kennel Club's (Detroit, Mich.) pug bitch Judy (Puggy———), April 23, one bitch, by J. Engelhart's Treasure (Fritz—Banjo).

Lillie. F. B. Zimmer (Springfield, Mass.) mastiff bitch Lillie (A. K.R. 2981), May 4, eight (five dogs), by J. L. Winchell's Boss (A.K. R. 2218).

Sue. Detroit Kennel Club's (Detroit, Mich.) pointer bitch Sue (Hindoo—Princess Bow); April 11, ten (six dogs), by their Fleet (Bodine—Ruby Croxteth).

Fannie. Detroit Kennel Club's (Detroit, Mich.) fox-terrier bitch Fannie (Pincher—Dummy), May 2, four dogs, by Wheaton's Barney (Sir Peter II.—Fawn).

Belle II. Detroit Kennel Club's (Detroit, Mich.) English setter bitch Belle II. (Nixey—Belle), April 24, ten (six dogs), by Campbell's Major (Van—Queen).

Lady Brighton. F. M. Shelley's (Sheridan, N. Y.) English setter bitch Lady Brighton (Prince Phœbus—Rosey), May 5, seven (five dogs), by T. G. Davey's Knight of Snowden (Johnnie Faa—Swan).

Marguerite. Clifton Kennels' (Jersey City, N. J.) pointer bitch Marguerite (Robert le Diable—Belle Faust), April 25, eleven (four dogs), by Jos. T. Perkin's Mainspring (Mike—Romp).

Lassie B. F. G. Bixby's (Boston, Mass.) Scotch collie bitch Lassie B. (Prince—Lady Bess), April 10, ten (five dogs), by T. C. Faxon's Kilmarnock Bruce (Marcus—Drumlin Isle).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Shady—Edith whelps. Two black cocker spaniel dogs and one bitch, whelped Feb. 18, 1887, by C. E. Gilchrist, Charlestown, Mass.), one each to D. W. Barrows, South Weymouth, Mass., J. Bardwell, Everett, Mass. and F. M. Thayer, Roxbury, Mass.

Gun (A.K.R. 1538)—Morning Star (A.K.R. 1541) whelps. Two black, white and tan Llewellyn setter bitches, whelped Dec. 31, 1886, by Chas. York, Bangor, Me., to A. P. Gardener, Hamilton, Mass.

Pink. White, black and tan Llewellin setter bitch, whelped March 9, 1887, by Chas. York, Bangor, Me., to W. B. Ryder, Brockton, Mass.

Barney—Flash whelp. Fawn and white fox-terrier dog, whelped Jan. 9, 1887, by Detroit Kennel Club, Detroit, Mich., to Chas. E. Wallis, Montgomery, Ala.

King Bow—Rudy Croxteth whelp. Liver and white pointer bitch, whelped Jan. 20, 1887, by Detroit Kennel Club, Detroit, Mich., to Horace Comfort, Huron, Dak.

Lexington. Black, white and tan English setter dog, whelped March 5, 1883, by Nixey out of Princess Louise, by Detroit Kennel Club, Detroit, Mich., to Wm. F. Jarvis, Detroit, Mich.

Tillie Doc. Apricot fawn English pug bitch (A.K.R. 4898), to W. H. Fendrich, Columbia, Pa.

Little Fly. Black, white and tan beagle bitch, whelped Nov. 17, 1885, by Bugler out of Laick's Rye, by George Laick, Tarrytown, N. Y., to P. P. Lewis, Tarrytown, N. Y.

Red Biddy (A.K.R. 1553). Dark red Irish setter bitch, whelped Feb. 2, 1883, by Chief out of Laick's Biddy, by George Laick, Tarrytown, N. Y., to J. B. Delmotte, Elgin, Ill.

Rattler. Black, white and tan beagle dog, whelped October, 1882, by Chancelor out of Careless, by Chas. R. Hoe, New Brunswick, N. J., to George Laick, Tarrytown, N. Y.

Dash. Dark red Irish setter dog, whelped Sept. 1, 1886, by Bixby's Ruby out of Flirt, by Franklin G. Bixby, Boston, Mass., to Capt. H. H. Buttrick, Concord, Mass.

Highland Belle. Black and tan Scotch collie bitch, whelped June 13, 1886, by Bruce of the Fylde out of Capt. Bixby's Bessie B., by Franklin G. Bixby, Boston, Mass., to George F. Mullett, Charlestown, Mass.

Joker. Black, tan and white collie dog, whelped May, 1884, by Kilmarnock Bruce out of Iona, by Kilmarnock Collie Kennels, Braintree, Mass., to John J. Crawford, Galena, Ill.

Minnie. Sable and white collie bitch, whelped July, 1884, by Kilmarnock Bruce out of Winnie, by Kilmarnock Collie Kennels, Braintree, Mass., to John J. Crawford, Galena, Ill.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

BEAGLE, New York.—A beagle bitch is in whelp. I was obliged to send her to a party to keep for me. She lay over all day Sunday and was not taken out of the box until Monday, 10 o'clock. She was well March 25. Will this close confinement in any way injure her whelps or cause the puppies to be born dead? Ans. It is impossible to say; but if she had a comfortable box, food and water, we see no reason for apprehension.

L. H. H., Bridgeport, Conn.—My pointer, 2yrs. old, has been out of condition about six weeks, though he does not seem positively sick. He is thin in flesh, appetite capricious, sometimes hungry, sometimes not. Eats grass every time he is let off chain. Bowels rather loose and every day or so discharges dark, tarry-looking fluid. Corners of eyes full of mucus, especially in morning. Ans. Give 5grs. of calomel. Drop 5 drops of Fowler's solution of arsenic in the food night and morning. Give a very little meat.

E. B., Waterford, Mass.—My setter pup, 4mos. old, has been troubled for the last two weeks with her eyes. It began with the ordinary discharges as in common cases of opthalmia, and I used sulph. of zinc wash, which arrested the discharge, but the eyelids swelled and dropped so that the eye looked red. I discontinued the zinc and the discharges returned. Since then I have used borax and camphor, and still the eyes are swollen and the lids droop and the animal seems no better. She is in fair condition, a little thin, her appetite is fair, spirits good. What had I better do? Ans. It looks as if the trouble was more than a mere local one. You had better purge the puppy with 5grs. of calomel or a half teaspoonful of syrup of buckthorn or castor oil. Wait a few days to see result of this. Feed very little or no meat. Give bread and milk and occasionally some beef soup with bread or toast.

Rifle and Trap Shooting.

Address all communications to the Forest and Stream Pub. Co.

RANGE AND GALLERY.

BOSTON, May 7.—A remarkable record was made at Walnut Hill to-day. Mr. Munroe scored three 100s and two 99s, Mr. Chase three 100s and Mr. H. J. Foster one 100 and four 99s. Altogether, the record is considered without equal. Appended is the record of to-day's scores in detail:

JAMESTOWN, N. Y., May 7.—At the regular club medal shoot yesterday, 200yds., off-hand, Creedmoor target, wind from 11 to 3 o'clock, light, from light clouds to heavy thunderstorm, at times nearly obscuring the target. The following scores were made in medal match:

Burns	4555444455—45	Ross	4445445344—41
Blanchard	4454445554—44	Ward	5553454444—41
Sonngren	4354545444—42	Baker	3454344333—36
			ZERO.

THE WASHINGTON TOURNAMENT.—At the request of the executive committee of the National Drill, Gen. Sheridan has detailed Col. S. E. Blunt, of his staff, to have charge of the rifle competition during the great Washington militia drill. The competition will be open to any regularly enlisted man or commissioned officer of the volunteer militia, not, however, to exceed two from any one company, to be governed by the rules regulating the annual competitions in the regular army, as contained in Blunt's manual. Each competitor will be allowed 10 shots at 200, 300, 500 and 600yds. Prizes will be awarded on the best aggregate scores. Eight prizes will be offered. First prize, a gold medal and $100; 3 prizes of a silver medal and $75, and 4 prizes of a bronze medal and $50. About 100 entries have already been received, and more are expected. The following entries have been made from the District of Columbia: Lieut. J. M. Pollard and Lieut. W. L. Cash, of the Washington Light Infantry Corps, and Lieut. Jas. E. Bell and W. B. Johnstone, of the Continentals.

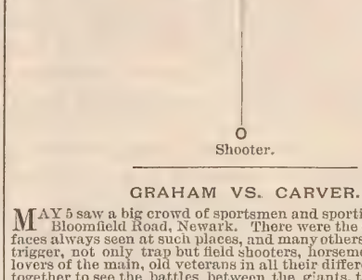
NATIONAL RIFLE CLUB.—The spring meeting of the club will be held at Vernon, Vermont, May 25 and 26, 1887. A general invitation is extended to all interested in rifle shooting. Any one can become a member and entitled to all the privileges of the club by paying the $5 entrance fee to the match for prizes. The standard weight for rifle barrels being 15lbs., all over must give the following odds to the pound for every 10 shots: From 15 to 20lbs., ¼in.; 20 to 30lbs., 3-16in.; 30to 40lbs., 1-16in. Rifles not over 10lbs., using globe and peep sights and shot from shoulder, will receive 3in. on each string. Match to be 5 strings of 10 shots each, time rules, distance 40 rods. Match called at 2 P. M., May 25, and 9 A. M., May 26.—JOHN WILLIAMSON, President. N. S. BROCKWAY, Secretary, Bellows Falls, Vt.

SCHUTZEN AND CREEDMOOR.—The Bullard Repeating Arms Company has just completed a model of the single-shot rifle made by them, in which two sets of barrels fit upon the same stock. With one barrel mounted the weapon is a Schutzen rifle of 14lbs., with set trigger, having a .32cal. barrel taking a 40-155 cartridge, and having the regular 18in. twist. In just one minute and 40 seconds T. T. Cartwright had slipped off the barrel by taking out one screw, and by taking out two screws on the trigger plate a new trigger was put on and the weapon was a Creedmoor arm, 10lbs. weight, .32-40-185. Of course the sights may be changed as well. While with barrels dismounted, the whole arm goes into a convenient traveling shape. A clever novelty is a stock taking without change of firing pin a .22 rim fire barrel or a .32 centre-fire barrel.

THE NEW ARMY RIFLE.—The Government officials at the Springfield Armory are pushing on with the plan of reducing the army model to a .44 caliber arm. In a recent test of one of the new models, the rifling was the three-groove regular depth pattern, 1 turn in 15in., firing a 375gr. cast canellured bullet with 85grs. of powder. There was a pasteboard disc, 1 1-6in. thick, placed loosely between powder and ball; this disc was boiled in Japanese wax. One score made upon a Creedmoor target stood 48 in a possible 50, with two very close centers.

MANCHESTER RIFLE ASSOCIATION, Manchester, N. H.—The spring meeting will be held May 18, 19, 20 and 21. For programme address A. B. Dodge, Manchester, N. H.

CONLIN'S GALLERY.—The conditions of the revolver shooting tournament, begun in this gallery on Monday, May 9, and continued to May 19, are as follows: Massachusetts target, counting 12 in the carton, 1 3-16in. bullseye, 8 rings 5-16in. apart, counting from 3 to 12; distance, 12yds., weapon, any revolver; no restrictions as to caliber, sights or trigger pull; 6 shots to a score, making a possible count of 72; each contestant to select his three best scores made during the ten days, the highest aggregate to win. No substitute shots allowed for defective cartridges except in case of actual missfire; in case of a "squib" shot, the contestant may abandon that score and begin on a new target, contestants to shoot as many scores as they wish in the ten days. Any disputes arising during the match will be left to a referee to decide.—JAMES CONLIN.



THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

DECORATION DAY TROPHY.

NO special entry blanks will be furnished, but score blanks will be supplied. Teams attending the World's Trap Shooting Carnival at Wellington can shoot for the trophy there. The managers announce that arrangements will be made to that end. In the case of teams competing at Wellington, the three witnesses of the shooting need not be members of the club to which a team belongs.

The conditions of flight are: Trap to be set to throw birds at least 45yds. from trap. Five targets to be thrown straightaway, five at a right angle to the right, and five at a right angle to the left. In this case a right angle means a right angle, thus:

GRAHAM VS. CARVER.

MAY 5 saw a big crowd of sportsmen and sporting men at Erb's, Bloomfield Road, Newark. There were the old and familiar faces always seen at such places, and many others, disciples of the trigger, not only trap but field shooters, horsemen, dogmen, and lovers of the main, old veterans in all their different walks drawn together to see the battles between the giants, the champion of the old country and the new in the handling of the steel tubes. Dr. W. F. Carver had beaten Wm. Graham, the champion of all England, when the Doctor visited England several years ago. Mr. Graham said that he had improved in his shooting and had come over here for the purpose of proving it to the Doctor; that he had been here some time and was very anxious for a match or matches for the championship of the world.

Dr. Carver arrived on the ground shortly before noon and said to Mr. Graham that "he was not in trim to shoot, that he thought he had given up pigeon shooting, had been on his ranch in southern Kansas and had not fired at a pigeon in four years; that he believed he would be all right in a couple of weeks with practice; that these matches were gotten up in a hurry, but that he would give Mr. Graham $50 to postpone them for a fortnight. But Graham wouldn't have it; said he was there for the purpose of shooting, and if Dr. Carver was "a man of his word" they would be shot then and there. "All right," says the Doctor, "you will beat me to-day and perhaps to-morrow, but I propose to stay around here for a few weeks and then we will see. I will shoot you on the terms proposed to-day, 100 birds each, Hurlingham rules. If you win I will give you $100. To-morrow 100 birds each, Monaco rules, and if you are then the winner I will present you with $300. But for the championship I will not shoot under a couple of weeks. I am not in form. I have not a gun to suit me, but I will do the best I can."

The result of the first day's attempt shows how well the Doctor had diagnosed his own case. He was off to some extent. His gun did not come, and he borrowed a couple of old ones from Mr. H. C. Squires, of New York, one of them the famous "Old Widow," with which he had done such marvellous execution years ago, defeating Graham a number of times, once, we recall, by three birds, again by one; winning among the 207 matches on the Continent the 27,000 francs at Bois de Boulogne; afterward gaining the wonderful victories over the champion of the Western world, Captain Bogardus. But the old gun had had its day. After its 500,000 reverberations, "rimmed, racked and center shaken," it should have been allowed to rest quietly in Squires's showcase, a relic of the great victories of the past. It not only refused to go off when called upon, but seemed to carry its load all around the birds. In the match Dr. Carver had 23 missfires, enough in all conscience sake to throw off any man but one with nerves of steel. But the Doctor only laughed and said, "Well, this is rather rough, but I think we will do better to-morrow."

Graham was cool and collected, as he always is, and killed his birds clean, but he had it all his own way from the start, and made his best score in this country, 92 birds out of 100, equaling Brewer's score with him at Philadelphia.

Carver led off. He stands erect at the score, holds his gun solidly and gracefully, his left hand well forward, calls "Are you ready?" and "Pull!" almost at once. Graham holds his gun close up toward the armpit, his left hand grasping the stock close to the guard; takes two or three sightings and calls deliberately, "Are you ready?" a pause, and then, "Pull!" and the gun cracks almost the instant the bird is up. He killed many of his birds close to the traps. But the first day showed very mediocre birds, weak and slow flyers. It is difficult to get good birds at this time of the year. The following is the score:

W Graham	0221112111012121221221112110111011111211111211112
	1221101111111212121012112121211102121111011111111—92
Dr Carver	2020122112202210211211222022022222211212021221
	1022211210122111100221211112122020222111102121011—85

2 signifies used both barrels and killed. Two barrels used—Dr. Carver 59 times and W. Graham 23 times. Birds fell dead out of bounds—Dr. Carver 3, the 4th, 13th and 60th, W. Graham 2, the 68th and 82d. Dr. Carver killed 19 drivers, 29 right quarterers, 18 left quarterers, 15 incomers, 2 towerers and 2 hoverers. Total, 85. W. Graham killed 25 drivers, 23 right quarterers, 28 left quarterers, 15 incomers and 1 towerer. Total, 92. Dr. Carver had 14 birds from trap No. 1, 15 from No. 2, 22 from No. 3, 51 from No. 4 and 18 from No. 5. W. Graham had 18 birds from trap No. 1, 13 from No. 2, 22 from No: 3, 25 from No. 4 and 22 from No. 5. Time of shoot 2 hours and 23 minutes.

Friday, the 6th, brought almost the same crowd with many more of the same ilk. They come from every direction, south, east and west. We learn that large sums had been wagered by capitalists in New York city on Carver and some of their representatives were on hand to look out for things. Rather a majority of the sporting men on the ground, we think, favored Graham; the betting was certainly in his favor at first; but after the first 50 birds shot at changed to 5 to 3 on Carver. Several thousand dollars were lost and won. Carver shot in splendid form, his new gun fitting him, and he did some of his old time clean work. He is certainly a graceful and powerful shooter, the best, we think, in the world when he is at his best; and the next few weeks, if he has an opportunity, will see some marvelous feats of his skill and nerve.

Graham shot well up fully to his average if not better. He was cool at all times and his run of 27 straight in an up-hill race was really magnificent. His friends are by no means disappointed in him. Had they been shooting really Monaco boundaries, *i. e.*, a wire screen instead of a string drawn around from stake to stake, Graham would have won the match, or tied at least, as he had 3 birds drop inside, but found out across the string. Carver had one besides one crippled bird driven across the line by the colored gatherer; this could not have happened had there been a wire netting. One bird of the Doctor's was given as dead that called forth considerable comment at the time and a protest from Mr. Graham at the end of the match. The bird was hard hit, wing broken, and running out of bounds toward the score. The gatherer made a grab and gave us a handful of feathers, but the bird got across the line. The referee decided dead bird, we presume on the ground that as a dog was also used to do part of the retrieving and the rule is, when the dog has once had hold of the bird it is a dead bird; so with the man, he had had in his grasp the bird or at least some of it and it was given dead. The protest should have been made then and there and not at the end of the match. As the referee was about to announce the result, Graham with considerable feeling, we thought, made his protest. Dr. Carver replied that he had come on here to shoot a fair and gentlemanly match and that rather than be thought to have won unfairly he would shoot it over again. This Graham would not consent to, and the referee mounting a bench declared the match in favor of Dr. Carver, 86 to 85. We believe all bets were paid on that decision.

The Doctor lost his 57th bird by not having his gun cocked, and the bird soared away, even escaping the pirates outside, for they were not expecting it, hearing no shot.

Carver shot a Greener hammerless, 7lbs. 13oz., with American wood powder in first barrel, Eley's buff 3in. shells, loaded by Von Lengerke & Detmold; in second barrel Curtis & Harvey's powder. Graham shot a Lang, 7lbs. 12oz., Shultz powder in Eley's green shells, also loaded 30 grains firm. Both guns 12-bore.

The day was dark and threatening and quite cool, the wind blowing from the trap to the score. They were a good lot of birds and mostly strong flyers; some hesitated on the start, but attempted lively action when they did get up. Carver took the lead on the 7th bird; at the end of the 75th he led five birds. Early in the last 25 the Doctor left the stand and shortly appeared with a black silk handkerchief bound around his head, over which was his white sombrero. He had been shooting in a black derby before. The Doctor's hair is closely shorn of the amber locks which, with broad, light-colored sombrero, used to make him so conspicuous years ago. Upon his return there seemed a marked contrast in his shooting, when, owing to a headache or other cause, he began to miss, losing his 78th, 82d and 84th birds. Things began to look dusty. He then rallied and killed 8 straight, missing his 93d. Many held their breath for Graham was doing marvelous execution, downing 20 birds without a miss, leaving him but one bird behind. It was nobody's race yet; but the Doctor was equal to the occasion, and the next 7 birds were cut down clean with the first barrel, winning the race and saving his $200 by one bird, the score standing 86 to 85

Match between W. F. Carver, of Kansas, and Wm. Graham, of England; 100 birds each, Monaco rules, *i. e.*, 30yds. rise, 18yds. boundary, both barrels. Wm. Siegler, of Montclair, referee. John Erb, handler of retrievers and furnisher of the birds. $200 to Graham if he wins. Carver's expenses from Kansas if he loses.

Dr W F Carver..1111111220111201120202021212121212221120111221

01202012122202110111021112221111111122112121112—85

2 signifies used both barrels and killed.

Two barrels used—Dr. Carver 42 times and W. Graham 43 times. This includes birds shot on ground.

Birds that fell dead out of Monaco boundary but inside the ordinary 80yds. boundary—Dr. Carver, 6—the 15th, 20th, 66th, 74th, 78th and 82d; W. Graham, 8—the 9th, 12th, 20th, 23d, 55th, 57th, 65th and 73d.

Birds that fell dead outside the 80yds. boundary—Dr. Carver 2, and W. Graham 3.

Lost bird scored from not having gun ready—Dr. Carver 1, the the 57th not shot at.

Miss-fires—Dr. Carver 1, and given another bird.

Dr. Carver killed 21 drivers, 24 right quarterers, 28 left quarterers, 9 incomers, 3 towerers and 1 hoverer. Missed 1 driver, 1 right quarterer, 1 left quarterer and 2 incomers. W. Graham killed 26 drivers, 21 right quarterers, 22 left quarterers, 13 incomers, 2 towerers and 1 hoverer. Missed 3 drivers and 1 incomer.

Biggest string of kills—Dr. Carver 18; W. Graham 27.

Dr. Carver had 20 birds from trap No. 1, 22 from trap No. 2, 15 from trap No. 3, 29 from trap No. 4 and 14 from trap No. 5. W. Graham had 21 birds from trap No. 1, 10 from trap No. 2, 23 from trap No. 3, 23 from trap No. 4 and 25 from trap No. 5.

Time of shoot—Two hours and 26 minutes. JACOBSTAFF.

THE WORLD'S CARNIVAL.

THE World's Trap-Shooting Carnival, held under the auspices of the New England Shooting Tournament Association, will be held at Wellington, Mass., May 30 to June 4.

The Association has made an equal division of the Merchandise Prizes, (value exceeding $3,000), giving to the amateurs prizes equal in value to those contested for by the experts. The conditions as follows: 20 birds each day, excepting Saturday, will be shot at, to go on record for the Merchandise Prizes. Total, 100 birds, the highest average taking the 1st prize, the next highest the 2d, and so on. Ties to be shot off, as there will be no division of these prises. As it is the desire of the Association to encourage and promote the interests of trap-shooting, the entries to these valuable prizes will cost the shooters only the price of the birds; but an optional sweep, as announced in the programme, will be shot in each event.

The committee in charge reserve the right to make any changes in the progamme that will better suit the shooters present. No handicapping of guns, all shooting at 18yds. rise; ties to be shot at 21yds., and at 5 birds. There will be two sets of 5 ground traps each, and three sets of 3 traps each, and extra sweeps will be in progress all the time. Only one kind of target used each day according to programme. Class shooting: all purses to be divided into four monies—40, 30, 20, 10 per cent., and all ties of four or less to divide, except by consent. No shooter can shoot in both classes for record for prizes, but amateurs may shoot in the expert class, if they so elect. Charge of powder unlimited; charge of shot not to exceed 1¼ oz. "dipped" measure, Dixon standard, No. 1,100. Ammunition for sale on the grounds. Refreshments furnished on the grounds. A committee has been appointed to classify the shooters.

The Executive Committee have made every effort to make the carnival a success, and from all parts of the country sportsmen have announced their intention to be present, as the classification of the shooters will afford the amateurs a good chance of winning a valuable prize.

The grounds of the Wellington Gun Club are located at Wellington, on the Boston and Maine R. R., five minutes' ride from Boston, and the shooting grounds within gun shot of the station. The headquarters of the Association will be at the Quincy Hotel, one of the best in the city, where special rates have been made for all shooters attending the carnival. The secretary will consider it a favor to be notified by those intending to come.

PROGRAMME.

There will be four events each day, beginning at 9 A. M., viz.:

First event, open to all comers, 10 birds, 5 traps, entry $2.00.

Second event, open to amateurs only, 10 birds, 3 traps, entry $1.00.

Third event, open to all comers, 20 birds. 5 traps, optional sweep, $5.00. Score to count on the Merchandise Prizes.

Fourth event, open to amateurs only, 20 birds, 5 traps, optional sweep, $2. C0. Score to count on the Merchandise Prizes.

Monday, May 30, will be Ligowsky Day, the targets being Ligowsky clay pigeons, with Ligowsky silver cup as special prize.

Arrangements will be made that teams wishing to compete for FOREST AND STREAM TROPHY on this day can do so.

Tuesday, May 31, will be American Clay Bird Day, shooting at American clay birds; special prize donated by American Clay Bird Co.

Wednesday, June 1, Blue Rock Day, shooting at blue rocks; special prize watch and chain (value $150), given by Blue Rock Co.

Thursday, June 2, Peoria Blackbird Day, shooting at Peoria blackbirds.

Friday, June 3, Lockport Bat Day, shooting at Lockport bats; special prize field gun (value $65), given by Lockport Bat Co.

On Saturday, June 4, $150 will be added to the prize in fourth event.

The officers of the Association are, B. S. Lovell, President; W. R. Schaefer, Vice-President; Edward Read, Treasurer; C. B. Sanborn, Secretary. Executive Committee, Edward Read, W. R. Schaefer, A. F. Adams, Hermann Strater, C. B. Sanborn, H. W. Eager, J. S. Sawyer, C. W. Dimick, C. H. Gerrish, W. H. Allen, W. L. Davis, O. R. Dickey, I. B. Wellington, T. G. Strater. Programme Committee, A. F. Adams, H. W. Eager, Dr. C. H. Gerrish, H. Strater, J. S. Sawyer. Classification Committee, H. W. Eager, C. W. Dimick, C. H. Gerrish.

Address: C. B. Sanborn, No. 29 North Market street, Boston.

LONG BRANCH, N. J., May 7.—The West End Gun Club of Long Branch held its final shoot on Monday, May 2, the end of a series of five shoots for a gold badge offered by the club to highest score in possible 100, each man to shoot at 50 glass balls and 50 clay-pigeons. Below will be found correct score of the five shoots:

W D Campbell	19 18 19 20 19—95	Wm Lloyd	16 17 16 18 15—82
Wm C Price	18 17 19 18 19—91	WHBennett,Jr.	10 20 18 16 16—80
Wm Green	18 16 18 18 18—88	R B Moore	14 17 15 17 15—78

Potter	0010111000001001— 6		

The first class gold medal was awarded to E. Dunshee with a score of 13 broken birds for one month only. Second class, ties on first at 3 pairs birds, 15yds., Holmes 2, Brown 2. Tie at 18yds, Holmes 2, Brown 2. Tie at 21yds., Holmes 3, Brown 2. Holmes was awarded second class gold medal for one month.

WORCESTER, Mass., May 3.—Sportsmen's Club had a beautiful afternoon for their shoot at the Coal Mine Brook Range, and there was a large attendance of members and spectators. The sweepstake matches were unusually closely contested and excellent scores resulted. The interest centered in the Davis-Russell match at 100 clay-birds thrown from the open traps, in which Davis proved an easy winner, leading from start to finish, although Russell shot a very good uphill race. The total scores, 74 for Davis and 68 for Russell, were exceptionally good, as the new traps throw the targets at a lively pace and in the most unexpected directions, making the shooting extremely difficult:

Davis	1011011101011011101—14	Russell	0000011011011011100—10
	1111110111101101111—17		1101111011111111001—16
	1111101001010111111—15		1101001101111101111—15
	1101110311111010110—14		1110111011010111001—14
	1101100110111011110—14		0111110011001101011—13
	74		68

Sweepstake—20 clay-pigeons from open traps: Gilman, Stone and Smith divided first, Tougas second, Swain third, Dean fourth.

PHILADELPHIA, May 6.—A party of ladies and gentlemen went to Andalusia this afternoon for an afternoon's sport, the guests of the Philadelphia Gun Club. The participants in the match were Miss Rose Coghlan and Messrs. Patterson and Robertson, of the club. The match was shot under the regulation rules, 5 traps, and the birds were all good strong ones. After half an hour's practice the match was begun. Mr. Patterson shot part of the time with 30yds. rise and part with 27, the same as the others. Only 10 birds each were shot at, and the result was a tie, which was not shot off on account of darkness. Following is the score:

Miss Coghlan, 27yds	1001111011—7
Mr Patterson, 27 and 30yds	1111110100—7
Mr Robertson, 27yds	1111110100—7

Miss Coghlan was delighted with her score, which was her first attempt at pigeon shooting. She is, however, a very clever rifle and pistol shot, which accounts for her prowess.

SARATOGA, April 25.—The Gun Club had its first spring meeting to-day. Three new members, Messrs. Putnam, Meehan and Pike, were elected, making the total club membership twenty-nine. The shooting day, until further notice, will be Monday, at 3½ o'clock.

W H Bockes	1111110111—9	W M Meehan	0101101101—6
H H Levengston, Jr.	1111111101—9	R M S Putnam	0011011110—6
W L Pike	1001111111—8	J W Lester	0011010010—4

SOLOMON CITY, Kans., May 5.—Semi-monthly shoot of the Solomon Gun Club, 18yds., Peoria birds:

Kraenchi	1110100111101111—11	Dewar	1111110111111100—12

A. I.

JOHNSTOWN, N. Y.—At the annual meeting of the Johnstown Gun Club, held on Monday evening, the following officers were elected for the ensuing year: President, George Yost; Vice-Presidents, Frank Northrup, S. E. Trumbull; Secretary, James Y. Fulton; Treasurer, James H. Hillabrandt; Captain, James Bantaz; Lieutenant, Jules Pierson; Executive Committee, Frank Northrup, Daniel McMartin, L. Hillabrandt; Scorer, Marcus F. Pierson. Friday was designated as the regular day for the weekly shoot, and to-morrow the opening day of the season; the executive committee being empowered to name the day for closing. It was decided that blue rock pigeons should be used for targets during this month, and that they be shot at from the angles prescribed in the FOREST AND STREAM. Each member to be restricted to 25 targets at each weekly shoot. The executive committee was empowered to procure the badges, to be shot for the ensuing season—a club badge and a badge for the B and C class, to be held each week by the shooter making the largest score, the club badge to the member making the best average during the season; no average to count unless shot for at least fifteen times. It was also decided that the club join the State Sportsmen's Association.

MIDDLETOWN, (N. Y.), GUN CLUB.—At the annual gun club meeting, held May 5, William Clemson, Esq., a gentleman who has made guns and gunning a study, and is probably better posted in the matters coming before an organization of this kind than any other person the club could have chosen, was unanimously elected President. The old-timer, "Potty" Worcester, was re-elected Field Captain, and Wm. H. Crawford was elected Secretary and Treasurer. The regular shooting season will open Thursday, May 12, and continue as long as the weather will permit, every Thursday afternoon. The public generally are invited to join with the club in shooting, and those not wishing to become members, will be allowed to shoot by paying a small fee. It was decided to hold a public shoot Decoration Day, open to everybody. —B. H.

THE POUGHKEEPSIE GUN CLUB will hold its annual tournament on Thursday, May 26, and prizes to the amount of $300 will be competed for, among which are a Colt's hammerless $100 gun, Colt's $55 gun, lightning repeater rifle, revolvers, etc., also an attractive list of sweepstakes. For programmes in full address A. C. GALLUP, No. 292 Main street, Poughkeepsie, N. Y.

Canoeing.

FIXTURES.

The Royal C. C. will sail their Challenge Cup Race on Hendon Lake, on June 11, 1887, and invite American canoeists to attend and compete.

MAY.

28-30. East. Div. Spring Meet, Haddam Island.
28-30. Hudson Meet, Croton Point.

JUNE.

THE MYSTERY OF THE NORTH BRANCH.

ONLY after long reflection did I conclude to write this. Its veracity will be questioned, and I can bring no proof to sustain myself, for all trace seems to have been swallowed up by the earth. But I will try to give a simple account of the strange adventures which befell me and my companions several years ago. We three, Dale, Carson and myself have kept the secret well. Perhaps if my intentions were known they would hold me to the solemn agreement which we entered into long ago, and which time has no power to annul. But at all events I shall keep my peace and they shall remain ignorant of my intentions until they see this in print. There are times when I fancy it was but a dream; and I can only convince myself of its strange reality by glancing at a broken fragment of rock, inscribed with uncouth and almost undecipherable characters. But looking more closely the eye can distinguish, in rude figures, "*July 2, 1773*," and in letters but faintly visible, "*I write this at the point of death.*" But I am digressing, and must go back.

In August, 1884, we made our first canoe trip down the North Branch of the Susquehanna. The country was new to us, and this added a keener enjoyment to our trip. One evening at sunset we were floating along through a mountainous country. That region is all mountains, but just at this point they were unusually steep and towered high on both sides of the river. We were looking for a camping place, but our search had been unsuccessful, and now the sun was below the horizon, and a dusky shroud had already begun to envelop the landscape. Darkness would soon be upon us. The steep mountain sides offered no protection. Abruptly descending into the river they afforded not even a foothold along shore, much less space to erect a tent. So we floated along too tired and weary to trouble ourselves much about it.

Carson and I were skirting along the one shore while Dale was far across on the opposite side. It had suddenly grown darker, and Dale and his canoe were lost to sight in the blackness which shrouded the distance. But all at once a shout rang out, echoing and re-echoing among the mountains, then a second, and then a third. We headed across and, nearing the other shore, Dale's form loomed into view. "Look here, fellows!" he exclaimed, "Here's a small gravel bar; we can drive stakes, and hold the tent up somehow." We paddled nearer, but suddenly encountered a swift current that nearly carried us past. A few vigorous strokes and our canoes grounded on the lower end. The mountain was steep as ever, but just at the foot lay a strip of gravel large enough to hold us comfortably. The current dashed past at a marvelous rate of speed. It was now very dark, though we knew the moon would soon be up. Under the circumstances we could hardly be very choice about camping, and with a feeling of relief we stood up in our canoes and stretched our cramped limbs.

And now happened a strange thing. Dale was at the further end of the bar. He rose up, placing both hands on the side of his canoe to steady himself. As he did this his paddle dropped into the water and was borne swiftly off. Hastily seizing mine, which I passed to him, he pushed off, and the current whirled him away. We saw him swiftly floating toward the mountain walls just below. We saw him in the dim light lift his paddle from the water, and then, just as we expected to see him stem the current and paddle up toward us, he disappeared completely from view. We rubbed our eyes, but to no purpose; he was gone. The space between us and the edge of the mountain was vacant. Could it be a delusion? A moment ago he was there in full view, and now he had vanished completely. Had the mountains swallowed him up? But hark! What was that?

"Help! help!" rang in our ears. What a horrible sound! So near apparently, and yet as if it came from the very bowels of the earth.

"Help! Help!" Again it rang out in agonized tones. It was Dale's voice. We hesitated no longer. Off we shoved with the current, and straight down toward the solid wall it carried us at terrific speed. If we struck our canoes would split from end to end.

Carson was a little ahead. I had hastily thrown him a line, and he was towing me behind. And now the lofty mountain, a mass of blackness, loomed threateningly above us, and then we seemed to pierce right through it. We scraped and bumped over rough rocks till our canoes threatened to fall apart. The dim light suddenly vanished and we were plunged in utter darkness. Dale's cries for help, magnified a thousand times, ringing despairingly in our ears. It was all too horrible to realize. Where were we? The current was swift as ever and we were gliding between rocky walls, for our canoes would scrape first on one side then on the other.

"We are under ground," cried Carson. His voice fell on my ears like a pistol shot, and echoed and re-echoed with numerous reverberations, which grew fainter and fainter, and finally ceased altogether. It was the horrible truth. The current was bearing us every second further away from light and life and hope, and dragging us down, down under the earth, to what end we knew not.

The air chilled us to the very bones, and the darkness—no words can describe it. I was side by side with Carson now, and Dale was just ahead.

The current was not so swift, and the channel had evidently widened, for our canoes struck no more on the sides, and our paddles stretched out at arm's length touched only the empty air. I leaned over and drew a small bullseye lantern from my forward hatch. A moment more, and its bright rays shone out and illumined the darkness. All around us was empty space, and above us as far as we could see. We were on an underground lake; how large we could not judge. We were moving rapidly, too, for several times we shot past limbs of trees floating on the water.

We caught up with Dale, and, floating three in a row, we held a council. To go back against the current was simply impossible. We were far away from the entrance by this time. One thought kept our spirits up. There must surely be an exit for such a body of water, and by trusting ourselves to the current we would ultimately reach the open air again. Then a spirit of exploration took possession of us and relieved our minds so much that we made a lunch off a box of potted ham and crackers. We had evidently made a chance discovery of this cavern, for in size it appeared to be great. One thing was unaccountable. How could it have escaped notice? We had entered it in the dark. In daylight it must be in plain view. It was too knotty a question for us to solve, so we gave it up, and turned our attention to more serious things.

Long afterward I came to a conclusion which was probably correct. The entrance, which must have been narrow, ran in a few feet and then turned somewhat abruptly. Darkness prevented further view, and the few stray fishermen who came that way never gave it a second thought. An ordinary boat could not have entered. It had barely admitted our narrow canoes.

Dale now lit his lantern. We were assured of light, at all events, for we had a bottle of oil, plenty of matches, and even a dozen small candles besides. Our provisions comprised boiled ham and tongue, a variety of canned goods, groceries, plenty of crackers, and half a dozen loaves of bread purchased that day at a farm house—enough to last us a few days anyhow.

The current now varied, sometimes very swift and then at times sluggish. Once or twice we passed rocks on either side of us, and finally our light shone on steep ledges, which at first some distance apart, soon closed in on us and narrowed down to a channel probably 20ft. wide. Now and then rocky shelves appeared a few inches above water, and at times our light shone into dark galleries which ran back into the mountain. Once we saw a roof above us covered with stalactite formation which glittered like diamonds in the rays of our lanterns. For the most part nothing was visible above only black, empty space.

Suddenly a cry from Carson broke the stillness. Even now I shudder to think of it. "Look! Look!" he shrieked. "What is that?" His finger pointed to a square-shaped mass of rock probably 10ft. high. It sloped toward us and on the flat top lay the skeleton of a man, the bones whitened with age and the grinning skull presenting a fearful contrast to the black rocks around it. The arms were folded on the breast. Several stone vessels stood beside it. It completely unnerved us and instinctively we grasped our paddles, and not until the dread apparition was far behind us did we draw a full breath. We trembled all over and our fright did not leave us for a long while.

Even our perilous and strange situation did not drive off the feeling of weariness which now oppressed us. I looked at my watch. It was 12 o'clock. No material change had taken place in the channel. We still floated between rocky walls which extended up beyond our vision. Sometimes the channel widened considerably, but trusting to the current we floated straight on.

About half past twelve, I think, we floated into a pool of some width, and drifting near one shore our light fell upon a gravel beach. We mustered up courage enough to land. It ran back some 20ft. to the wall of rock. It was only about 30ft. long, but back from the center, a gloomy-looking hole pierced the rock evidently extending far in. It was just large enough to admit a man standing erect. We were too much exhausted to give it any attention, and wrapping ourselves in our blankets we lay down on the outstretched tent. I found it impossible to sleep and tossed about uneasily.

It was a strange scene. Our feeble lamps shed a sickly glare on my sleeping companions and upon our canoes pulled half way up on the beach. It could not pierce the darkness in front of us, and

the rocky wall in our rear, illuminated with this ghastly light showed up with horrible distinctness the gloomy hole in its sides.

I fell asleep at last from sheer exhaustion. Dale woke me some time after. He and Carson were up and anxious to start. They declared they had slept for hours. I looked at my watch and found it was 4 o'clock. We stowed our blankets away, and as we folded up the tent I picked up from the gravel several flint arrow heads in very good condition.

This discovery put us in good spirits. The cavern had been used by Indians and some exit from it must exist. We concluded to explore the passage behind us. As a wise precaution, we tied an oil silk line to the end of a canoe, and taking a light we started in, unwinding the line as we went. The passage was narrow but free from rocks. We picked up more arrowheads, and several times we stumbled over what appeared to be human bones. Our line was short, and on reaching the end we turned back, for numerous passages running from both sides of the main passage made it extremely probable that we should lose our way if we continued further. So we retraced our steps and shoved off into the unknown current more hopeful than ever of finding our way out.

Hour after hour we traveled on, and but for one good omen we should have given up in despair. Before us some distance we saw a bar of pale white light streaming obliquely down. We paddled swiftly to it, and there far, far above us, too great a distance for the eye to calculate, was a sunbeam streaming in through a small crevice. How far away it was! We lingered near for some time, loath to tear ourselves away from the one link which bound us to the open air. It was now about noon. It did not seem so to us. Down here under the earth day was night and night was day. And now comes the strange part of our adventures.

The channel had narrowed a little and consequently had become somewhat swifter. Suddenly we shot out into a vast pool, and so occupied were we in gazing round on the huge walls of rock that the current, unperceived, drifted us with an eddy and we floated up backward till our canoes grated on a beach of shining white sand.

We stepped out. Our feet scarcely left a mark upon its smooth, level surface, worn solid by time and the action of the water. On both sides it terminated a short distance away in solid rock abruptly descending into the water. Impelled by an irresistible curiosity we took a light and advanced. It sloped upward for some distance till it reached a point some 12ft. above the water level. Here it was perfectly flat, and as we reached the top, and threw the light before us we recoiled in horror, and with difficulty refrained from shrieking aloud. A few feet off lay the skeleton of a man, the limbs twisted out of shape and the arms thrown over a smaller skeleton which lay upon the breast. Evidently a man and a boy. They had died in each other's arms. For a while we gazed on this horrible spectacle with strange emotions. Was this prophetic of our fate? Were our bones destined to lie somewhere in this vast cavern? Were we never again to see the surface of the earth and the bright sunlight? We shuddered and turned away. Dale raised the light and it fell upon the rocky wall behind, and brought into view an inscription upon the smooth surface. We drew near, and there rudely scratched with some sharp-pointed instrument we read the dying message of the unfortunate wretches whose bones lay before us. The writer had started on a flat fragment of rock, and had inscribed the date, "July 2, 1778," and the single sentence, "I write this at the point of death." Then he must have fallen from exhaustion, and been unable in the darkness to find the place, for he began over again several feet away. It was very brief:

JULY 2, 1778.

I write this at the point of death. The Indians captured us five days ago, and bringing us here left us to die. We cannot leave this spot. My son is now dead, and I pray that the end may soon come.

ISRAEL B——

Moisture dripping from the rocks had worn the name away and his identity was lost. The Wyoming massacre following so soon after had probably swallowed up all trace of him. It was an awful fate—brought to this isolated spot and left to die in the darkness.

I grasped the flat fragment of rock on which the inscription had first been commenced, and succeeded in pulling it loose. I brought it with me, bulky as it was, packed away in the canoe, and it lies at my side as I write.

We picked up a few arrow heads and an Indian needle. The point was blunted, and it was probably with this that the message was written. We took one more look at the whitened bones, now divested of much of their horror since their history was known to us, and then we turned away and went down the sandy slope with sad hearts.

We embarked in silence, too anxious about our own fate to think much of the scene we were leaving behind us. We had no appetite, though nothing had passed our lips for hours. The current was now very sluggish and we used our paddle considerably, traveling in single file. The channel grew ragged, sometimes huge rocks threatened to block our way, and stalactites hung down within reach of our paddles. Here and there strips of sand gravel ran along the sides and the rocky walls were perforated by numerous holes, some large enough to enter. But we kept on, no stop and paddled on hour after hour. Once I struck a rock, and my lantern was thrown into the water, and instantly sank. Only one was left now. About half past seven the water grew very swift and our paddles were not needed. We were carried along at a tremendous rate. A little ahead we saw a belt of sand lying on the right. "Look!" said Carson, as we drew near, "What is that?" We were just opposite now, and there, a few feet from the edge, half buried in the sand, lay a small iron chest, studded with brass nails, which could hardly be seen for the thick coating of rust. Even as we looked the current had whirled us past and the chest vanished in the darkness. The current was too strong to go back and we could only conjecture at its contents. Treasure of some sort we thought it must contain, and we did make an effort to paddle back, but without avail. We could not gain an inch on the current, so we gave it up and with hope strong in our hearts we trusted ourselves to the current. Shortly after we reached a point where the channel divided, and cut by a massive wall of rock ran to the right and left. A moment's hesitation and then our eyes fell on an arrow marked distinctly on the rock, the barb pointing to the left. We accepted the guidance. And now the passage was very narrow, with smooth walls on each side and a low roof. Carson took the lead and Dale and I followed singly. Faster and faster ran the current, apparently gaining speed every moment.

Carson swung near one side and ran partly under a protecting shelf of rock. He pushed the bow out just in time, but the stern ran in close, and in an instant the lantern which had been placed behind him was swept off and we were plunged in total darkness. It was a moment of horror. Our speed had increased fearfully and the dashing water made a deafening roar in our ears. I shrieked, but my voice was drowned in the awful roar. I seemed to be gliding over a precipice, and then above the thunder of the current I heard distinctly, "Stoop low! Stoop low!" Instinctively I crouched down, my head seemed to be splitting open with the awful crash, long twining arms seemed to thrust out and strike my head and shoulders, my canvas helmet was jerked violently off, and then what a moment of happiness. I felt the warm air surge upon my burning cheek and throbbing temples, pale light burst upon my vision, I saw white-capped billows shoot past me, I saw trees and the dim outline of mountains and hills, twinkling lights away off in the distance, above me innumerable stars and the moon flooding everything with its silvery light. All in a moment I realized that we were saved and were shooting on the broad surface of the river again, every second speeding further and further away from our horrible prison.

We were beside ourselves with joy, and in the bright moonlight we paddled on, inhaling deep draughts of pure air. In fact we traveled several miles before we thought of stopping. When we had been vomited out of our subterranean prison and thrown on to the surface of the earth again, strange to say not one of us thought of looking back or fixing any landmark by which we could distinguish the place again. I can only remember from a hasty glance that mountains towered steep above us, and that the river was exceedingly swift and rocky. The exit from the cavern was evidently entirely concealed by over-growing bushes, and I have no doubt that the swift current would effectually prevent a boat from ever getting near. I have since located the place pretty correctly.

Little more remains to be told. In two days we rounded the great bend and reached Wilkesbarre, and from there made rapid progress home. We had a secret consultation, and agreed not to breathe a word of our adventure. Perhaps our thoughts were fixed on that mysterious iron chest.

The following summer we packed our traps and launched our canoes on the North Branch again, fully equipped for another underground journey. But a bitter disappointment awaited us. The entrance to the cave could not be found. Everything was changed, and the supposed entrance to the cavern was buried in tons of limestone and slab rock from a recently opened quarry on the mountain side. Search was useless, and we gave it up in despair.

It appears at times like a dream, and I have long hesitated about making known our strange adventures. For what proof have we? But now it is told. The location I shall keep secret, for, perhaps, some day when the mountain quarry is vacated, and the stones have been carried away or blasted out, the entrance to the cavern will appear again, and its mysteries will come to light. But that is improbable, and I am reluctantly compelled to believe that the ghastly skeletons, with their awful history, the corroded iron chest with its unknown contents, and whatever hidden secrets the dark caverns may possess, will be forever hidden from the eyes of man.

W. M. GRAYDON.

STATEN ISLAND AND ITS VISITORS.

ON Saturday last at about 8 P. M. Messrs. Vaux and Burchard, of the New York C. C., were running to catch a train at West New Brighton, Staten Island, coming from the direction of the Staten Island Athletic Club. When near the station a man threw himself violently against Mr. Vaux, who was some thirty feet in advance, and shouldered him into the street, where he fell heavily. Mr. Burchard, on coming up, spoke to the fellow, one "Burns" McTamany, a huckster, a tall, powerfully built young man with a local reputation as an athlete, remonstrating with him for maltreating a man so much inferior in size and strength. McTamany menaced Mr. Burchard, who stepped back, not desiring to miss his train, and become involved in a street broil with a man who was evidently partly intoxicated. He retreated into the street, the man following him and finally striking him. Mr. Burchard hit him in return with a light umbrella, when he was thrown to the ground and his opponent jumped on him, placing his left arm on Mr. Burchard's throat and choking him, crushing his chest and striking him in the face with his right fist.

Meanwhile a second man had attacked Mr. Vaux, but the wily canoeist, recognizing his inferiority as a boxer against a taller man, grappled and soon threw him. The fellow at once begged off and promised to go to the assistance of Mr. Burchard, who was struggling beneath his burly antagonist, the latter swearing, meanwhile, to kill him. Mr. Vaux attempted to drag McTamany off, when the other man, Johnson, interfered and tried to hold Mr. Vaux. Mr. Burchard finally broke away and crossed the street, when his drunken assailant followed him, again threatening to kill him. As he came up Mr. Burchard seized him by the arms, but was forced backward over the picket fence, severely injuring his back, and the fellow, unable to use his arms, butted several times with his head, breaking Mr. Burchard's nose and blacking both of his eyes. Mr. Vaux again freed himself and ran up, supporting Mr. Burchard from behind, while he reached around his head, and as McTamany butted forward, struck him a powerful blow in the nose, over Mr. Burchard's shoulder. Both then broke away and ran to the police station, and returning with officers, captured Johnson and found McTamany hiding behind a fence. A complaint was at once made and the prisoners held on $250 bail.

Mr. Burchard arrived home at 1 A. M. and placed himself under the care of a surgeon, who set his nose. His injuries, it is hoped, are not dangerous, but he was very severely handled. Both gentlemen were at a disadvantage, as they had run some distance and were completely winded when attacked. On Monday evening a hearing was had before Justice W. J. Powers, at which Messrs. Vaux and Burchard told the story of the assault, the defendants pleading not guilty. The case was postponed until Monday next at 7:30 P. M. at Justice Powers's court, Richmond Terrace, West New Brighton, Staten Island, the assailants being allowed to go on the same bail.

As both gentlemen were strangers to their assailants there is no visible reason for the assault except that McTamany, being partially intoxicated and out for a lark, thought that he could throw a small man into the gutter with impunity.

The assault was committed within a few rods of the police station on the principal street of the village, and people were passing at the time, but no one attempted to interfere.

Staten Island has long been a favorite resort for boating men on account of its facilities for yachting and canoeing, and there are many who board there in summer and visit it throughout the year, spending a great deal of money among its tradesmen. Among these the New York Canoe Club has been very favorably known along both shores, especially at West New Brighton, where it has made many friends. It remains to be seen now whether this brutal and unprovoked assault by two of its residents will be resented by the citizens of West Brighton and whether the offenders will be adequately punished. Such occurrences as these are calculated to drive away a very desirable class of residents and visitors, and self-interest alone should move the citizens to action in the present case. The many boat clubs along the shore are specially interested, as their members have before this been victims of similar attacks.

THE HUDSON RIVER MEET.

Editor Forest and Stream:

Canoeists in the vicinity of New York wishing to attend the Hudson River spring meet, May 28-30, can reach camp by steamer S. A. Jenks, which leaves pier foot of Harrison street, New York, daily at 3 P. M. Up river canoeists can probably get steamers to stop at Rockland, which is within easy paddling distance of the camp.

The camp site, which is on the southeast side of Crotou Point, has a good sand beach, a fine place for land tents, and a convenient spring of good water. Supplies will be brought to camp or can be obtained in the village.

A successful meet is anticipated, as all the prominent Hudson River clubs will be represented. Some of the Jersey clubs will also turn out in force. A cordial invitation is extended to all unattached canoeists as well as members of clubs. Any further information will be gladly furnished upon inquiry.

H. M. CARPENTER, Purser Shattemuc C. C.

SING SING, May 7.

BROOKLYN C. C. NOTES.—In spite of the bad weather there was a good attendance from the Brooklyn C. C. present at the boat house on May 7, to see the trial of Mr. Ward's new rig. This is practically a leg of mutton sail, with one batten starting from the tack of the sail. It gives a very flat sail, and proved very satisfactory in the light airs going. The Brooklyn cup has been challenged for, for the first time this season, and will be sailed for on Saturday, May 14. Eight entries are expected to start, and all the new rigs will undoubtedly be seen for the first time under actual trial. The challenger on this occasion is Mr. R. Blake, a new contestant for cup honors. Canoeists who may visit the club on that occasion will be cordially welcomed and taken care of. Private letters from England report that Baden Powell is building a 16x30 canoe, fine forward and full aft, with very little freeboard, said to be designed on the true wave form theory. He also has a new rig, giving nothing in front of the mast and very little sail aloft, approaching the leg of mutton shape.—G.

IRRAWADI C. C., Davenport, Ia., May 7.—*Editor Forest and Stream:* The fifth annual meeting of the Irrawadi C. C., held the first Monday in April, resulted in the re-election of the following officers for 1887: Com., Marcius C. Smith; Vice-Com., Lee G. Kratz; Sec., Edward S. Hammatt; Ex. Com., Marcius C. Smith, Joel M. Parker, Stanley B. Lafferty. The club totem is a dolphin, paddle and letter C. The old I. C. C. burgee was discarded and the new signal is a light blue-pointed burgee with a white disc in the center, on which is placed the club totem. The club was organized in 1883 and now has the following fleet: Ceiba, Isis, Lotus (No. 907 A. C. A.), Daphne, Solitaire, Sunbeam, Pocahonats, Naiad, Onaway, Dolphin.—E. S. HAMMATT, Sec.

A. C. A. MEMBERSHIP.—Trenton, N. J., May 7.—Mr. Julius H. Seymour, of New York city, and Mr. Charles R. McNeil, of Litchfield, Conn., have applied for membership in the A.C.A.—WM. M. CARTER, Sec.

TITANIA.

THOUGH, as it has proved, the second class is not to have the honor this year of furnishing a Cup defender, it will make a better showing than it has done for a long time, and threatens to monopolize much of the interest of the early races, in spite of Mayflower, Puritan, Priscilla and the new boat of Gen. Paine. Beside Bedouin and Gracie, which have virtually constituted the class for a season or so, and Pocahontas, who makes her entry into the class after some years absence, there will be two entirely new yachts by different designers and of different models, the success or failure of which will be watched with almost as much attention as the new boat in the first class. One of these, the Shamrock, was launched last week at Bay Ridge, the other will be launched on Saturday, at Piepgrass's yard, City Island. A special interest attaches to the latter craft from the fact that she is a departure in many respects from her designer's previous successful efforts, and also that she is built of steel, the second American sailing yacht built of this material, and the first vessel from the new yard.

Titania, as the new yacht is named, was designed by Edward Burgess for C. Oliver Iselin, of New York. but with the general features of the other two Burgess boats she differs materially from both in many respects. In the sheer plan she shows the same plumb stem and the long high counter, with less sheer, being quite straight on deck. The sternpost has a rake of some 30 degrees, but the draft is greater, and the keel, rockered at its middle portion, rises rather straight to the forefoot. There is very little crown to the deck which, with the straight sheer and great beam, gives it a very flat look. It is in the midship section, however, that the difference is most marked, the new boat having a regular S section, a deep keel rounding into a floor with a great deadrise, a hard bilge above, and a side slightly turning in at the gunwale, the greatest breadth being well above the water. The hollow of the garboards is carried well fore and aft, making the boat very fine below, her body being about the surface of the water.

The principal dimensions are:

Length over all	82ft.
Length on l.w.l.	69ft. 9in.
Beam, extreme	21ft.
Beam, l.w.l.	19ft. 11in.
Draft	8ft. 9in.
Displacement	75 tons.
Ballast, keel	30 tons.
Mast, diameter	16in.
Masthead	9ft.
Boom, extreme	70ft.
Boom, diameter	12½in.
Gaff	41ft. 6in.
Gaff, diameter	9in.
Height, deck to truck	107ft.
Spinaker boom	67ft.
Spinaker boom, diameter	7in.
Bowsprit, outboard	34ft.
Bowsprit, diameter	12in.

The hull is built entirely of mild steel, the plating being ¼in. The keel is 2⅝in. thick, built up of four pieces—one on each side of the slot, one forward and one aft. The fore piece is 6in. wide where it joins the trunk, and tapers to meet the stem, the after piece being of similar shape. One end of each lies between the corresponding ends of the pieces that run along the bottom of the trunk, the three ends being riveted together. The stem and stern forgings are each sided 1¼in. The headledges of the trunk are channel beams, 4in. wide, with side plating of ¼in. steel, stiffened with angle irons at every 2ft. The trunk is carried up to the deck beams and closed in with wood on top. The lead is run directly into the bottom of the yacht. The frames are single, 2½×2½×¼, spaced 21in., with deck beams of the same size and spacing, the latter being doubled at the skyhight and mast partners. On each frame is a gusset plate of ¼in. steel, 12in. on each arm. The butt straps are 6×¼in., double riveted. The bilge clamps are 2½×2½×¼, and the planksheer is 10×¼, covered with oak. The deck is of clear white pine, 2¼×2¼, fastened with a yellow metal screw from beneath through each deck beam. Abreast of the mast are two diagonal plates, 6×¼in., laid on the deck beams, the planking being scored over them, and from the rudder stock aft runs a similar plate, 10×¼in. The mast partners are of 4in. oak, and a filling of the same takes the bitts and windlass forward. The centerboard is 20ft. long and will drop 8ft. It is of oak, shod with iron. The stanchions are of locust, 2½×3in., the heels bolted through the plating well below deck. The rail is of white oak, 2×6in. and 11in. high amidships, with bulwarks of 1in. white pine. The rudder stock is of 2½in. steel, with a No. 8 Edson steerer. The main chain plates are 8×⅜in. and the others 2×⅛in. The bowsprit is a handsome round stick, 12in. in gammon iron and 8in. at end. It is fitted between the bitts of 4¾×8in. locust, with two hardwood rollers above it, to allow it to run easily. The fid is of locust, 3×5in. The heel of the stick is square, 12×12in. The gammon iron is a very handsome forging, in one piece; a ring 4in. wide, with three lugs forged on the upper side, between which are fitted a 1½x3in. sneave to starboard, for the foresay, and a 1x3in. to port for the tack. The spreaders are each 6ft. long, of hollow spruce, and fit on projecting bosses forged on the lower part of the gammon iron. The bowsprit is fitted to house, but the bobstay is a solid bar. The jib outhaul is of flexible steel wire rope, with no traveler. The shrouds are of 2⅜in. circumference, of crucible cast steel, and the running rigging is of manilla, specially made by Wm. Wall & Sons for the boat. The rigging has all been fitted by Phillip Low, who has turned out a very fine piece of work. The winch for the centerboard is of wrought iron, with a lignum vitæ barrel. The boom is fitted for its entire length with a jackstay of wood, on which run toggles for the foot of the sail to lace to. The sail can thus be hauled out or slacked in at will, being fitted with the regular outhaul at boom end. The boat below is finished entirely in white pine, painted. The head room is 6ft. 2in. under deck. There is a large main saloon, with two small rooms abaft it, on the starboard side is the owner's room and another adjoining it, with toilet room forward, and on the port side is a passage fore and aft, on which open two staterooms and a w.c. The pantry, galley and ice-box, with some large closets, are grouped about the mast, and forward is a very good forecastle. On deck there is a hatch to forecastle and galley, a sail hatch abaft the mast, a large skylight and the main companion, besides a sail hatch aft. The deck fittings are all neat and shipshape and the finish generally is in good taste.

The work is a credit to Mr. Piepgrass, the plating being specially fine, and it is something for New York to feel proud of that she has at least one yard capable of turning out the highest class of work in wood or metal. Bedouin, Oriva, Wenonah and Ilcen have stood for some time at the head, as far as wooden construction is concerned, and Titania is fully worthy to rate with them in quality.

HARLEM Y. C. REGATTA.—The Harlem Y. C. will sail a regatta on June 13 over the club course from Oak Point, open to all yachts. Yachts will be classed as follows: Class A, cabin yachts 35ft. and over; Class B, cabin yachts under 35ft.; Class C, open jib and mainsail boats from 23 to 28ft.; Class D, open jib and mainsail boats under 23ft.; Class E, catboats from 23 to 28ft.; Class F, catboats over 18 and under 23ft.; Class G, catboats under 18ft. The club will contribute $75 prize money, and all entrance fees will be added.

CHANGES OF OWNERSHIP.—Magic, schooner, has been sold by Chas. G. Weld, of Boston, to Thornton N. Motley, Larchmont Y. C., former owner of the sloop Vivid....Ocean Gem, steam yacht, Wm. P. Clyde, owner, has been sold to Chas. H. Taylor, to be used by the *Boston Globe* for collecting shipping news, and has left New York for Boston....Norna, schooner, Alex. J. Leith, has been sold to T. N. Vail....Percy, keel sloop, of Boston, has been sold by A. H. Blackman to F. C. Fowler, of Moodus, Conn....Maud, keel sloop, has been sold by Wood Bros. to J. E. Davis, of Boston.

LARCHMONT Y. C.—A meeting was held on May 7 at the club house, at which the following classification was adopted: "Class C to embrace a sailing measurement of 75ft. and over; Class D of 60ft. and under 75ft.; Class E of 52ft. and under 60ft., and Class F of 42ft. and under 52ft. Thirty-five new members were elected,

A NEW BOOK FOR CORINTHIAN SAILORS.

THE growth of all outdoor sports, both in this country and abroad, has been very rapid within the last half dozen years, and yachting has come in for its full share of the general prosperity. Not only is the interest much greater than formerly, but the numbers have greatly increased, especially in the smaller classes, and the number engaged in the sailing of small craft of all kinds, from the little model yachts to boats of 20 to 30ft., is very much greater in proportion to the entire body of yachtsmen than it was but a dozen years since. At that time yachting was confined largely to the owners of the larger classes of yachts, but to-day there may be found in every town near the water, scores of young men who sail and perhaps design and build their own boats, who are familiar with the large yachts of the world and their racing, and who keep up a lively and active interest in all that pertains to yachts and sailing. It is only natural that this large pleasure marine should demand a literature of its own, to meet which want the Forest and Stream Publishing Co. have already published works that are the acknowledged standards in their various departments of yachting and canoeing. To fill out still further this valuable collection they have now ready a new book intended mainly for amateurs and young yachtsmen and boat sailors, treating at length of the design, construction and use of model yachts, canoes, sailing boats and singlehanders.

The sailing of model yachts, while looked upon by some as mere play, is a most important branch of yachting, and one from which much can be learn d by the careful sailor. While the actions of models and their larger prototypes are not in all respects identical, there so closely related that the value of careful experiments on models has long been recognized by the first authorities, many of whom have given much care and time to the subject, and with important results. In "Yachts, Boats and Canoes" the author, Mr. C. Stansfeld-Hicks, has devoted the first chapters to this subject as the one to which the young yachtsman first turns before attaining to the dignity of commanding a craft of his own. Considerable space is devoted to the subject, giving not only such simple directions as will enable the young naval architect to plan, build and rig his first boat, but going thoroughly into the finer details of this charming and instructive sport, into the construction, rigging and match sailing of the elaborate and costly model yachts found in the larger clubs. Several large designs of hulls and rigs are given on seperate plates.

Following the model yachts the author takes up canoes and small sailing boats of different kinds, explaining their construction, rig, fittings and uses, wood and canvas boat building, and the fitting out of canoes with rudders, centerboards, etc., the text being explained by a large number of small cuts in addition to large folding plates.

The main portion of the book is devoted to single-handed sailing, in which the author is an enthusiast, growing eloquent in praise of the sport in the following introduction which will in once appeal to all of similar tastes: "There is a peculiar charm in sailing small yachts, a sense of freedom and the consciousness that all depends on one's self, which to a great extent disappears with larger vessels; and this, perhaps, tends to create the feeling that the little craft herself is something more than a mere boat, a pleasant companion in fair weather, and a tried and true friend when the horizon darkens with wind, and the rising waves are tossing their snowy crests in eager anticipation of the fray. Then it is that the boat and her owner, as one sentient being, sweep forward their onward course, ready to take advantage of every puff and lull, now running down the steep declivity of some huge sea, and then quickly rising to meet the crest that comes rolling on as if certain to engulf the little craft; but buoyant as a cork, and kept well up to it by her helmsman, she gaily mounts the watery acclivity, and pausing for a moment on its summit like a seabird, heels well over to the access of wind in her sails, and shoots away into the valley below; and though the puffs may come heavier and heavier, and a real hard blow come on, yet still the little creature, under her small rag of reefed canvas, dodges away to windward, bowing and curtseying to the unfriendly elements, until the last tack is made, and with her port in view the sheets are eased, and in a few brief moments the boat and her owner, both dripping with brine, and the latter sufficiently exercised to enjoy the restful change, glide into their destined haven. A few moments more and the little craft, with her wings folded, is lying gently at her moorings, and the worthy owner, in dry flannels, is enjoying a well-earned rest, while he superintends those culinary operations which are soon to minister to the well-being and contentment of the inner man; and then to himself, if he be alone, or to his chum, if he have one aboard, will he proceed to reconsider and review various little episodes touching the performance of his vessel, or some delicate bit of steering, or how he did what he thinks it would be perhaps better not to do again, or *vice versa;* in short, he fights his battles over again, until the cabin clock warns him that an early start necessitates his turning in without delay, and so he retires to his comfortable berth, and soon the dryness and coziness, all the more appreciated when contrasted with the tossing he has just had, and the easy swing of the little vessel, and the swishing lullaby of the water running past her bows, send him off into the happy cruising ground where Morpheus reigns supreme.

"There are a few men who have had an apprenticeship in small craft but look back with a great deal of half-regret on those happy days, even though they may now be the proud possessors of a 'flying fifty,' and the contrast is strong between the two. On the one hand, all the comforts and pleasant surroundings which the superior accommodation of the large vessel affords; the spacious saloon, the natty owner's cabin, the pleasure of having a cabin at the disposal of a friend, and the additional charm of being able to enjoy the society of ladies, for whom the spacious after cabin is specially designed—these are all weighty arguments in favor of the big boat. Then you have the feeling that you are practically a passenger, and though your skipper may be a worthy man and consider you to be pretty fair for an 'amatoor,' still the mere fact that you have a crew perfectly able to pull and haul and do all the work of the vessel without your assistance makes it unnecessary for you to do more than take the helm so long as the skipper thinks fit to trust you with it (there are, of course, many owners who can and do sail their own vessels; but, as a general rule, the skipper is the practical man and takes charge when he sees need); and when racing, unless in a Corinthian race, the skipper is almost invariably master of the situation Again, in a large boat there is not only the boat to be considered, but the crew. You may have a good crew and you may have quite the reverse, and the same may be said as to the skipper; while in the small craft you have no one to please but yourself, and it is almost impossible for those who have not tried the experiment to imagine the amount of amusement and health-giving recreation that is obtained by working a small yacht."

The following directions will be useful to beginners in this branch of yachting: "In choosing a boat for working single-handed one cannot be too careful as to the amount of gear involved, and the whole matter should be looked at not as it is in ordinary weather, but how it would be in a hard blow; and the strength, knowledge and activity of the owner is a great factor in determining the size of the sail and the weight of the gear. In any case it is much better to be under spared and canvased to start with, and when you see what you can do with the boat it is easy enough to make any requisite alterations. * * * In selecting the type of boat, the intending owner will have to be guided by the nature of his requirements, as it is impossible to have a craft perfect in all points. There are, however, many points which a good boat should possess, and before discussing them I would say a few words as to a favorite mode of procedure with amateur yachtsmen, which is buying an open boat and converting it (or trying to do so) into a yacht. This is about the worst way of going to work, for many reasons. In the first place the boat was probably designed and built for rowing, with little or no rise of floor, and heavy quarters, so that however she may be altered aloft by her topsides being raised, and a deck given her, she remains a mere makeshift, and at the same time she will probably cost more before she is finished than a yacht of about the same size. There are certain advantages in this description of craft, i. e., good beam, roomy cabin, and capability of taking the ground, against which you have shallow draft, insufficient lateral resistance, unless with a great keel, and no head room. Such boats, too, being brought down by ballast to waterlines they were never designed for, have to carry a great press of canvas to get them along at any rate of speed, and, instead of dividing a sea, spank it, sending up showers of spray, while in a short chop they are almost useless, and in a long swell, and with sheets slightly off, they get along fairly; but from beginning to end they are boats, with no pretensions in form or ability to yachts."

The following remarks on the rig of small boats are of general application: "What is the best form of rig for a small boat is not an easy question to answer off-hand. If for an open boat, or for smooth-water sailing, it is best to have all the canvas in one sail if possible, and this may be either a gaff sail or a balance lug. The advantages of such a rig are simplicity in gear and great efficacy of sail power, as the more the sail plan is cut up the less result is obtained from it. The disadvantages are that while craft under such rig are very handy and close on a wind, they are inclined to veer wild and sheer heavily when running free; while for sea work, if the craft is of any size, one sail becomes difficult to manage in a breeze. Of the two the balance lug is better off the wind, and for small boats perhaps no better can be devised, the standing lug is also a useful sail, and has more lifting and less pressing tendency than the gaff sail. For speed there is no rig better than the cutter for sea work, and if a trysail is carried the boat can be made as snug as it is possible to make a craft; but a cutter-rigged boat is heavier to work than one rigged as a yawl, and for this reason many small boats are yawl-rigged. For getting under way easily, and for tiding down a river when there is no hurry, a yawl is charming, as it is not necessary to set the mainsail at all; but a smart little cutter will work almost as well under her headsails, and if a balloon foresail is set, the cutter will work almost as well as the yawl with her mizen added. Under all sail the yawl's mizen is always getting a back draft out of the mainsail, and never does half the work it should do. The great benefit derived from it is that the mainboom is kept in the boat, and I believe if a good boat were rigged as a cutter with a short boom, she would be better for sea work than a yawl, particularly if she carried a balloon foresail sheeting well aft to work under when reaching, or when it is not desired to set the mainsail. On the other hand there are certain advantages in a mizen, such as luffing the boat in a squall, but in a blow with any sea on, the mizen is almost the first sail to stow, as it can, as a rule, only be carried with large jib set. When this is shifted for second jib the mizen is reefed, and with a small jib stowed altogether, it will be readily understood that the reason of this is that, as diplomatists say, 'to keep up the balance of power,' and though from its low center of effort, the mizen does not heel the boat much, it must not be forgotten that in a breeze it is requisite to have commanding canvas set, and this must be of sufficient hoist to keep the boat going, otherwise when in the trough of the sea she loses her way. For this purpose all small boats should have a trysail, storm lug or some storm canvas with a good hoist and suitably fitted with strong double sheets. In a blow a foresail is a very pressing sail and the boat is greatly eased when it is doused. A small jib, set on reefed bowsprit and no foresail, will often enable a little craft to make good weather, when with the foresail, even if it were reefed, she would be buried. Of course if it is necessary to make tacks and the boat will not come around without her foresail it must be carried."

LAUNCH OF THE THISTLE.

THE cutter yacht Thistle, which has been specially built to race for the America Cup, was successfully launched from the building yard of Messrs. D. and W. Henderson, Partick, Glasgow, on Tuesday afternoon. In the fall of last year a syndicate of Clyde yachtsmen was formed and funds subscribed to build a craft, which would have a fair chance of success, sailing under the American rule of measurement for the America Cup. The Clyde confederacy, with the traditional shrewdness of North Britons, began at the beginning so far as the practical part of the business went; Mr. G. L. Watson, commissioned to design the Thistle, journeying last autumn from Glasgow to America to take stock of the Mayflower, Priscilla, Puritan, Sachem and others, and we believe that he came back with the idea that he would have a tough job to whittle out the model of a keel boat that would be able to tackle the Yankees in very fine weather. However, he set to work with a good heart, and the Thistle was laid down at the Meadowside Yard in January under a close shed, and none but workmen and those immediately interested have either watched or seen the vessel in course of construction, and it may be said that after the shed was knocked away the hull was covered up with old sails until she was water-borne. The actual model of the Thistle is, therefore, only known to her designer, who laid her off in the mould loft and supervised her construction, and we believe the joint owners of the Thistle, of which body Mr. James Bell, who for several years successfully sailed the Amadine schooner, is director, and among other prominent Clyde yachtsmen we believe that Mr. N. B. Stewart, Mr. John Clark and Mr. James Coats, Jr., have shares in the venture.

Late on Monday night the shed under which the Thistle had been built was pulled down, and the vessel was struck over on the patent slip carriage and run down the next morning to low water mark. About 2 o'clock everything was let run, the sail coverings having been removed from the hull, and Mrs. Watson, the mother of the designer, christened her "The Thistle." Viewed broadside on, the new craft does not appear to have more overhang than the Wendur, but she has a trifle more sheer and a prettier turned cutwater, which, it may be said, carries the national emblem as figure-head, and on the scroll work on the bow is the motto of the Scotch nation, *Nemo me impune lacessit*, and the rampant lion in shield. She shows a nice round side, and is something substantial to look at end on compared to the plank-on-edge type which was the outcome of the exploded length-and-breadth rule. She has, of course, a grand platform to work on, and the deck of narrow plank is beautifully laid. The covering boards and stanchions are of teak, and the wide sweep described by the American elm-rail is hardly suggestive of a racing vessel to one accustomed to the pinched indeck plan of some modern boats that could be named. The principal dimensions are as follows: Length (Custom House measurements), 98ft.; length on load waterline, 85ft.; breadth extreme, 20·30ft.; depth in hold, 14·10ft.; registered tonnage, 100·67 tons. The hull is steel through and through, the plating below the waterline being ¾in., and above 5-16in. The ballast, all but a few tons, is run solid into the keel-plate, and what with keelsons, stringers, diagonal and cross plates, brackets, etc., the vessel is tied together in a wonderful way, although there is no excess of weight where not wanted.

Under deck she is plainly but substantially fitted, and from her great beam has great cabin accommodation. Her area of lower sail will equal the American centerboarder Mayflower, and the mast, with mere a gantline on, looked startling in regard to tautness. The ironwork is a model of neatness, and there is nothing cumbersome in regard to the skylights, hatches, etc., and even with the capstan shipped in its place the foreguard will have a nice clear deck to work on. After being launched the mast was stepped and the loose ballast put on board, and the Thistle was then towed down to Greenock, where she will complete her outfit. She is in charge of John Barr of that ilk, who, from small ship sailing, was promoted to the May, and his last charge was the Clara, which he sailed successfully for two seasons in American waters. The Thistle will probably be ready to bend sail in about a fortnight, and, according to present arrangements, she will be sent round to the Thames to take part in the New Thames Channel Yacht Match, from Southend to Harwich, on May 28. We hear that she will be entered for all available races from Thames to the Mersey, and shortly after the Clyde racing season is over, in July, she will set out for America.—*Land and Water, April 30.*

LAKE ONTARIO.

BELLEVILLE, Ont., May 5.—The annual meeting of the Bay of Quinte Y. C. was held last night, when the officers were unanimously chosen as follows: Com., W. H. Biggar (re-elected); Vice-Com., ex-Com. L. B. Robertson; Capt., ex-Com. R. J. Bell; Hon. Sec., Richard S. Bell; Asst.-Sec., W. H. Campbell; Treas., Geo. N. Leavens; Measurers, Geo. N. Leavens and W. S. Denney. Mr. Alex Robertson, M.P., was chosen chairman of the executive committee and Mr. D. R. Leavens chairman of the regatta committee. The delegates chosen to represent the club in the Council of the Lake Yacht Racing Association were Messrs. D. B. Robertson, R. S. Bell and D. R. Leaven. Com. Biggar is president of the L. Y. R. A., the Council of which body will meet in this city May 14. Four applicants were admitted to membership, of whom two are residents of Lachine, Quebec, who purchased the unfinished second class yacht which was designed by ex-Com. Roy and which is rapidly approaching completion. A committee was also appointed to consider the advisability of erecting a club house.

The club at the instance of the Hon. Secretary, declared themselves on the questions of sub-dividing the existing first class yachts, drawing the line at 50ft. corrected length, of prohibiting the letting of open boats in the second class and of uniform prizes in all classes above 25ft. corrected length. To all these proposals an affirmative response was given and ten representatives of the club will vote in accordance therewith at the L. Y. R. A. meeting.

There is but little in the way of news at present. Com. Biggar will try the experiment of outside lead on the Iolanthe, but will not race her this season so extensively as usual. The Norah will soon be launched at Deseronto and fitted out, and the Atalanta will make the round of the L. Y. R. A. races. She has not been sold, as was reported, but may change hands ere long.

By the way, a strong feeling in favor of excluding professional crews from races under the auspices of the L. Y. R. A. is growing up and I should not be surprised to see it acted upon at the meeting here, at least to the extent of allowing no professionals in races except a sailing master in each yacht. The bane of racing has been its expense, which the proposed reform would reduce to a minimum. PORT TACK.

TORONTO Y. C.—The officers are: Com., Thos. McGaw; Vice-Com., Geo. P. Reid; Captain, Wilton Morse; Meas., L. V. Percival; Treas., W. H. Parsons; Sec., D. L. Macmurchy; Committee—Hume Blake, Wm. Dickson, F. B. Polson, Geo. E. Evans. It was resolved to form a company to manage the business of the club house, instead of continuing the club as a joint stock corporation.

RHODE ISLAND Y. C.

THE Rhode Island Y. C. is the latest, and perhaps the most remarkable, exemplification of the strong and general interest in yachting on New England seaboard. Though it has been an actual organization but a few months, its sudden standing and wonderful growth have indicated that only a charter and constitution was needed to draw together in a compact body a large number of men who were yachtsmen in spirit and deed, whether a yacht club existed or not. It was not realized, however, how great and wide was this interest in the sport until the club called it out. Hustled enthusiastically together last fall, the first annual meeting at Providence in February found the new organization equipped with a name, a charter and constitution and by-laws, and a membership of upward of 200, including nearly every small yacht owner on Narragansett Bay, representing Providence, Newport, Fall River, Pawtuxet, and almost every town on the bay or its tributaries where a sailboat could find water enough to float. As the characteristic boats of the bay are small craft—cats or sloops—it is to this class of boat owners that the club owes its membership and will owe much of its success; but its yacht list will also include a notable fleet of little steam craft and larger boats, like the schooner Madcap, of Boston, and most of the large sloops of the bay, and Peri, of Newport, Kelpie, M. F. Swift, of Fall River, Ada and Alice, well known on the bay, will be found in its club book.

The club adopted the old and well-known pennant of the once flourishing little organization, the Providence Y. C.; and thus organized, set energetically to work to get a permanent house. A site on a big rock off Pawtucket, the most prominent and picturesque spot on Narraganset Bay, was secured, and here the infant organization is boldly erecting a beautiful little Queen Anne style club house on top of the rock and connecting with the shore by a 300ft. bridge. This house and adjuncts is to cost $4,100, which figures will give some idea of the boldness and energy of the club in undertaking its creation in its infancy. Subscriptions have, however, been received by the club from interested gentlemen outside its membership, the treasury is fat with the initiation fees, and as a culminating stroke the club undertook in the latter part of April the revival of the opera "H. M. S. Pinafore," for its benefit, which appropriate nautical entertainment proved an event of social and financial importance in Providence, and netted the organization something over $500 for its building fund. The club house will be completed early in June, and will be gloriously "warmed," and then the organization will settle down to make Narragansett Bay lively with its regattas.

The membership has reached 330, including men prominent in social and business circles in Providence and throughout the State. Its officers are: Com, W. H. Low, Jr., Providence, sloop Lucille; Vice-Com., F. P. Sands, Newport, sloop Peri; Rear-Com., Charles F. Handy, Providence, steam yacht Alert; Pres., Dr. Sayer Hasbrouck, Providence; Sec., E. Howard Wright, Providence; Treas., Dr. R. Herbert Carver, Providence; Meas., Benjamin Stillwell, Paul B. Warren, Providence; Trustees, C. G. Bloomer, Pawtucket; Benjamin Davis and George H. Slade, Providence. Membership Committee, C. G. Bloomer, Pawtuxet; W. G. Brennan, Charles H. Howland, Edgar F. Knowles, R. L. Green, Providence. Regatta Committee, E. Howard Wright, F. P. Eddy, Providence; Elisha S. Arnold, Pawtuxet; R. H. Carver, Charles C. Manchester, Providence.

The club's laws have been based largely on those of the Larchmont Y. C. and the sailing regulations, which have not yet been completed, are drawn up with a view to the classes recommended by the FOREST AND STREAM and already adopted by a number of prominent clubs.

MAYFLOWER AND ARROW.

MESSRS. Paine and Burgess have written as follows in answer to Mr. Chamberlayne's letter:

Dear Sir—As the prospect of an international match between the Arrow and Mayflower has been definitely ended by your decision to attach to the contest a condition restricting the use of the Mayflower's centerboard, I must now, in Mr. Burgess's absence, write you the reasons that made it impossible for us to accept the restriction. The first reason is that the conditions require a yacht club to authorize a challenge, as well as to become the responsible owner of the cup, if won, and I doubt whether any yacht club that I belong to would wish to assume the defense of the cup, either directly or through one of its members, upon conditions which crippled its principal class of racing yachts. Furthermore, from the tenor of your letter to the public, Oct. 27, 1885, in which you require six months' notice, that you may have time to make the Arrow "fit to compete with a modern flyer," and the opinion you express in the same letter that, after some suitable alternations, you would be able to make a gallant, even if a losing fight, in defense of the trophy, I was led to suppose that the Arrow would be modernized and would defend the cup as a national champion, and I was surprised to find by your letter of March 30, 1887, that you did not intend to fully modernize her, but proposed, instead, to tax and discriminate against the Mayflower—thus eliminating the element of international championship. I was also especially surprised that the centerboard should be made the subject of restriction, because your whole motive in offering the cup seemed to be to attract (to quote your words) "such v ssels as the Puritan to our shores"—the Puritan at that time being the most conspicuous centerboard yacht in this country. A restriction of any kind upon either yacht in such a contest changes its whole character from an international contest to a private handicap, and by conceding the superiority which the international match was intended to determine, seems to make the match itself unnecessary.

Faithfully yours, CHAS. J. PAINE.

BOSTON, May 4.—Dear Sir—I have just returned to town and find your note of April 19 awaiting me. Gen. Paine has already answered the preceding letter. In yours of the 16th inst. you deem the argument invulnerable that "the centerboard is an advantage, or it is not an advantage. If it is an advantage its use should be restricted so as to place the other vessel on equal terms. If it is not an advantage, no exception can be taken to any interference with it." I am sorry I cannot agree with either conclusion; for, if the centerboard is a disadvantage, I do not see why it should be made a still greater one by restrictions in its use; and, on the other hand, if it is an advantage, we wish the benefit of it, believing that each yacht should derive all possible advantages from its form and rig. If in your letter you referred to the centerboard as an advantage, not for speed, but only with reference to passing over shoal ground, then it seems to me the only way to match yachts of different types is to arrange with them to meet everywhere deep enough for both types. I may add here that the course proposed in the present case would not have permitted the Mayflower to go to windward in racing form. The great object of these international contests is to contest the comparative speed of the keel and centerboard types. The latter type is built here partly for convenience, and sometimes for safety, and I think we may regard the question of the advantage of the centerboard in point of speed as still to be settled. Regretting that there is to be no match, I remain, yours. EDWARD BURGESS.

To Tankerville Chamberlayne, Canberry Park.

MONTGOMERY SAILING CLUB.—The second race of the Montgomery Sailing Club took place on May 1; wind light, N. N. W., making a series of long and short legs 2½ miles to turning buoy and a run home. The start was made at 9 A. M. and the boats finished as follows:

	Finish.	Corrected.
Igidious	11 07 00	2 06 27
Flying Eagle	11 07 03	2 06 30
Cocktail	11 11 03	2 09 30
Ino	11 21 29	2 18 04
Gracie	11 27 58	2 18 22
Elsie	11 29 07	2 25 33
Little Tycoon	11 27 40	2 27 40

Igidious, Flying Eagle and Cocktail are 15ft. tuckups and carried 28yds. of sail; Little Tycoon is a 16ft. boat and carried 23yds. of sail; Ino and Elsie are 15ft. duckers and carried 18yds.; Gracie is a 12ft. rowboat, rigged with a single weather grip to starboard. She is 34in. beam and carried 65ft. of sail in main and mizen.—E. A. L.

OLEANDER POINT REGATTA.—A regatta was held on May 3 at Cocoa, Fla., over a 20-mile course for first class and 10 miles for the others. The classification and prizes were as follows: First class, 24ft. and upward, first prize $100, second $50; second class, 20 to 24ft., $60 and $30; third class, 15 to 20ft., $50 and $25; fourth class boats, or flat bottom boats of all lengths, $40 and $20; sweepstake $75. The summary was: First Class—Frost Line, H. G. Hawley; Ripple, Victor Vuillaume; Arrow, A. J. Canova; Minnehaha, Leon Vann; Minnesota, Hosmer Allen; Sparkle, C. J. Travis; Linda, C. Edward Cecil; Island City, R. B. LaRoche. Ripple, 3h. 13m.; Arrow, 3h. 16m. Second Class—Bessie, B. B. LaRoche; C uiser, S. S. Fleming; Water Lily, Geo. N. Hatch; Gretchen, C. H. Knapp; Rosalind, B. W. Jerome; Ida May, C. J. Coggin. Third Class—Rosa H., J. F. Houston; Gold Dust, B. A. Circle; Mildred, R. B. Burchfield; Meteor, Ellis B. Wager; Dot, J. O. Schofield. Fourth Class—Ohio, Edgar W. Holmes; Osceola, Julius King; Victoria, G. Cleveland; Ruby, E. C. Summerlin.

DELAWARE RIVER.—*Editor Forest and Stream:* Mr. Howell's little cutter behaved admirably on her trial trip May 1, heeling gently to the northwester and poking her nose almost into the wind's eye. I watched her first go about with some little anxiety, but she looked up and filled away handsomely, while the two tons of lead on keel kept her moving while in stays. She looks odd to local eyes. Mr. Work's keel yacht Gretchen is out with a new suit of sails, sloop rig, and while having an advantage under the new measurement rule, will have a lively time in her class (4th) among the cutter breed. The little cabin yacht Faust has been purchased by Philadelphia parties, Loland & Co., and will probably join the Q. C. Y. C. in the fourth class. She is in cruising rig and has an able, comfortably look. The Cooper's Point Corinthian Y. C. sailed their first race this season on May 3, starting from abreast of club house at 2 o'clock P. M., to sail to Horseshoe Buoy and return. The following boats started: Humes and Fitch, first class; Wilkins and Allmond, second class; Cook and Anderson, third class; wind light N. E. Time at Shoe buoy: Humes 3:30, Wilkins 3:32, Allmond 3:33, Cook 3:37, Fitch 3:38, Anderson 3:42. The beat up against the wind and tide tested the skill of the captains, and as the wind freshened made the race more exciting. Time at home flag boat: Wilkins 6:32, Capt. H. C. Funk; Humes 7:39, Capt. C. T. Humes; Fitch 6:54; Allmond 7:12; Cook 7:14, Capt. W. G. Cook; Anderson 7:35. One thing the Corinthians have learned and intend to adhere to in the future. The boats participating in the race must start promptly on time, as in the present instance, or be ruled out of the race. The next race will take place on May 17, and the laggards are now forewarned. "Time and tide wait for no man," and many a fine race has been utterly spoiled by unnecessary delay. Some of our old clubs might profit by this Corinthian hint.—R. G. W.

SANDY BAY Y. C.—This club will sail four races this year one each month from June to September. The prizes for the annual regatta are the Rockport Cup for first class boats, the Mackay-Bennett Cable Cup for second class boats, Mackay-Bennett Cable Cup for third class boats. Should only three boats compete in each or any class, only one prize will be given; six boats will insure a second liberal prize in cash, and a greater number a third liberal cash prize in each class. There will also be a dory sailing race for fishermen around an inside course, the prizes being donated by the Mackay-Bennett Cable Co., as follows: For dories over 15ft. in length, $10; under 15ft., $5. The prizes for the other regattas have not been selected.

MORE LEAD.—Hope Leslie, schooner, is out at Burnham's Railway, Boston, for lead in keel.... Atlantic is on Mumm's ways, where her fore and after deadwoods have been cut away and replaced with lead. The lead keel now extends to within 3ft. of the sternpost.... Jane, cutter, J. S. Poyen, is out for two tons on keel. .... The new catboat, 28ft. over all, 24ft. l. w. l., that Wood Bros. are building, will have 4,500lbs. of iron under her.

MR. COLT AND CAPTAIN SAMUELS.—The following letter from the owner of the Dauntless to Captain Samuels, who sailed her in the ocean race, should put an end to the newspaper canards concerning a disagreement between them: "SOUTHAMPTON, ON BOARD DAUNTLESS, April 23, 1887.—Dear Captain Samuels: I am very glad to hear that you arrived safe and sound at home and found your family in good health. I wish to thank you for your prompt and vigorous denial of the unfounded rumors of difficulties and disagreements between us during the trip across. I fail entirely to understand how such malicious reports could have been circulated, considering that we 'pulled ropes' together for the good of the ship with the most hearty good will. And I am as certain as you are that these reports originated from neither of us, but were made up of whole cloth. I wish I had been with you on the arrival of the Adriatic to add my denials with yours. If your business engagements should permit, I only hope you will pay me a visit on board this summer after I return, and only wish that you would make arrangements to come over as my guest and watch some of the English yacht racing, and return with me on the yacht. All on board join with me in good wishes to you and with kindest regards to Mrs. Samuels. Believe me, most sincerely, CALDWELL H. COLT."

YACHT RACES AT MARTHA'S VINEYARD.—At its last meeting the Martha's Vinyard Club appointed a committee of four to arrange for races to be sailed annually by yachts of the Atlantic coast, in Vineyard Sound. It is proposed to offer several cups (to be made by Tiffany & Co.), to be raced for every year at the visit of the N. Y. and E. Y. C. squadrons. The courses suggested are for first class sloops, from Nobsque light to flag boat off the west end of Squash Meadow Shoal, thence E. by S. ⅝ S. to Cross Rip Lightship, thence N.W. by W. ½ W. 6 miles to flag boat, thence W. by S. 6 3-5 miles to stake boat off East Chop, or, with an east tide, to start from East Chop down the sound to the Sow and Pigs and return. Second class from stake boat at Oak Bluffs S.E. by. E. ½ E. 6½ miles to flag boat off Hawes Shoals, thence N. by E. 3¼ miles to flag boat, thence W. by N. 7 miles to finish at East Crop. These cups will add greatly to the interest and excitement of the cruise, following closely on the Goelet Cups at Newport, and it is probable that a few seasons will see more of such racing, the fleet making a regular round with a race at every port.

CORINTHIAN Y. C.—The annual meeting of the Corinthian Y. C. was held on May 3 at Delmonico's, last year's officers being reëlected as follows: Admiral, E. M. Padelford; Secretary, M. Roosevelt Schuyler; Treasurer, E. M. Clark. June 13 was set for the annual regatta, and the opening of the season will be on Decoration Day. At the regatta it is proposed to offer two prizes for different allowances in the same race, the object being to test the different systems. The club resolved to offer to Mr. Bell the use of the club house and landing stage during the stay of the Thistle at New York.

THE PALATKA COLORED Y. C.—This club was organized on May 5 of this year at Palatka, Fla., with twenty-six members and six yachts. A regatta will be sailed on July 4, to be open to colored yachtsmen of Palatka, St. Augustine and Savannah. The latest addition to the fleet is named the Mayflower, and was launched on May 4, a centerboard boat 23x8ft., built by E. F. Gilliard and A. H. Finley.

SOUTH BOSTON Y. C. OPEN REGATTA.—The Regatta Committee of the South Boston Y. C. has changed the published rules for the open regatta May 30, so as to conform with the rules of the New England Yacht Racing Association, of which the club is a member. A new circular will be issued during the coming week. These rules do not allow of shifting ballast, and place some restrictions on sails.

MONTAUK.—On May 4 Montauk left Bay Ridge for Norfolk, but in consequence of a fog she returned. In working to her anchorage she fouled the schooner Avelon, of Philadelphia, carrying away the main boom of the latter and tearing her own mainsail.

HILDEGARDE, schooner, lately purchased by Mr. George Gould, will sail for New York from Cowes this week. Hildegarde was built by Camper & Nicholson in 1874, and is about 100ft. l.w.l., by 21ft. beam.

A MATCH BETWEEN CRACKS.—A private match has been made between Atlantic and Pocahontas, over the N. Y. Y. C. course, for $250 a side, Atlantic to allow Pocahontas 30 minutes' time.

SUSQUEHANNA.—The new steam yacht for Mr. Jas. F. Stickney, now building by Harlan & Hollingsworth, will be named Susquehanna. Her length on l. w. l. is 150ft.

FORTUNA.—Ex-Com. Hovey, E. Y. C., will sail for England in the Fortuna about June 1, returning before the fall races. Mr. Chas. Longfellow will accompany him.

JERSEY CITY Y. C.—A planked shad dinner with Oswego flap jacks as accompaniments, was given at the club house on May 8.

ROUND BOWSPRITS.—Gitana, Palmer, Rebecca, will all come out with round nose poles this year.

ANSWERS TO CORRESPONDENTS.

THE LAMBS, New York.—A. wagers B. that there are more setters than pointers used in the United Stated for shooting purposes. Will you decide this and oblige J. M.? Ans. Probably more setters, but nobody knows.

THE TRAVELERS of Hartford advertises what it HAS DONE, not what it is GOING TO DO; it HAS PAID over $11,200,000 to Policyholders in settlement of claims.—*Adv.*

Canoe and Camp Cookery.
By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages. Price $1.00.

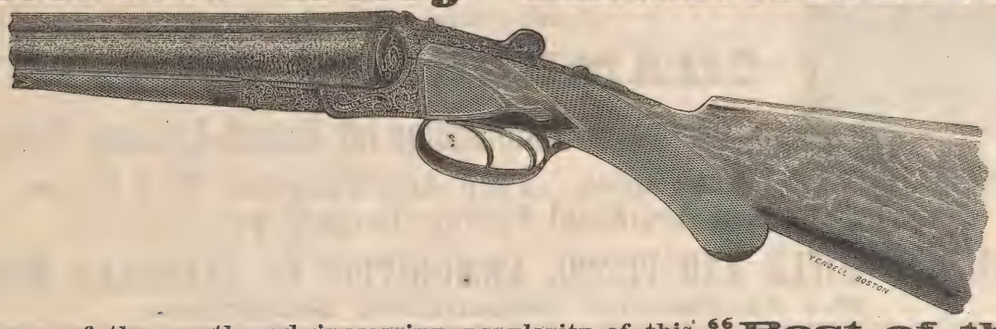
CHARLES DALY 3-BARREL.



The success of this gun introduced last year has exceeded our expectations. The maker's name is a guarantee of perfection in workmanship and every other desirable quality in a gun. The rifle barrel is rifled on a new system, which gives perfect results. The barrels are put together (a difficult thing in a three-barrel gun) with perfect accuracy. IT IS A GREAT CONVENIENCE TO ALWAYS HAVE A RIFLE WITH YOU. THE EXTRA WEIGHT IS NEXT TO NOTHING.

12-Gauge are made with rifle barrel, .32 W. C. F., .32 Marlin, .38 Marlin, .40 Ballard. .45 Gov't. Price, $85.00.
10-Gauge " " " " " .38 Marlin, .40 Ballard, .45 Gov't. - - - - " 95.00

THE SHOT BARRELS ARE FINE DAMASCUS.

Charles Daly Hammerless.

As an evidence of the worth and increasing popularity of this "Best of the Hammerless," the sales this spring have been nearly double those of any former spring season. Alongside of any other make, costing 50 per cent. more, they excel in every respect. Especially in the remarkable close hitting and consequent solidity and lasting quality, and long-distance shooting. Here is a letter from one of the best shots in the West, who, like hundreds of others, believes the Daly is the ONLY gun:

CHICAGO, April 28, 1887.

F. P. TAYLER, ESQ.—DEAR SIR: The Hammerless Diamond Daly ordered herewith is to be the same weight, drop and trigger pull as my old gun purchased of you in the spring of 1881. The old hammer gun and I will never part company if it can be avoided, and I only hope the new one will prove as good in every respect. I do not expect to get a better one, because I do not think a better one can be made. This gun has been shot in the field and at the trap during the past seven years more than falls to the lot of half a dozen ordinary guns, and it is still solid and good for many years more hard shooting. It carried off the $500 Diamond Badge, representing the State championship of Illinois in 1885, when, owing to a gale of wind and strong birds, very close, hard shooting was required to stop a bird within bounds. In this contest many of the guns (57) on the grounds did not do justice to the men who held them. Now, I want as fine a gun as you can turn out. If it is too pretty to shoot with I have the old one to fall back on. I can only say in conclusion that I am wedded to the Daly gun, and intend to own one as long as I can carry it.

Very truly yours, GEO. T. FARMER.

SELF-COCKING.

Automatic Ejecting.

This new Revolver will be ready for delivery about July first. It will be almost a fac-simile of the celebrated SMITH & WESSON, and is guaranteed equal in quality and finish to **any pistol in the World.** At present will be made only for the .38 S. & W. cartridge. .32-caliber to follow.

Retail Price, $11.00.

A WORD IN SEASON.

Readers old and new of the FOREST AND STREAM may be pleased to know that the paper is now at the close of 1886 enjoying the support of a wider circle of friends than at any former period in its history. This is an interesting fact, for it proves, with the best possible demonstration of success, the sound sense of the theory long ago adopted by editors and publishers, and steadfastly adhered to, that there is room in this country for a journal treating the subjects embraced by our departments, and depending for its support wholly upon what have been accepted by the conductors of the FOREST AND STREAM as legitimate journalistic methods. In other words, we have kept faith with subscribers by devoting our reading columns exclusively to honest reading matter, and have not given up our pages to extended paid puffs of railroad routes clumsily disguised as accounts of sportsmen's travel, nor alluring descriptions of wonderful agricultural regions, all paid by the column. The conviction that a sportsman's journal for sportsmen could be conducted without resorting to such questionable makeshift expedients have proved quite correct.

The tone and high character of the journal, as one fit for sportsmen to receive into their homes, will be jealously maintained. As there is nothing in the recreations of field and stream inconsistent with the highest type of manhood, so, the editors are convinced, there should be in a journal like the FOREST AND STREAM nothing to offend good taste.

The FOREST AND STREAM will be, in the future as in the past, thoroughly representative of the best field sportsmanship of America. It will maintain its position as the chosen exponent of those who seek recreation with gun or rod, rifle, canoe or yacht. Its character will be scrupulously preserved, and readers in 1887 may expect a rich fund of sporting sketches and stories, suggestions, bright sayings, prompt, reliable news, and interesting discussions. Angler, shooter, dog breeder, canoeist and yachtsman, may be assured that whatever is of interest in these respective fields in 1887 will find its way into the columns of the FOREST AND STREAM.

The Sportsman Tourist

columns are filled with bright sketches of travel, camp life and adventure, the reflected experience of a host of outers.

Natural History.

Papers descriptive of bird life, chapters of animal biography, notes on the ways of field, forest and water creatures as observed by sportmen, anglers and naturalists, make up these pages. The special work of the past year has been the establishment of the Audubon Society for the Protection of Birds, begun in February, and having now a membership approaching 20,000.

Angling and Shooting.

Time was when a single journal sufficed in this country for adequate discussion of all the heterogenous pastimes and practices dubbed sport. That time has long since passed away Some of the sports have been outgrown or put under a ban, others have developed to such a degree that each class requires a special organ. The particular fields chosen by the FOREST AND STREAM are those of angling and shooting. The pages given up to these topics are rich with the freshest, brightest, most wholesome, entertaining and valuable open air literature of the day. They have the sunlight and woodsy odor of the haunts of game and fish; they picture nature as seen by sportsman and angler. One has not long to read the FOREST AND STREAM before learning its attitude with respect to game and fish protection. The editors believe in conserving, by all legitimate methods, the game of fields and woods, and the fish of brook, river and lake, not for the exclusive benefit of any class or classes, but for the public. They are earnest, consistent and determined advocates of strict protection in the legal close season, and in restricting the taking of game both as to season and methods, so that the benefits of these natural resources may be evenly distributed.

The Kennel.

This department has kept even pace with the growth of the interest of breeding field and pet dogs. Reports of trials and shows are usually given in the FOREST AND STREAM in advance of other publications, and being prepared by competent writers their intelligent criticisms are of practical utility. This journal is not hampered by personal animosities. It has no judges to "kill." It does not decide a dog's merit by asking who the owner is. It treats all kennel subjects without fear, favor or ulterior motives, and in consequence enjoys a degree of public confidence and esteem denied to such as stagger beneath the incubus of malice and flounder in the bogs of ignorance.

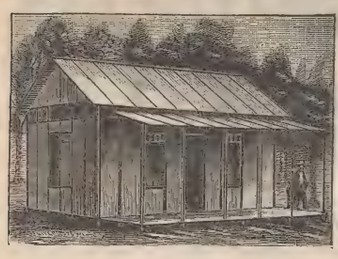
Rifle and Trap Shooting

records scores of meetings and matches, discussions of topics pertaining to the butt, gallery and trap. Secretaries of gun and rifle clubs are invited to send their scores for publication.

Canoeing.

This country is a land of magnificent water courses, and Americans are just beginning to appreciate the canoe as a means of enjoying the delectable charms of river and lake, and bay and canal. The men who are making fortunes by making canoes know best how rapidly the ranks of canoeists are multiplying. Novices and old hands will find in the FOREST AND STREAM canoeing columns, in charge of a practical canoeist, accounts of cruises, lines of new craft, and hints and helps and suggestions without number. Closely allied is

Yachting,



in which the FOREST AND STREAM is the only competent, all-the-year-round, intelligent exponent. Our reports of races are full, prompt and accurate. The numerous illustrations of lines of new yachts make an invaluable record of the development of yacht building.

Weekly, $4 per year; $2 for six months.

Forest and Stream Pub. Co., 39 Park Row.

THE GRAND RAPIDS

PORTABLE COTTAGES

Are briefly described as follows: The sides and roof are 3-ply Veneer, *the fastenings are iron pins, no nails or screws being used.* Can be easily put up or taken down without mutilation. Are very light and durable, and are furnished in different sizes and designs.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, MAY 19, 1887.

VOL. XXVIII.—No. 17. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, regi ered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, $5 per year; $2.50 for six months.

THE AMERICAN KENNEL CLUB.

THE American Kennel Club is in a fair way to make itself just about as popular under the present management as it was under that of Major Taylor; in other words, it is acting in a way to disgust honest people. It seems a pity that this should be so, for if it would only do its duty in an honest and straightforward manner it might have the support of all the dog men of the country. If the governing body of the A. K. C. will not do what is fair and right, if they have one sort of treatment for their friends and another for those whom they regard as their enemies, if they are going to form themselves into a ring or clique, if no one who does not belong to this clique can expect just treatment while those who do are to receive favors—why then there is nothing surer than that they will incur the contempt of all right-minded men, and before long they will be the laughing stock of the better portion of the community.

The reported action of the club in a number of recent dog show matters is very discouraging. It seems as if there were one rule for one set of men and another entirely different rule for others. Everything done by one man is right, everything done by another is wrong. Of course this sort of thing will not do at all, and the American Kennel Club will have to mend its ways if it is to continue to exist.

When Major Taylor went out of office we were promised a change of methods, and the dog public waited patiently and respectfully for a fulfilment of the pledge. The public is waiting still, but no longer with patience nor with respect. On the contrary, it is beginning to jeer at the American Kennel Club and to speak of it in language more forcible than polite.

It should not be necessary for us to point out to the governors of the American Kennel Club that the questions which come up before them are not about Mr. Mason or Mr. Smith or Mr. Munhall or Mr. Watson, but have to do with matters of principle. Just as at our dog shows the merits of the dogs and not their owners are to be passed upon, so, in matters coming before the A. K. C., justice and right should govern decisions, and not likes and dislikes or prejudice and passion.

The governing body of the A. K. C. is not a convention of partisans, brought together for the purpose of seeing that their faction shall secure all the spoils that can be snatched away from some hostile clan. Their office is quite a different one. They constitute a high court to pass upon matters of abstract justice, to determine the facts and announce the law on these matters as they may come up.

If they fail to appreciate their position and its duties, they may be sure that the public will not be equally obtuse, nor equally lacking in comprehension of what an American Kennel Club ought to be and ought to do. The average man has a fair sense of justice, a contempt for trickery, and a hearty sympathy with any one who is badly treated.

The American Kennel Club has thrown away its opportunity twice already. Not to put too fine a point upon it, the officers and delegates from clubs have shown that they are incompetent to handle the most ordinary matters of dog show policy. If no one can be found with brains enough to grapple with the questions which must come up before such a body, the club had better be disbanded and give place to an organization which can accomplish something.

SPARROWS.

THE English sparrow has been justly credited with vast and varied capabilities for mischief, and the added charge may now be brought against the feathered nuisance that it has led the New York game law patchers to make themselves foolish in a new direction.

Mr. Erwin's bill, which in its original shape permitted the killing of hawks and other birds in his own district of St. Lawrence county, was subsequently amended to apply to Long Island and Staten Island; and its scope has now been further enlarged to provide a penalty for feeding or harboring the English sparrow. By the terms of the law any man, woman or child who throws crumbs to the sparrow or who gives it shelter is thereby guilty of a misdemeanor for which arrest, trial and punishment may follow.

This action of the Legislature is presumably based upon the recommendations recently sent out from the Division of Economic Ornithology, which is a branch of the Agricultural Department at Washington. In these recommendations the sparrow was declared to be vermin, and State legislatures were urged to provide for its destruction. The Albany members perhaps imagined that they were making such a provision when they passed this law, but it is patent to everybody outside of the Senate and Assembly that the sparrow clause can be nothing more than a dead-letter. No one, unless maliciously, will dream of causing the prosecution of a woman who throws table crumbs to English sparrows; nor will little children who feed the birds on the snow in winter ever be sent to jail for the offense. The sparrow law will be a dead-letter, as absolutely dead as the clause which declares it an offense for ladies to wear song bird feathers in bonnets has proved to be.

If the sparrows be a pest they should be exterminated. They cannot be exterminated, nor even diminished, by enacting dead-letter laws at which the community laughs. A bounty, however slight, would be of some account; and if the sparrow question is worthy attention at all at Albany, it is worthy of sensible action in place of child's play.

MICHIGAN sportsmen are organizing county game protective societies and subscribing funds to pay the deputy game wardens for their services. This action evinces appreciation of the new order of things. Thus substantially supported by public sentiment the wardens may be expected to do their duty. The Michigan Sportsmen's Association worked eight years to get the warden system, and now that their efforts have been crowned with success it is noted that individuals who had become discouraged and given over their efforts are manifesting renewed interest and activity.

SNAP SHOTS.

JAMES GEDDES, of Syracuse, N. Y., who died last Monday, was one of the best known sportsmen of the State. He was a man of earnest convictions, took much interest in game protection and fishculture, when a member of the Assembly in 1883-4 gave much attention to securing needed amendments to the game laws, and for several years had been interested in restocking some of the Adirondack waters. For the past thirty years Mr. Geddes and an intimate friend, Mr. John W. Truesdell, made an annual pilgrimage to the North Woods for hunting and fishing; and with his cousin, ex-Governor Tifft Jerome, resorted to Michigan deer forests. He was an ideal camp companion, a wonderful man for expedients, and of sunny, open disposition in camp as well as at home. Mr. Geddes held a number of responsible public positions, always acquitting himself with credit, and did much to develop the agricultural interests of the State.

A professional pigeon shooting match *à la mode* is arranged in this way: The principals publish wordy challenges, amicably arrange who shall win the match, and let in their friends; then the friends, betting on a known sure thing, lay wagers with the outside public, which is of course in blissful ignorance of how the match will end and only too ready to be fleeced. Since the Carver-Graham pigeon shooting matches at Newark, N. J., there have been rumors of disgruntled gamblers who lost their money because the prearranged result did not materialize in other words, one of the shooters is charged with having agreed to a certain result and then not sticking to his agreement, all this at the expense of the pockets of his friends. The victims who were bled will not have much sympathy; in the game of lamb-shearing they are old enough to look out for themselves. Individuals of mature age who bet on a cut and dried professional pigeon match, and then see the funds pocketed by greenhorns whom they had hoped to swindle, will only be jeered at by a heartless world. It is a case of the biter bit.

The transfer of the Southern magazine, *The Bivouac*, from Louisville, Ky., to New York, where it will be published by the Century Company, has been seized by the critics as a new evidence that the South cannot support a magazine of its own. If it be meant by this that there can be no successful purely Southern magazine, it is perhaps true enough. The same thing might be said of the North and the West. The *Atlantic*, *Century* and other magazines, though published in the North, are far from being purely Northern in their make-up. Many of their best things come from the South and always have come from there. Any American magazine, wherever published, will fail to attain great popularity if its material be limited by sectional lines; it is the variety that gives the spice to the magazines, just as it does to the FOREST AND STREAM.

The special prize lists of bench shows afford entertainment when read with enlightened understanding. The true philanthropist is he who gives a handsome and valuable prize, which he is "dead sure" can be won by no other dog than his own; in this way we have a silver cup for the best black dog with one white ear, and a house and lot for the best crack dog with a walled eye, owned by a resident of Blank street, Blanktown. At the last New York show an agent for a John Bull brand of dog cake offered a barrel or two of his product under conditions that took it to his own dog; and the rival agent of a Brother Jonathan brand followed suit with a cask of his dog cakes, and in due time saw it safely landed in his own kennels.

Some enthusiastic anglers of Dakota county, Minnesota, are so sure of the moral influences of angling, that they recently sent to the reform school commission a string of trout caught in the Vermillion River as substantial evidence that the school should be established in that vicinity.

"Shootist" is the term employed by a growing number of editists and reportists to designate the sportsman who shoots. By and by we will hear of fishists and anglists. But why not stick to the English language?

Entries for the FOREST AND STREAM'S Decoration Day Trophy competition must be mailed next Saturday, May 21. It is hoped that a large number of States may be represented by teams.

The Sportsman Tourist.

Address all communications to the Forest and Stream Pub. Co.

AN ADIRONDACK WINTER TRIP.

A BIT of good luck came to me last winter, for by luck alone I was given opportunity to spend a week in the heart of the Adirondacks, and thus to enjoy greatly a very novel experience of winter life in the woods.

It so happened that coincident with my arrival at Potsdam, St. Lawrence county, to make a long promised visit, business of importance summoned my host to visit a large lumber and logging camp, of which he is the proprietor, and which, being situated well up the Raquette River, and including the Great Tupper Lake within its boundaries, involved a trip of several days duration. The rather embarrassing alternative presented, for "to go or not to go" was temporarily the question, was quickly relieved by my ready acceptance of the cordial invitation to accompany him; and very glad was I that I did, from the hour we started until this present writing. Many trips into the wilderness had so familiarized me with the ordinary incidents of life therein, from sojourning room mate with the electric lights and bells of the hostelries at Blue Mountain Lake and Paul Smith's, to the camping out under the turned up boat of my guide, that I hardly expected to see or learn much, or enjoy many new sensations; but I did though, lots of them, and I enjoyed every moment.

When the trip was first proposed I felt a twinge of anticipated trouble in the way of possible rheumatic results, due to very low temperature. During the week we drove a hundred miles and I tramped perhaps twenty, with the mercury see-sawing over a central zero, and snow from 1 to 2ft. deep, but I felt hardly a bit of discomfort. This rather astonished me, for having spent the last two winters in the tropics, and this being my first winter with snow in it for three years, I feared that my blood was too thin and my feet too tender; but my fears proved groundless. To be sure I was well and warmly clad. My good wife, sister, nieces and every other female member of the family bethought herself of something that would aid in keeping me warm, and when a bulky, almost helpless mass of furs and felt, I was helped into the cutter, for I was packed like a mummy, and nearly as helpless, I reminded myself of the figure in the Smithsonian of Dr. Kane in his arctic costume. That sort of thing did not last though. When after a bit I found myself compelled to ask my companion to himself search my breast pocket for something he wanted, because I couldn't reach it, I thought it time to reduce, and I did.

Starting from Potsdam behind a pair of grays that could go, the air cold and clear, we soon pulled clear of the half-bare ground of the village streets—it was in early December—and struck the good going of the country. Our route was in general to the southward, and for a considerable part of the distance along the banks of the Raquette; and to me it seemed very odd to be steering south yet bound in and not out of the woods; but "we got there all the same."

Just a quarter of a century before, less the few months between December and July, I went over the same route on my first trip into the "South" woods. I had been often enough to the North, and I was surprised to find how strongly many bits of scenery that I thought utterly forgotten, had stamped themselves upon my memory, so that, although in the beautiful attire given by the "beautiful snow," I recognized at once.

I say "beautiful snow" with the utmost deliberation, and fears of the chestnut gong shall not deter me, for in the bright clear air of the mountains the surface of the snow fairly glistened and sparkled in the bright sunlight, as though strewn with myriads of diamonds. And most artistic had the snow transformed ugly landscape into beautiful; the stump-dotted clearings, with brush and log heaps, ordinarily hideous disfigurements, were changed; every charred and blackened stump, with its arched white cap and side trimmings, had become a symphony in black and white; the brush heaps pretty rounded hillocks; the rude log-cabin shanties, with the red glow of great wood fires shining through their little windows, reflecting upon the fresco of icicles adorning the eaves, were turned into Swiss chalets, and picturesque as comfortable; and as toward dusk we threaded the forest, the snow-covered branches which, in endless tangle, overarched our path, became almost invisible, while their white covers formed against the after-sunset glow of the sky a most delicate and beautiful network of lace. By the roadside the smooth surface was dotted at close intervals by the imprints, which showed that but shortly before us deer, foxes, martens and rabbits had been there. To the proprietor of much of the forest land we drove through the snow appeared beautiful, for its presence assured him of easy hauls to the skids, hence much, instead of slight returns for a given amount of labor; a few cents more or less of cost to each "standard" in cutting, skidding, hauling and floating, amount to quite a sum when 30,000 are to be handled. Now if every one who uses that venerable quotation could be forced, as I have been, to give so long an explanation, it might die out.

Twenty-five miles drive, in a little over four hours, brought us to "the Farm," just before reaching which, at Munger's tavern and landing (formerly Pelso's), we bade adieu to civilization as represented by barbed-wire fences and telegraph poles. There had been no lack of taverns along the route; in fact every farmhouse of larger than usual pattern was a place of entertainment, and these occurred at intervals of three or four miles. At most, if not all, of these wayside resorts prices are very reasonable, for a man and team are cared for to the extent of supper, lodging, breakfast and hay for one dollar, and the meals are of good, substantial, lasting quality. Of course each tavern has a bar, and it would be difficult to name a liquor desired that one or another of the three or four bottles in sight would not supply; but the bar is not very well patronized by the lumbermen, most of whom are French Canadians, and who while on a job are very temperate and frugal.

"The Farm" is quite a hamlet, and is part of the lumbering outfit owned by Mr. Luke Usher, my companion and host. It is situated on an extensive plain, the last clearing of any magnitude on the road to the woods; and is nearly half way (25 miles) between Potsdam and the lumber camp.

As we drove up after dusk, the many lights seemed to indicate a little village, but I soon learned that all of the dozen or more houses were parts of the same establishment, originally started by Mr. Usher as a farm and so named, upon which grain and hay for the twenty odd teams could be raised and potatoes for the hands, at rates made economical by the high tariff for hauling to the spot (ranging from $1 per barrel to $15 per ton); here, too, the horses could be pastured during summer, and sick or disabled men or horses sheltered in winter. As time passed a little hamlet was developed. Sleds and harness broke often, horses needed shoeing; and there grew a sled factory, harness shed and blacksmith shop, where work was turned out with the requisite strength; and part of the quarters were used as a hospital, where, when a lumberman cuts his foot, as often happens, or was otherwise injured, he could lie by and with sticking plaster, kerosene and castor oil doctor himself. The superintendent, Mr. W. E. Huggard, with his family, is provided with a very comfortable farmhouse, and they made us as comfortable as hearty welcome, good fires, good beds, plenty of blankets and most bounteous and well-cooked meals are apt to do. The store is well provided with the ordinary necessities of the woodsmen, such as tobacco, soap, flannel shirts, drawers, blankets, rubber boots, hats and leggings, felts and packs. The men are boarded by the firm.

We remained at the farm until noon the next day, Mr. Usher engaged upon his business, I amusing myself by interviews with sundry woodsmen, the results of which I will give you further on. I was seduced into an excursion after partridges, and with a .22cal. Stevens rifle tramped five or six miles through snow a foot deep without getting sight of a bird; it was too cold for them, thermometer standing 8° above zero; and they were all snugly housed under the bushes and snow.

About noon we started for another twenty-five mile heat, and a glorious drive it was, far exceeding that of the day before, for then starting from a town, we passed through several smaller ones, then groups of farmhouses with school house and tavern, then wide clearings, in which single houses with barns, first of frame, then of log cabin and shanties as the intervals between grew longer, made a comparatively tame affair; but to-day our route was through the forest primeval and was an enjoyable one. As a general thing the snow had reduced to one level, the usual irregularities of a woods road, and we spun along lively. Now and then a straightaway path for a few hundred yards gave us a beautiful vista and we were passing through a natural arcade, under the snow-covered interlaced branches of the giant spruce and pine, the natural droop of the spruces increased as was the upward tendency of the pines lessened by the weight of clinging snow, which formed a roof above us, broken here and there by tall and shapely tamaracks, bare as were the maples and birch trees; the pines and spruces so snow covered that but for the proud uplifting of the branches of the pine, contrasting with the droop of the spruce, it was hard for me to distinguish them until well taught as to their different barks.

Now and then there were obstacles in our path, the deep snow covered completely one that I shall always remember, for driving rapidly on a slope, the up-hill runner encountered the end of a projecting log; I was on the down hill side, but I didn't stay there. I remember the first shock, then standing on my shoulders, head buried in a snow drift by the roadside. The careless driver had "fired me out." There was a bit of malicious joy mingled with the regrets I expressed to him that evening when he discovered that he had broken his runner. Our drive was not a lonely one, for the woods were full of birds. I never saw half so many in summer time. Among them, and most common, were woodpeckers, chickadees, blue-jays, sparrows, and "meat birds," as the Canada jay is called in this part of the Adirondacks. The birds named, and some others, spend the winter in the woods, flocking near camps and cabins, and, especially the meat bird, becoming very tame and familiar; the meat bird is always on hand when a deer is killed, and being very fond of venison, becomes as fearless and impudent as a magpie.

We reached Gale's Hotel just before dark. There are undoubtedly many of your readers who will locate me at once, and feel as perfectly sure as I did when we drove up that I was in for a good time and had struck a most comfortable ranche. In ye olden times the Raquette was the abode of many and large trout, and its forest-lined banks then, as now, abounded in deer. The Devil misled one of the best of guides and woodsmen, and in a moment of temporary aberration, or "possessed of the Devil," Lysander Hall, it is said, introduced to its waters the pickerel. As a matter of course, once in they stayed, increased and multiplied, and the trout are a reminiscence of the past.

In those days the anglers thronged hither in season, as the hunters do now. One has but to read and enjoy some of our best sportsman's literature to become familiar with "The Bog," Setting Pole Rapids, Soe's Island and Massawapie Lake. Case's Hotel is very near to the last and still nearer to another very pretty little lake, Catamount Pond, in the center of a clearing whose horizon is dense forest, and but a mile from the Raquette. There were few old-time anglers who did not take the tramp across to the lake and make sure of a good bed and one good square meal, at least, and a chat with the veteran woodsman, father of the present proprietor, son, I believe, of a former one, successive hosts, who for years have made of the hostlery an attractive resort.

The Gale who welcomed me a quarter of a century ago, then a man of middle age, was no longer here; he had gone, as had his father before him, and as will Emory, the present proprietor, when the time comes, into the recesses of the wilderness to shanty out alone, trap, hunt and be happy.

We spent a couple of very pleasant days, with our headquarters at Gale's, and between meals at the logging camps, from two to four miles beyond, and from which, the air was so still and clear, the sound of the axes reached us. At the camps Mr. Usher transacted his business and I loafed around amusing myself.

There is wonderful fascination in watching the wonderful skill and precision by which, in such little time, such great trees are leveled to the desired spot; and the quick, handy work of the trimmers, who, with a sharp axe, have no need of a chest of tools. A shanty was being built, and the joiner work, casing of windows, etc., were being axed out. The men work from daylight till dark; have their meals in a large mess hall, whose two long tables were arrayed in shining tin and snowy crockery; all as "clean as a pin," and their supper, as I can vouch, was a most excellent one for a hungry, hearty man.

One cold forenoon I spent in Mr. Gale's cozy parlor amid comforts and luxuries which seldom appertain to a woods tavern. On the table was an abundance of interesting readings, including some standard books; around the walls were choice engravings, some from Europe, and here and there cases and single specimens of most skillfully set up and tastefully arranged stuffed specimens of nearly all of the birds and beasts indigenous to the woods. Mrs. Gale, the taxidermist, is self-taught, but there is evidence in her work that she has had the best instruction from nature, the best of teachers. On one side of the room a cock grouse drumming, very evidently, attracts the attention of two hens; a group of frisky squirrels, another of field mice and moles, hawks of several varieties, a grim blue heron silently fishing, owls from the largest down to a tiny one, no bigger than a quail, sneaking marten, minx and weasels, and deers' heads and antlers—which latter form the text upon which this letter is based.

Mr. Emory Gale spent as much time as he could spare from his work helping me use up time and some cigars, and we naturally discussed woods topics, and I learned a great deal, some of which may be new to others also. Noticing that none of the sets of antlers were remarkably large, not equal, in fact, to numbers which I have seen mounted in sundry halls and dining rooms, I commented on it. Mr. Gale replied that very fine sets were eagerly sought by many of the city sportsmen who come into the woods, and they thus commanded quite a high price. So great was the competition to secure first-class sets to carry out that while some bought, others would spend their entire time in continuous hunting, killing deer after deer, far more than could be utilized, in the hope of securing a very large pair of horns; and this was one great source of cleaning out the deer; in fact he said, "If the law makers would shut down on carrying out the horns as well as the carcasses, half the deer killed by outsiders would saved."

Mr. Gale gave me his views on hounding versus still-hunting, and every woodsman with whom I talked agreed with him, differing as radically from our legislators who hold that chasing deer with hounds tames them, in fact, that the deer rather like it. Franklin county adjoins St. Lawrence. In the former hounding is allowed, in the latter it is not. Before it was stopped in St. Lawrence county, the deer were equally abundant in both; now there are vastly more in St. Lawrence county and less in Franklin, the deer hounded in the latter escaping across the borders into the latter do not go back.

Hounding in late November and December is particularly injurious in that such deer as take to the water with their blood heated become chilled, and even if they escape they are sick all of the season, and if does, fail to bear fawns. Only the week before he had found on one bank of the Raquette a frozen deer, otherwise uninjured which had been, as shown by the tracks in the snow driven in on the other side, and quite a number of somewhat similar instances have occurred.

He and the rest of them seemed to be very unanimous in the idea that it would be well to extend the open season for still-hunting through November, inasmuch as then the fawns are large enough to take care of themselves, the venison is at the best and can be kept, and still-hunting can be carried on with greater success; to this end they think that the season should open and close a month later.

None of them, however, seemed to have any hopes that any measures dictated by knowledge would be taken, the repeal of the six-inch clause in the trout law appears to have weakened their respect for the common sense of the lawmakers.

As one of them put it very graphically "Any d—d fool that would go for that law would shoot robins in a burying ground and sell 'em for their hides." PISECO.

EARTH BUILDERS.

[*From the May Audubon Magazine.*]

THERE are many people who roam through the forest or over the prairie, who see the fruitful soil everywhere bringing forth food for man and beast, who know that the same state of things has existed as long as man has lived on earth, but who never dream that an enormous amount of living energy was required to prepare the soil for man's occupancy, and that an equally enormous sacrifice of life is needed to maintain the soil in fruitful condition.

The farmer's experience has given him some clue to the truth—he knows if he keeps cropping the soil for all it will yield, without returning anything to it, its fertility will soon be exhausted. He knows, in fact, that crops want food to make them grow, that they find some of this food in the soil, and that after this food is all used up, it is no use trying to till the land any more until it is manured, or dressed with a fresh supply of plant food.

The farmer knows too that when land becomes so poor that it is no longer profitable to cultivate, it improves by lying fallow a few years. The soil gets fresh plant food from the air.

This can only be done by the agency of plants and animals. The life-work of every plant and tree and blade of grass that grows, is to live on the air and convert it into its own substance. The life-work of every insect and bird and beast that lives, is to convert the plant substance into animal substance. In doing this, all these creatures take something more from the air—not the same sort of food that plants take from it, but something different. This something, called nitrogen, which animals take from the air, is mixed in their stomachs with the vegetable food.

If plants and trees were simply to die where they live, they would not render the soil fertile; what they take from the air would go back to the air, and nothing would go back to the soil except the little they take up by their roots; just as when wood is burnt, nothing goes back to the earth but the ashes which came from it. Peas and

indigo and tea and coffee are exceptions, they take nitrogen from the air like animals. But almost every plant that grows is eaten by some creature, either in its green state, or when dry, or while it is going to decay. In this latter stage it is eaten by worms and other creatures, some of them so small that they are not visible without the aid of a microscope.

But everything is eaten, and although in the process of digestion something goes back to the air again, a large portion goes to enrich the soil with plant food, rendering it more fertile. A cow eating a ton of grass or hay, assisted by what it takes from the air, will make as much manure as will supply plant food to two or three tons of fresh grass.

And so it is that when the farmer finds his crops getting poorer and poorer every year, and leaves the land fallow, the worms and other creatures in the soil eat all the plant roots and dead leaves, and create plant food which provides for a crop of weeds; insects come to eat the weeds, and birds to eat the insects, and in a few years the fertility of the soil is restored in whole or in part. The worms and minute creature in the soil convert the plants into what is called the vegetable mould, and the birds preying on worms and insects supply what is necessary to render the soil fertile for grain crops. The black soil is really not vegetable mould, because it has all passed through the worms and soil microbes, as the minute creatures are called, but until lately no one knew that.

This then is the secret of the earth's fertility. Every creature that lives returns more to the soil than it takes from it; it gives it all back with something added which it takes from the air—finally it gives its own body. Consequently, in a state of nature, the soil always tends to grow richer from year to year, from generation to generation.

If a new continent were suddenly to rise from the ocean, man, oxen and horses could not live on it, because there would be no soil to grow grass or grain on. But some plants, and even some trees, want very little from the soil, they take almost everything from the air. The pine tree, you know, will grow in the cracks of rocky mountains. Such plants and trees would soon find all the food they want. By the time a vegetation of this sort had covered the surface, it would provide food for countless insects, which in their turn would become food for birds. In time the insects would cover the surface with black mould, and the birds, enriching it with their droppings, would render it fit to grow grass and grain, and thus prepare it for man and beast.

The old doctrine of transmigration of souls was a myth, and the modern view that all the noblest animals have descended from the lowliest cannot be proved; but the doctrine of transformation of bodies is a living reality—the self-same substances which plants take from the air enter into the living substance of animals, and are changed from living tissue to dead tissue, from animal tissue to vegetable tissue, and back again through a never ending series.

Perhaps the most wonderful fact in this connection is that one of the substances, called carbon, exists in the air in a quantity not sufficient to cover the whole dry land of the earth with mature forest at one time. The plants and animals of one generation must die to set free the carbon needed for the next generation, so that the carbon, which constitutes more than a fourth of the bodies of living plants and animals, is the very self-same carbon which entered into the substance of the plants and animals of the pre-adamite ages, and of every generation that has lived since.

Nature is very lavish of all the other substances derived from the air. The rains and rivers of this country wash away about four inches of its surface every century, and thus a great part of the plant food, which plants and animales take from the air, is carried to the ocean, necessitating the constant and universal activity of life and death to replace it by fresh drafts from the air; but nature is very economical of her carbon—animals give it back to the air with every breath, and plants as constantly take it in by their leaves.

But there is one substance necessary to men and animals, that is the phosphorus which enters into the formation of their bones and brain, which does not exist in the air, nor originally in the rocks. For this necessary substance we are indebted to the fish, which abstracted it from the waters of the ocean, used it to form their own bones, rendered it insoluble in water and left it at the bottom at the ocean, so that when the continents were up-heaved, the ocean mud was full of it; plants take it from the soil and men and animals get the necessary supply in their food, and thus it is that man, the highest branch of the tree of life, has inherited the substance of his body, not only from all the past generations of life on earth, but he has also inherited some of his substance from the fishes which lived and died in the ocean which once flowed over this continent and from the great creatures which lived ou the dry land—the giant saurians of a bygone age. These giant reptiles, some of them 50 or 60ft. long, which swam in the water, paddled in the mud and roamed over the dry land and some of which flew through the air, left us their bones as an inheritance, so that we are their heirs.

The roots of the tree of life stretch downward and backward and derive their support from the earliest creatures that first put on the mystery of life in air and sea, when as yet no part of the earth's crust had raised itself above the ocean's level.

Every creature that lives is an earth builder; living it adds daily to the earth's crust; dying it builds its body into it. Every drop of water in ocean, lake or river is full of living creatures, invisible to the naked eye, but dying by millions every minute, they fall to the bottom until their remains cover it with a bed of mud of vast thickness. Nothing lies in vain; creatures individually most insignificant, play most important parts as earth builders, and man could no more have existed without the lowly creatures which lived on the earth before him, than the topmost branches of a tree could exist if there were no trunk and roots.

And thus not only in the past, but in this present, the creatures most important to man are the microscopic dwellers in the soil. The farmer may dress his land with stable manure, but unless these minute creatures were present to pass it through their own system, and create a mould of uniform quality, his returns would be but small.

Some experiments on the value of these minute creatures in converting leaf mould into plant food were recently undertaken by M. Laurent, and published in the London *Lancet*, as follows:

"Seeds of buckwheat were sown in four different kinds of mould. In the first flower-pot natural mould was employed; in the second the same earth sterilized and then inoculated with bacteria of the soil; in the third simply sterilized mould; and in the fourth sterilized mould with the addition of chemical manure. Precautions were taken to prevent contamination of the four receptacles (*Journal de Pharmacie et de Chimie*, No. 7). The production of wheat in each of the pots respectively was in the proportion of 94, 96, 23, 66. In all the experiments the third series was inferior to the others. The value of microbes in soil rich in organic detritus seems thereby to be proved.

Who would have supposed that such insignificant creatures could render man such important services?

C. F. AMERY.

GROUSE IN CAPTIVITY.

Editor Forest and Stream:

You will remember that some weeks ago your correspondent, "Lawyer," of Wilkesbarre, Pa., spoke of some live ruffed grouse which he saw at a county fair. On my application he was so good as to procure them for me, and they came into my hands on the 24th of last month. There were two birds, both hens, and the previous day I had been fortunate enough to receive a male grouse sent me by a gentleman living in Iowa.

One of these hens has already made a nest which to-day has two eggs in it. The peculiar liquid note of a nesting grouse is naturally a pleasing sound, but it was particularly delightful to me when I heard it again for the first time this year. I can compare it to nothing in the world but running water. My grouse hens began it last year when they first commenced making their nests, and kept it up at intervals during the period of incubation, as far as it progressed. This singular habit of the female grouse at nesting time was a revelation to me, but I suppose the fact is well known to hunters and woodsmen.

It is singular how jealous the male bird is. To-day I was compelled to shut him out of the part of the coop where the hen was on her nest because he persisted in standing over it and driving her off. If the eggs over turn out chicks I shall take special pains to see that he is not on hand to "assist," since I am strongly inclined to believe that he would make short work of them. Judging from my experience last year and this, it is not difficult to understand why the hen gives the cock a wide berth after the chicks are hatched and till they are big enough to take care of themselves. J. B. BATTELLE.

TOLEDO, O., May 11.

THE COMING OF THE BIRDS.

ELMIRA, N. Y., May 8.—Despite the backwardness of spring, the migrants appeared in this vicinity at about their usual time. I observed the first flock of horned larks (*O. alpestris*) Feb. 28; after this date they appeared in quite large numbers; several flocks could be seen in a short walk. On March 1 I saw the first slate-colored juncos; they seemed to be accompanied by the tree sparrow (*Spizella monticola*); in fact, I observed several flocks, which were composed of both species, and they seemed to be on the best of terms with each other. The first flock of purple grackles came March 7; in this flock were three rusty blackbirds (*S. carolinus*); the same day came that melodious harbinger of spring, the song sparrow.

The first bluebird did not come until March 9, and three robins were seen the same day. On the morning of the 12th the great blue heron (*Ardea herodias*) came, four being seen in an afternoon's jaunt. The redwing blackbird was seen March 18, and the fox-colored sparrow arrived March 23. The first mourning dove was seen March 24, and on the morning of the 25th I heard a meadow lark. Later in the day I saw several more.

The first pair of brown creepers (*C. americana*) were observed the 26th, and on the following day the golden-crowned kinglet appeared, followed in a couple of days by *Regulus calendula*.

On the morning of April 9 the flutelike notes of the wood thrush were heard for the first time. A hermit thrush was also seen. While speaking of this bird I also wish to add it to the list of birds which occasionally remain with us all winter. On the morning of Jan. 1, 1887, while rabbit hunting, I saw a hermit thrush in a deep, sheltered ravine. I got within a few feet of the bird and positively identified it as a hermit thrush. If any of your readers have observed anything similar, I would be pleased to hear from them on the subject.

The first phœbe came April 10, and was followed on the 13th by the wood pewee (*C. virens*). A kingfisher was seen on the same day. The morning of April 14 brought several flickers (*Colaptes auratus*). The oven bird was also seen, as was also the great northern diver (*Urinator imber*). April 12 the white-throated sparrows (*Z. albicollis*) were seen. With them were a few white-crowned sparrows (*Z. leucophrys*). On the afternoon of April 13 I saw the first osprey (*P. haliaëtus carolinensis*) soaring around the river. A few spotted sandpipers were also seen. The green heron came April 30.

The first warbler to arrive was the myrtle warble (*D. coronata*); a few came May 1; three towhees were seen the same day.

The chimney swift appeared on May 2 and the next day another warbler appeared in quite large numbers, namely, the sweet-voiced yellow warbler (*D. æstiva*), whose dulcet note is heard as I now write. The beautiful little birds seem very abundant this year.

The least flycatcher (*E. minimus*) was also seen for the first time.

My old friends, the house wrens (*T. aëdon*), came the morning of May 4 and every morning since my ears are saluted by these diminutive songsters. On the evening of May 5, while on a fishing excursion, I saw a solitary kingbird (*T. tyrannus*) and later in the evening I heard the plaintive call of the whippoorwill in the deep woods.

May 6, as I glanced out the window from my work, my eyes were greeted with two of our handsomest birds, the Baltimore oriole, they were a beautiful pair of males and they were searching diligently for worms in an apple tree, every few minutes one of them would warble sweetly. At this writing, the 8th, they are quite plenty. While out for a walk yesterday I saw that prince of the meadows, bobolink, who has come to pass another season with us. Several catbirds were also heard for the first time.

Although these observations do not embrace all of our migrants that have arrived, they are such as I have had a chance to note in the limited time I have had to devote to my favorite pastime, the study of our feathered friends.

EDWARD SWIFT.

DOMESTICATING WOODDUCKS.

BERLIN HEIGHTS, O., April 8.—*Editor Forest and Stream:* Last season I raised six young woodducks. When they had arrived at an age that I feared they might fly away, I caught all but one and cut the primaries off one wing. One, being more fully fledged than the rest, escaped, and though she kept about the premises and was often seen, did not return to the park in which the rest were kept for a week or more, then she returned and made her home with the rest of them as before. In November she migrated, and I saw nothing of her again until about April 1 this year, when she returned bringing with her a mate, came into the park, which is adjacent to a much traveled road, and seemed as tame as when she left. The drake, however, was shy, and when people were passing would fly and alight in the tops of trees in a yard near by. In the course of a few days he became more tame, and now pays little heed unless people gaudily dressed come too near. Two days after the pair brought with them another duck, and soon after another drake, all of which now come to the park to feed on wheat, which I have kept constantly where they can get it. The ducks are undoubtedly incubating now, and only come at night to feed and bathe in the pond; but the drakes spend most of the time in the park with mine of the same species. I have instructed all the gunners in this vicinity of the facts as I have written, and as the season is off for shooting ducks I think they will breed and bring their young here, as they seem strongly attached to the premises. Some time, if you wish, I will write you my observations regarding wild geese, which might be very interesting to some of your readers.

M. M. BENSCHOTER, M.D.

EVENING GROSBEAK NEAR BUFFALO.—An entirely unlooked for stranger to our own neighborhood in the shape of the fairly preserved remains of the head, neck and breast of a bird were handed to me by a boy of collecting proclivities, and proved on first sight to be a male finely plumaged specimen of the evening grosbeak. There had been two of these birds shot, and there was fortunately enough of one preserved to identify this well marked species. The locality where its capture was made is Brant, a little town on the slope bordering the Cataraugus Creek, which yielded also several years ago a four-footed stranger to our neighborhood in the shape of a marten, which fell fortunately into the hands of Mr. Otto Besser, an accomplished Buffalo taxidermist, who recognized at first sight the value attached to this animal. The date of the capture of the grosbeaks was April 15. A full and interesting account of the occurrence of the fox sparrow was communicated to me by Mr. Davison, of Lockport, with the *prima facie* evidence of a shot specimen, which was duly preserved in memory of the first fox sparrow I have thus far seen during spring in our immediate neighborhood, and is thus certainly entitled to take its place among the transient wanderers from the South. It would be interesting to know, however, how far south the migration of this species extends during winter, as I am not aware of any definite information in this respect.—CHAS. LINDEN (Buffalo, May 9).

CONGRESS AND THE NATIONAL PARK.—In the Forty-ninth Congress, Mr. Samuel J. Randall, chairman of the Appropriations Committee, refused to insert in the Appropriation Bill the usual item providing for the payment of the salaries of the Yellowstone Park Commission for the ensuing year, and for the salaries and traveling expenses of the Mississippi River Commission, both past due, and for the future. In these matters Mr. Randall deliberately took upon himself to obstruct the operations of a law of Congress, and in the case of the Park Commission to absolutely annul the law. In both cases Congress placed funds at the disposal of these commissions, and instructed them how to apply the money. Mr. Randall stepped in and (virtually) said: "You shall not obey those instructions. I will not furnish you the means wherewith to do it." In this way he destroyed the Park Commission, compelling them to resign, thereby taking the case of the Park out of the Interior Department, thus defeating the wishes of the Government. In the case of the river commission he evidently designed to accomplish the same result, to wit, destroy the commission and defeat the will of Congress, by first refusing to pay them what they had already earned, their back salaries, which were fixed by Congress, and for which the Government is both legally and morally bound; and secondly, refusing to provide them with the means of carrying out the instructions of Congress. The *Avalanche* must regard this conduct of Mr. Randall as revolutionary to an extraordinary degree, and what is needed now is a counter-revolution which shall revolve this autocrat of the House of Representatives out of the chairmanship of the Appropriations Committee.—*Memphis (Tenn.) Avalanche, May 12.*

SABLE ISLAND AGAIN.

Editor Forest and Stream:

I trust you will not refuse me the right of a few words in reply to your comments upon my letter published in your issue of the 12th inst.

First, in regard to the paragraphs adapted (not quoted, and therefore not requiring quotation marks) from Dr. Gilpin, I can only repeat my previous explanation and my regret that in the course of the two compressions my article underwent, one before and one after the proofs passed through my hands, he should have been deprived of the credit due him.

Second, as to your mysterious reference to an article in *Harper's Magazine*, I am glad to be able to say that although aware of its existence, having in fact read it with much interest some years ago, but not since, I had absolutely nothing to do with it in the preparation of my article, and I challenge you to adduce passages from my article having anything more in common with passages in the *Harper* article than would be occasioned by their being based upon the same authority, to wit, Dr. J. Bernard Gilpin.

OTTAWA, Canada, May 14. J. MACDONALD OXLEY.

Camp-Fire Flickerings.

"That reminds me."

214.

OUR friend John M. is a famous story teller. He has a memory like wax and a style all his own. An audience will stay by John as long as the lamp holds out and longer, too. Into his open ear the boys love to pour their "best ones," well knowing that when they come out of his storehouse they will not have lost any of their richness, but will rather have gained a flavor which he alone can impart. John's comments on a story when he takes it in and puts it away for safe keeping, are sometimes better than the deposit itself. Listen to this:

One day last summer Jack E. came up the river for a day in town. He was loaded with a couple of "good ones." He soon ran across John surrounded by one of his congregations and quickly joined the company. At the first break in the conversation, Jack said: "John, have you heard the stories Brock is telling about his boy Sam and the deer?"

John had not heard them.

"Well," said Jack, Sam is a great chunk of a boy about 18 years old. He is something of a shot and also an amateur photographer. He had a chance to go to the mountains with a hunting party a spell ago, and was promised his first deer. He packed his camera, etc., with his traps, thinking he would get some fine views of mountain scenery. Toward evening of the first day in camp, while they were all lounging about, a fine buck dashed through the timber in plain sight, and took to the water in fine style.

"Young Sam sprang to his tent and in a minute appeared with a rifle. Running to the bank of the river he fired two shots in quick succession, just as the deer reached the further shore. The monarch of the forest fell dead in his tracks. A post mortem disclosed the fact that the first shot had broken his lower jaw so that it hung by the skin only. The second had done the same for the upper jaw. The verdict of the jury was that "that thare buck would never be able to browse no more."

Here this story ended, John had listened unmoved.

"But that's not all," said Jack. "The next day a hunt was organized and the boy Sam was placed on a runway by the stream. He took his camera along to while away the spare time. He had been at the crossing for some time and had just focused his instrument on a pretty riffle about a hundred yards above, when a fine doe came bounding into the water on the spot covered by the camera. In an instant Sam had a negative of the pretty leaping creature on a dry plate, and a second later had shot the deer dead with a load of buckshot from his double-barreled."

As this story ended a smile might have been seen playing around John's mouth and working its way up into the corners of his eyes and he said: "Well, now, d'ye see, Jack, if Brock had told you that his boy took that deer's photograph with the double-barreled shotgun and shot her with the camera, I might have believed it."

BLIVENS.

STEUBENVILLE, O.

Game Bag and Gun.

Address all communications to the Forest and Stream Pub. Co.

A BRITISH SUBALTERN IN CANADA.

I GOT my commission in June, 187—, and joined the —th Regiment at Halifax, Nova Scotia. Among my new friends was a merchant of Halifax, an old moose hunter. We agreed to start out together to call for moose. The time selected was September, during the full of the moon, for it is then the lords and lady moose, tired of roaming forest glades alone, meet and make preparations for passing the winter *en famille*. It took the little steamer thirty-six hours to carry my friend C. and myself to Shelburne, where we had arranged to meet M., our guide. He was a man of about fifty-five, full of energy, and with cordial manners. He prophesied good sport with a confidence that made us wish to embrace him on the spot. Sending the ox team ahead he took C. and myself in a rickety dugout and paddled along a deep stream, on the banks of which were many traces of old beaver dams. We finally came to a broad sheet of water, and reached M.'s camp on the opposite shore about five in the afternoon. We could hear in the distance the creaking and groaning of the ox team on its way to join us.

The next morning, after tying all our traps securely on the cart, we started for the moose country. M. and his son, a stout lad of sixteen, went ahead to clear the way with an axe. Tom looked after the team and C. and myself deployed as skirmishers—and berry-eaters. We jogged along steadily to the north over a country that had evidently once been swept by fire. Hill and dale were covered with a growth of young trees, interspersed with granite boulders and huckleberry as well as blueberry bushes laden with the most delicious fruit. I had heard the expression "walking on your ear," but never realized what it meant until I saw the capers of our cart. It seemed able to clear everything, and while one wheel towered high in air, hung on nobly with the other. On our way we picked up a piece of moose horn. C. and M. on examining it declared it had been broken off in a fight. The horn is very tough and it is no easy matter for a strong man to break one up with an axe. The shipwrights in that country often use it as a caulking iron when the manufactured article is not to be had. It must be a thrilling sight, a duel between two big bulls weighing eight hundred pounds or more, and the impetus when they meet must be indeed tremendous to shiver such a formidable lance.

We were nearing a lake and in went the team, pawing and splashing, under the skillful guidance of M.'s boy, who maintained his equilibrium in a truly wonderful manner as the cart rolled over the uneven bottom of the ford. We on foot took a turn to the right and joined the team further on. Late in the afternoon we came to one of M.'s old camps on the top of a hill, unyoked the oxen, and prepared a supper of fresh meat from a moose M. had killed two days before. The meat resembles a very tender beefsteak, and some people cannot tell the difference, though a keen palate can always distinguish the peculiar moose flavor.

We were ready for a start early the next morning, and said good-bye to Tom, who was to drive the oxen back to M.'s meadows. Our packs were soon ready and carried on our backs Indian fashion by means of a rope or strap going across the chest and over the arms. Rifle in hand we descended the other side of the hill, which was thickly wooded. At the base was an immense caribou bog.

A caribou bog is comparatively dry and spongy, covered in spots with a white moss or lichen, a favorite food of the caribou. During one of our halts M. pointed out a rock whence he had one winter seen a wildcat make several ineffectual springs at a herd of caribou standing, as it seemed, directly under the rock. At every attempt they moved away only to return to the same spot, while the baffled cat climbed back to his vantage ground to renew the attempt. Pointing to another spot, M. told us that one winter he met there a moose cow completely exhausted, followed by three dogs in the same state. As it is against the law to hunt them with dogs in the winter, on account of the cruelty of their legs being cut to pieces by going in and out of the thin crust of ice on top of the snow formed by the sun's rays by day and frost by night, M. tried to drive the dogs off. Tired as they were they showed fight, when three cartridges from his Winchester settled their hunting forever.

At last our weary march across the bog came to an end. Right in front of us was a heavy belt of timber skirting the rising ground beyond. M. and his boy here left us to return for the rest of our traps. We started to get through the woods, not thinking it worth while to unpack our compasses, as there was only an eighth of a mile of timber to cross. After a long tramp we found we had lost our way and got into a dispute as to our future course, C. pointing one way and I insisting on going in an entirely contrary direction. C.'s eyes suddenly flashed with intelligence, and with a smile of confidence he started off in what I fancied must be the wrong direction. After fifteen minutes' tramp we came out on the right side. C. then explained that he had caught sight of some hackmatack trees that grow to a fine feathery point with an inclination to the northeast. He got a northerly direction by keeping the trees a little to the right.

M. and his boy soon joined us, and together we began seeking a suitable camping ground for the night. Wading knee deep through the long, dry ferns, we came to a regular fairy dell, with the scarlet pigeon berry, blueberry and huckleberry scattered around in beautiful contrast and abundance.

Here we found traces of a forest tragedy, the bones of a moose and the tracks of a large bear. The two experts disputed over the point as to whether the moose (a small one) had been wounded and had crawled to die before being found by bruin, or whether he had crept up on her unawares when she was calling, coming from the direction whence she expected her loving lord. M. told us his brother, formerly famous as a caller and woodsman, never went to call now since a shock he had received by nearly falling a victim to bruin's habit of creeping upon a calling moose. He had been imitating the call for some time, and was creeping noiselessly forward when a slight rustling made him swing around to see an enormous bear almost on top of him. Bruin, luckily, was as much startled and surprised as he, and beat a hasty retreat. Though the compliment to his calling powers was great, M.'s brother has not been much of a caller since.

M. now proceeded to make a moose-call. Selecting a birch tree, he removed from it a section of bark about 3ft. long and 6in. wide. This he trimmed and finally rolled into a funnel, fastening it with the young roots of the ground juniper. These are tough and pliable, and frequently used here as cord. We determined to camp without putting up our lean-to; so sending M. to look for water—never very far off in this country—the rest of us busied ourselves breaking up small spruce boughs. The butt ends of these we afterward inserted in the ground, much as a bird's feathers are imbedded in its skin. This makes a delicious, springy and aromatic couch. When covered with dried ferns and waterproof sheets it is a bed fit for a king. Our task was hardly completed when M. returned in great agitation with pail and dipper. He hurriedly told us that he had been chased out of a swamp by a big bull moose. C. and myself got our rifles, and, telling M. to lead, moved rapidly in the direction, but some hundred yards to leeward of the spot where the bull had last made his appearance. At length we reached a little valley. M. put the call to his lips. Almost instantly we heard the answer on our left. There, on the top of a hillock 200yds. away, stood the most magnificent animal I have ever seen. We might have tried a shot, but after what we had heard of his exploits, and his sudden appearance, we half expected to see him rush toward us. I being a novice, waited to see what the others did. To hesitate was fatal. He soon got our wind, turned and fled.

As it was getting late we returned to camp. At supper M. gave us the details of his being put to rout. While he was in the swamp the moose suddenly arose from behind some bushes. As M. was admiring the splendid beast, he was amazed to find the animal moving slowly toward him. He clapped his tin pail and dipper together, but it had no effect. His surprise turned to fright, and he took to his heels. His theory was that the animal was to windward, had never seen a man before, and being a big fellow, came up to see who his disturber was. When he got the scent he retreated, the reason of our finding him so much to leeward.

The next morning C. decided to retrieve his character by going out "creeping" (Nova Scotian for stalking). M. was to be his companion, while the boy remained with me. I had hurt my leg over a boulder in the wild goose chase of a day before, and was still very lame. We all started out together, but soon separated, the boy and I losing sight of C. and M., who had turned off to the right. We came to running water, and I decided to refresh myself with a bath. I had hardly thrown my coat down when I felt myself clutched from behind, and looking around saw a very excited boy gesticulating and saying something about a bull moose. Hurriedly slipping on my coat, which contained my cartridges, and seizing my rifle, I went a few yards to the edge of a little wood, and there, on the barren, walking leisurely toward the wood, I saw the noble animal. He must have been about 80yds. away. I could have stood there watching and admiring him for an hour, but the boy was too anxious. Raising my rifle I fired. Beyond a slight wince he seemed unconscious of hurt. I slipped in another cartridge and fired again, when he rose up on his hindlegs and fell over on his side. Running up we found the blood bubbling up from two holes just behind his fore shoulders. Both bullets had done their work, but the last one pierced his heart.

C. and M. came up at the sound of the shooting. M. at once sent the boy over to the meadows for the ox team, and the rest of our party set to work skinning and cutting up the moose. During this process we found several greenish stones, about the size of a chestnut, clinging to the inside of the intestines. "They were for the purpose of aiding the animal's digestion, and are a limestone formation," said M. Our disagreeable work over, we hung the beef, while M. stretched the skin to dry in the sun over a pole laid on a couple of crossed sticks. It remained there during our stay. I afterward had it tanned in Halifax, and it still makes an excellent rug. I noticed C. skinning the animal's ears. I asked him why. He answered with a grin that when he got his moose, he would have the skin of four ears. Sewn together, with the points in the center, they make an excellent winter cap. The hocks of the moose are also greatly prized. Moccasins are made of them perfectly impervious to wet and cold by simply sewing up the toes after cutting them the desired length. All that is needed to preserve them, after the meat has been scraped off, is to keep them filled with salt when not in actual use. The butchering work done, we moved our camp nearer the spring and put up the "lean-to." This is a simple piece of oiled cotton with flanges on each side, capable of sheltering four persons. We built a good fire and prepared for an early supper and a rest before going to call.

As the evening wore on with every appearance of an ideal night, a full moon and perfect calm, my impatience and excitement became intense. At last, just as the sun sank to rest and the pale moon began to shed its mysterious light we arose and started for the barren, the site of our old camp, and three hundred yards from our present one. C. and I had blankets and pipes. We chose a place in the middle of the barren. Leaving us at the foot of a huge boulder and cautioning us against making any noise, he clambered on top of the boulder and gave his first "call." One must experience to realize the curious sensations felt at the moment this peculiar sound breaks the silence of the night, when all is quiet except the quickened breathing of the hunters, amid witching scenery changing with every shadow of the moon. A pause of expectation follows the sound that dies quivering among the treetops. The call resembles that of a domestic cow, but is far more plaintive and broken, and pitched in a higher key. When given by a good caller it is not unmusical.

M. called several times without result. He then climbed a "ramspike" (that is, a tree blighted by fire or lightning), but still retaining a firm hold on the ground, leaving the branches bare, but sound. When he recovered breath after the effort, we heard again the call that seemed now to fill the whole atmosphere. In a minute or so he waved his call and nodded to us to show that he heard something. He called again, and now, surely from a great distance, I heard a sound as if some one had struck an axe into a tree. C. heard it too, and told me it was an answer. M. slid down from his tree, and as he did so we heard the answer repeated and coming nearer every few seconds. C. and I left M. at the boulder, crept with infinite precautions about 70yds. in advance, and knelt down behind two rocks 10 or 12ft. apart. By this time we heard the monarch of the glen coming through the wood, his horns every now and then striking a tree. The noise he made seemed to come from deep down in his throat, like gulps of intense excitement spontaneously ejected to save him from suffocation. He came steadily on, and I expected every moment to see him; but just then M. gave a call, and C., who was more excited than such an old hunter should have been, in trying to change his position snapped some dry sticks. The moose stopped short on the verge of a small thicket not 30yds. away, and although we could distinctly hear we could not see him. He remained in this position about half an hour when, with a sudden snort, he began to walk around us, keeping well out of sight until he got to leeward when, of course, he was off like a shot.

We stumbled over the broken ground back to camp, where a supper of Digby herrings and biscuits consoled us a little for our disappointment. I could not resist the temptation to chaff C. about losing the moose. M. told us that the animal, hearing the call and then hearing the stick snap so much nearer him, knew there was something between him and his inamorata, and was afraid of being attacked from ambush by a rival. We were surprised to hear him add that he had never known a cow to call unless a bull was with her. The general idea is that when the September moon is at its full the cow is alone or only accompanied by a calf. She then begins to call until answered by the bull, with whom she remains until spring. She then goes off to calve and the bull returns to bachelor life, growing the massive horns that attain perfection about the middle of September. M. certainly ought to know, for he has spent whole days and weeks lying down in the woods listening to the different sounds made by the moose. I have never since heard either white or red man call like him; certainly not as successfully. His theory was, that if his lordship, in paying his attentions to the lady of his choice, does not meet with ready acquiescence, he prods her with his terrible brow antlers. She cries out and brings to her assistance any chivalrous bachelor or dissipated husband of another cow who may be within hearing. The two bulls then fight it out. The weaker goes to the wall; the other takes the lady.

We called in the same place at early dawn the next morning, but had no luck. After breakfast we packed the moose meat for transportation in the ox team, which was to meet us at the edge of the little wood we had lost our way in. The night promised to be fine. Reducing our fire to a few live embers we went a short distance from camp and began to call. For a time we got no answer, but just as we were about to give it up we heard a loud reply in the valley beyond the hill and soon heard the call of a real cow in the same direction, luring the wanderer back. We kept up the competition for some time. The bull would come a little distance and then be

called to order by his wife. After testing his morals and distressing his wife for some time, we retired. On the next morning and evening we had no luck, but got one answer from our old friend in apparently the same place and with the same results. C. and I tried to work toward him, but found that getting along a barren by moonlight is no easy matter. So we sat down on a boulder, lighted our pipes and listened. We discovered that the happy family included a calf. Every now and then we could hear the bull utter a sharp bark (the noise they make when angry) and drive off the calf, whose plaintive cry would be followed by that of the cow, trying to make peace between the foster father and her young.

The following afternoon was devoted to a stroll in the woods. In the evening, after a short nap, we determined to try a call a little further from camp. When we reached the rocky barren we had selected for the operation M. went to work, but nothing came of it. To relieve the monotony a small owl perched itself on the limb of an old ramspike and surveyed us generally, as if expecting us to explain our presence in that solitude at such an hour. C. made a noise like a mouse. The little owl turned his head first to one side and then the other, as if to locate the exact spot. He suddenly swooped noiselessly so close to C.'s head as to almost make him lose his balance on the boulder where he sat.

I now fancied that I heard something like an answer from the woods, so I made the boy stop throwing pieces of granite at the owl on account of the noise it made. We tried the call again. An unmistakable reply was returned. C. and I went down the hill about 100yds. and intrenched ourselves behind some boulders. The boy had followed us unperceived. On came the gallant beast slashing through the trees, answering frequently and making straight for us without stop or hesitation. We both felt certain of a big fellow, he seemed so bold. As he came nearer and nearer the muscles of my leg began to quiver from the efforts I was making not to move. Before I lost control of them I saw the animal, about 15yds. off, emerge into the moonlight, and with head and neck outstretched stand there like a statue. So quietly did he come that I began to doubt my senses, but not for long. I saw C., 8yds. to my right, raise his rifle; the white tips on his sight glimmer for a moment, then came the report. We rushed forward, scared at each other's shadows; for it does not do to close with a wounded moose, one blow of whose forefoot will stop your hunting forever. Here was no such risk. A few paces down the hill we found him; the bullet had done its work well. The jugular vein was severed and the shoulder broken. We lit a fire of birch bark, and by the light of the moon skinned and cut up our game.

We returned to camp pretty hungry. While some marrow bones were cooking, M., in answer to the surprise I expressed at the animal's coming so close after the noise the boy made, told me that a moose does not mind a noise so much, and will often go toward where he hears the sound of branches breaking, because he thinks it is made by others of his species feeding, frisking or fighting. But when closer he advances so cautiously and quietly that when he finds out the lay of the land he can retreat without betraying his presence. But one whiff of a human being will set him running for hours in an opposite direction. Their sense of smell is so acute that they detect you half a mile away, if to windward and with open ground between you. To call with success there must be no wind, as, when he hears the sound, the bull, unless very big or very careless, will try to get to leeward of you. The reason C. and I worked well ahead of the caller was to try to meet the bull before he got too cautious. When a man calls alone, the moose will sometimes, after answering once or twice, remain still and creep close after the hunter has given him up, as shown by the fresh moose tracks in the morning. An Indian once showed me a hollow tree where a man, after calling until worn out, had gone to sleep, and awakened in the morning to find the fresh tracks of a moose close to his feet.

At dawn the next day we sent the boy for the team, and as the morning was too fine to waste gave a few calls, but soon desisted and returned to breakfast. Leaving C. in camp, M. and I finished cutting up the moose of the day before, and had hardly returned when we heard a shot, followed by another not far from the strip of woods. We wondered what it meant, but an hour later we heard a loud halloo directly south of our camp. After several minutes who should appear but Tom, our Indian driver, with a small boy on one shoulder and an old Queen Anne musket on the other. After making him welcome it occurred to us to ask him whether he had done anything in the way of sport. He calmly told us that he had that day killed a moose and did not feel quite sure of finding the carcas, though he had blazed the trees around the spot. We all started out to help him, but it was like looking for a needle in a haystack. M., who had all the time advised a search in the opposite direction to the one Tom was leading us in, now as a last chance led the way. Whether it was luck or judgment I cannot pretend to say, but we soon found the moose in a grove of young spruce trees, and a monster it was. It must have been the king of the forest who had chased M. out of the swamp. Its horns were quite as large and its neck measured as much around as a barrel. C. bought the head and horns on the spot and afterward sold them for a large sum of money.

All things have an end. It was time to turn our steps toward home. After breakfast and a pipe in the morning, each of us, pack on back and rifle in hand, bade adieu to our temporary home and began the retreat. During our tramp across the caribou bog we disturbed a moose. So near did we come that a small branch he had trodden on in his flight was slowly rising to its normal position. We came soon afterward to a small lake and pitched our camp. In the morning M. tried his skill. After the woods had rung with his plaintive cries for a few moments, we heard an answer from across the lake. The animal seemed very determined and energetic, answering every few seconds. C. and I pursued our usual tactics, went to the edge of the woods, and lying down among the bushes waited eagerly for the moose to swim or wade the lake, a sight we might never be able to see again. To our intense chagrin, his last challenge sounded as if he had tried to check it in his throat; we heard him no more. M. told me a light breeze had sprung up, and the moose must have got our scent across the lake.

We traveled all the next day and camped at night in a grove of young spruce trees. After supper the rain came down in torrents. The storm continued all night, but we managed to get a little sleep at intervals, awakened, perhaps, by a gust of wind that caused the tree roots to rise up under us and ourselves to wonder whether we were to be catapulted into the air, killed by a falling tree, or blown up by the cartridges under our heads.

The next night was passed in M.'s house. The following morning, after buying for a mere trifle some horns of the moose and caribou M. had in his house, we shook his honest hand, asked him to look us up if he came to Halifax, and with a good-bye to "the family," started in Tom's wagon for the steamer. During the drive we shot about twenty partridges. C. and I added up the expenses of the trip, and found to our astonishment that it would be covered by a ten pound note.

We arrived late in the afternoon at Halifax, where the horns and partridges on the box of our cab attracted a good deal of attention. One of the newly joined was anxious to know whether we had killed all the moose the horns indicated ourselves, and seemed relieved when we told him "No."

There was a "wet" dinner at the mess that evening, and I have a faint, a very faint, recollection of sending for M.'s moose call and trying to imitate some of his notes upon that instrument. My comrades finally seized me, chaired me in the antlers and in that way carried me up to bed. Thus ended the first and not the least successful of my many moose hunts. CECIL FRANCKLYN.

DELAWARE BAY IN 1862.

AS I sit in my easy chair, with my right-hand friend FOREST AND STREAM in my lap, the perusal of its always interesting pages sets memory to work recalling the many and various trips I have enjoyed in pursuit of what to me is the most fascinating of all sport, duck shooting. While my thoughts run in this strain, it occurs to me that some of the young sportsmen of the present day, living on the borders of the noble old Delaware, may be interested in an account of a ducking trip in the waters of the bay away back in the 'sixties, before the days of breechloaders, at least before they were in common use; so I copy a log of one of my trips.

Tuesday, Nov. 19, 1862.—Louis S., Amos B., the Commodore; Captain V., a noted Delaware River yacht sailor; Captain Billy G., a noted bayman and duck shooter from Tuckerton, N. J.; our boat keeper and cook, George, and your humble servant, even at that time, although a young man, an old duck shooter and water rat, left Riverton (just above Philadelphia) for a cruise down Delaware Bay in the good yacht Nettle, stored with a plentiful supply of all the good things we could think of.

This trip was more for a cruise than to make shooting a specialty, the writer and his regular party of friends, who were all duck cranks, having already made three trips in the bay and having had splendid sport. The log says: Wind N.E., weather clear. Made Christiana Creek (Wilmington) at 6 P. M., where we made harbor for the night.

Wednesday, 20th.—Left the yacht for Wilmington, via yawl, for sundries which we found we had forgotten to put on board in our haste to start yesterday, among them a barrel of ale. The crew of yawl, on their return, gave us a glowing account of some of the inhabitants of the good city of Wilmington, especially of the charms of a young lady who waited on them at the baker's; and then they sold us by pretending that they had forgotten to buy a spigot for the ale barrel, but finally producing it from one of their pockets. We attempted to put it in place, and—oh, murder! split it in the attempt. With the help of a piece of marlin repaired spigot. Ale pronounced good, very good XXX.

Weather very foggy all the morning, and the one thing needful to all sailing craft minus. Fog lifted at noon and light breeze came out from S.W. All hands piped on deck to make sail. Wind ahead, light and baffling; fog again on the increase until it and the night shut out everything except Reedy Island, between which and Port Penn we dropped our mudhook.

After stowing sails the bell (companionway hatch hasp) sounded for supper, of beefsteaks, sausage, bread, butter, coffee, etc., etc., well cooked and served by our cook and factotum George. Several games of euchre, interspersed with a little boat talk and a heap of "blowing" generally, with hot toddies all round, finished the evening. Did not turn in until late, but soon a snore to port, then one to starboard, and one astern from our poor half-starved dog Wis (so fat he could hardly hunt) announced that the party were trying to make up for lost time.

Thursday, 21st.—Fine breeze, S.W., tide ahead, made sail and up anchor at 8:30 A. M. in company with a pungey, which we soon required the aid of an opera glass to see, and before long could only see by "going one eye on her" with our long glass. Wind increased rapidly, tide in our favor by this time, tied in two reefs off Listen's Tree. Very damp and cool, so much so that the ship's company were piped below to "smile." Lots of common ducks ahead, on both bows, on either beam and astern. Oh, what duck talk, what running for guns by the two novices of the party, crawling forward, banging away, and never a feather. "Well, they were fishy, decidedly fishy." Threatening rain, sprinkling rain, very decided rain, great cry for oil skins, gum coats and sou'westers, our party very soon so metamorphosed that we hardly knew "t'other from which."

Made mouth of Duck Creek (Cross Cut) before noon, tide ahead and narrow creek, boat too large for the creek or creek too small for the boat, don't know which; but our good ship worked like a top and showed her sailing qualities to perfection, which in addition to having a working crew, who all knew when to haul and what to haul and what to let go, especially the latter when we jibed over the main boom and didn't want to get our hands burned by the main sheet, soon got us out of difficulties. We thought it rained out in the bay, but we were certain of it before we dropped our hook abreast of Duck Creek ponds. Down sails, stow same, and down to dinner is the order of the day. Never tasted better corned beef and cabbage, with the usual concomitants. Those who were wet soon dried themselves, and those who were dry, I rather think "wet their whistles." A good harbor, a fine, roomy cabin, a stove—what shall I say of that stove? Well, it just wouldn't burn, having a long horizontal pipe that ran under the cockpit before it came on deck. Sent a long-legged man under the cockpit, who by taking a reef in his legs was enabled to take down the pipe and punch a scupper hole in it to let the rain out. Shipped pipe, fired up, but no go. Anathemas loud and strong against the "little varmint," but she asserted her prerogative of smoking. After some thinking, some talking, some wondering, Capt. Billy proposed that we put the stove out in the cockpit and bring the pipe in the cabin; but after coaxing it a little longer and getting the pipe hot the fire burned all right. "Now, boys," said one of our blowers, "I can beat any man at euchre." Down we sit, and midnight found us still at it. Then all hands turn in came the order.

Friday, 22d.—Rain, rain, rain, cold and rain. Up at 4:30 and a portion of the party turned out in the marsh, dragging their duck boats over to the ponds, trying on their way the depth of many "salt holes," some of which we declared had no bottom, or rather that our legs were not long enough to reach the same. All hands returned at dark with 31 ducks, nearly all baldpate, with a sprinkling of black ducks and others. Hungry was not the word. Such slices of bread and butter, sausage, beefsteak, oysters and other viands as disappeared on the occasion would astonish any one not accustomed to see duck shooters eat after such a day on the marsh. Euchre, pipes, hot toddies, and occasionally a yarn, wound up the evening. Through the night more than the usual amount of snoring.

Saturday, 23d.—Fine, clear morning, wind fresh N.W. All hands on the marsh. Wind wrong, only 32 ducks. In at dark, with the same royal appetites.

Sunday, 24th.—Fine, clear day, wind N.W. This being an "off-day," we made sail, ran down the creek, thinking we should lie off and rest, smoke, read and loaf generally; but "man proposes," etc. Slap bang into the mud, crack goes our centerboard. There's the mischief to pay and no pitch hot. Went to Mahon's Ditch where, after a good deal of work, we unhung our board, and horrors, found it broken in two. After taking a little more off it, hung it again and found we could use it, and piped all hands to supper, in which fat young baldpates made the principal dish. Do you understand, baldpates? No finer duck flies. The number we put away would astonish you.

Monday, 25th.—Clear, fine breeze, S.W. Made sail after a hearty breakfast (notwithstanding our duck supper of the night before) for Straight Creek on the Jersey side. A great popping of guns at coots by the greenhorns of the party in crossing the bay. Dropped our anchor in the creek at noon. All hands went up the creek to King Pond. Very few ducks this afternoon, only six: returned to yacht at dark. Usual card party in the evening.

Tuesday, 26th.—Clear; wind fresh S.W. The party, except Capt. V. and the Commodore, went to the pond and killed forty-three ducks, nearly all black. Stove smoking at both ends, "whew! my eyes." George (cook) certainly understands cooking ducks and the party as certainly understand eating them; nothing but shaking out reefs in the waistbands of our pantaloons all around the table.

Wednesday, 27th.—Rain this morning; cleared off by noon with a fine breeze, N.W. Three of the party, Capt. Billy, Amos and the writer, went up to the pond. Poor luck; only killed twenty ducks. Marsh party very cold and sharp set when they returned. Ducks, coffee, etc., etc., went down to fill the vacuum. After supper usual amusement, which was varied by the Commodore having an attack of sciatica; whisky and cayenne pepper was applied hot externally. An impromptu cupping attempted by the writer, who heated a tumbler and applied it to the Commodore's back, was pronounced a success by all except the Commodore. He did not exactly coincide in this view of it, as the tumbler had been heated too hot, and as it stuck to his back, brought him flying out of his berth, forgetting sciatica and all else except the tumbler; this caused a general snicker to pass around the card table which reminded the Commodore of the fable of the "boys and the frogs." Boarded an oysterman to-day who had some "coves" of the real stripe.

Thursday, 28th.—Clear, wind N.W. Made sail about noon. Small creek, wind dead ahead, very little water, but the Nettle behaved in her usual style and very soon put herself in deep water. Started up the bay; wind died out just as we reached Middle Marsh Creek, where we dropped anchor at 4:30 P. M. The party went to a pond near the creek, this being new ground to most of us. Captain Billy killed a pair of black ducks, and a pair that Amos claimed to have killed, but didn't get, would have made four. Hats bet on his getting them in the morning (which bet was lost). Supped on ducks, with fish, oysters, etc., etc. After supper "boat talk," and a round of "old sledge" closed the evening. Cook reported provisions getting low. No butter for supper, but we concluded that plenty of ham fat was a good substitute.

Friday, 29th.—Clear at sunrise, wind S.W. Made sail at 5 A. M.; ran up the bay; wind failed before noon. Boarded a schooner off New Castle for coal. Started our cabin stove, but could get nothing out of it but smoke, smoke, smoke. Dead float from New Castle to Marcus Hook. Sent a boat ashore there for provisions. Cook reports us out, dead out. A duck apiece for breakfast, and one and a half apiece for dinner, and a slice of ham each for supper—most decidedly short allowance for hungry men. Cook brought off some butter and some short-waisted mackerel; all he could find. Always thought the Hook a one-horse place; now know it to be. Evening, euchre, with some rich, very rich stories, with pipes, cigars, egg nog, and nightcap of hot toddy. Stove smoked awfully, euchre party smoked out. Small hours of the morning surprised all hands except the Commodore, who turned in and went to sleep, waked up and undertook a story, failed decidedly; not rich enough, couldn't get up a laugh.

Saturday, 30th.—Cloudy. Light wind, N.E. Looks and feels like snow. No fire. Made sail at 5 A. M. Wind increased. Piped to breakfast at 7 o'clock off Clemell Flats. Plenty of good bread and butter, mackerel, ham and eggs, first-class coffee, etc, Made Navy Yard at 9 o'clock, assorted and divided ducks, and drew lots for the different piles. Stood off and on at the island to set Captain Billy and Amos B. ashore, bag, baggage and ducks. Wind and tide ahead from here up. Cold and raw. Tried our stove once more; put in plenty of paper, then kindlings, chips, etc., but no go. Thought of hanging out a sign, "Hams taken in to smoke;" but after a long trial got the fire going, and it felt very comfortable. Reached Riverton about 4 o'clock, where party disbanded. So ends this log. SINKBOAT.

THE WHEATLANDS, Maryland.

AMONG MINNESOTA WILDFOWL.

"BOYS," said Bart, pointing over the prairie to the westward, toward an extensive area of high slough grass; "boys, do you see that bunch of buffalo grass off to the right of the road? Well, there's a big pond in there, and when I came by this morning it was chuck full of mallards, and if they ain't been disturbed, it's more 'an likely they're there yet. There goes a bunch in there now!" he exclaimed, as we observed a large flock of ducks circle around and settle into the grass. "We'll drive along as fur as we can and then see if we can't get a shot at 'em;" and reaching down under a couple of horse blankets in the wagon bed, he pulled out an old 12-bore pin-fire of French make.

"Is she a hard hitter, Bart?" asked George, throwing the gun up to his face two or three times, and examining it critically.

"Hard hitter!" ejaculated our host, "well I reckon she ain't nothin' else."

The above conversation took place one morning in October, 1885, on the road from Balaton, Minn., to Bear Lakes, in Murray county. My partner, George R., and myself, had planned a trip into that country along in the summer, and had watched and waited for the day to arrive when we should once more have a chance to drink in the pure air of the prairies, paddle our boats over the sedgy lakes, mark the flight of wildfowl and perchance bring to bag the wary mallard. The day of our departure finally arrived, and preparations being completed, we boarded the train in Chicago and in due time arrived at the little station of Balaton, Lyon county, after having passed through and enjoyed the beautiful Devil's Lake country of Wisconsin, and the rolling prairie land of southern Minnesota. Arriving at Balaton we waited over until the next day when, by previous arrangement, Mr. Bart Low met us, and loading our shooting traps and hunting trunk into his wagon, together with our boat, which had been shipped ahead of us, we were off for his home in Murray county, fifteen miles south.

This part of the State of Minnesota is noted for its numerous sloughs and lakes, many of which contain wild rice and are preëminently the home of the mallard. The majority of the smaller waters can be waded with hip boots, and the tall grass and rushes around the edges provide best of cover for the hunter. These sloughs occur frequently on the road from Balaton to Bear Lakes, and as we rode along over the rolling country we could see occasionally both geese and ducks winging their way to and from their feeding grounds, telling us plainly that sport was in store for us.

"Now, boys," said Bart, pulling up his horses, "I reckon we're about as near that slough as we ought to get with the team, so we better get out here."

We employed the usual tactics of approaching the pond from different directions, and, after getting ourselves into good cover, Bart, at a signal, fired a random shot over the water. With a great quacking and rushing of wings the ducks sprang into the air and made a break in the direction of one of the large lakes. This brought them over to me and a couple toppled over to my double report. This reception startled the flock, and in considerable disorder they turned only to meet with a similar reception from George. Again they were repulsed and sought a new direction, but such a height had they attained that I thought we should get no more; but Bart was the champion, for he stopped three ducks with one barrel. The No. 1 shot with which his shells were loaded told with good effect at such long range, and proved what he had said, that the old fusee could shoot. But I hadn't much time to think about the shot Bart had made, for at his sharp "Mark west!" we went down behind our blinds out of sight of an approaching flock of mallards. They were making directly toward George, and I watched them as they neared the fatal stand. On they came, steadily, until they were well abreast of him. Bang, bang! Three of them tumbled headlong into the rushes, while the rest of the flock mounted high in the air and went over me out of range. Bart managed to wing one, after which we retrieved our birds and were once more on our way.

To me there is not much real sport in this style of shooting, although the game is large and fine. It lacks the excitement of pass-shooting, while many birds are lost in the matted reeds and grass lining the shores of these ponds, to become the prey of hawks, minks and the like. We arrived at our destination about five hours from Balaton. The house of our host was in the edge of 300 acres of timber, the only natural timber, by the way, within a distance of 20 miles or more. This clump of woods, which is composed chiefly of elm, cottonwood, black oak, and burr oak, is nearly surrounded by lakes. The largest, two miles long by about one and a half wide, is Lake Tebbets; it lies east of the house within a stone's throw of the door. Several of the smaller lakes and ponds contain wild rice, and we had the good fortune to discover some very good flyways before our stay was over. We spent the rest of the day unpacking our effects and getting into shape in our new quarters. We put our boat into the water, cleaned our guns and loaded some shells. More than once that evening we paused to mark the flight of ducks or listen to the honking of geese.

Long before daybreak the next morning we had eaten our bread-and-milk breakfast, prepared for us the night before, and were on the way to the well-known pass on the south shore of Lake Tebbets. As we pushed along through the rushes, ever and anon a duck or two, startled from their morning nap, would take wing, or the hoarse croak of some water bird close by would in turn startle us. Finally, after a deal of hard paddling and fouling three or four rat huts on the way, we pushed our boat through the rushes on the opposite shore just as faint streaks of light began to show in the east. Wending our way to the higher ground above the margin of the lake, we took our stands about 200yds. apart behind some bushes. I had barely gotten on the stand, with shell box open and heavy outer coat off, when the whistling of wings overhead announced the commencement of the flight. But we were facing the west, and it was not yet light enough to distinguish objects in that direction. However, I had not long to wait, and standing with my gun at a ready, was wondering which of us would draw first blood, when whang! went George's gun, and I felt sure it would not be me who would bring down the first game that morning.

It is now light enough to see and a bunch of swiftly moving shadowy objects draw my fire. The distant boom of a gun comes borne on the wind from the direction of Big Marsh at the other end of the lake and now the ball had opened in earnest. As the sun climbs into sight I have half a dozen down on the land and two or three more have pitched into the pond behind me. A momentary lull in the flight gives me an opportunity to look around and gather my birds, which I do very easily, as the grass on the ridge where I stand is quite short. After securing a mallard and a sprigtail from the pond, I count my bunch. Four mallards, three redheads, two sprigtails and a green-winged teal, ten in all. I feel, though, I haven't any too many if I intend to be ahead of George, for his gun has been kept busy and I am too well acquainted with his skill and good judgment to be mistaken. The main flight having passed over, we are favored with more singles than flocks; and the shooting in consequence becomes more interesting because more difficult. The ducks begin to climb as they cross and I replace my No. 6 shells for those loaded with No. 5. Clean misses are frequent at the swift-flying birds. It seems at times next to an impossibility to swing the gun rapidly enough to cover and avoid shooting behind; but occasionally we feel repaid for the misses by making some long or difficult shot. The fun wanes as the sun mounts higher, and by 9 o'clock the flight is over and we have plenty of time to look about us. We adjourn to the boat and count our spoils. I have sixteen ducks, while George comes to the front with nineteen and I acknowledge defeat.

Leaving George to tie the birds in bunches, preparatory to setting out for home, I climbed a tall cottonwood, which grew near the water's edge, with a field glass to survey the surrounding country. Off to the northward could be seen the two Bear Lakes, connected by a narrow strip of water. In close proximity to the east was Rush Lake. To the westward stretched Lake Tebbets, behind us a long line of ponds and sloughs. The whole was hemmed in, seemingly, with rolling prairie, forming a beautiful picture to the wildfowler's eye. Indeed, as I drank in the panoramic view from the top of that cottonwood, I felt that it was indelibly stamped upon my memory. And even now the picture is as fresh to my mind as if I had beheld it but yesterday.

The evening flight was but a repetition of the morning's sport, only that it did not last so long. Not until the sun dipped the western horizon, and we had been on our stands over an hour, did the shooting become anyway brisk, the ducks then skimming the high ground and pitching down to the ponds behind us. As soon as it became too dark to shoot with any degree of certainty, we abandoned our stands and set out for home. Arriving there we found a good supper in waiting for us, some of the ducks shot in the morning forming no small portion of the meal. Supper over, we whiled away the evening discussing the events of the day—of remarkable shots or unaccountable misses—and listening to stories of early Minnesota life, when "Injuns was plenty and trappin' su'thin' to brag on," until, overcome with drowsiness, we retired, to sleep the sweet sleep of the tired hunter.

Such is the narrative of our first day's shooting. Nothing very startling, to be sure, but simply our experience and that, I dare say, of many another devotee of the gun who may chance to read these lines.

I have time to speak of the rest of our stay only in general, selecting only two or three red-letter days which were specially enjoyable—for let no one suppose that every day we did nothing but "bag meat."

At the western extremity of Lake Tebbets is a narrow arm of water filled with wild rice, through which the hunter may push his boat for a distance of perhaps five hundred yards, when he will come out into a large bay—it might properly be called a lake—containing three or four hundred acres of rice and rushes, with here and there a patch of open water, which is shallow enough for a mallard to feed in. Days when it blows hard, and the rough water on the open lake makes it difficult for a duck to live in it, they resort to these sheltered places until the wind subsides, as it generally does on these Western prairies with the going down of the sun.

On one such day the writer might have been seen edging along under the shelter of the timber on the windward shore, keeping as much out of the wind as possible, with decoys, shell box, lunch and gum-coat stowed in the bow of the boat. Occasionally a snipe would flush as I neared some point jutting out into the water, and after a short, zig-zag flight, would drop down again. A dozen mallards passed over from the direction of Bear Lake, going at a terrific pace before the wind, and, swinging around, settled into the rice toward which I was making. Away off to the westward could be seen a flock of geese struggling against the wind. At length I entered the rice in the narrow arm of water, and pushing through it as carefully as I could, I succeeded in getting to the other side without putting up very many ducks. But the instant I made my appearance on the other side scores took wing at once. I lost no time in putting out the decoys and getting into shape to receive the birds when they returned. First came an incomer, an old mallard drake, twisting his head first on one side, then on the other, evidently undecided whether to alight or not. He took a circle around the decoys and finally swung into range. As I threw the gun quickly to my face, he made an extraordinary effort to mount high in the air; but it was too late, the gun spoke, and he came down all in a heap. Instantly hundreds of well-concealed ducks, whose presence I had been unaware of, sprang into the air and made for the open lake, only to return after making a short flight, for nothing with feathers could live long on the wing in such a wind as was blowing. First came eight mallards, going over and well out of gunshot. Following them closely were four sprigtails, flying to the left and well down. Catching sight of the decoys, they swung around and prepared to settle. At the report of the right barrel two pitched into a bunch of rice; the left winged another. To say the remaining duck was scared would be putting it very mild. In an amazing short space of time he was far over the marsh. There was a good, open space of water around my blind, and I let the ducks lie where they fell, occasionally pushing out to pick up one which had fallen upon its back—for ducks will not decoy where the white breasts of dead ones lie upturned on the water. At 4 o'clock the wind went down. Huge banks of black clouds began to pile up in the southwest, and, fearing a storm, I pulled for home with a very fair bag of mallards, wigeons, sprigtails, and others.

Three miles east of the timber was a big slough, Bart had told us, which was a good flyway for ducks when the wind was right. There was a big pond in one end easily reached from the road which ran near it. Long Lake lay over the hill from the pond about a mile, and in coming from two smaller lakes to the southeast, the ducks, before rising over the higher ground, would dip down to this pond. There was good cover, and with a few decoys one might get good shooting, he thought.

The weather had turned off pretty warm, and we had been lying around the house most of the time. Time began to hang heavily on our hands. The days of our stay were numbered, and we were getting anxious for a change in the weather that we might try this pond about which there had been so much talk. Besides, we wanted a few birds for our friends at home, and unless it changed colder it would be useless to shoot them, for they would not keep well.

Finally, one evening Bart came in and said: "Boys, there's goin' to be a change in the weather, sure as shootin', and in less than twenty-four hours, too, or I'm mistaken, and it strikes me I've been too long in these parts to be fooled in weather signs." And even as he finished speaking a gust of wind whistled around the corners of the house and through the leafless branches of the trees in the yard, announcing a sudden change. "There she comes," remarked our host, as George made a break for the door. "Ducks 'll be thicker 'n hair to-morrow." George reported a few flakes of snow falling. "Now, boys," said Bart, "I'm going to Currie in the mornin', and if you fellers want to go to that slough I've been blowin' to you about, come right along with me and I'll drop you out there." The next morning we found the ground white with snow and a few flakes still falling. The sky was overcast; a high northwest wind was blowing; no better day for duck shooting could have been asked for. "If that slough keeps up her reputation to-day you fellers 'll have a chance to burn powder enough to last a year," remarked Bart, as we climbed into the wagon. In about an hour we hove in sight of the pond. It was full of ducks that had dropped in out of the storm; others were continually passing over. "Now, boys," said Bart as he drove away, "I'll be along here about sundown and I reckon you'll want some help, too, for the old slough is going to be a hustler for ducks to-day."

I got out the decoys as soon as I could, and waded out to an old rat hut, which was entirely concealed by rushes, and which made an excellent blind. George was in good cover on the other side of the pond, about 200yds. from me. The ducks flew as I never saw ducks fly before. The decoys were scarcely of any use whatever, as the birds seemed glad of a chance to drop down anywhere out of the storm. The wind continued high all day, with a flurry of snow along about 10 or 11 o'clock. Geese were seen frequently, high on the wing, the ▷-shaped order of the flocks indicating a long flight. At noon we adjourned for lunch, and, after a smoke, went back to our blinds. At 4 o'clock I got off the hut and went up to the other end of the slough, where I had a good open space of water behind me. I was wise in doing this, as I lost fewer ducks than if I had stayed at the old blind, where the rushes were high and the water rather too deep to be waded easily. There were many exhibitions of wretchedly poor shooting from both of us, and just so, because of the high wind that was blowing, and the terrific pace with which the birds sometimes went before it. Knocking down a poor, cramped-up pigeon thrown from a trap at 18yds. is a vastly different thing from killing a duck flying like a cannon ball in a high wind. A flock of prairie chickens flew over the slough not over forty yards from either of us. Away went four barrels after them, but not a bird responded to the call. At sundown a flock of brant went over, and I managed to fetch one out of the flock. It came down into the water about a dozen yards from where George stood. He waded out to retrieve it, when the brant took wing and flew around him in a circle. The old 10-bore cut loose twice, but the bird rose high in the air and sailed away in the direction of the sloughs to the southeast. I ran out of shells at dusk, and turned my attention to picking up the birds. I never saw wildfowl come into a slough thicker and faster than they did on that memorable evening. They came apparently from every direction, and dropped in anywhere and everywhere. Finally the bright spot in the western sky where the sun disappeared paled into twilight, and the twilight deepened into darkness, and we carried our birds out of the marsh to the road, which ran close by it, and waited for Bart. But no sound of approaching wheels greeted our ears, and after waiting a little while, we shouldered our game and started. I never had but one tramp, packing a load, that I remember any better than I do the one that night, and that was once in Minnesota, a walk of three miles through prairie grass almost waist deep, with twenty-eight large ducks and two brant, a heavy gun and a hundred loaded shells, and so dark I could scarcely find my way. That was the night when your humble servant was pretty near tuckered out.

Fortunately we got a ride when about a mile from home, and as the last mile is always the longest and hardest, the boost was most acceptable. Bart never turned up till 10 o'clock that night. He said he could smell powder and blood when he came by the pond, and he "reckoned as how thar might be two or three ducks less roostin' around Bar Lakes." When invited to take a squint around on the north side of the house where the bunches were hanging, he was convinced that "thar was at least three less."

Our bag that day was the largest of any during our stay. We shot somewhere between ninety and a hundred, bringing in eighty-three. They were all kinds—mallard, redhead, widgeon, pintail, gadwall and teal, including three brant and one Canada honker, the latter a contribution from my genial friend George.

We decided to put in one more day at the pond and then start for home. Accordingly, the next day found us at the old stand, but the ducks were by no means as numerous as on the preceding day, and our bag was only fair.

The next day being the one set for our departure we packed up and were taken to Balaton in time for the evening train. This was the beginning of the ending of two of the pleasantest weeks I ever spent in my life—two weeks full of unalloyed sport and good feelings. The weather was beautiful throughout nearly all of our stay—almost too pleasant for good shooting. For Mr. Low and his family I have only praises. They are wholesouled, genial and accommodating; and I want to say in passing that Mrs. Low can manufacture the best—mark you, I say the best—griddle cakes it has ever been my

good fortune to sample. Mr. Low is now a Representative to the Minnesota State Congress from his district, and did good work at the last session which passed the law abolishing spring shooting.

And now a word to any who contemplate going into the Bear Lake country to hunt ducks and I am done. By all means take with you a Bond boat; if not a Bond, then some kind of boat. Dogs are all right, as you will secure many birds from the grass and rushes that would otherwise become lost, but your dog will not save you a score or more long tiresome tramps, as a boat will. Aside from the hard work of tramping in slough grass up to your neck, you will not be able to get anywhere. For Minnesota water shooting I consider a boat indispensable. As to goose shooting, I cannot recommend this immediate section of the country as the best. There is scarcely enough feed for them. There were, however, a good many in the country while we were there, but, although they took their flights at daybreak and at 4 o'clock in the afternoon, there seemed to be no particular feeding grounds or lines of flight.

Seven miles northeast of Bear Lakes are lakes Susan and Maria, where excellent canvasback and redhead shooting can be had. But we did not visit these lakes, so I am unable to speak from experience. We saw a good bag that was shot there by Sycamore, Ill., parties who stopped a couple of days or so with Mr. Low. I have no doubt, though, but there is good canvasback shooting there, for I was told by Dr. Thompson, an old duck hunter, and at that time proprietor of the railroad eating house at Tracy, Minn., that he had had excellent sport among redhead and canvasback at Lake Susan. There is an abundance of vallisneria (wild celery) in the lakes, which, of course, accounts for the presence of the canvasback. C. F. C.

CHICAGO, Ill.

BRANT SHOOTING AT MONOMOY.

Editor Forest and Stream:

It is now some years since a report of brant shooting at Chatham, Mass., has been made, and feeling that some of your readers might be interested to know how this work had progressed, we will briefly sketch the season's sport.

It must be understood that there are three clubs at Monomoy Island, Cape Cod, but that for two years the three have been united as one club, under the management of the elder—the Monomoy Branting Club. Then the members and invited friends are grouped into weekly parties of seven or eight for each week, the first party this year having entered the field on the 24th of March. The season was cold and backward, and all fowl—geese, brant, eider-ducks, coots, etc.—were a little late in their migrations. Several gaggles of geese (*Anser canadensis*) passed this point as late as the 20th of April, March being their usual migrating month. There is among these weekly parties some little rivalry to see which shall get the most birds, and this rivalry adds zest to the occasion. During the latter part of March and the first part of April the weather was very rough and cold, and the high tides and wind destroyed the bars as fast as they could be made, and so much extra labor was required on the other bars that the north bar was not made and covered with canvas till the season was far advanced, and the score for the first two weeks ran quite small. Ordinarily there are so few brant here as late as the 25 h of April as to render pursuit unprofitable after that date, but this season they were so backward that a party of six was made up for April 27 to May 4.

The score for the season was as follows: First week 23 brant, second week 6, third week 45, fourth week 171, fifth week 55, sixth week 65; and 15 were killed by the resident members before the weekly parties arrived, making a grand total for the season of 380 brant. There are during the season a good many other fowl killed, such as geese, ducks, etc., but only two of the former came to bag, though there were an unusual number on the ground.

We have been thirty years in this "bloody business," and we must say we have never seen more brant than during the present season. The proportion of young brant fairly astonished us. More than three-quarters of the number killed during the last three weeks of the season were young birds. Of the 71 brant hanging on the north end of the club house on the first day of May—the usual place for keeping them cool—only 7 were old ones; and of 11 killed in one day, there was not a single old bird among them. Earlier in the season the proportion of old ones would be greater. The difference in the weight of the birds on the first of April and the first of May is quite pronounced. The average weight at the first date is scarcely 3½lbs., while at the last date it is nearly 4lbs. The young birds especially have a "lean and hungry look" early in the season, but later nearly every one is a fine fat fellow worthy the tooth of a gourmand. All birds get fat very rapidly, we believe, when supplied with abundance of suitable food, and these birds must have fallen into such luxuriant feeding ground before their arrival here, though we confess we know not the place. Although we have here fine feeding ground, the birds do not seem to tarry a great while. They are coming and going all the time, this year especially, even down into May, though of course in diminished numbers.

In the nature of things, since in spring time the birds hug the shore, most of the brant that inhabit the east coast of North America must pass in sight of Monomoy and Chatham Bay, and to a person who never witnessed it, the spectacle would create wonder and surprise. Almost the first question asked by a stranger is, "Where do they all come from?" Let us suppose for a moment that last year we had a million of brant pass this point. Then let us further suppose that three-quarters of the brant that pass this year are young, then we have of these delicious little feathered migrants this season the magnificent spectacle, the grand moving panorama of four millions of brant. And this is thought by our resident members and best judges not to be an overestimate. The autumn of 1886, in the Arctic regions, where the birds breed, must have been warm and favorable. When cold weather sets in early, so as to make young ice by the 3d of September, there is no possible escape for the young birds, and the mother must depart or perish with her offspring. Instinct is stronger than affection, and the mourning matron wends her weary way to warmer climes, but the disconsolate gunner sees no young brant on Cape Cod the following spring. A fortnight more of warm weather would have saved thousands of the callow birds, and this fortnight was vouchsafed to them last fall.

If the reader has had patience to follow us to this point, we would in conclusion like to open our club journal and read to him nearly verbatim the record of a single day's shooting:

"*April 19, 1887.*—The heavy snow storm of yesterday was reduced by rain to three or four inches. During the entire night the wind howled fearfully, heavy thunder shook the earth, and the forked lightning made the night only more hideous. The wind continued strong from N. by E. till afternoon, when it swung more to westward and slackened somewhat in severity. High tide 9:13 A. M. and all the boys were out in good season, full of the highest hopes for a big day's sport. Nor were they disappointed. W. and T. occupied the South Box, G., D. and R. the North, L. and S. the Mudhole, and V. his old haunt the Hummock. Never was better day for branting. Never were there more brant here, and never did they behave better nor give more shots. In all our thirty years' experience never before have we seen so much powder burned in a single day. Three or four times did one and another come in for more cartridges. The wind was so strong it actually tore the water, and the poor birds could neither stay in it nor out of it, and they seemed tired out and seeking a place of safety and rest. Nearly all the birds were shot on the wing. The water was so rough it was no easy matter for them to light, nor were they all in one large flock, but broken up into small 'pods' of two, three or half a dozen, and these were decimated as they approached the decoys. Not more than eight were killed and recovered from any one shot. They kept coming along amid a continuous fusilade, now here, now there, now everywhere. The South Box took in thirty-seven, Mudhole thirty-six, North Bar twenty-six, and Hummock six. When the wind blows fresh from the east many dead birds are lost by being drifted off shore. Seven of these were recovered to-day when the wind changed, making the day's work foot up one hundred and twelve brant. There was great rejoicing at the club house as each party came in and dumped its heavy load down by the front door. Cheers, huzzahs and tigers rent the air, and the remainder of the day was absorbed in marvelous stories and circumstances that favored or obstructed the sport of each individual." W. HAPGOOD.

BOSTON, Mass.

NEW JERSEY GAME.

NEW JERSEY experienced an unusually good English snipe season this spring. It began early, and the last bird I heard of being killed was shot on Saturday last at East Newark. Several years ago Dr. Robinson, of Newark, killed thirteen snipe one hot July day on the Newark meadows. These birds, among some others, had bred there. I feel convinced that if unmolested in their spring flight snipe would, under certain conditions, breed on the Newark meadows and at Pine Brook. At present the shooters do not give them time to alight.

The woodcock have had a set back in New Jersey, owing to the cold rain and snowstorms in the middle of April. Along the Wallkill, between Hamburgh and Liberty Corner, old birds have been found dead. The rise of water in the northern counties is also said to have destroyed many nests. Something always interferes with the woodcock shooting in these days, and those who follow it have a hard road to travel.

Along with the apple blossoms came a big flight of yellowlegs and other bay snipe. On May 8 they were very numerous along Little Egg Harbor and Barnegat Bay, and the Sunday shooters enjoyed excellent luck. On the following day not a bird was to be seen.

Mr. James L. Anthony, of this city, has, along with his kennel partner, Mr. Charles Heath, established a game preserve at Lynch's, Va. Mr. Anthony has put out some English partridges there, and also about thirty birds of the same kind at the Graphic Kennels at Netherwood, N. J. SNIPE.

MICHIGAN WARDEN SYSTEM.

Editor Forest and Stream:

I have had some experience with the State game and fish warden, and he seems to mean business. He informs me that within the last two weeks nearly a hundred arrests have been made.

The deputy wardens for Antoine county are Jesse A. Cary, of Central Lake; Alex Campbell, of Milton, and F. W. Severance, of Jordan. They are all men who will not be fooled with, and there is a growing feeling among the population that it is no longer safe to violate the fish and game laws.

Our protective association prepared the way for this feeling and its influence has been salutary.

I have good hopes to see our woods and waters restocked within a reasonable time. KELPIE.

CENTRAL LAKE, Mich., May 9.

MONTREAL.—The Fish and Game Club, of which Dr. Brainerd is president and Mr. John Molson secretary-treasurer, have just moved into new quarters at the corner of St. James and St. Peter streets. The rooms are most elegantly fitted up and are probably the finest in the city devoted to such a purpose, and to complete the arrangements for the comfort of the members and their guests, the services of Mr. Henri Beau have been secured as caterer. The Fish and Game Club, which numbers about 225 members, is in connection with the Fish and Game Protection Association, membership in which is a necessary qualification in those belonging to the social organization. The officers of the Protection Association are Mr. W. H. Rintoul, President; S. Cross, Vice-President, and John Nelson, Jr., Secretary-Treasurer.

ANOTHER VICTIM.—This time in Florida. The Palatka *News*, May 12, reports: The old joke of carrying unsuspecting innocents into swamps on the pretense of catching snipe, has been practiced so often that nearly everybody is into the "sell," and it is a pretty hard matter to get a victim. Some of the Palatka boys, however, have been coaching a young man in town for several days, and last night they took him out beyond the junction to initiate him into the mysteries of snipe hunting. He was given an old corn sack and a light and stationed as far into the swamp as it was possible to go, where he was left while his companions went off to drive the snipe. They returned to the city in great glee over the success of their joke, and the victim doubtless kept a silent vigil for the snipe that never came.

UNITED STATES FIELD TRIALS CLUB.

A NEW field trials club has just been organized under this name, and starts out with brilliant prospects for a successful career. It is not intended in any sense as a rival to any of the existing clubs, but has been formed by a number of wealthy gentlemen, who believe that there is room for another association of this kind in America. The membership of the club is to be limited to thirty, and this number will include representatives from Washington, Baltimore, Philadelphia, New York, Brooklyn, Providence and Boston.

The grounds chosen comprise 8,000 acres of land south of Annapolis, on the famous Eastern Shore of Maryland, the property being now owned by Mr. Robert Garrett, of Baltimore, who will turn it over to the club, of which he is a member. The initiation fee will be $500, and the annual dues $100.

The club expects to hold a field trial this autumn, to consist of a Derby and an All-Aged stakes. Entries for the former will probably close Aug. 1, and for the All-Aged Sept. 1. The trials will be run under a single judge, and it is intended to try to obtain the services of Mr. John Davidson, of Monroe, Michigan, to act in this capacity. All the heats will be run to a finish, and there will be no dividing of the stakes. Dogs that win must do so on their merits.

The grounds selected for the club are said to include some of the best duckshooting points on the Chesapeake Bay, and there are vast beds of the wild celery. The upland affords admirable quail shooting. An English game keeper, who brought over a shipment of 3,000 English pheasant eggs for Mr. Garrett, which he intended to hatch out and turn loose on his place at Montebello, near Baltimore, is now superintending the hatching of these eggs on the club grounds, and the birds, if sucessfully reared, will be turned out there. The eggs are being incubated by bantam hens.

Membership, energy and money are important factors in the success of any club. The United States Field Trials Club has all these, and will undoubtedly be successful and do a great deal of good.

MASSACHUSETTS SNARING BILL.—A Boston paper reports the discussion in the Massachusetts Senate last week on the grouse snaring bill: "In place of an adverse report, Mr. Wadlin, of Reading, moved a substitute bill to allow the trapping and snaring of partridges, hares and rabbits by landowners upon their own land between Oct. 1 and Jan. 1. Mr. Young, of Wellfleet, opposed the bill, because the game law has lately been passed and found to be in the public interest. Mr. Wardwell, of Haverhill, spoke on the same side, attacking the doctrine of private ownership in game and criticising the law of criminal trespass. Mr. Conant, of Acton, saying that he represented the farmers' sons, didn't believe in preserving the game for hunters by prohibiting the farmers' boys from trapping birds on their own lands. He ridiculed the idea of exterminating partridge and quail, and presented a unanimous vote of the town of Acton in favor of the bill. The farmers were not going to stand the greediness of the sportsmen any longer. Mr. Foss, of Rowley, followed on the same side. Mr. Wadlin, of Reading, defended his bill on the ground that the owner of land has a property right to wild bees, fish and birds on his land, and that snaring, as practiced by farmers' boys, does not exterminate game. After further debate, the bill was substituted almost unanimously, without amendment."

NEW YORK GAME LAWS.

THE Governor has signed Senator Wemple's bill providing for a fish hatchery in the Adirondacks.

Assemblyman Moore has just introduced a bill somewhat similar to the bill of last year amending Section 442 of the penal code (relating to the use of steam dredges weighing over 30lbs. in taking oysters) by providing that nothing in the section contained shall be construed to forbid the owners of any legally planted beds of oysters from using steam power or heavier dredges on such legally planted beds.

The Assembly has passed Hamilton's amendment to the general game laws relative to fishing and hunting grounds where special privileges have been granted.

On Friday, in the Senate, Mr. Coggeshall read a communication from Forest Commissioner Townsend Cox, stating that charges had been made on the floor of the Senate against the Forest Commission, of which he is president, and requested an immediate investigation. Mr. Coggeshall, upon this request, attempted to have a committee of three Senators appointed to investigate the matter. Mr. Sloan thought such an inquiry might be expensive, and as some explanation might be made at once by the Senator who made the charges, he moved that the resolution be referred to the Finance Committee, which was done after considerable debate, during which Mr. Pitts declared that the resolution was offered to enable some one to spend the summer in the Adirondacks. Mr. Coggeshall replied that he did not need to take to the woods whatever others may do. Mr. Pitts replied that seven-tenths of these investigations are merely means of furnishing Senators with summer vacations.

The Assembly has passed Reeves's appropriation of $2,500 for a patrol steamer in the harbor of New York city to enforce the law against garbage; also Hadley's appropriation for the Adirondack Survey increased from $15,000 to $30,000; also Senator Murphy's bill, authorizing the having in possession trout and other fish caught outside of the State at seasons when fish caught within the State are not allowed; also the following bill (No. 1,440) introduced by Assemblyman Emery:

SEC. 1. No person shall set or take any fish by any device known as pound-net, trap-net, set-net or gill-net in any of the waters of Lake Erie within jurisdiction of the State of New York, opposite to and adjoining the shores of the county of Erie in such State, or engage in procuring or preparing for market any such fish or any part thereof, or exposing any fish taken in such nets as aforesaid for sale.

SEC. 2. Any person who shall violate any of the provisions of this act shall be guilty of a misdemeanor and upon conviction shall be punished by imprisonment for not more than five months or by a fine of $50 or by both such fine and imprisonment. One-half of all fines recovered by the provisions of this act shall be paid over by the court receiving the same to the complainant, and the balance after deducting his fees and fees of officers making the arrest to the county treasurer, and it shall be the duty of every sheriff, deputy sheriff and of every constable and of every game constable to arrest whereon found within this State without warrant any person whom they shall find violating any of the provisions of this act and immediately to bring such offender before the nearest magistrate having jurisdiction of the offense for examination and for trial.

SEC. 3. This act shall take effect immediately.

The Assembly has passed Erwin's amendment to the song bird act of 1886, making it a misdemeanor to feed or shelter sparrows; also, making it lawful to kill crows, hen hawks, owls and blackbirds. The bill was opposed by many members, who regarded the provision as relating to sparrows as most extraordinary legislation; but it passed.

There was considerable of a fight in the Assembly over Coggeshall's 6-inch trout bill, some of the members wishing to reduce the length to 5in. Passed with $10 fine clause omitted.

The Senate Finance Committee reported Hall's amendment to the Forest Commission act and it was ordered to a third reading. The same committee also reported Reeves's general oyster bill (the same which was worked over by the Assembly Game Committee) so mutilated that Reeves will not allow it to pass in its present form. He declares that in this shape it is worse than useless. It has again been taken back by the committee.

RIFLES AND BULLETS.

Editor Forest and Stream:

The lessons of the trajectory test appear to be many and various, and each rifle expert seems to draw encouragement or consolation from its study. What I, together with a great many others, don't know about rifles would doubtless make a good size primer, yet I cannot avoid the conclusion that the advocates of the muzzleloader are slightly off their base. Because the Romer muzzleloader beat the Bland Express less than 1¼in. in trajectory over the 200yd. range, while using 20grs. more powder and 40grs. less lead than the Bland, to claim that the muzzleloader is consequently proved to have a flatter trajectory than the breechloader, appears to me very like boasting because John C. Heenan in his prime could doubtless have carried a 10lb. weight further than a 10-year old schoolboy could carry a sack of flour. The Merrill muzzleloader should never have been included in the report, as its owner appears to have been the only contestant who "crawfished" when it came to the 200yd. test, while the little Hunter's Pet, with its pitiful 9grs. of powder to drive 85grs. of lead, (ye gods! what a cartridge) comes bravely to the scratch at any and all distances. Let a test be instituted between breechloaders and muzzleloaders of the same weight, length, bore, groove, powder and ball, and then the rifle that comes out ahead can fairly be regarded as the best in trajectory. Aside from the question of trajectory there can of course be no comparison whatever.

Every old boy in America who has served an apprenticeship in deer hunting with one of those abominable old war clubs called the muzzleloader, will bear me witness that when (thanks to the inevitable buck-ague of American boyhood) he has missed the biggest buck he ever saw in a fair shot at 75yds., the great brute will stand motionless as a staue through all that agony of suspense while the little fellow with cold stiffened fingers fumbles through four jackets for his powder bottle with newspaper cork, spilling half his small store of powder on the snow and the rest in his trembling hand, sifting at last about 200 grains of powder down the little bore a trifle bigger than a rye straw and rams the squirrel skin patched bullet furiously down the long barrel (skinning his knuckles shamefully in the excitement). All this time that buck will stand gazing curiously at the busy pantomime, but no matter how many times it may have been tried, no one ever saw the buck that would wait until the villainous little "G.D." cap could be fitted upon the tube. Should he live a thousand years that boy will never know a pang to match his sinking of the heart as the great white tail waves him a final adieu. "Fare ye well, Brother Watkins!" I shall always remember this against the muzzleloader. No doubt the mistake we all made was in not fitting the cap on first.

Since coming to this Territory in 1881, I have killed with the rifle 85 deer and 20 coyotes. During that time I have bought two new Winchesters, .45-90, three new Marlins, .45-70, and the "Old Reliable" Sharps, .45-110. The last named now hangs on the hooks in my bedroom. I have been induced to change rifles, partly because of my own experiments, and partly because of the perusal of the record of the experiments of others in the sportsmen's papers; and right here I wish to acknowledge my indebtedness to editors and correspondents, who have so kindly aided me in my difficult search for the best hunting rifle. That carefully written article of your valued correspondent "P.," entitled "Nights with the Grizzlies," set me to experimenting with the express ball, and, consequently, led me to sell my .45-70 Marlin at the first opportunity. As I doubted my ability to get just the right shaped bullet-mould by correspondence, I took my old 405grs. bullet-mould, and with a three-cornered file, a piece of a small iron bolt, a little inherited Yankee ingenuity and the leisure hours of a rainy day, fashioned a pair of bullet-moulds to cast just the right shaped express ball I wished, weighing about 350grs. The next step was to purchase a new Sharps. .45-cal., 2⅞in. shell. After using it just about a year, I have proved, not only that it will do all that "P." claimed for it, but that I never saw the combination to be named in the same breath with it. For long-range shooting I use the solid ball.

A few of the shots this gun has made for me I wish to record. The first deer killed with it was a large, five-pronged buck. He was lying in his bed, 40yds. distant, looking intently at me as my head showed above the tops of the bushes. The ball struck him just between the nostrils and of course his head was a wreck. The next was a buck at 70yds., standing broadside nipping the twigs of a bush. Aim was taken at his neck and he fell in his tracks. No bone was touched, the ball passing just above it. The solid butt of the bullet passed through, while the rest of the ball flew into fragments, and when the skin was stripped from the neck my unclenched hand was easily passed into the hole where the ball went out, and my hand is doubtless larger than "P.'s"

Because a single buckshot can kill a deer it does not follow that a small-bored gun is best for deer hunting. Many a time deer are met with on the top of a mountain ridge where it is all important that they be killed instantly, for even though mortally wounded they are apt to jump down the wrong side of the ridge and run in cañons, where, when found, they are not worth carrying out, and many times deer are badly hit a trifle too far back, bleeding freely at first, but the flow of blood soon checking, the baffled hunter is forced to return empty-handed to camp, where on making his report he is consoled by some "Jobs' comforter" of a comrade with the assurance that of course the deer will probably die if it lives long enough. Small comfort to him when, a week after, the buzzards guide him to the carcass a few hundred yards beyond where he left the trail.

Not a single deer struck in the body by the big Sharps has yet escaped me, and twenty-seven deer have already fallen before it. The trajectory is lower than that of any muzzleloader I ever owned, and its accuracy appears perfect. Seeing a band of mule deer on a ridge while looking for meat, I crept within 125yds., and when about to take aim, with a solid ball in the rifle, not having any express balls with me, I observed another deer standing directly beyond the one I wanted, and as I did not wish to be bothered with the meat of two, waited until one stepped out of the way, when I fired and killed—two. A third deer, that I had not seen, was standing just beyond, and had I fired at first am confident that the solid ball would have killed three, for it went through those two deer without upsetting or striking any large bones.

A few days since, having a few express ball cartridges that were slightly defective, I concluded to use them in killing a kind of ground squirrel or diminutive prairie dog, which hibernates for seven months of the year, and works havoc with our crops during the other five. One of them sat on level ground, on grass 1in. high, with his right side presented, when I fired at his body at 40yds. As the smoke blew away nothing was seen of the squirrel, and I walked down to examine. A large black spot of earth appeared where the bullet struck, and two or three specks of red showed upon the black dirt, which upon inspection proved to be bits of flesh. Noticing still another in the very bottom of the hole made by the bullet, I picked it out, brushed off the dirt, and found the complete heart of the squirrel. Nothing else appearing, I walked on in the direct line of the flight of the ball, and just 16 paces distant from where the ball struck I found the ribs and flesh of one side, but without the skin, spread out on some weeds. I now returned to the house to ask my wife to come and see the effect of an express ball in the big Sharps, and accompanied by three of our children we walked back and began the search anew.

Twelve paces to the left front lay the head with most of the skin hanging in strings. Nine paces directly to the left of the point where the ball struck, at a right angle with the flight of the ball, lay one shoulder, while 11 paces directly to the right lay the tail and part of one hindleg. Thrown directly apart, right and left, lay fragments 60ft. apart.

Possibly the reader may think that this story is misplaced, and that it belongs in the "That reminds me" column, along with that of the sturgeon that wore the deer horns, yet I can assure him of the fact, verified by more than one witness. I have no idea that that squirrel felt a paug. The front sight of my rifle is a piece of the tooth of a mountain lion, the whitest ivory I could find. The rear sight is copied from T. S. Van Dyke, author of the "Still-Hunter," and the best and most practical gun sight I have yet found. Made of vulcanized rubber, level on the top, without a niche in the center, and with two projecting spurs, one at each side, ¼in. higher than the center, to take the friction given by touching other objects, and preventing the top of the sight, in the center, from becoming polished; the object being to secure a dull, black surface to the rear sight. When a better gun is made, I want it.

Mr. W. A. Baillie-Grohman tells, in a FOREST AND STREAM of last year, that he has often seen the old Hudson Bay Company's musket beat the Sharps rifle. I had, in consequence, some thoughts of selling the Sharps and buying one of these wonderful muskets; but reflecting that I had nowhere seen the list of prizes won by the Hudson Bay Company's musket in the shooting matches, I delayed the sale. Possibly Mr. Baillie-Grohman will kindly furnish the list for publication. A growing suspicion, that the last issue of FOREST AND STREAM confirms, inclines me to the belief that, after all, it was probably an English sort of a match (à la Tankerville Chamberlayne's yacht racing "conditions") that Mr. Baillie-Grohman refers to when the Sharps rifle was so ignominiously beaten. Probably the Sharps had 10 per cent. "added to its rating;" that is, it had to make ten bullseyes to one with the musket, and was prohibited from "using its centerboard," or, in other words, the Englishman insisted that the Yankee should put no bullets in the Sharps. I hope to try the Old Reliable on big-horns and white goats the coming fall. UNCLE FULLER.

PEAK O' MOOSE.

"And goodness gracious bless me,
What a deal of good it does
To have such recollections."

"CAPTAIN, if you want to catch trout, I'll take you up to Peak o' Moose." Now Peak o' Moose is the highest pinnacle of a spur of the Catskills, some twenty miles west of Kingston. Within the memory of the oldest settler the lordly moose might have been found in its well nigh impenetrable fastnesses, and even now one might perchance encounter the timid deer, though this is doubtful; or occasionally run across a bear.

"Of course, Billy," I said to my guide. "By all means let us start to-morrow morning early."

Four o'clock on a balmy June morning found us fully armed and equipped with Conroy's best, and rattling away seven miles an hour over the Lackawac road toward the scene of our labors. A slight wind from the southward and a cloudy sky betokened just the day for trouting. Fourteen miles rattled off, we pulled up at Joe Porter's. A bite of sandwich and a drop "of the dew that shines in the starlight," a good-bye to Joe, and off we go, up a rocky mountain road for the headwaters of the Lackawac. Sawmills to right of us, sawmills to left of us, sawmills in front of us, where can trout live, we wonder. The road soon became so rough we had to walk the horse. Old Sol shows us his glowing face as if he had been making a night of it, and then as if in compassion for us, veils himself under a cloud, while Peak o' Moose, seven miles off, towers up in solitary pride. And on we go, winding along through wood and ravine till we bring up at Hill's Mills, unhitch, stable, get out our rods and tackle, and ask the squire what's the chance for sport. "Waal, Capt'in, three of them fellers from York here yesterday, six the day before, more the first of the week—" "Hold on, Squire, that'll do."

Billy looked grave; he had fished every stream around Old Peak, man and boy, for twenty years, and didn't want the captain to be disappointed. Now I had thought the thing over, and on the supposition that the trout had had flies offered them until they were sick of the sight of them, I had quietly provided myself with a quart of nice worms carefully put up in moss. Just here I expect a howl to go up from those sarcastic fishermen who thank God they never caught a trout with anything but a fly, and not many at that, oh no! We old fellows have heard lots of such talk and value it accordingly. The youthful yachtsman "never deserts the tiller in times of danger, thrashes her through it," and loves the howling waves and mighty winds, wasn't frightened a bit, oh no, probably scared to death! The tyro visits the ranch, gets a shot at an elk, sees a bear in the distance, which is all he does see, and comes home with heart-rending stories of "Old Ephraim," and wouldn't cross the road to shoot any other kind of bear. Oh yes. Well, we know these "tender shoots."

Let not the men who fish with flies
The man who uses worms despise.
The chances are as ten to one,
He gets more fish and has more fun.

The result fully justified my expectations, and I refer the fly-fisherman to Thos. Todd Stoddard. Right by the sawmill, where the water came tumbling and foaming over a fifteen-foot dam into a pool, rock-bound, deep and impenetrable to a fly-fisherman, I began operating. Billy, a hundred yards below me, had already waded in. Crawling along carefully to a ledge overlooking the pool, and hanging on by teeth and eyelids, I tossed my worm gently in a moment, and away went my line; the next, out came a fine trout. So, baiting, casting and pulling up, without stirring from my resting place, I captured twenty-one nice fish; when, taking alarm at "the worm with a hook in his tail," they beat a retreat. As these trout had been taken out under the very noses of the gentlemen "who could not let a worm come between the wind and their gentility," with a grateful remembrance of Tom Todd, I rejoined my guide, and we waded down stream in company, through one of the wildest, roughest and hardest streams to fish I ever encountered. The water thundered down through rocky chasms and deep ravines; tall pines towered up on either side; maples and beeches overshadowed us, and on we toiled and fished. Oh, that I had the wings of a dove or the buoyancy of a balloon, or could turn myself into a fly—though I am not much of a fly-fisherman—that I might better get through! Prone, extended full length, we could peer down into some pool, reel off sixty feet of line, and drop in, but without much success. I thought of Watkins Glen. Here it was again, "linked sweetness long drawn out."

Suddenly I missed my guide. Gnats, mosquitoes, punkies swarmed around me; countless bills were drawn on me at sight; and though born under a lean star and thinking I did not offer much temptation even to a mosquito, I found I was mistaken. But where was Billy? Had some trout in rage and despair pulled him in? Had he come Sam Patch over me? Had he— "Halloa, Captain!" and a hundred feet below me stood my guide, laughing quietly and enjoying my perplexity. Stars and stripes! he never could have slid down. "Keep to your right, Captain, and climb up a little." Bless me, does the man think I am a lizard or a fly? However, by climbing, crawling, toiling, scratching and wriggling along sideways and downward, breathless I at last reached my guide. I had been an old sailor, and that stood me in good stead.

So on we went by fall and pool, with very moderate luck, until at length we found all further advance apparently barred by an impenetrable barrier. Billy scratched his head. I scratched every part of me—punkies, punkies; only that and nothing more. "Wait a bit, I'll climb up on that rock and take a peep." So up he went like a fly on a pane of glass, and reported, "I can get through if you can." Taking our rods apart and "belaying," I followed suit. There we stood, on a ledge of rock just large enough to hold us, tall pines at our feet, the stream like a silver ribbon below, and we perched up in mid air, like men on a royal yard. My guide worked himself along like a snail, and I followed him, though the more I looked the less I liked it. Soon came what Fishermen would call "the first drop." Billy let himself down full length, and holding on like grim death, found he couldn't touch bottom. No help for it, he had to let go, and he struck solidly enough, in a short fall, to start half the breath out of his body. My turn next, but being "muchly taller," here's where I had the best of him. Down I dropped, unharmed; and scrambling down through brush and brier, we reached the stream, deposited rods and baskets on a broad rock, baited, repaired damages, and getting out our pipes, sandwiches and concomitants, rested from our labors.

After lunch I said: "Billy, where does that stream come from?" pointing to a bubbling, rippling rivulet that entered the water just below us. "Out of a small lake just up there." The very mention of the word lake aroused me. "Any fish there?" "Dunno. Three or four years ago some fellers went in there with a seine and scooped out three or four barrels full." "Any left?" "Dunno." Boat on the pond?" "Guess not." "Well, I am going to fish that lake. My soul's in arms and eager for 'the fry.'"

We headed up stream for a short distance, when suddenly there burst on our view a lovely miniature lake, reaching far back, thick wooded on both sides. Old hemlocks fallen in on either side gave required shelter for the fish. There were trout there, but how to get at them. Face to face with them, no boat, how to begin the attack. I advanced a step or two in the water, and sank quietly down and quickly too, in the yielding sand; bah! this won't do. Another glance revealed a bar of sparkling gravel running out toward the channel way, and this I deemed hard enough to hold me could I reach it.

The old Second Corps was famed for flanking "Butternuts." Why not trout? My plan of action was instantly decided on. Noticing some 20yds. above an old hemlock stretching out into the lake, Billy crawled out quietly to its end and gleefully signaled to me the presence of the enemy. Making a detour, I gained the wished-for sandy reach and waded in, tossing the bait some 50ft. to them. What sport I had! Up to my waist in water, my ammunition stowed away aloft to keep dry, tossing and playing and retossing and capturing, I stowed away twenty or more fine fat trout, Billy also doing a good stroke of business and keeping his end of the log up, until a general alarm sounded, away went the fish up the lake, and away we went down the lake with baskets full enough to satisfy any reasonable fisherman.

On coming out on the wood pond, Billy, who was tired somewhat, sat down and counted the fish, while I, calling out "Legs, legs, do your duty," trotted off two miles up stream, hitched up, bid the 'Squire good-day, and picked up my guide and traps, with seventy fine trout. Not a bad day's work over a stream whipped to death. We fished from 11 o'clock to 4 o'clock.

Ten miles ride over a rough road found sunlight followed by twilight and night succeeding. Here and there as we passed a farmhouse, smudges were in full blast, while urchins kept continually calling out to us, "Say, Mister, give us a fly." Of course we did. I had a supply of flies on purpose to give away. Past Bear Hole, past Bull Run, at last we reached the hospitable inn. Out came our worthy landlord. "Come in, boys. What luck? By George, you have done well." Off came old toggery and wading boots, on went our dry rig; and sitting down to supper with an appetite that many a New York millionaire would have given a fortune for, we pegged away, until obliged to call for quarter. Striking out for home, on a good road, we set sail. A rapid ride in the cool of the evening refreshed and rested us, and midnight found us home. Everything stowed away safely. Seventy trout present and accounted for. Forty-five miles traveled. Our duty accomplished we slept the sleep of the just. CAPT. CLAYTON.

MONKS GOES FISHING.

THE following letter was read to the jury in a big divorce suit in the Supreme Court, this city, last week. It made the judge, jury and all the lawyers want to drop business and start for the woods with fish poles:

"MY OWN DEAR ROBERT—By your telegram, just received, I knew you must have the one I sent you, but it was my good fortune to find out the name of the hotel you would stop at, and not the address you gave. Now, Mr. Humbug, you were very smart to fool me the way you did, for I fully expected you back Wednesday evening, as in saying good-bye you were so uncertain, and just as likely as not you would be back, and all the time you intended to go. Well, I will know you next time. But there won't be any next time. You can make the most of your free foot, now that you are away, because I will not let you go ever again on business or pleasure. This I mean—no more until after February is over, and then we will see in the future.

"Monks, I forgot to give Katie your clothes' brush and whisk, also your soap, and it has worried me ever since that you had not them with you. I guess you have everything else you want. Do you think of going to Meacham Lake, now that you are so near? You are such a funny boy to have your way, with everything so uncertain. You did not give me the name of the place Mr. Hartshorne gave you to go to. How do you suppose I can write to you?

"I suppose you will not see the day's paper giving the account of the terrible storm all over the country and so many people killed by lightning. You can just watch out when you see the storms coming up, and keep from going under trees; any place is better than trees. If I were with you I would stay on the lake and not go ashore for shelter, as we did when we were together. I hope you will have a perfectly grand time, catch lots of fish, and eat them and grow fat, drink very little and eat a big lot, and look like a big, strong, hearty Monks, to stand the business months and winter storms.

"As for hunting, your chief delight, I wish you no end of good fortune. I hope you will shoot deer, and I guess by this time there must be other game to shoot, such as quail and partridge. If you get any you shoot yourself, like when we were in Branchville, if it is possible to send it, why, Monks, would like some. Forget everything and everybody and just see what an awful good time you can have. Be careful you don't catch cold, and that is all. I am all right, and will be as good a girl as I can with my Monks away. * * * This letter is terribly written, but I have a cramp in the palm of my hand. Mamie joins in love to you, all my heart's love, and oceans of kisses. Your devoted little wife, JOSEPHINE.

A FISHING TRIP EXPERIENCE.

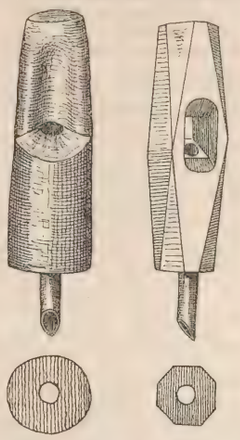
WHILE sitting in my office one day last summer a friend bounced in with an open letter in his hand and said, "Ned, let's go up to the Falls bass fishing. Here's a letter from Ben and he says the fish are biting like all the world." "All right, Johnny, when do you want to start?" "To-morrow morning." "I'll be on hand."

We met at the depot with rods and bait buckets and were soon on our way to G., where we were to meet Ben and drive up to the Falls. After a dinner, presided over by Ben's very pretty and agreeable wife, we packed our things into the wagon and started for a sixteen mile drive to the Falls. Ben said he had made all arrangements for us, having engaged a nice room at the hotel, plenty of bait and the services of a first-class guide, who knew every hole in the river. We enjoyed our drive very much, and arriving at the hotel had the horses put away and asked to be shown to the room Ben had engaged for us. We were ushered up-stairs and shown the door of a room which we were told was ours. Being very tired and dusty, we hastened toward it, but opening the door we fell back aghast at the noise and sight that greeted us. Great Cæsar! what an air came from that room. We found it occupied by eight or ten men, at two tables, deeply absorbed in a game of poker. The air fairly reeked with stale tobacco smoke and the fumes of the whisky. The window was shut and two coal oil lamps were burning and smoking on the table and adding their stench to that of the stogies and whisky. We very politely informed the gentlemen that we had engaged that room and would be very much obliged to them if they would vacate and allow us to air the room a while before retiring. We were politely told to go to hades or some other room; they would not give up the room until they had finished their game and that would be by daylight. We appealed to the landlord, but he told us he was powerless; his house had been taken complete possession of by a large crowd of fellows who had come there to fish and have a spree.

We were preparing to make the best of a bad scrape, when the landlord said he thought he could accommodate us in a room over his storehouse across the canal. We had a very poor supper and then all went to the room over the storeroom. There were two frames of bedsteads in the room, across which we put some boards, on top of the boards the landlord put a new husk mattress, which he covered with a new Marseilles quilt and gave us another of the same material to cover us with. We turned in as soon as we could, hoping to get a good night's rest. But Great Cæsar's ghost! what beds and what coverings. Every place they touched the skin they rasped as a file, and the mattresses felt as if they were stuffed with stones. Besides, the smells that greeted our nostrils were something awful; there was a smell of tarred rope, onions, codfish, coal oil, turpentine, cheese, boots and shoes, and everything else that goes to make up the stock of a canal-lock store. Added to all this, in the next room to us was another poker party, and our room was the thoroughfare through which all had to pass to get outdoors. There was a constant running backward and forward by the fellows in the next room. Finding sleep impossible, I got up about 2 o'clock and went out in the moonlight for a stroll to try and quiet my nerves a little. I walked up the towpath a short distance to an overflow, where I saw two men sitting on a log. I found they were watchmen employed to watch the bait belonging to different parties at the hotel. They had about twenty buckets hung under the overflow, and one of the men had a large revolver in his hand. I asked if it was necessary to watch the bait so closely, and they said that if it were not watched there would not be a minnow there by morning; the black and white thieves would steal them all.

As soon as daylight dawned we were up and preparing for our day's sport. Our guide put in an appearance and we inquired for our bait. Of course it was the same old story—he had had not time to get it, but a friend of his had a nice lot for sale at one cent apiece. We purchased 200, and following the guide, made for the river. Nick, the guide, told us that if we wanted good fishing we must cross the river, and he immediately set up a series of whoops and yells, which in half an hour brought a man to the other side who shoved off a little boat. It looked more like a coffin than anything else; and would accommodate but two at a time. After four or five journeys we were all across. We heard Nick tell the man who ferried us across that we would be at his house at 1 o'clock for dinner. Johnny and I looked at each other, for a filthier specimen of humanity we had hardly ever seen. His beard was very long, reaching almost down to his waist, and he had a habit of gathering it up and tying it in a bow knot. By examining his beard closely you could tell what he had had to eat for several days before. He looked so poor and so dirty that we despaired of getting anything fit to eat at his house; but we said nothing, and put ourselves into the hands of Gus, who had made all the arrangements, and of Nick, who was a first-class guide and knew every hole in the river. We then went down on the rocks and prepared for fishing. Each selected a bait to his fancy and cast off; we waited patiently for bites, but none came. We tried all the best holes known to the guide, also the riffles and eddies and pools; we tried with minnows, still-fishing and casting, with artificial baits and flies, but to no purpose. One measly bass about ¼lb. weight was all we had caught up to the time we heard the tooting of the dinner horn.

We adjourned to the ferryman's house hungry as hawks and prepared to devour the fat bacon and greasy fried potatoes we expected to get. The house looked from the outside like a ropewalk or bowling alley cut down a little, being only one story high and five or six rooms in extent. In one end was a rude bar, where contraband whisky was dispensed at 5 cents a glass, and at the other end was the dining room. This room had a dirt floor and a ceiling of slabs from the sawmill. The table was three boards held up by a flour barrel at one end and a trestle at the other. The kitchen was detached from the house, and, casting a wistful and hungry glance toward it, I saw an old colored aunty moving about before the large, open fireplace. This, I thought, argued well for us, for there are no cooks in the world that could beat our old-time colored cooks. Finally, dinner was announced, and we piled in, but one and all stopped on the threshold filled with amazement at the feast spread before us. At the head of the table was a baked shad, and such a shad, most as thick as it was long, and must have weighed 8 or 10lbs. before cooking. At the foot was an immense dish of fried chicken, done to a turn. There was also delicious corn pone, with elegant white bread, splendid butter, plenty of milk and cream, preserves and pickles, coffee fit for the gods, and a pudding for dessert that beat anything we had ever tasted. When we asked our dirty host how much we had to pay he reckoned 35 cents a piece would do. The dinner was worth a dollar of any man's money. We paid him 35 cents and chipped in 25 cents apiece for Aunt Rachel, who had spread herself for Mars Nick, as she told us. After dinner we resumed our fishing, but with poor success, catching only four or five small bass. We returned home that night and footed up our expenses, which were $9 apiece—rather steep for one day's fishing; but then the surprise and elegance of that dinner was worth a good deal. E. A. R.



BALTIMORE, Md.

A FISH PRICKER.

MANY sea fish, especially those caught in deep water, fill themselves with wind on being brought into the air and then float belly up and die. Messrs. Rosendo Torras & Co., Brunswick, Ga., had an inquiry from a friend in Spain concerning an instrument which was said to be used by American fishermen to correct this evil, and they wrote to Messrs. F. Coschina & Co., Brooklyn, to know where such an implement could be bought; and the latter firm referred the matter to us.

Mr. E. G. Blackford tells us that he has seen marks on fish where such an instrument had been used, but has never seen the tool itself.

In 1876, when some sharks were brought into the New York Aquarium, which had their stomachs full of wind,

the fishermen tried to puncture them and let the wind out, using a penknife, which slipped on the distended stomach, pushed it one side, and failed to pierce it. A glass tube was then inserted down the throat of the shark and the wind came out readily.

Mr. R. E. Earll, of the National Museum, to whom we referred the matter, writes under date of May 10, as follows:

"U. S. COMMISSION OF FISH AND FISHERIES, Washington, D. C., May 10.—We have in our collections two kinds of fish prickers. One form, used by the red snapper fishermen of the Gulf of Mexico, is made of hollow brass tubing, about three-sixteenths of an inch in diameter, inserted in a handle in such a way that the air can escape from an opening in same. The projecting end of the tube is cut obliquely, so as to form a sharp point on one side. The New York smack fishermen use a common awl, or any other sharp instrument, for liberating oil from poke-blown fish before putting them in the well.

"Our records do not show where any fish prickers, manufactured especially for that purpose, can be obtained; but I infer from those in our collections that they are made by the fishermen themselves. I inclose a drawing showing the two forms used by the red snapper fishermen of the Gulf of Mexico, which you can forward to your correspondent. These will, I think, give him a sufficient knowledge of the implement to enable him or the parties interested to make it for themselves.—R. EDWARD EARLL.'

FARMER BROWN'S TROUT.

Editor Forest and Stream:

While reading "Pine Tree's" remarks on the above subject, I could not help thinking of a similar demonstration of a "Farmer Brown's" displeasure. On C—— Creek there used to be a beautiful camping place—velvet turf, shady trees and an excellent landing place. One day, after a space of eight months had intervened since our last visit, we paddled into the creek, meaning to camp at our old ground. But what a change had come over it all! The trees were gone, the turf plowed up, and the landing spoiled. It was utterly impossible to camp in such a place as it had become; but being wearied from a long paddle, we landed to rest.

Soon we saw the farmer coming toward us, and jumped up to greet him, he being an old acquaintance. He sat down, and at once began: "Well, I am sorry for the sake of the likes of ye to have done it; but I couldn't help it. Those campers used to come here from the city just for the sake of having a big spree. They'd get howling around here, chasing the cattle and making it so as we couldn't sleep up to the house. Then they'd pull my fences down and make great bonfires with them. So I says to myself, says I, if you burn my fences, scare my cattle and frighten the wife and children with your racket, I'll spoil your camping place. And I did."

And so it goes! The farmer's got the whip hand, and he's sure to get ahead in the end. Why not be civil and courteous to him? It's easy enough. Only one in a thousand is crusty and won't make friends. The others are always tickled if you ask them into the tent to sit down and chat for a while.

Even if a man's land is posted, if you go up to him civilly and ask leave to camp you will seldom be refused.

Treat a farmer well and he'll seldom treat you badly,
That has been my experience. DUSKY DUCK.

OTTAWA, Canada.

THE LARGE TARPON RECORD.

THE well-known tarpon angler, Mr. W. H. Wood, from this time forth must take a back seat, for Mr. Walter Man, of Fanwood, N. J., has just come back from Florida with a record of having caught nine monster tarpon, two of which weighed 151 and 149lbs. These are believed to be the largest tarpon ever caught by rod, reel and line. This record is absolutely correct, and in time will be sworn to by the entire population of New Jersey. This capture by Mr. Man is considered the greatest fishing exploit ever known on the western coast of Florida. The fish were taken at Punta Rassa, and the aggregate weight of the nine tarpon was 1,042lbs., being an average of 116lbs. for each. The summary of the catch from Mr. Man's note book reads as follows:

April 11, wind puffy and strong. Three fishes; one 5ft. 6in. in length, weight 90lbs.; one 6ft. 1in. in length, weight 113lbs.; one 6ft. 2in. in length, weight 120lbs.

April 20, wind west. One fish, 5ft. 6in. in length, weight 97lbs.

April 21, wind southwest and very light. Two fishes; one 5ft. 7in. in length, weight 100lbs., and one 6ft. 4in. in length, weight 151lbs.

April 22, wind south, blowing at the rate of 18 miles an hour. Three fishes; one 5ft. 10in. in length, weight 102lbs.; one 6ft. 3in., weight 120lbs., and one 6ft. 5in., weight 149lbs.

The first five fish were caught on a weakfish rod, 18oz. in weight and 8ft. long, the other four on a bass rod, 6ft. 8in. in length, which weighed 18oz. Mr. Man used half a mullet for bait, and cast after the manner of the big striped bass fishermen at Pasque Island, Cuttyhunk, West Island and Squibnocket. While he made his casts from his yacht while at anchor, he jumped into a small row boat alongside before he made his strike. In every case the tarpon was allowed to swallow the bait before being struck; this is done to prevent the fish from tearing out. Mr. Man says that the big fish, which is 6in. taller than Kelly, the baseballist, jumped out of the water 3ft. and then made a home run around the boat. He then turned several cart-wheels, and in all leaped sixteen times. At the end of an hour and a quarter the fish was gaffed, his throat cut, and by means of a rope passed through his gills, towed back to the yacht, where a sail was lowered and the fish lifted on board. He had made a terrible struggle, and at one time towed the boat quite a distance from the yacht. The fishes are now in New York city, at 16 North William street, being stuffed by J. Wallace, who years ago made mermaids and gorillas to order for P. T. Barnum. FRANKLIN SATTERTHWAITE.

POTOMAC BASS RESORTS.

SHEPHERDSTOWN, W. Va., May 8.—*Editor Forest and Stream:* Since the publication of a little sketch of mine in that dear old friend of the sportsman, FOREST AND STREAM, relating to black bass fishing in the Potomac River, I have received so many letters of inquiry in relation to the manner of reaching this point, the accommodations, expense, etc., that I have thought it best, there being so many of your readers interested, to answer all possible questions through your paper.

From New York, New Jersey and Philadelphia take Pennsylvania Railroad to Harrisburg, Pa., thence to Hagerstown, Md., where you change cars, taking train on Shenandoah Valley Railroad for this point. This route takes you to the famous Antietam battle field, which is but three miles from Shepherdstown, and which has become a "Mecca" to the pilgrims of the G. A. R. posts all over the North.

Good board and lodging can be secured by writing to Maj. Henry Hagan a few days before arrival here. His charge is $1 per day.

Maj. Hagan will also furnish men to keep fishermen in live bait, and manage boats for them and act as guides, at a cost of about $1.50 per day for man and boat.

Board can be secured with many of the farmers living along the river by those anglers who prefer fly-fishing and wading to fishing from a boat, as very few of the farmers own boats. If you prefer stopping with a farmer, write to me and I will attend to the matter, for gentlemen—we want no fish "butchers" who sell their bass.

We have a most delightful climate; being surrounded by high mountains, it is never very warm. Our river is often as clear as crystal, and with hundreds of ice cold springs flowing into it, and with splendid cliffs equaling the famed Palisades of the Hudson, in altitude and beauty it offers one of the most desirable points for a summer sojourn on the continent.

A half day of fly-fishing down stream, will bring one to the famous scenery of Harper's Ferry, which Thos. Jefferson said: "It was worth a trip across the Atlantic to see."

For the fly-fishermen, the months of May, June, September and October are the best. Those using live bait can also extend their stay through July.

Trolling is permitted, and any of the artificial minnows and Buel's No. 5 spoon bait will prove to be killing.

With the fly catches of from 20 to 60 fish per rod, averaging 1¾lbs., are a common occurrence for a day of sport.
E. D. BOWLY.

THE FLY-CASTING TOURNAMENT.

AT the time of our going to press next week the annual tournament of the National Rod and Reel Association will be in progress. The contests take place on the northeastern side of Harlem Mere, Central Park, at the corner of 110th street and Fifth avenue, opposite the Polo Grounds. There are two ways to reach the place: Take the Third Avenue Elevated road to 106th street and walk north and west, or go by Sixth or Ninth Avenue Elevated road to 116th street and walk back to 110th and then over to Fifth avenue. There are often hacks to be found at these stations, but not always, although they can be had at the Polo Grounds for return. The contests are called at 10 A. M., May 25 and 26. In our last issue we gave the prize list and rules.

The stand from which heavy bass minnow casting will be practiced will be 1ft. high in front and 9in. high at the rear.

"PISCATOR," who suggests plan for keeping fish fresh will oblige by sending his name.

MAINE WATERS.

THERE is still a shade of justice left, even in Maine, and when the murderers of game wardens get before the judges of the Supreme Court in that State they get their deserts, even though a sentimental jury, made up of the citizens of a district not in love with game protection, gives such a murderer only conviction in the second degree. That notorious game warden slayer—Graves—was tried at Calais last week, and though there was not a mitigating circumstance that his counsel could produce, yet the jury, for the simple reason that the crime had had six months to cool, found him guilty of murder in the second degree—one of the most cold-blooded deeds in the history of crime, where not only one man was shot down without a warning, and almost without provocation beyond a diabolical hatred of game wardens, but the gun was also turned, with fatal effect, upon a poor, one-armed soldier. But the judge saw the crime in a different light, the true one, and gave the murderer all the law would allow—imprisonment for life. It is curious to note that this punishment is the extreme that the statutes of that State could have given him, even had the jury found the murderer guilty in the first degree. The Legislature, during the absence of Graves in California, where he had fled to escape arrest for his crime, had changed the punishment for murder in that State from hanging to imprisonment for life. Hence, in spite of the unjust sentiment of the jury, Graves gets the full penalty of the law. Thanks are due the wisdom and good sense of Judge Enoch Foster—it is not a crime to commend a judge—for his just sentence. He might have given him only a dozen years in prison. Graves is safe now, till a sentimental governor pardons him out.

The telegraph this morning said that the ice had left the Androscoggin Lakes, the last one having cleared Sunday—eleven days later than last year. But the fisherman's cup of happiness is not yet full, for the ice has gone out leaving the lakes remarkably high, with but little chance of taking trout till the water falls. Indeed, so high has been the water that the dam at Errol, N. H.—the dam which controls the flowage of Umbagog, the lowest of the chain—has been carried away, and the Androscoggin River has run wild over farms and roads, to the utter exclusion of travel on some of the routes to the lakes. One or two early fishing parties have been delayed by the flood. But this has not been near enough to dampen the ardor of Boston sportsmen, and they are now leaving by nearly every train. Mr. Wardsworth, of the grain trade, Eugene Clapp and Mr. Haskins left on Saturday. They are old timers at Rangeley, but they are a little early this year. The Tuttle party has gone—started last week. The Vine Vale party will not leave till next Saturday, Mr. C. P. Stevens being hindered by a case in court. The ice left Moosehead Lake last week, but the water is reported the highest ever known. The vast quantity of snow, still back in the woods, is likely to keep the water up for a long time this spring. But the later sportsman has one idea to console him, high water always means good fishing for him that has patience to wait its departure. The loss of the Errol dam will greatly hinder the navigation of the little steamers on the Umbagog, as soon as the water begins to fall, and it will be likely to ruin the fishing in that lake till the dam is rebuilt and the usual pitch of the water once more restored. Besides, that route to the other lakes will have to be considerably modified, for it is doubtful if the steamer can come down as far as Upton at all. The Union Waterpower Co. will probably commence the work of rebuilding as soon as possible, but there is probably a whole season's work there.

It begins to be rather singular that no salmon of any consequence have yet been taken in the Penobscot. There are reports of one or two being taken at Bucksport, with the suggestion that the fish are working up the river. But the salmon fishing at Bangor is late, to say the least. But few landlocked salmon have yet been taken in the Sebago waters; it is evident that the smelts are not yet running. The fishing for landlocks is already reported good in Weld Pond, while some good ones have been taken from Wilson's Pond in Auburn. Brook trout fishing has not yet amounted to anything in Maine waters, the freshets having been too great. But from the lakes and ponds some trout have been taken, from the shores where the ice had moved down. It must take another week longer to settle the troubled waters, and make the life of the rod and line sportsman anything but a burden, if he dares to venture into the regions of Maine and the Granite State. But the patient waiter will this time be no loser, for the fishing is bound to be good when the waters have gone down to a reasonable pitch.

SPECIAL.

Fisciculture.

SALMON IN THE HUDSON.—The spring run of salmon in the Hudson River has begun, and in a few weeks we expect to hear of captures of these fish in the upper river. In our last issue we recorded the capture of a 15-pounder at Stapleton, Staten Island, and now have notice of one which weighed 12lbs. and was taken at Coney Island on Friday last. These places are at the mouth of the river, and are no doubt the advance guard of the plantings by the U. S. Fish Commission from Cold Spring Harbor. Last year so many fish were taken in the upper river that their appearance cannot be attributed to accident; over twenty were recorded, and the numbers taken must have exceeded that. We hope that the experiment of restocking the Connecticut will not be repeated, and the original plant be sent to market and the parent fish be killed without having a chance to reproduce their kind. Two things are necessary, an intelligent system of fishways and protective laws, and then we may hope to see this valuable fish firmly established in a river to which it was not native because of mechanical obstructions to proper breeding grounds.

SHAD FOR THE HUDSON.—Last week Col. McDonald, Superintendent of Distribution of the U. S. Fish Commission, sent 2,500,000 shad eggs from the central hatching station, Washington, D. C., to Cold Spring Harbor, N. Y., where they were hatched and 850,000 fry were sent to Albany on Monday last, and 200,000 to the Nissequoque River at Smithtown, Long Island. On Sunday Col. McDonald sent car No. 3, in charge of Mr. Ellis, with the following: 1,500,000 fry for the Hudson at Albany, 1,000,000 eggs to be hatched on the way and 1,000,000 eggs to Cold Spring Harbor to be hatched and distributed as the N. Y. Fish Commission may direct. The car is ordered to remain at Albany until the fish are hatched and ready for planting, and will be visited by those who are interested in these matters.

FIXTURES.

DOG SHOWS.

May 24 to 27.—Inaugural Dog Show of the Michigan Kennel Club, at Detroit, Mich. Chas. Weil, Secretary, Newberry and McMillan Building, Detroit, Mich. Entries close May 10.

Sept. 1 to 3.—Inaugural Dog Show of the Pacific Kennel Club, at San Francisco, Cal. J. E. Watson, Secretary, 516 Sacramento street, San Francisco, Cal.

Sept. 12 to 17.—First Show St. Paul and Minnesota Kennel Club, St. Paul, Minn. W. G. Whitehead, Secretary.

Oct. 12 and 13.—Stafford Kennel Club Show, Stafford Springs, Conn. R. S. Hicks, Secretary.

FIELD TRIALS.

Nov. 7.—Third Annual Field Trials of the Western Field Trials Association. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 21.—Ninth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

December.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5036.**

AMERICAN KENNEL CLUB METHODS.

Editor Forest and Stream:

The reports which from time to time appear of the American Kennel Club convey but scant information of the manner in which the business is conducted. I have been a member of a good many clubs and associations, but the whole series of blunders and mistakes of the entire number don't equal those made at almost every meeting of the American Kennel Club. Such travesties on justice would be amusing—were they not deplorable—and such a continuous series of errors in the rulings of President Elliot Smith betray either a supreme contempt for the sense of the members of the executive committee or the most callow and lamentable ignorance of the English language—perhaps it is a combination of both. To show that the very strongest terms of condemnation would be completely justified in speaking of President Smith's rulings and actions I will tell the story of last week's A. K. C. meeting at greater length than will be found in the cut and dried official report:

As usual, we had to wait patiently or impatiently for President Smith's arrival. For him to be on hand at the hour for which he calls the meeting is out of the question. Sometimes we wait an hour or two and then convene without him—no loss, certainly, except that of time. On this occasion he burst smilingly into the room an hour late and without a word of apology for the delay. The secretary proceeded with the calling of the roll, and this being an annual meeting, I asked for the reading of the credentials of the delegates. The request seemed to nonpluss the president, for the rule specifying that delegates were to come provided with them had to be read over to him three or four times. Finally the secretary was asked to read the credentials, and did read those of the gentlemen who had not hitherto been delegates. A request for the reading of all the credentials was refused and ruled out of order. The plea for refusal was that the constitution specified that delegates were to be elected annually, and the president decided that the "annually" referred to their own club electing them and had nothing to do with the annual meeting of the A. K. C. A delegate tried to assist him out of the mire by saying that the constitution provided for officers retaining their offices till their successors were elected. This was eagerly snapped at and pronounced conclusive for putting a stop to my request. Of course a boy in the street could have told President Smith that a delegate to an annual meeting is not an officer, but the omission of certain delegates to provide themselves with credentials had to be bridged at all cost.

Then we had the minutes of the last annual meeting read, and President Smith stated that, although the constitution provided that a certain form of proceeding should govern "at all meetings of this Association," he should rule that this did not apply to an annual meeting, and the election of officers would be next in order. The reason for this, we may presume, was that the new constitution was part of the regular order of business, and, not knowing exactly which way the cat might jump, it would be advisable to get a hold on the officers and then trust to possession being nine points of the law. The election was a narrow one, the vote being: Smith, 5; Child, 4; Terry, 1. The subsequent change of a Child vote to Smith made it 6, 3, 1; but the first told the tale of popular feeling. With the election of two vice-presidents, neither of whom is ever likely to be present at a meeting of the Executive Committee, and the reëlection of Secretary-Treasurer Vredenburgh, the annual meeting was adjourned.

The delegates then convened as an executive committee and proceeded to business.

In the secretary's report of business transacted *ad interim* appeared the announcement that H. M. Perry, of the Sans Souci Kennels, had been reinstated by a vote of 8 to 1. There is unwritten history about this case. The president had been appointed some time last fall as a committee of one to procure and submit the testimony to the Association. His failure to be present at or send the testimony to the December meeting of the Association prevented any action being then taken. The president, under date of Dec. 30, sent his report to the Association. Considering that it was so shortly after the Christmas festivities, it is perhaps hardly fair to criticise the document. However, necessity compels a fair statement of its contents. The instructions to the committee of one were to collect and submit the testimony. The president, as such committee, precedes the testimony with an opinion covering four pages of foolscap. The testimony covers thirty-four additional pages and consists entirely of letters, with a short extract from the Philadelphia Kennel Club's minutes.

The opinion which precedes and forms part of the report is one of the most remarkable productions I have ever come across in sporting literature. To put it concisely and briefly President Smith conclusively proves that with three aces in your hand and the knowledge that the other is somewhere about the table you can beat a full hand. The case, it will be well to say, was that in which H. M. Perry had but four dogs benched and the prize conditions called for five to be shown, Perry claimed that the absent dog was at the show and President Smith's opinion seems to be that the dog was there and produceable on demand. This he pronounces to be the pivotal point of the case. On Oct. 2 he writes H. M. Perry and says: "Should you prefer to submit the matter on affidavits please to secure those of such as saw the fifth animal (So-So, as I understand) within the building during the time the award was made. The issue is a narrow one and should be easily disposed of. It is as above stated simply a question whether she was there or not." Again on Oct. 11 he writes: "Your favor of date received. I leave town tomorrow or Wednesday for a fortnight, which will give you ample time to prepare your statement, which I hope will be as positive on the point at issue as possible. If you do not know of your own knowledge that So-So was in the building when the special was awarded you should produce the evidence of any one who does."

That is the question at issue as stated by President Smith and here is the evidence. In a letter dated Nov. 27, H. M. Perry says: "I wrote to the president or secretary of P. K. C., asking them to reverse the judge's decision in that I had found out that as my dog was not at the bench at the time of the decision, I was not entitled to the prize." On Nov. 29 President Smith again comes to the point at issue and writes: "Please inform me where So-So was at the time the special was judged. Was she in the building or on the grounds or absent from both?" To this plain inquiry the answer is: "Had I desired it I could have had the decision of the kennel prize postponed till next day or even an hour or two, and So-So would have been in her place."

That is the sum total of the evidence on the point at issue, and upon it we are asked to believe that no deception was practiced. I leave it to any of the eight voters for reinstatement to prove to his own satisfaction that So-So was at the show. The report dated Dec. 30 was mailed to the committee members early in February, and on Feb. 7 Mr. Peshall proposed the reinstatement of Perry. This notice was sent out by the secretary with an urgent request for an immediate reply, and as I knew more about the case than appeared in the alleged evidence, I offered an amendment to the effect that the New England Kennel Club be sustained in disqualifying Perry, but that the penalty be removed on March 1. Mr. Seabury, of Providence, also offered as an amendment that the matter be decided at a special meeting to be called by the president. Mr. Seabury's amendment was burked by the secretary, who does not seem to be aware that his duties are purely clerical in such cases, and the next thing we know is that along in April notice of H. M. Perry's reinstatement is made public and the case buried in the archives of the A. K. C., beyond all hope of bringing it up for a decision on its merits.

Another point worth noticing in the secretary's report was that an application received on Feb. 3 from the Buffalo Kennel Club for admission had never been acted upon by the committee appointed to advise on the subject of membership. Another case of burking, with no one responsible.

The Pittsburgh pewter medal case was reported on by the committee on discipline. Two members were of the opinion that the club should be censured as the officers acknowledged the deception. The depth of ignominy was reached, however, in a letter from a club official wherein it was given as an excuse for calling pewter silver, that it had been done when Mr. Wade was a delegate to the A. K. C. A mean, dirty fling which only needs to be known to recoil upon the writer and his club. Of course nothing was done. It would not be A. K. C. if anything had been done to reprimand an associate member.

Mr. Peshall reported on the time-worn Sensation case, and after President Smith acknowledged that at the time of the show he was fully aware that Sensation had no business to be entered as he was in the champion class, thereby admitting that the various defenses which had been set up in the case were without any foundation, I proposed that the judge's decision be allowed to stand with the declaration of the committee that the dog was not eligible. The boldness of the admission was sufficiently gratifying to wipe out all recollection of the abuse of my position so prevalent a year or more ago.

After that we took up the report of the committee on constitution and by-laws. My letter has already spread out to too great a length, but I would like to draw attention to the great wisdom of the president in deciding that it was not the province of the association to frame its laws for the guidance of the executive committee, but the duty of the executive committee. Fancy the State Legislature adjourning and saying it was the duty of the Governor and other officers charged with the execution of the laws to frame the laws of the State. But that is hardly surprising considering that a little later on President Smith decided that at a special meeting of the A. K. C. the business to be transacted was not necessarily confined to that specified in the call.

JAS. WATSON.

BEAUFORT—PATTI M.

Editor Forest and Stream:

The action of the A. K. C. on the above at their last meeting is most extraordinary. As I understand the matter, Mr. Munhall protested Beaufort at Waverly, appealed to the local delegate, then to the A. K. C. All decisions were against him. Now, some five or six months after, the A. K. C. takes up the case again and reverses itself! Did mortal man ever know such colossal stupidity before? Remember that the A. K. C. is the court of last appeal in dog matters. Appeals lie to it from two lower courts, and who in the world ever heard of a court of last resort reversing its decision in the same case? Such judgments are held final as far as the particular case is concerned, the world over. Yet the A. K. C. gives final judgments that are not final. Can fatuity further go? Did not Mr. Mason and the N. J. K. C. have every earthly reason to conclude that the case as to Beaufort and Patti M. was closed? Now suppose Mr. Mason refuses to recognize this brilliant addition to supreme courts (I earnestly hope he will), is the N. J. K. C. to pay the money over again?

This is simply an enormous piece of asininity, no other name will answer. When, where and how are we to be certain that anything is safe about dog show, if courts of last resort can reverse themselves whenever they choose, and as often as they choose, on one case?

Then the preposterous grounds you give as reason for a reconsideration. An officer of the A. K. C. voted on a proxy. Well, why in thunder shouldn't he? Where is the rule against it? An officer has no vote unless as a regular delegate from his club. Does not this imply that he can act as a proxy for a regular delegate? The qualification for a proxy is, that he must be a member of a club, a member of the Association; and failing to give any disqualification, his officership in the A. K. C. can be no bar.

This is the first time the A. K. C. has disgraced itself. It has blundered, failed in its duty, has been disgraced by its officers (as in the "hole in the wall meeting" of "dearly beloved Roger and I," at Cincinnati, that enacted "construction"), but this time it has written itself down an insufferable knave or fool. Then whence the singular report of this proceeding in a western paper, eliminating all reference to the vital fact that the A. K. C. had heard and decided this very case before? I believe the case was worked against former rulings by working on the personal animosity some people have to Mr. Mason. Whether the case was rightly or wrongly decided before, sinks into insignificance in comparison with upsetting previous determinations long after they had been final.

Then another case, in which fortunately the A. K. C. comes off without disgrace. I mean the Glenlivat case at the late Newark show. Mr. Terry, before the A. K. C., acted as we all would have expected him to act, but the management of the protest was just what we all are sure he wouldn't do. Why was the consideration of the protest pushed ahead of the judging, forcing a meeting of the committee several hours ahead of the regular time? Then why was there the studied attempt to exclude Mr. Watson and his dogs from the ring? He had appealed the decision against him to the next higher court. Why not

hasten a hearing by that court? I was in a fine fix in that case, a drafted steward, with the steward's responsibilities, without knowing whether I had any authority or not, and I was told to exclude Mr. Watson from the ring. Of course, I wasn't going to make an ass of myself, as I did not know that the party who so instructed me had any more right than I had, so I just dodged the question by being very busy taking a dog's number when I saw Mr. Watson approaching until he got safely within the sacred inclosure. Why was this determined attempt to exclude Mr. Watson's dogs from competition? It could not have been the claimed irregularity of the entry, for a devotion to regularity, would have necessitated a protest against Mr. Van Schaick's dog (Scotson, I think), which was entered in the catalogue "will compete for stud dog prize only." Remember, I am not implying anything against Mr. Van Schaick. I know that the error was in transcribing his entry; but if regularity is so important that the regular course of affairs must be upset, and a class has to be ordered out of the ring for the A. K. C. delegate to hear it, I cannot see why sauce for the goose is not sauce for the gander. W. WADE.

HULTON, PA., May 16, 1887.

PACIFIC COAST DERBY.

LAST week a partial list of entries to the Derby of 1887 in the Pacific Coast Field Trials Club was given. A number of entries, among them many of the better ones, reached the secretary on Friday and Saturday and are published to-day, together with those given last week. The list is a sufficient answer to all croaking malcontents. No apology need be offered either for the size of the list or the character of the entries, and the names of those who own the dogs include a large proportion of the truest sportsmen in the State. Several remarked last week upon the absence of entries from the Messrs. Bassford, all of whom are recognized as leaders in everything relating to sport with gun and rod. At the last moment a budget of entries came to hand from them, three from Mr. Henry Bassford snd five from Mr. Joe M. Bassford, Jr. We did not for a moment doubt that from the large number of good young pointers owned by the gentlemen named a generous draft would be entered, but so splendid a list was not expected. Mr. Joe Bassford enters Susie and Don Ranger, and names Esther, Jocco and Essie, all ot the dogs being out of sterling old Beautiful Queen, and sired by the best pointer of the day, Vandevort's Don. Mr. Barney's entry is sired by a great field dog, Nick of Naso. Mr. Taft's famous Dorr is represented by a daughter, and a good one we are informed. There are thirteen English setters, one Gordon setter, one Irish setter and sixteen pointers in the stake, the first time, if memory is not treacherous, that pointers have outnumbered setters in a stake open to both. Most of the dogs will receive the best training attainable. Mr. Allender has a number of them, Mr. Allen has several, Judge Post will train his own, Mr. Barney will attend to Galatea personally, Mr. Joe Bassford will shoot over his own entries in the trials, Mr. Bennett's Sirius goes east in a few days to be trained for his races in the American Field Trials Club and the Eastern Field Trials Club, in both of which he is entered and from which he will return to make his race here. Aside from the excellence of the dogs we see a world of solid pleasure in the coming trials, because of the choice sportsmen who will attend to see the performance of their entries. There is no better sport than to listen to General Crosby, Judge Post, Mr. Barney, Mr. Schreiber, the Bassfords, comical Mr. Allender, Mr. Will Kittle and others of those whose names appear in the entry list and who will attend this year. The Derby will be an event to be remembered and if, as is hoped, Colonel Arthur Merriman judges it, it will be of great value to all concerned. The complete list of entries follows:

SALADIN—bw&t English setter dog (Sportsman—Sweetheart), May 24, 1886. Breeder, California Kennels. Owner, H. C. Chipman, Sacramento.

HERALD—blue bel&t English setter dog (Harold—Janet), April 29, 1886. Breeder, California Kennels. Owner, Henry Gerber, Sacramento.

SIROCCO—bw&t English setter dog (Sportsman—Sweetheart), May 24, 1886. Breeder and owner, California Kennels, Sacramento.

SUNLIT—or bel English setter bitch (Sportsman—Sweetheart), May 24, 1886. Breeder and owner, California Kennels, Sacramento.

STEPHANIE—bw&t English setter bitch (Sportsman—Sweetheart), May 24, 1886. Breeder and owner, California Kennels, Sacramento.

HIDALGO—lem&w pointer dog (Vandevort's Don—Beautiful Queen), April 21, 1886. Breeder, H. H. Briggs. Owner, J. G. Edwards, San Francisco.

JOHN G.—bw&t English setter dog (Regent—Topsy), April 17, 1886. Breeder, J. B. Barber. Owner, William Schreiber, San Francisco.

RUSH—liv&w pointer dog (Vandevort's Don—Drab), May 3, 1886. Breeder, R. T. Vandevort. Owner, L. J. Rose, Jr., San Buenaventura.

PILOT—bw&t English setter dog (Regent—Topsy), April 17, 1886. Breeder and owner, J. B. Barber, San Francisco.

POINT—lem&w pointer dog (Vandevort's Don—Drab), May 3, 1886. Breeder, R. T. Vandevort. Owner, L. J. Rose, Jr., San Buenaventura.

MAID—lem&w po nter bitch (Lemme B.—Surf), April 28, 1886. Breeder and owner, W. S. Kittle, San Francisco.

SIRIUS—lem&w flecked English setter dog (Sportsman—Sweetheart), May 24, 1886. Breeders, California Kennels. Owner, Thomas Bennet, Oakland.

HONOR BRIGHT—bw&t ticked English setter bitch (Harold—Janet), April 29, 1886. Breeders, California Kennels. Owner, Thomas Bennet, Oakland.

DOTTIE SHAFTER—b&w ticked English setter bitch (Regent—Fannie), May 24, 1886. Breeder and owner, Charles Kaeding, San Francisco.

BOWSTRING—liv&w pointer dog (Bow, Jr.—Mollie Ashe), March 27, 1886. Breeder, H. C. Brown. Owner, W. W. Foote, San Francisco.

BLOSSOM—lem&w pointer bitch (Glen R.—Josie Bow), March 17, 1886. Breeder and owner, J. W. Bassford, Suisun.

MACK—liv&w pointer dog (Bow, Jr.,—Mollie Ashe) March 27, 1886. Breeder, H. C. Brown. Owner, W. E. Osborne, Sacramento.

SHOT—liv&w pointer dog (Bow, Jr.—Mollie Ashe) March 27, 1886. Breeder, H. C. Brown. Owner, W. E. Osborne, Sacramento.

SABRINA—w chestnut&t English setter bitch (Sportsman—Sweetheart) May 24, 1886. Breeders, California Kennels. Owner, C. L. Ecklon, Folsom.

DICK—bw&t English setter dog (Royal Duke II.—Adam's Nelly) April. 1886. Breeder, Edson Adams. Owner, W. W. Foote, San Francisco.

CLAIRE—Irish red setter bitch (Pat O'More—Lena). Breeder, J. C. Scott. Owner, Edward Fay, San Francisco.

FANNY DORR—b&t Gordon setter bitch (Dorr—Dorris) March 3, 1886. Breeder, F. A. Taft. Owner, H. A. Bassford, Vacaville.

BESSIE DON—liv&w pointer bitch (Vandevort's Don—Beautiful Queen) April 21, 1886. Breeder, H. H. Briggs. Owner, H. A. Bassford, Vacaville.

VAN DON—liv&w pointer dog (Vandevort's Don—Beautiful Queen), April 21, 1886. Breeder, H. H. Briggs. Owner, H. A. Bassford, Vacaville.

GALATEA—w&liv ticked pointer bitch (Nick of Naso—Temptation), May 8, 1886. Breeder, Geo. W. McNeil, Jr. Owner, J. Martin Barney, Dutch Flat.

HUBERT—blue bel English setter dog (Harold—Janet), April 29, 1883. Breeder, California Kennels. Owner, Wm. H. Harris, Lowell Hill.

ESSIE—w&lem pointer bitch (Vandevort's Don—Beautiful Queen), April 21, 1886. Breeder, H. H. Briggs. Owner, Beach Bassford, Suisun.

JOCCO—w&lem pointer dog (Vandevort's Don—Beautiful Queen), April 21, 1886. Breeder, H. H. Briggs. Owner, Dr. R. F. Taylor, Napa.

ESTHER—w&liv pointer bitch (Vandevort's Don—Beautiful Queen), April 21, 1886. Breeder, H. H. Briggs. Owner, T. L. Robinson, Vallejo.

DON RANGER—w&liv pointer dog (Vandevort's Don—Beautiful Queen). April 21, 1886. Breeder, H. H. Briggs. Owner, J. M. Bassford, Jr., Vacaville.

SUSIE—w&liv pointer bitch (Vandevort's Don—Beautiful Queen), April 21, 1886. Breeder, H. H. Briggs. Owner, J. M. Bassford, Jr., Vacaville.—*Breeder and Sportsman.*

AMERICAN FIELD TRIALS CLUB.

THE American Field Trials Club's first Derby for setter and pointer puppies born on or after Jan. 1, 1886, closed May 1, 1887, with 57 nominations—41 setters, 16 pointers (3 entries not yet received, having been lost in mails).

SETTERS.

BELLE NOBLE (W. W. Titus), liv&w bitch (Count Noble—Belle Boyd).

JACOBIN (W. W. Titus), wliv&t dog (San Roy—Nettle), May 18.

SIRIUS (C. Tucker), lem&w dog (Sportsman—Sweet Heart), May 22.

PHETNA (Manitoba Kennels) w,l&w ears bitch (Mark J.—Bredria), Jan. 1.

LINK (F. I. Stone), b&w bitch (Lincoln II.—imported Beauty), May.

HENRIETTA (F. J. Waddell), bw&t bitch (Baden Baden—Jennie), Feb. 28.

CLARA (James N. Macklin), bw&t bitch (Gath's Mark—Maggie Gladstone), April 24.

MAY (James N. Macklin), bw&t bitch (Gath's Mark—Dell), May 2.

DAISY ROYAL (D. Morrison), bw&t bitch (Lightning—Dot), Jan. 7.

LULU ROYAL (D. Morrison), bw&t (Lightning—Daisy Dot), Jan. 7.

SIM BONDHU (A. M. Tucker), bw&t dog (Gus Bondhu—Bo Peep), June 11.

DAVE R. (Jas. S. Fisher), or&w dog (Gath's Hope—Daisy F.), April 13.

MISS DUDLEY (Middle Tenn. Kennels), tri-colored bitch (Gath's Hope—Lady M.), June 1.

CLARA (Seiler & Porter), bw&t bitch (Roybel—Lucy), Jan. 20.

BLUE CHIEF (J. I. Case & F. K. Bull), blue bel dog (King Noble—Elsie Belton), July 12.

KING'S MARK (J. I. Case & F. K. Bull), blue bel dog (King Noble—Belle Belton), April 12.

QUEEN NOBLE (J. I. Case & F. K Bull), blue bel bitch (King Noble—Belle Belton). April 12.

JACK MODOC (Edward Dexter), b&w dog (Buckellew—Ida), July 25.

RODERIGO'S ACE (Jas. H. Trezevants), bw&t dog, (Roderigo—Countess House), June 7.

AMERICAN DAN'S PUCK (Jas. H. Trezevants), bw&t dog (American Dan—Grace Gladstone), June 7.

LADY CARORE KEVE (Jas. H. Trezevants), bw&t dog (American Dan—Grace Gladstone), June 7.

COUNT PARIS (C. W. Paris), bw&t dog (Count Noble—champion Dido II.), May 21.

TASSO ROYAL (A. H. Watson), bw&t bitch (Lightning—Daisy Dot), Jan. 7.

LILLIAN II. (W. R. Holliday), bw&t bitch (Roderigo—Lillian), May 23.

GLADSTONE, JR. (Ohio Kennels), bw&t dog (Gladstone—Jessie Turner), May 3.

LATONIA (W. Shattuc), bw&t bitch (Count Noble—champion Dido II.), May 21.

HECTOR (W. B. Shattuc), bw&t dog (Count Noble—champion Dido II.), May 21.

NOBLE DIDO (W. B. Shattuc), bw&t dog (Count Noble—champion Dido II.), May 21.

BILLY B. (W. B. Shattuc), o&w dog (Count Noble—champion Dido II.), May 21.

LIT II. (W. B. Shattuc), bw&t bitch (Roderigo—Lit), July 21.

SAMUEL S. (W. T. Bowdre), bw&t dog (Paul Gladstone—Lottie), March 7.

OLLIE S. (W. T. Bowdre), bw&t bitch (Paul Gladstone—Lottie), March 7.

LADDY (W. T. Bowdre), bw&t dog (Roderigo—Bo Peep), June 2.

CINCH (Memphis & Avent Kennels) bw&t dog (Roderigo—Bo Peep), Jan. 2.

ROD'S ROWDY (Memphis & Avent Kennels), bw&t dog (Roderigo—Bo Peep), Jan. 2.

MISS THOMPSON (Memphis & Avent Kennels), bw&t bitch (Roderigo—Bo Peep), Jan. 2.

CLAUD (Memphis & Avent Kennels), bw&t dog (Roderigo—Lillian), May 20.

JOEY B. (Memphis & Avent Kennels), bw&t dog (Roderigo—Lillian), May 20.

SUNSHINE (Latonia Kennels), bw&t bitch (Count Noble—Lit), Jan. 8.

TEMPEST (Latonia Kennels), bw&t bitch (Count Noble—Lit), Jan. 8.

NORA (Latonia Kennels), bw&t bith (Count Noble—Lit), Jan. 8.

LITTLE GIFT (Bert Crane), bw&t bitch (Roderigo—Queen Bess), May 12.

MASTER BRACKET (Jas. L. Anthony), lem&w dog (Bracket—Nell of Efford), July 18.

PEACHSTONE (Premier Kennels), liv&w bitch (Trinket's Bang—Pearlstone), April 13.

LADY MAINE (H. F. Farnham) b&w ticked bitch (champion Graphic—Zitta), June 10.

LASS OF MAINE (H. F. Farnham), b&w ticked bitch (champion Graphic—Zitta), June 10.

LADY W. (F. J. Stone), lem&w bitch (Heno—Lady Washington), April —.

POINTERS.

OSSIAN (P. T. Madison), liv&w dog (Croxteth—Annie), May 8.

TRINKET'S CASH (E. F. Stoddard), w&liv ticked dog (Croxteth—Trinket), April 4.

TRINKET'S COIN (E. F. Stoddard), w&liv ticked dog (Croxteth—Trinket), April 4.

TRINKET'S COUNT (E. F. Stoddard), w&liv ticked dog (Croxteth—Trinket), April 4.

GUYMARD (I. N. Cochran), liv&w ticked dog (Croxteth—Lady Gwendolin), June 25.

TRINKET'S COUNTESS (Paul Francke), liv&w bitch (Croxteth—Trinket), April 4.

GRAPHIC III. (Jas. L. Anthony), liv&w dog (Graphic—Bloomo), Feb. 18.

DONALD IV. (Jas. L. Anthony), liv&w dog (Donald—Revel III.), June 27.

FASHION (Jas. L. Anthony), liv&w dog (Donald—Revel III.), June 27.

FRIVOLITY (Jas. L. Anthony), liv&w bitch (Donald—Revel III.), June 27.

MISS GLEE (Jas. L. Anthony), or&w bitch (Bracket—Nell of Efford), July 18.

EASTERN FIELD TRIALS DERBY.

ADDITIONAL ENTRIES.

RUE III. (Bayard Thayer, Boston) o&w pointer bitch (Bang Bang—Rue).

SIRIUS (Thomas Bennet, Oakland, Cal.) o&w setter dog, May 24 (Sportsman—Sweetheart).

MASTIFFS AND JUDGES.

Editor Forest and Stream:

Mr. Mason pertinently asks, in his admirable critique of the New York dog show, "Who will be the first American to breed a high-class mastiff?" Remembering that he has owned a stud mastiff longer than the majority of American breeders, I certainly expected that he would show us, ere this, a first-class specimen.

The first and second prize winning puppies at Philadelphia were bred by me, and, when age is taken into consideration, they are better dogs than were ever sired by Mr. Mason's Nevison. This he must admit.

I do not agree with Mr. Mason and others, that a man must have been a breeder before he can be a competent judge. Some of our best horse and cattle judges have never bred a colt or calf.

Mr. Mead has been a breeder for some time, yet mastiff exhibitors did not accept this as a proof that he could judge the breed, or the entries of mastiffs at the New York show would not have exhibited such a large falling off. That he is president of the American Mastiff Club may also have had much to do with holding the entries down to 36. This club had been organized "on the sly," the most prominent mastiff men not being asked to join. The following gentlemen are not members: Messrs. Wade, Perry, Alsop, Craig, Lynch, Aston, also others, equally as well known. Mr. Moore is a member, but when admitted did not own the superb animals he does now.

While intelligence and knowledge have much to do with breeding a prize winner, "luck" has often been an important factor, and is illustrated by Dr. Sidney Turner. A late number of the *Stock-Keeper* says: "Dr. Turner was the first to use Crown Prince as a stud dog, notwithstanding his Dudley nose, his light eye and rather heavy ears, and in mating Lady Rowena with him he met with the greatest success. Four litters by Crown Prince were bred out of Lady Rowena. * * * * * They have all made their mark in the mastiff world, and the place each occupies individually is not a small one—we do not mean on account of their bulk."

How could Dr. Turner know that Crown Prince would not perpetuate his Dudley nose, his light eye, or other defects, upon his offspring? Sires generally do this thing, and Crown Prince is a great exception, and Dr. Turner is a remarkably lucky man. Had he been breeding after a fixed type for years, he would probably have finally accomplished his ends; but to have bred all grand dogs from the first trial was, I contend, "more luck than good management."

I have occupied considerable space to say that it is my opinion a man can be a competent judge without having been a breeder; that a breeder of high class dogs is not necessarily a good judge—though it is more than likely he is—and, finally, exhibitors are tired of having experiments tried upon their valuable animals. It's all right when the judge proves a good one, but it's all wrong, and can never be made right, when he proves incompetent. To illustrate this, I refer the readers to the unprecedented ignorance of the man who gave The Lady Clare hc. at Pittsburgh to Jessica's first. The management are to blame, as they were assured good classes if a reliable judge was chosen.

VICTOR M. HALDEMAN.

POINTERS AT NEW YORK.

Editor Forest and Stream:

In criticising the late W. K. C. dog show, might I ask you to call attention to the fact that my entry, Puck, 253, Class 38, was awarded the red ribbon by Mr. Donner in the ring, and entry No. 266 was awarded the yellow ribbon. After wearing them around for several minutes in the ring, Mr. Donner requested me to remove my ribbon and change it for the yellow one, as he had since decided that he preferred No. 266 for second prize. I would request in justice to my dog, that whatever your own criticisms on him may be, that you call attention to this fact, as it was doubtless witnessed by your reporter, and I cannot see the difference between removing the prize several minutes or several days after it has been once officially awarded. Whether my dog deserved second or not, I would be the last to question the judge's decision, but it seems highly improper to award a prize and then remove it merely because the judge has changed his mind about the two dogs' relative merits.

JOHN A. WELLS, M.D.

ENGLEWOOD, N. J.

Editor Forest and Stream:

The cause of my absence from New York was distemper in my kennels, contracted at some of the earlier shows.

GEO. W. LOVELL.

MIDDLEBORO, Mass.

By an error of transcription Mr. S. K. Sperry's pointer Capt. Fred was credited with an hc., when he should have been noted as absent.

DETROIT BENCH SHOW.

DETROIT, Mich., May 14.—*Editor Forest and Stream:* The following is an official list of the entries at the Detroit show: 63 English setters, 22 Irish setters, 14 Gordon setters, 32 pointers, 8 Irish water spaniels, 2 field spaniels, 39 cocker spaniels, 28 beagles, 2 bassets, 4 dachshunde, 38 foxhounds, 19 collies, 26 mastiffs, 22 St. Bernards, 8 Newfoundlands, 15 Ulmers, 19 deerhounds, 11 greyhounds, 1 Chesapeake Bay, 6 bulldogs, 15 bull-terriers, 27 fox-terriers, 9 Scotch terriers, 11 black and tan terriers, 7 Dandie Dinmont terriers, 5 Irish terriers, 7 Skye terriers, 4 Yorkshire terriers, 8 Bedlingtons. 2 white English terriers, 1 King Charles, 1 Blenheim, 19 pugs, 1 poodle, 6 miscellaneous; total, 503. A very respectable number for an inaugural show.

CHAS. WEIL, Secretary.

AMERICAN FOX-TERRIER CLUB.—At the annual meeting held in the Madison Square Garden on May 6, 1887, there were present Messrs. Belmont, Lewis Rutherfurd, Jos. Kelly, Grainger, Rathborne, Frothingham, Murphy, Hitchcock, Mortimer, Field, Inches, Terry and Hoey. The Treasurer's report showed a satisfactory balance to the club's credit. The following were elected: President, August Belmont, Jr.; Vice-President, Lewis Rutherfurd; Secretary and Treasurer, Fred Hoey; Governors—W. Rutherfurd, John E. Thayer. C. Rathborne, Ed Kelly, T. H. Terry and J. E. L. Grainger. Mr. Belmont was appointed with power to select three others to constitute the Bench Show Committee of the second annual show of the American Fox-Terrier Club. Mr. Thomas H. Terry was appointed delegate to the American Kennel Club. Mr. Percy C. Reid was elected an honorary member, and a vote of thanks was given him for his kindness in coming to America to judge at the New York dog show. Mr. Reid kindly offered a cup to be given at the Jubilee dog show in London for the best fox-terrier from America. After some minor business the meeting adjourned subject to the president's calls.—FRED HOEY, Sec. and Treas.

GREYHOUNDS AT PHILADELPHIA.—*Editor Forest and Stream:* I have read Mr. Webber's reply to my criticisms of the Philadelphia and Boston entries of his dogs, and also the comments of "Porcupine" relating thereto. As it appears by the admissions, Mr. Webber made application to the clerk in charge to allow the substitution of a dog not entered for one already catalogued. How he could expect a mere servant of the club to overrule all precedents in way of substitution without first consulting the officials I am at a loss to understand. He knew the dog Nick was not entered, that the entries were closed and the show on the eve of opening. Therefore I claim he should have presented his case to the officials, who I am confident would never have allowed the change. I am informed by Mr. Child, the secretary, that the first he knew of the substitution was when his attention was called to it. He immediately ordered a "disqualified" card to be placed on the stall. As willing as I was to censure Mr. Webber's conduct upon reading the reports of the shows and no one having stated the case as Mr. Webber has, through utter ignorance of the facts, so am I now equally prompt to withdraw my remarks regarding the Philadelphia entry, as by the books of the club the substitution was permitted by one who at least had access to the books, but who overreached his authority. The club unfortunately is held responsible for their agent's act. The prize awarded to Nick (though he would be entitled to it if entered) should be withheld. No disqualification can be served upon a dog which is absent, nor censure be attached to Mr. Webber in this matter as far as fraud is concerned, though I think he erred greatly in consulting a clerk and ignoring the secretary and other officials. As to the Boston entry of Pembroke, I am surprised at Mr. Webber's defense. Had he acted here as honestly as at Philadelphia, I should offer him an unqualified retraction. He claims that as the club did not make the transfer it was none of his affair to see it done. I take issue here with both him and "Porcupine." Mr. Webber made the entry, and as a subsequent change in the winnings of the dog affected it, it was as much his duty as a gentleman, as it was the club's, to see that he was transferred. Because through rush of business the matter was overlooked by the club, he was morally (though perhaps not legally) bound not to allow the matter to go unchallenged. The club's error or dereliction does not absolve him from his moral obligation as a gentlemanly exhibitor. He knew when he accepted the ribbon, that he was not entitled to it. He knew he belonged properly in the champion class where Memnon was, and in taking the ribbon that was offered him he accepted that which he knew did not honesly and fairly belong to him, but to the vhc. reserve dog, if there was any. Submit the case to a jury of twelve, and I am confident my position will be upheld. I will ask Mr. Webber one question: If upon arriving at Boston and finding Memnon absent from the champion class, would he have remained in the open class with six or eight dogs to compete against, for first prize, or would he have asked to be transferred to the champion class, in which there was no competition? As to my desire to have Mr. Webber disqualified, let me assure him it was through no fear of his dogs. My Lancashire Witch having faced Memnon, a better dog than ever Mother Demdike was, beaten him in England when he was in his prime, I also having beaten Mother Demdike with three different dogs under as many different judges, and on four different occasions, his statement that I desire to get rid of his competition falls far short of the mark. I never feared Mother Demdike and Memnon as a brace; I certainly should not fear the former alone. If Mr. Webber believes his bitch to be better than my Lancashire Witch and will call at my house I will be pleased to show him a letter written by Messrs. Charles, the representative exhibitors, of England, and former owners of both dogs, which will soon aid very materially in disabusing him of the idea. The letter is dated June 3, 1884, before the two dogs were purchased by either Mr. Smith or myself. If Mr. Webber desires to try conclusions with me, for his own edification, he shall appoint one judge, I another, and the two decide upon a third. Let the trio bring in the verdict who is to pay for a handsome silver trophy as well as the judges' expenses.—H. W. HUNTINGTON.

A DOG BITE CASE.—Mr. William Wall, a brother of Berry Wall and an ardent sportsman, was defendant in a dog case before Justice Murray, in Jefferson Market Police Court yesterday afternoon. The complainant was a young lawyer named Henry C. Beach, whose bandaged right hand showed that up to the opening of the case in court he had had the worst of the encounter with the animal, upon whose legal execution he was bent. The story which he told to the court was that he called Tuesday night at the Rossmore Hotel, Broadway and Forty-second street, to see his client, Mr. Underwood, the engineer, and that while he was passing along a passage in the hotel basement a setter dog, the property of Mr. Wall, which was in a room opening upon the passageway, seized his right hand and lacerated it badly before Mr. Beach managed to make him let go. Mr. Beach said that he would not have caused Mr. Wall to be summoned had not the latter, during an interview earlier in the day, charged him with bringing the case with a view to blackmail. As it was, he desired that the dog should be shot. Mr. Wall said that the dog was not his property. It was a gentle bird dog, of considerable value, and had been sent him on trial by Jim Temple, formerly one of the owners of the Rossmore Hotel. It had been placed over night in the room near the engine room, and if it bit Mr. Beach it was the latter's fault, as he had no business in the basement of the hotel without having first obtained permission from the proprietor or clerk. Mr. Beach said that he had frequently visited his clients at the hotel, and that the clerk had given him a general permission to visit Mr. Underwood whenever he desired to do so. Judge Murray dismissed the proceeding because actions of the kind only lie in cases where dogs are unmuzzled and at large in the street. A civil remedy was the only recourse for a person who had been injured by a dog upon private premises.

A PRETTY POOR GRADE OF ADVICE.—Hartford, May 4.—*Editor Forest and Stream;* What do you think of this kind of advice from a great paper like the *Journal of Commerce*. I think they should be called to account by the FOREST AND STREAM.—C. B. The advice referred to is as follows: "*Editor Journal of Commerce*: Please inform me what is the best action to take against dogs that make themselves a nuisance in a small country village by destroying seed beds. I do not wish to create the ill-feeling of my neighbors.—CORONA. *Reply.*—Twenty-five cents worth of strychnine placed in a piece of meat will forever destroy the appetite of a dog for reveling in seed beds. If the dog should subsequently be found reposing in that vicinity, a deep hole in the ground afterward well covered will remove him from sight. Nothing need be said about it to create ill-feeling in the neighborhood."

TRAILER.—The beagle Trailer, whose removal from the show at Hartford on a veterinarian's certificate was referred to in the introduction to our report of the New York show, is still sick. There is no question about his serious illness during the Hartford show, and Mr. Schellhass is still working hard to bring this good little dog successfully through a severe bronchial attack.

UNITED STATES FIELD TRIALS CLUB.—Jersey City, N. J., May 12, 1887.—*Editor Forest and Stream:* Myself and associates claim the name "The United States Field Trials Club" for field trial club now being organized.—C. J. PESHALL.

DACHSHUNDE AT PHILADELPHIA.—Allentown, Pa., April 30.—*Editor Forest and Stream:* Although I do not expect that you will recognize this criticism upon your critic, yet I think that judges and exhibitors should have a fair chance to answer Mr. Mason through your columns, as heretofore he has had full sway, and seems to have full power to say what he pleases or he thinks is correct, although he is as liable to err as others. Judging from his writings and criticisms on dogs and their judges, he is certainly a phenomenon and a wonder, for he knows all points, and of all dogs, whether foreign or domestic, while most of the judges claim to know but one or two breeds, with which they are familar by actual contact and by breeding. Some people criticise who have never even bred a dog. I notice, taking Mr. M.'s writing all through, that he is particularly severe against the judges who give a preference over New York dogs. There is a great flavoring all through his writing that there is nothing proper in the dog line outside of New York. Mr. Mason is rather severe with Mr. Barlow, and more than severe with Mr. Ashburner. I would like to refer Mr. Mason to Vero Shaw, of New York, to find out what a dachshund is. I am the breeder and owner of Gretchen, who won the first prize at Philadelphia, April 18, 1887, whom Mr. Mason criticises so severely. She is chocolate or seal brown and tan. Mr. Mason says her color is bad. Authority colors are black and tan, chocolate and tan, brown and tan, fallow or red. Her length is 38in. and height 10in. Mr. Mason says she is short. Authority says no dachshund should be over 10in. high and the length about 38in. and less for smaller dogs. Mr. Mason's favorite, Rubenstein, is certainly 12 to 14in. in height. Gretchen's ear reaches ½in. from nose and her head is broad behind the ears, which denotes courage. German authority and Vero Shaw say that conical heads and long ears are very faulty, and that the ears should come to within ½in. of nose. Another mistake of Mr. Mason's is that he is comparing a 14-month old bitch with a dog, and the bitches are always lighter in bone throughout than the dogs, and smaller and finer in every way. Gretchen's weight at Philadelphia was 17½lbs.; she will be lighter in New York as she is just recovering from a severe attack of pneumonia. Authorities say no dog should weigh over 20lbs., or bitch 17lbs., and the Germans give ten kilos for dogs and proportionally lighter for bitches. One of the greatest prize bitches in England weighed but 15lbs., and the greatest dog 20lbs. Mr. Mason says Gretchen is too light. Next season I will exhibit two of my dogs to show the difference of size and bone between a dog and bitch of the same breed. Flirt, dam of Gretchen, was imported by Mr. Bailey, of New York, of circus fame; and Waldman, her sire, was imported by Theodore Engle, of Philadelphia, who owns him now. I am importing a dog myself at the present time to breed Gretchen, Dora and Ulrica. I also own two brown and tan dogs. As there are several classes of dachshunde I wish Mr. Mason would look them up or consult Vero Shaw and then give as near as possible what a dachshund should be, as there is such a vast difference of opinion by breeders and people who should know. Perhaps we are both right.—FRANK HOUPT.

CLUMBER SPANIELS AT PHILADELPHIA.—*Editor Forest and Stream:* Mr. Mason says that he has promised to say nothing about the subject under dispute. The writer feels diffidence in pressing the matter further, but has Mr. Mason the right to withdraw in this manner? Has he forgotten what he said in his report of the Hartford show, viz., "I will have something to say about these dogs on a future occasion." The writer did not infer, nor did he think that it would be the inference of any one, that either Mr. Hemingway, Mr. Wilmerding or Mr. West was the "unfortunate gentleman" of Mr. Mason's Philadelphia report. Mr. Rendle was without doubt the person referred to. That Messrs. Hemingway, Wilmerding and West had decided that Johnny was the better dog, was not advanced as evidence. It was a simple fact which there was no getting over. The writer gave his opinion of the heads of the two dogs and criticised them, and hoped that Mr. Mason would accede to his request and do likewise. With regard to Mr. Hemingway's decision at Newark, the facts of the case, as I have learned, are these: Mr. Marmaduke Richardson handled Johnny and Drake in the ring. The former's real number was 275, the latter's 276. Mr. Hemingway picked the dog with tag 276. Mr. Richardson said he had not found the dog, but Mr. Hemingway insisted that he was judging and that his decision must stand. Mr. Wm. Tallman, under whose charge Johnny and Drake were, was then called into the ring, and immediately said that the numbers were reversed, and that Johnny was the dog chosen for first place; therefore, the dog which Mr. Hemingway had decided must stand the winner was Johnny. Both Mr. Tallman and Mr. Richardson will, I know, be prepared to certify that these are the facts of the case. So much for Mr. Hemingway. Mr. Wilmerding, I would be prepared to swear, made a careful examination of the two dogs, and gave the blue ribbon to the dog which in his honest opinion was the better. Of Mr. West's capabilities as a judge I know nothing, but in my opinion, and until it is proved by facts to the contrary, it will remain my opinion, he showed discernment in his judging of Johnny and Drake at Philadelphia. In conclusion I would beg Mr. Mason not to fly off at a tanget, and quote the opinion of this man and that, but to keep to the point. He was requested to state his reasons for saying that Drake is a better dog than Johnny, and has not done so.—A MEMBER OF THE AMERICAN SPANIEL CLUB.

PHILADELPHIA DOG CATCHERS.—A city ordinance authorizes the Mayor to detail as many police officers as he may deem necessary who shall employ suitable persons "to take up, kill and bury all dogs found running at large in the city of Philadelphia." For every dog taken up and killed $1 is paid to the dog-catcher by the city. Those redeemed by the owners net these same licensed pirates $2 for each dog. Elsewhere we publish a letter showing how these dog-catchers, protected by two or more policemen, interpret their authority to extort money from the owners of valuable, or at least valued, dogs. Police protection, and a good deal of it, is necessary for these dog-catchers, for so offensive have they become to the people that they would be hardly dealt with whenever they appear were the strong arm of the law not so visibly at their back. Mangy curs without owners are uniformly passed by when these discriminating highwaymen see a $2 dog within reach of their nets. Our correspondent tells how these men invaded his domicile and seized his dog in the doorway. They habitually grab dogs on the doorsteps and tear them from the very grasp of their owners. A dog in the street held directly by the collar or by a leash is "at large" in the estimation of the dog-catchers and their complaisant police protectors, and is certain to have the net thrown over him, in spite of the indignant protests of the owner. The pets of women and children are fair play for these bandits. A case is reported of a lady in the upper part of the city who sought to protect her pet poodle from seizure as the dog-catchers came up, but had the filthy net thrown over her own shoulders, and under such compulsion she consented to pay her assailant $2 for the privilege of keeping her dog. This is a gross and outrageous abuse which we hope Director Stokley will look into and correct. The law is at fault by holding out such extraordinary inducements to the dog-catchers to seize house-dogs regardless of the equities or decencies of the case. To offer a lot of hoodlums $2 apiece for every valuable dog they can catch is to make it certain that they will secure these dogs with just as little regard for the owners' rights as they are compelled to pay by policemen, who in all probability share in the blackmail extorted and think that every dog is legally "at large" which can be brought within the reach of the dog-catcher's net. The licensed robberies and outrages of the dog-catching gangs have been endured long enough. A reform administration will certainly find a way to put an end to them.—*Philadelphia Times.*

AN OLD YARN.—A Massachusetts correspondent suggests that the Providence *Journal* "should have the cake" for this: "Some time last fall a well-known huntsman lost a very valuable pointer dog, and the most strenuous exertions made to find the animal proved fruitless, so finally he was given up as being hopelessly lost. Last Monday the owner of the dog, in company with three other gentlemen, was travelling through a section of Buck Hill woods, when they came across the skeleton of a dog in attitude, the left fore paw raised and the tail sticking out straight as a ramrod, the bones being held in position by the sun-dried cords and sinews. The collar around the neck established beyond doubt the fact that the remains were those of the long-lost Leo, and a further search brought to view, about a rod from the dog's nose, the bones and feathers of a partridge. The mystery now became clear as day. With the wonderful and inscrutable instincts that control birds and brutes the partridge had lain perdu, afraid to rise, while the dog, like a Roman sentry at Pompeii, had died at his post of duty. The hunter exhibits the recovered collar as proof positive of the truth of his story." This is an old story of English origin, given in the books at least a hundred years ago.

CLUMBER IMPORTATION.—Mr. H. B. D. Bruce, of Ottawa, has imported from the kennels of Mr. Logan, of Portaferry, Ireland, the Clumber spaniel bitch Lucy II. She was whelped June 3, 1887, and is by Manners, bred by Earl Manners, out of Lucy, bred by the Earl of Arundel. Both her sire and dam were owned originally by the late Dr. Hind, and while in his possession won many prizes, especially the latter. Her grausire was the celebrated Thoresby, owned by Lord Manners. Lucy II. is a valuable addition to the Ottawa Clumber family.—CLUMBER.

VACCINATION FOR DISTEMPER.—May 11, 1887.—I am sorry to report the death by distemper of my Glencho puppy Kerry (A.K.R. 4578) in spite of every effort to save him. I cannot help thinking that if I had been here to attend to him myself he might have been saved. He had the handsomest coat of any dog I ever saw, and gave every promise of being worthy of his illustrious sire. It would be a boon to all lovers of good dogs if vaccination could be made successful to prevent this dangerous disease killing off so many puppies annually.—E. F. BISHOP.

BULL-TERRIERS AT NEW YORK.—Providence, May 11.—You do not credit Jubilee, Mr. Comstock's bull-terrier, with winning the champion prize at New York. The class was divided. Jubilee, having won three first prizes, was transferred to champion dog class and won.—W. J. COMSTOCK.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Geronimo and Marion. By Jas. B. Murphy, New York city, for black and white blue belton setter dog and bitch, whelped April 1, 1887, by Jock (Jocko—Nell Grouse) out of Bess (Duke of —— —imported Mollie).

Rose of Rancocas. By Jos. B. Murphy, New York city, for orange and white English setter bitch, whelped April 4, 1887, by Dashing Monarch (Dash II.—Countess Moll) out of Nancy Rake (Bergundthal Rake—Phyllis).

Clifford. By Elisha P. Baldwin, Norwich, Conn., for dark red Irish setter dog, whelped July 12, 1886, by Bruce (Elcho—Noreen) out of Zelda (Allison's Ike—his Nancy).

Bertie May. By J. C. Schuyler, Berryville, Va., for lemon and white pointer bitch, whelped Dec. 14, 1886, by Tammany (Tory—Moonstone) out of Bertie (Rab—Bellona).

Blanche May. By J. C. Schuyler, Berryville, Va., for liver and white pointer bitch, whelped Dec. 14, 1886, by Tammany (Tory—Moonstone) out of Bertie (Rab—Bellona).

Chloe. By F. Tracy, Brooklyn, N. Y., for liver and white pointer bitch, whelped Dec. 14, 1886, by Tammany (Tory—Moonstone) out of Bertie (Rab—Bellona).

Lucy II. By H. B. D. Bruce, Ottawa, Ont., for lemon and white Clumber spaniel bitch, whelped June 3, 1886, by Manners out of Lucy.

Rockett. By Fred Bollett, Brooklyn, N. Y., for liver and white pointer dog, whelped Dec. 14, 1886, by Tammany (Tory—Moonstone) out of Bertie (Rab—Bellona).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Saddlebags—Rockingham. E. W. Durkee's (New York city) English setter bitch Saddlebags (Foreman—Belle of Allendale) to F. Windholz's Rockingham (Belthus—Bess), May 2.

The Duchess—Count. G. D. Davelson's (New Haven, Conn.) bull-terrier bitch The Duchess (Count—White Violet) to Frank F. Dole's Count (A.K.R. 3178), April 4.

White Violet—Count. T. A. Harris's (Philadelphia, Pa.) bull-terrier bitch White Violet (Dutch—White Rose) to Frank F. Dole's Count (A.K.R. 3178), April 10.

Cautyre—Les. Hur Kennels' (Chicago, Ill.) mastiff bitch Cautyre (A.K.S.B. 4723) to Mrs. Peck's Leo (Jacob—Ruth), May 9.

Petry—Don Quixote. F. E. Loring's (Oakham, Mass.) pointer bitch Petry (Sancho—Tot D.) to Don Quixote Kennels' Don Quixote (Robin Adair—Lady Belle), April 30.

Fortune—Vortigern. E. Lever's (Philadelphia, Pa.) black and tan terrier bitch Fortune (Reveller—Lilly II.) to his Vortigern (Viper—Gipsey), March 26.

Floss—Bang. H. J. Gerald's (Milton, Mass.) pointer bitch Floss (Rox—Toy D.) to Tuckerfield Kennels' Bang, April 22.

Miss Druid—Fred W. C. Tucker's (Stanton, Tenn.) setter bitch Miss Druid (Druid—May B.) to B. F. Wilson's Fred W. (Count Noble—Spark), May 13.

Morning Star—Gun. Chas. York's (Bangor, Me.) Llewellyn setter bitch Morning Star (Dashing Dan—Daisy Starlight) to his Gun (Gladstone—May B.), May 9.

Effie Deans—Dublin Scot. Dr. John P. Gray, Jr.'s (Utica, N. Y.) collie bitch Effie Deans to Chestnut Hill Kennel's Dublin Scot, May 14 and 15.

Dot—Nullamore. Chestnut Hill Kennels' (Philadelphia, Pa.) collie bitch Dot (Rex, A.K.R. 149—Jersey Lily, A.K.R. 147) to owner's Nullamore, May 7 and 8.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Zadie. East Lake Kennels' (agents) (West Jefferson, O.) English pug bitch Zadie (Treasure—Peggy), May 1, four (one dog), by City View Kennels' Bradford Ruby.

Dela. Chas. H. Newell's (Portland, Me.) pointer bitch Dela (A.K.R. 1347), May 10, eight (five dogs), by Westminster Kennel Club's Naso of Kippen (Naso II.—Maggie).

Sensation's Rose. J. Bardwell's (Chicago, Ill.) pointer bitch Sensation's Rose (Sam—Fan), May 7, eleven (eight dogs), by Prichard's Ben (Croxteth—Trinket); one dog and one bitch since dead. Three are orange and white, eight liver and white.

Roxana. P. M. Carman's (Wrightsville, Pa.) beagle bitch Roxana (Ringwood—Belle), April 26, six (four dogs), by A. C. Krueger's Racer (A.K.R. 4504).

Trixy. P. M. Carman's (Wrightsville, Pa.) beagle bitch Trixy (Ringwood—Belle), April 27, four (three dogs), by A. C. Krueger's Cameron's Racket (A.K.R. 4010).

Nellie. Jos. B. Murphy's (New York city) pug bitch Nellie (Ring—Dot), April 10, eleven (four dogs), by Henry Bitz's Jack, pedigree unknown.

Bess. Jos. B. Murphy's (New York city) blue belton bitch Bess

(Duke of —— —Mollie), April 1, ten (five dogs), by Jos. Reynold' Jock (Jocko—Neil Grouse).

Miss Slick. C. S. Bailey's (Amenia, N. Y.) fox-terrier bitch Miss Slick (A.K.R. 3687), May 1, five (two dogs), by E. Lever's Little Swell (Spice—Relish).

Saucy. Geo. H. Whitehead's (Trenton, N. J.) fox-terrier bitch Saucy (A.K.R. 4408), April 29, four (one dog), by E. Lever's Little Swell (Spice—Relish).

Gyp. S. J. Parker's (West Chester, Pa.) fox-terrier bitch Gyp, April 15, six (five dogs), by E. Lever's Little Swell (Spice—Relish).

Judy II. C. S. Bailey's (Amenia, N. Y.) fox-terrier bitch Judy II. (A.K.R. 4226), April 22, five (three dogs), by E. Lever's Little Swell (Spice—Relish).

Safety. E. Lever's (Philadelphia, Pa.) black and tan terrier bitch Safety (King—Violet), May 14, six (four dogs), by J. Tatcham's Lord George (Burke—Luce).

Flirt II. Alf. Watts, Jr.'s (Brantford), cocker spaniel bitch Flirt II. (Brag—Ruby), May 8, four dogs, by Fred Fawkes's Guy (A.K.R. 4685).

Cordelia. Associated Fanciers' (Philadelphia, Pa.) cocker spaniel bitch Cordelia (Pascha—Gypsey), April 6, seven (three dogs), by their Bonanza (Watermark—Nellie).

Maggie Gladstone. A. P. Gilliam's (Stanton, Tenn.) setter bitch Maggie Gladstone (Gladstone—Lavalette), April 11 five (three dogs), by Dr. G. G. Ware's Dean Swift (Gladstone's Boy—Grammie).

Pet Gladstone. C. Tucker's (Stanton, Tenn.) setter bitch Pet Gladstone (Gladstone—Sue), April 27, five (three dogs), by B. F. Wilson's Count Noble.

Piper's Girl. Associated Fanciers' (Philadelphia, Pa.) collie bitch Piper's Girl (Major—Belle), May 1, nine (five dogs), by their King Bruce (Leafer—Renda).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Bob Clifford. Liver and white ticked pointer dog, whelped July 22, 1886, by Clifford out of Lady Belle, by A. Quick, New York city, to C. A. Swindell, same place.

White Violet. White bull-terrier bitch, whelped April 28, 1885, by Dutch out of White Rose, by Frank F. Dole, Philadelphia, Pa., to T. H. Harris, same place.

Silver. White bull-terrier dog, whelped February, 1885, by Rebel out of Lilly, by Frank F. Dole, Philadelphia, Pa., to H. Alton Waldron, Providence, R. I.

Count—Bertha whelp. Bull-terrier dog, whelped March 1, 1887, by Frank F. Dole, Philadelphia, Pa., to L. Breisacher, Detroit, Mich.

Beauty. Black Newfoundland dog, whelped March 20, 1887, by Folly out of Black Bess, by Wm. W. Silvey, Philadelphia, Pa., to David T. Jones, same place.

Bitz's Jack—Nellie whelp. Fawn, dark pug bitch, whelped April 10, 1887, by Jos. B. Murphy, New York city, to John Schreiner, same place.

Kitty. Black and tan terrier bitch, whelped Oct. 11, 1886, by Vortigern out of Fortune, by Edward Lever, Philadelphia, Pa., to W. R. Smith, Buffalo, N. Y.

Nanon. Black and tan terrier bitch, whelped March 23, 1886, by Vortigern out of Lilly II., by Edward Lever, Philadelphia, Pa., to W. R. Bingham, Toronto, Can.

Ward's Tempest—Fanny whelp. Snow white English setter dog, whelped Oct. 30, 1886, by Geo. L. V. Tyler, West Newton, Mass., to J. W. Knowles, Cambridge, Mass.

Gun (A.K.R. 1533)—Pearl Blue (A.K.R. 1543) whelp. Black, white and tan Llewellyn setter dog, whelped Aug. 24, 1886, by Chas. York, Bangor, Me., to Geo. B. Mescrole, Tarrytown, N. Y.

Mac. Gray and brown deerhound dog, whelped August, 1886, by Lance out of Lorna II. (A.K.R. 336), by Associated Fanciers, Philadelphia, Pa., to N. G. Flick, Ulysses, Neb.

Grit. White fox-terrier dog, whelped Feb. 12, 1887, by Squire, Jr., out of Snow, by Geo. H. Tator, Hudson, N. Y., to Associated Fanciers, Philadelphia, Pa.

Snow. White fox-terrier bitch, whelped May, 1885, by —— out of (A.K.R. 3182), by Geo. H. Tator, Hudson, N. Y., to Associated Fanciers, Philadelphia, Pa.

Don. Liver and white pointer dog, two years last September, by Associated Fanciers, Philadelphia, Pa., to W. P. Adams, Wahpeton, Dak.

Young Faust (A.K.R. 779)—Nellie (A.K.R. 1211) whelp. Liver and white pointer bitch, whelped Oct. 16, 1886, by Oakdale Kennels, Westbrook, Conn., to Associated Fanciers, Philadelphia, Pa.

Clancarty and Brother. Red Irish setter dogs, whelped July, 1886, by Bruce (A.K.R. 54) out of Zelda (A.K.R. 240), by Jean Grosvenor, Boston, Mass., to Associated Fanciers, Philadelphia, Pa.

Sancho. Red Irish setter dog, date of birth and pedigree not given, by Oakdale Kennels, Westbrook, Conn., to Associated Fanciers, Philadelphia, Pa.

Dot. Lemon and white English setter bitch, whelped March 13, 1886, by Dash out of Dolly III., by Oakdale Kennels, Westbrook, Conn., to Associated Fanciers, Philadelphia, Pa.

Bessie. Blue belton English setter bitch, whelped May 16, 1886, by Duke out of Vic, by Oakdale Kennels, Westbrook, Conn., to Associated Fanciers, Philadelphia, Pa.

Homer (A.K.R. 1630)—Florence (A.K.R. 1333) whelp. Fawn English mastiff bitch, whelped Feb. 6, 1887, by Associated Fanciers, Philadelphia, Pa., to Henry Drain, Baltimore, Md.

PRESENTATIONS.

Jock—Bess whelp. Black and white blue belton dog, whelped April 1, 1887, by Jos. B. Murphy, New York city, to James Donnelly, Morrisania, N. Y.

IMPORTATIONS.

Lucy II. By H. B. D. Bruce, Ottawa, Ont., lemon and white clumber spaniel bitch, whelped June 3, 1886, by Manners (Thoresby— ——) out of Lucy (—— —Nettle).

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

X. Y. Z.—The primary cause was doubtless worms. The abscess was probably the result of her debilitated constitution, one of the glands of the groin breaking down into pus.

J. M. H., Augusta.—My setter puppy, 7mos. old, is thin, with varying appetite; runs very badly at the eyes. In morning eyes filled with whitish matter so he can scarcely see. Drools saliva at the mouth and seems to choke in throat. Is restless and languid in movement. Have treated him with areca nut and oil for worms, without improvement. Ans. See answer in this issue to B. P. R.

B. P. R., Willamsport.—Irish setter dog, 20mos. old, has no life about him, is very dull, appetite not as good as usual, and in the morning he has a mattery discharge from his eyes; is always glad to be let out but will not run about, seems weak and tired. Ans. Dog is out of condition. Give 5grs. of calomel and 5 drops of Fowler's solution of arsenic in the food. Give but one dose of calomel, but continue the arsenic night and morning for two weeks.

C. E. B.—My English retriever puppy, 2mos. old, has very bad, bloody diarrhœa. He passes a kind of gummy substance, mixed up with a good deal of blood, is weak, listless, very thin, and has not a good appetite. Ans. Your dog has dysentery. Feed on milk containing lime water (two teaspoonsful to the pint). Give a very little raw meat each day, finely minced and mixed with the white of an egg. Give the following pill:

℞ Pulv. camphorac.....grs. v.
Pulv. opii.....grs. iii.
Div. in pil. No. x.
Sig. One morning and evening.

If very weak give teaspoonful of brandy and water three or four times daily.

A lady in Barringer Township had heard that sprinkling a little gunpowder on the fire would prevent hawks from molesting chickens. Hawks were very troublesome among her chickens, and she got the powderhorn and proceeded to pour a little stream of powder on the fire. What might have been expected to follow did follow—the fire ran up into the horn, the powder exploded, and her hand was badly torn to pieces.—*Statesville (N. C.) Landmark.*

Policeman Toner, the champion runner of the Jersey City police force, gave chase on Wednesday night to three suspicious looking men. They outran him, and his dog took part in the chase. The dog ran between the feet of one of the men and tripped him. The man scrambled to his feet and resumed his run. The dog again ran between his feet, threw him a second time, and Toner caught the fellow. A stolen coat, belonging H. H. Pelzer, of Palisade avenue, was found on him.—*New York Times.*

Rifle and Trap Shooting.

RANGE AND GALLERY.

WILMINGTON, Del., May 9.—The Kent County Rifle Club met for practice last Friday afternoon, but, as they were laboring under several disadvantages, the scores are not as good as they ought to have been. The club has lately been taking in several new members, which increased the membership to nearly thirty. This is very promising for so young a club, and as all of the members take an enthusiastic interest in the sport, it only needs steady practice to bring out good marksmanship. Standard American target. At 200yds.:

SAN FRANCISCO, May 8.—To-day the National Shooting Club went to Shell Mound Park Rifle Range, and there held its regular monthly shoot. The day was very propitious for rifle shooting; the wind was low and the atmosphere very clear. The shooting done by Hovey, Klein, Johnson and Robertson was something above the ordinary with military rifles:

	200yds.	500yds.
Julius Klein	3444444535—40	4442543455—40—80
A P Raye	4445444455—43	4023453454—34—77
S J Penbroke	5545544444—44	3524235345—34—78
E Hovey	5455544544—45	5444555554—46—91
Ruddock	4454444443—40	5555543545—46—86
Meyer	5554555555—49	4335435445—42—89
A N Brod	5444544444—42	5055244544—38—80
Neath	5544534444—44	
C L Lods	4444454534—41	4555535445—45—86
Retton	0424240330—19	
Johnson	5544444455—44	5555555545—49—93
J E Klein	4455444555—45	4555445555—47—92
Robertson	5455555545—48	4555545555—48—96
O'Connell	5432544443—37	
Stanton	2402000202—12	
Kennedy	4444433334—36	

At the termination of the shoot Johnson and Klein selected two teams from the marksmen present and, singular to relate, neither team won, both making an equal score. The result of the special shoot was as follows, at 200yds.:

A Johnson	5455544444—44	J E Klein	5455544544—45
P Robertson	5545444444—43	E Hovey	5444455554—45
C L Lods	4444544454—42	C Meyers	4345445454—41
P C Moore	4344334454—38	A P Reye	5344534444—40
A J Ruddock	4344334454—38—208	Col Bendel	4433434444—37—208

Ruddock and Meyers shot a match at 500yds., each firing 50 shots. Meyers won with a score of 223 so 216 made by Ruddock.

BOSTON, May 14.—The scores made at Walnut Hill to-day in the rest matches for practice were made on the new center designed for rest shooting, and used in connection with the Standard American target. Appended are the best scores made this week:

Decimal off-hand match.

THOMASTON, Conn., May 16.—At the shoot of the Empire Rifle Club, May 7, the weather conditions were excellent, the light being good, with scarcely any wind:

W H Dunbar	5	9	10	9	10	7	7	9	8	10—84
G A Lemmon	8	5	9	10	6	8	10	7	9	10—82
G P North	6	7	6	9	4	5	3	7	7	4—58
C F Williams	6	4	4	5	9	4	5	4	5	6—52

May 14 only two members were present at the range. A rather poor light, with a light 7 o'clock wind:

Fred A Perkins	7	6	7	10	7	7	10	6	5	5—70
G A Lemmon	8	8	7	7	6	7	9	8	3	7—70

GARDNER, Mass., May 12.—At the last regular meet of the Gardner Rifle Club at Hackmatack range the standard target was used. The shooting was off-hand, 200yds. The totals were as follows:

N Dodge	76	80—156	H C Knowlton	75 67—142
C N Edgell	70	79—149	E B Taylor	76 60—136
F E Nichols	79	66—145	C J Crabtree	68 68—136
A E Knowlton	69	74—143	F B Edgell	63 63—126

MANCHESTER, N. H., May 19.—The Manchester Rifle Association is holding a four days' tournament on its grounds to conclude on Saturday. The prize list is an attractive one, embracing 25 articles valued at $330, including cash prizes of $40, $30, $25 and $20. The event is open to all comers, standard American target, rounds 7, 5 cards to count.

HAVERHILL, MASS., RIFLE CLUB.—May 14, 200yds. off-hand, standard target:

H Tuck	6	10	9	6	8	10	7	8	10	8—82
A Edgerly	8	7	8	7	10	7	8	9	10	7—81
J Busfield	10	9	8	6	5	10	8	5	6	10—77
S E Johnson	10	7	6	9	8	7	6	6	7	9—75
J F Brown	6	8	6	8	8	4	10	8	9	5—72
C B Wright	6	7	5	6	6	9	8	6	6	10—69
L Jackson	4	4	7	4	7	6	9	7	9	7—64

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

DECORATION DAY TROPHY.

THE final day for making entries for the FOREST AND STREAM Decoration Day Trophy competition will be next Saturday, May 21. The names of the members of each team must be named in the entry blank, and each shooter must be designated by his real name. In case any member of a team is prevented from competing, a substitute may fill his place, if chosen before the shooting begins.

Score blanks will be furnished to all competitors, and three members of the club will be required to certify that each score sent in was made in strict accordance with the conditions named.

The names of entered teams will be announced in our next issue.

The TROPHY, a solid silver cup, manufactured expressly for us by the Whiting Manufacturing Co., of this city, is now on exhibition in the window of the Atlantic Ammunition Co., No. 291 Broadway. It has won high praise from all who have seen it. The prize is not an annual challenge trophy; when given to the club of the winning team it will become the absolute property of the club.

No special entry blanks are required. Entries may be made in usual form. The names of team members must be given. Entries must be mailed on or before May 21.

BOSTON, May 13.—*Editor Forest and Stream:* At a meeting of the executive committee of the New England Tournament Association, held Wednesday evening, it was voted that I write to you, saying that arrangements will be made at the tournament so that if any parties wish to shoot for your prize on Decoration Day they could do so.—C. B. SANBORN, Sec'y N. E. T. A.

TAUNTON, Mass., May 7.—T. F. and G. P. Association. Small attendance on account of rain, 10 blue rocks, blue rock trap, 18yds. 5 angles, N. G. A. rules:

G A Davis	1110110100—6	A Leonard	0001100000—2
F M Scudder	1110100100—5	M Lott	0001001111—4
E C Leonard	0110111111—8	J J Davis	0101111110—7
F S Keith	0111100010—5	C E Cahoon	0011100111—6
C Hill	0000100000—1		

Match at 5 blue rocks, 18yds., 5 angles:

Leonard	01011—3	G H Davis	11010—3
J J Davis	11111—5	Scudder	01110—3
Cahoon	10100—2	A Harty	11110—4
Lott	10011—3	G L Smith	01110—3
Keith	01001—2		

Leonard won third on shoot-off.

Match at clay-pigeons, 18yds. rise, 5 angles:

J J Davis	01110—3	Leonard	10010—2
A Hardy	00011—2	Keith	11010—3
Scudder	10100—2	Cahoon	01111—4

Second divided, Hardy won third on shoot off.

Match at 7 blue rocks, 18yds. rise:

J J Davis	1111110—6	Keith	1010110—4
Cahoon	1011011—5	Hardy	0110110—4
G H Davis	0011110—4	E Leonard	0101110—4
Scudder	1111101—6	M Lott	0010100—2

Keith won third on miss and out.

Match at 10 blue rocks, 18yds. rise:

A Hardy	1001100010—4	Keith	0101110100—5
J J Davis	1011110111—8	Scudder	0000101011—4
Cahoon	1011111011—8	Smith	1101100110—6
E Leonard	0101111110—7	Lott	1110000010—4

J J Davis and Cahoon divided first, E. Leonard second, Smith third.

WASHINGTON, D. C., May 12.—Capital City Gun Club, match at American clays, No. 1, 5 traps, N. G. A. rules, sweepstakes, all ties miss and out:

Match 1:

Green	01011—3	Meyers	01010—2
Cunningham	01111—4	Collison	11010—3
McLeod	11100—3	Hart	00010—1
Goldsboro	00011—2	Finn	00010—1
Mills	10011—3	Williams	01111—4

Miss and out—Williams and Cunningham first, Collinson second, Goldsboro and Meyers third.

Match 2:

Mills first, McLeod second, Collison third.

Match 5:

Cunningham	10011	Williams	11011
Mills	01011	Collison	00001
McLeod	11011	Green	10111

11 11—7
11 11—7
10 10—6

11 10—7
10 01—3
11 01—7

Ties, miss and out on doubles:

Cunningham	11 10 01 11—6	Mills	11 10 10 10—5

Williams 01, Green 00. Cunningham first, McLeod second.

SECRETARY.

UNKNOWN GUN CLUB.—Fifth shoot of the season at Dexter's Park, L. I. Only 16 went to the traps, and with one or two exceptions did some fair shooting, the birds furnished by Chris Durber being first-class flyers and hard to kill, one barrel allowed, club handicap:

A Harned (23)	1011010—4	J Boyle (21)	0011100—3
R Monsees (24)	1101111—6	E Vroome (24)	1110110—5
R Midmer (23)	1001111—5	H Kirchel, Jr. (22)	1110101—6
J Blohm (21)	0000001—1	W Gilman (23)	1001021—3
C Plate (24)	1101011—5	C H Ring (21)	0100100—2
C Rankin (21)	0001010—2	H Lemken (21)	0100011—3
R N Williams (22)	0100000—1	H Von Staden (23)	00w
J Rathjen (24)	1111111—7	W Tomford (25)	0100 —1

Tie for third prize won by C. Plate.

Score of sweepstakes, 25yds.:

J Rathjen	101—2	W Tomford	111—3
C Plate	111—3	R Williams	001—1
W Gilman	101—2	M Monsees	010—1

CARVER VS. BREWER.—Philadelphia, May 12.—Dr. W. F. Carver, of rifle shooting fame, visited this city to-day, and had an interview with Judge Wescott, of Camden, N. J., John Brewer's backer. The result was that three matches were arranged for May 23, 24 and 25. The first two, 100 birds each, Hurlingham rules, Monaco boundary, and the third 100 birds each, Hurlingham rules, 80yds. boundary. Nothing has been heard of William T. Mitchell of Virginia, who accepted Dr. Carver's challenge and promised to shoot against Dr. Carver at Newark.

WORCESTER, Mass., May 13.—The Worcester Sportsmen's Club held their fourth series of prize shoots this week. They were divided into two classes. In the classification score each man shot at strings of 10 bluerocks, bats and clay-pigeons, with a possible 50. In the prize score there was a possible 7 clay-pigeons, and in the shooting off of the ties a possible 3. The totals of each were as follows:

Class A.

	Classification. R.	B.	P.	Prize. C. P.
W L Davis	10	8	8—26	7
W H Cole	3	7	8—18	7
M D Gilman	7	9	7—23	6
W S Perry	7	7	7—21	6
E Welch	9	6	4—19	6
A R Boudish	7	9	7—23	6
E Whittaker	10	8	7—25	6
F Stone	4	8	8—20	5
G B Rugg	6	7	7—20	5
G W Russell	8	7	7—22	5
E T Smith	8	9	9—26	5
C B Holden	6	9	9—24	5
C Doono	7	8	6—24	4
A B Franklin	6	7	5—18	4
J B Tougas	8	8	5—21	3
C S Day	6	6	6—18	w.

Class B.

	Classification. R.	B.	P.	Prize. C. P.
H W Webber	4	5	7—16	7
C A Parker	7	3	6—16	5
E F Swan	4	8	3—15	5
J B Garland	2	5	7—14	5
V D Kennesson	5	9	3—17	5
L R Hudson	6	6	5—16	4
Chas Howe	7	5	5—17	4

There were ten other events during the afternoon. At this meet 1,933 targets were thrown. The interest in this series increases as they progress.

MIDDLESEX GUN CLUB.—The regular monthly shoot took place at their club grounds, Dunnellen, N. J., May 10, with a fair attendance. The day was rather warm. The birds a fair lot for this time of the year. A very pretty match was indulged in by Messrs. Quinlan and Lever, Middlesex rules, 10 birds each, $10 a side. These birds were quick, strong flyers, and some very pretty kills were made by both gentleman. T. M. K., referee. The following is the score:

Quinlan, 28yds.....1212112211—10 Lever, 30yds.....1212211121—10

Tie to be shot off next monthly shoot. Messrs. Dickins and J. H. Force have been appointed a committee to select teams, members of the club, to shoot for a supper, and the boys are expecting a good time: date to be announced when settled upon. The following are some of the sweeps shot. First sweep, miss and out: Lever 30yds., 0; C. Smith, 27yds., 4; Dickens, 30yds., 3. Second sweep, 4 birds:

Lever (30yds.)	1212—4	Voorhees (30)	0112—3
Gaddis (29)	0111 —3	Dickens (30)	1111—4
C Smith (27)	1121—4		

Lever and Smith tied again on 4 and divided first, Gaddis and Voorhees divided second. Third sweep, 4 birds:

Dickens (30)	2010—2	Lever (30)	1212—4
Cannon (30)	1011—3	Gaddis (29)	0200—1
Quinlan (30)	1112—4	Keller (26)	1001—2
C Smith (27)	1202—3	S G Smith (29)	1221—4
H Campbell (30)	1223—4	J H Force (30)	2211—4
Voorhees (30)	1312—4		

Ties on 4, miss and out: S. G. Smith 3, Voorhees 4, Force 7, Lever, Campbell and Quinlan 8 and divided, C. Smith and Cannon second, Keller and Dickens third. Fourth sweep:

Cannon	0001—1	Lever	1111—4
Dickens	1201—3	Gaddis	1122—4
S G Smith	1113—4	C Smith	2120—3
J H Force	1113—4	Keller	0101—2
Williams	2112—4	Warden	1211—4
Quinlan	0211—3		

Ties, miss and out: Warden 2, Force 2, Williams 3, Dickens and Smith 4, and divided. Ties on 3: Smith and Quinlan 3, Dickens 4. Fifth sweep:

Cannon	1223—4	Quinlan	2101—3
Dickens	2112—4	Williams	1110—3
S G Smith	1112—4	C Smith	2100—2
J H Force	1101—3	Keller	1010—2
Lever	1111—4	Warden	2200—2

Tie on 4: Dickens 3, Cannon 5, Lever 5, Smith 6. Ties on 3: Quinlan 2, Force 5, Williams 6. Ties on 2: Smith 2, Keller 3, Warden 4. Sixth sweep:

Williams	110—2	C Smith	102—2
Robby	112—3	Keller	110—2
Dickens	112—3	Warden	111—3
S G Smith	111—3		

Ties: Dickens first with 2, Williams second with 5. Seventh sweep:

S G Smith	111—3	Dickens	101—2
Robby	200—1	Warden	102—2
Williams	121—3	Keller	121—3

Ties: Smith first with 2, Dickens second with 1.—T. M. K.

PHILADELPHIA, Pa., May 6.—Wayne Gun Club. Match at Ligowsky clay-pigeons, one Ligowsky clay-pigeon screened trap, 18yds., W. G. C. rules:

P F Yost	0101020011—4	Gus Hessler	1010101111—7

Gus Hessler	1111121111—10	G Scargle	1110101120— 7
Wm Ulary	1111011110— 8	F Hessler	0001001110— 4

BUFFALO, N. Y., May 14.—The Niagara River Shooting Club met for practice on their grounds at La Salle, N. Y., last Thursday. The meeting was largely attended and was a very enthusiastic one. At the close of the shoot Mr. J. H. Jewett, Sec. and Treas. of the club, was presented with a beautiful gift—"The Birds of North America"—as a memento of respect and gratitude. The presentation speech was made by Pres. Spencer Kellogg, Mr. Jewett, though much surprised responded in an eloquent and touching manner. There was a great deal of enthusiasm shown by other members and some beautiful and appropriate remarks were made by Mr. E. H. Smith and H. C. Howard. Taking it all in all a more pleasant day could not have been spent. Much interest was shown by members in watching "Man-afraid-of-his-horse" shoot, the style of holding his gun, the remarkable scores made by him, etc.; he is recently from the West and greatly resembles Buffalo Bill. Sweepstakes, 12 Niagara Falls blackbirds, 4 moneys:

Smith	010101001011— 6	Jones	0000111001O— 5
Howard	1101101111— 9	Talsma	1101100011— 7
Kellogg	1111101101—10	Jewett	1100110101— 6
McCarty	0010010010O— 3	Andrews	1111111111—12
Clark	0010010001 1— 5	Case	1101101001— 7

Sweepstakes, 9 bluerocks:

E H Smith	010011011—5	Andrews	111011110—7
Kellogg	001110111—6	Case	101010111—6
McCarty	111111110—8	Shirley	0100 w.
Clark	011011111—7	Jones	011110100—5
Jewett	001111101—6		

McCarty first, Clark second, Case third.

Twelve bluerocks:

Smith	101010311001— 6	Jones	101111011101— 9
Howard	101O01001001— 5	Tolsma	100111111101— 9
Kellogg	1111u1111111—11	Jewett	101101100111— 8
McCarty	101101110011— 8	Andrews	111111110111—11
Clark	111110111110—10	Case	111110011011— 9

Kellogg first, Clark second, Jones third, McCarty fourth.

Nine Niagara Falls blackbirds:

Smith	110101011—6	Jones	110011001—5
Howard	111000111—6	Tolsma	101101011—6
Kellogg	101111000—5	Jewett	110u110;0—5
McCarty	100111010—5	Andrews	111011100—6
Clark	011110001—5	Case	110101101—6

Andrews and Tolsma divided first, Kellogg second, Case third.

Nine Peoria blackbirds:

Kellogg	111111100—7	Case	111111100—7
McCarty	110101111—7	Jones	011110011—2
Clark	101101111—7	Jewett	101111111—8
Andrews	111111111—9	Hopkins	110110001—5

Kellogg third.

BROOKLYN, May 11.—The first shoot on the new grounds at Woodlawn, which took place this afternoon, brought a large representation of the members of the Coney Island Rod and Gun Club. In addition to the usual prizes a badge of handsome design was to be competed for. This is to be worn from month to month by the member making the highest score, and at the end of the year will become the property of the member showing the greatest number of points for the twelve months. Club handicap, 21yds. rise, second barrels half a bird:

C W Jones (30)..1 0 1 1 1 1 1—6	G Monsees (21)..0 1 1 1 1 0 0—4
Davenport (29)..1½1 1 1 1½1 1—5½	H Bennett (23)..1 0 1 0 0 1½—3½
A Schwarts (28)..1 1 0 1 1 1 1—6	F Lanzert (23)...0 1 1 1½1½1½—4½
G Hayes (26)....1½½0 0 0 1½0—1½	J Smith (23).....1 1 1½1 1 0 0—4½
R Monsees (26)..1 1½0 1 1 0½—4	McLaughlin (25)0 1 1½½0 1½—3½
H Grace (23) ...1 1 1 1 1½1½—6	E Bushnell (27)..0 0 0 0 ½w.
W J Stewart (23)..1 1 1 1 1 1½1—6½	C A Coster (23)..1 1½1 1½1 1½0—4½
H Donnolly (25)..1 1 0 1 1 1½—5½	J Carlos (25).....0 1 0 1 1 0 1—4
J E Lake (21)...1½1½1½1½1½1—4	L Defrane (25)...1 1 0 1 1½1 1—5½
C Wise (23).....1½1 1 1 1½1 1—6	J Kearney (28)..1 1 1½1 1 0 1—5½

In shooting off, second went to C. Wise, third to L. Defrane, fourth divided, and fifth R. Monsees won.

SAN FRANCISCO, May 8.—The Blue Rock Pigeon Club held their first pigeon shoot this afternoon at Adams Point, East Oakland. The traps, three in number, worked tolerably well in the single-bird shots, but they were decidedly irregular in springing double birds. The majority of points were made by right-quartering and straightaway birds, the left quarter proved a sort of "hoodoo," for during the afternoon some very fair bird shots were missed from that section. Twenty birds, 18yds. rise, three traps, regular club prises:

*Twelve-bore 16yds. rise.

HASTINGS, Minn., May 13.—The second annual tournament of the Hastings Gun Club opened May 11 on their grounds at the southwest end of the city, under very favorable auspices, the attendance being good, both of sportsmen and spectators. The weather was propitious, with strong side wind all through the three days, and the exhibition of skill on the part of the contestants very interesting:

First Day.—No. 1, 10 Peoria blackbirds: Nixie 6, Kennedy 8, Shaft 6, Arthur 8, Noreen 8, Hanna 8, Sisson 7, Ruble 9, Hetherington 6, Skinner 10, Daly 6, Van Slyke 4, Bonte 10, Westerson 10, Paul 8, Greiner 10, Tuttle 10. First and third divided.

No. 2, 9 singles, 3 pairs Peoria blackbirds: Daly 12, Bonte 12, Westerson 10, Ruble 12, Hanna 13, Van Slyke 12, Shaft 12, Noreen 11, Nixie 6, Skinner 11, Kennedy 11, Greiner 9, Sisson 10, Hetherington 9, Paul 12, Arthur 10, Tuttle 12. Secoad shot off, third and fourth divided.

No. 3, 15 Peoria blackbirds: Hanna 12, Daly 13, Skinner 10, Ruble 11, Bonte 13, Greiner 9, Van Slyke 9, Arthur 11, Tuttle 11, Sisson 13, Paul 11, Kennedy 11, Hetherington 14, Shaft 12, Smith 8, Noreen 12, Westerson 8. Second divided. Third shot off, Shaft winning. Fourth divided among four ties, Arthur being shot out.

No. 4, 10 singles, 5 pairs Peoria blackbirds: Hetherington 13, Daly 17, Bonte 13, Skinner 16, Sisson 17, Kennedy 16, Ward 12, Van Slyke 13, Noreen 18, Ruble 15, Paul 18, Hanna 15, Shaft 14, Westerson 15, Greiner 15, Smith 14, Tuttle 15. First three prizes divided. fourth won on shoot off by Greiner.

Second Day.—No. 5, 10 straightaway Peoria blackbirds: Harrison 9, Paul 7, Ruble 8, Patterson 6, Skinner 10, Noreen 9, Daly 7, Whitcomb 7, Van Slyke 7, Westerson 9, Tuttle 10, Mack 9, Greiner 8, Ward 5, Smith 6, Hanna 10, Harold 9, Sisson 8, Bonte 9, Hetherington 10, Shaft 10. First divided, second shot off, Daly and Westerson winning; third and fourth divided.

No. 6, 14 Peoria blackbirds: Hanna 14, Skinner 11, Paul 12, Harrison 13, Van Slyke 13, Harold 9, Shaft 12, Smith 13, Greiner 10, Noreen 12, Daly 11, Whitcomb 8, Sisson 13, Hetherington 11, Mack 12, Bonte 9, Ruble 12, Westerson 10, Tuttle 11. Second divided, third shot off, Paul winning; fourth divided.

No. 7, 10 singles, 5 pairs Peoria blackbirds: Hanna 13, Noreen 17, Paul 18, Van Slyke 14, Tuttle 15, Daly 14, Bonte 14, Smith 16, Skinner 16, Mack 16, Sisson 19, Anderson 13, Westerson 15, Greiner 16, Hetherington 12, Ruble 15. Second and fourth divided.

No. 8, 10 Peoria blackbirds: Daly 10, Noreen 9, Hanna 7, Sisson 9, Bonte 7, Skinner 8, Paul 9, Tuttle 7, Westerson 9, Mack 8, Anderson 8, Hetherington 6, Whitcomb 5, Greiner 7, Ruble 9, Smith 8, Shaft 8, Emerson 3. Ties divided.

Third Day.—No. 9, 10 Peoria blackbirds: Paul 7, Hanna 10, Sisson 9, Harrison 9, Daly 9, Hetherington 8, Anderson 8, Wallace 7, Tuttle 8, Mack 7, Bonte 10, Skinner 7, Ruble 8, Peters 5, Greiner 4, Noreen 7, Shaft 9, Westerson 8. First and second divided, third shot off, Hetherington and Ruble winning, Paul won fourth on shoot-off.

No. 10, 7 single and 4 pairs Peoria blackbirds: Hanna 14, Sisson 12, Noreen 11, Harrison 11, Paul 9, Mack 11, Hetherington 7, Tuttle 11, Johns 14, Daly 15, Skinner 12, Anderson 12, Wallace 10, Bonte 13, Westerson 12, Ruble 14, Shaft 13. Second divided, third divided, fourth shot off, Sisson and Skinner winning.

No. 11, 6 singles, 2 pairs Peoria blackbirds: Skinner 8, Hanna 7, Daly 6, Sisson 9, Paul 6, Hetherington 3, Anderson 9, Bonte 9, Shaft 7, Johns 5, Baker 5, Hoffman 5, Sommers 3, Myers 7, Mack 6, Noreen 5, Ruble 10, Alstrom 5, Tuttle 8, Westerson 8. Ties divided.

Team shoot for championship gold medal, held by St. Paul club, 20 Peoria blackbirds, 10 singles and 5 pairs. It was won by the home team with the following score:

St. Paul.			
Blakely	14	Pfister	15
Macomber	14	Myers	11
Campbell	13	Paul	15—82
Stillwater.			
Ruble	17	Willman	13
Anderson	15	Castle	14
Newquist	16	McKusick	10—85
Hastings.			
Hanna	15	Tuttle	16
Westerson	17	Noreen	16
Shaft	17	Greiner	14—95

The following prizes were awarded for the best averages out of a possible 150:

1. Jerome Hanna, Hastings, gold watch	128
2. N. G. Sisson, Lakeville, $20	126
3. J. A. Ruble, Albert Lea, $15	123
4. John Pfister, St. Paul, $10	122
5. W. H. Skinner, St. Paul, gun case and cleaner, in shooting off ties with Henry Blakely, St. Paul, and Martin Noreen, Hastings	119
6. E. E. Tuttle, Hastings, pocket flask	118
7. Charles Paul, St. Paul, keg of powder	117
8. August Westerson, Hastings, $5	114
9. G. J. Hetherington, fish pole	99

NEWARK, May 13.—This afternoon two prominent members of the Caledonian Clay-Pigeon Shooting Club, Messrs. Ulbricht and Reinhardt, shot a match at 50 birds each, 18yds. rise, for a stake of $25 a side. The shooting took place on the South Fourteenth street grounds. Ulbricht was the favorite by odds, and would undoubtedly have won the match had he not accidentally loaded several of his shells too light. Several birds were shown to have been hit by him, but the charges were not strong enough to break them. Reinhardt broke all out of 50, and Ulbricht broke 39. Mr. Fritz Theurer acted as referee, and Mr. Beda Voigt as scorer. The return shoot will take place in a short time, either on the Erelinghuysen avenue grounds, or at John Erb's park. On the same day Mr. Reinhardt will shoot Mr. Eugene Flocken a match at 50 birds for a wine supper for a party of friends. In this latter match much interest is centered, as Mr. Flocken is a crack wing shot, and is considered to be the champion of the club.

SAN FRANCISCO, May 8.—The Golden Gate Gun Club held its regular club medal shoot at McMahon's station to-day. The following is the score at 15 clay-birds each, 18yds. rise, five screened traps:

Ashcroft.....1111011100111111—12	Kershaw.....1001111000111111—10
Munson.....1101011000111010— 8	Louis.....1011110100011011— 7
Scorem.....0101010010001101— 7	Mayer.....1110000030000030— 3
Schlueter.....1101000011000000— 5	Foley.....1160100010000000— 4
Allen.....0100101001111000— 9	

SAN FRANCISCO, May 8.—There was only a fair attendance to-day at the San Bruno shooting grounds to witness the pigeon match between T. A. Pearson and J. D. Kerrigan. The match was for $200 a side, 50 birds each, 30yds. rise, 10yds. boundary, Harlingham rules. Pearson used a 12-bore Parker and Kerrigan a Greener of the same caliber. Jabez Swan officiated as judge, and Colonel Rice acted as trapper. The full score is as follows:

Kerrigan....30—0212121201212211112112011112211102111121111121—45	
Pearson.....30—0111112111212111101121111011122110112201112112O0—42	

ATHOL, Mass., May 14.—The Athol Rod and Gun Club has been organized with the following officers: Levi C. Sawin, President; Wm. A. Bearman, Vice-President; Cyrus M. Peirce, Sec. and Treas.

THE GRASS VALLEY STYLE.—The sportsmen of Grass Valley, instead of shooting at tame pigeons from traps, congregate under the wild pigeon roosts, near town, and blaze away as the birds return from the feeding grounds to their nocturnal quarters. Several matches that have taken place recently afforded the shooters much sport. Teams of six men to a side are chosen, and each team selects a certain line of flying birds. The shooting at incoming pigeons is generally kept up for an hour or so, until darkness sets in. On the return home the birds are counted, and the side or team scoring the most kills wins the honor of the day and a supper. The sportsmen of the mountain town say that wild-pigeon shooting discounts trap-shooting. The birds are harder to kill, and, as they come into roost with rapid flight, they afford the shooters many critical shots, and generally the misses outnumber the kills. Wagner and Stone are ranked as the leading pigeon shots of Grass Valley.—*San Francisco Call.*

GARDNER, Mass., May 12.—A few of the members of the Gardner Sportsmen's Association went out to the range to-day. Out of a possible 10 clay birds the following are the totals bagged: First event—I. N. Dodge 8, B. J. Buckman 5, E. C. Dodge 5, A. N. Henry 3, A. Elliott 2. Second event—E. C. Dodge 10, I. N. Dodge 9, B. J. Buckman 7, A. N. Henry 3, A. Elliott 2.

PLYMOUTH, Mass., May 14.—The Plymouth Gun Club held a shoot at its ground this afternoon. The targets were 5 clay-pigeons, 5 bats and 5 American clay birds. Score: I. M. Jackson, 10; W. C. Hathaway, 10; A. S. Rich, 10; F. Mater, 10.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

The Royal C. C. will sail their Challenge Cup Race on Hendon Lake, on June 11, 1887, and invite American canoeists to attend and compete.

MAY.

28-30. East. Div. Spring Meet, Haddam Island.
28-30. Hudson Meet, Croton Point.

JUNE.

5. Oakland, Edwards Cup.
18. Brooklyn, Annual, Bay Ridge.
25. New York, Annual, Staten Island.

JULY.

3. Oakland, Edwards Cup.
4. Passaic Meet, Dundee Lake.
18-31. W. C. A. Meet, Ballast Island.
24. Oakland, Mayrisch Badge.

AUGUST.

1-12. Northern Division, Stony Lake.
7. Oakland, Edwards Cup.
12-26. A. C. A. Meet, Lake Champlain.
18. Lake St. Louis Chal. Cups, Lachine.

SEPTEMBER.

4. Oakland, Edwards Cup.

OCTOBER.

9. Oakland, Edwards Cup, Mayrisch Badge.

NOVEMBER.

6. Oakland, Edwards Cup.

DECEMBER.

4. Oakland, Edwards Cup.

A. C. A.

FOR membership apply to the Secretary, W. M. Carter, Trenton, N. J. Required age, 18 years or over. Application to be accompanied with $3. Sec'y A. C. A. Central Div., E. W. Brown, 4 Bowling Green, New York. Sec'y A. C. A. Eastern Div., W. B. Davidson, Hartford, Conn. Sec'y W. C. A., J. O. Shiras, Cincinnati, O.

THE OLD CANOE.

WHEN the rocks are gray and the shore is steep,
And the waters below look dark and deep,
When the rugged pine in its lonely pride,
Leans gloomily on the murky tide;
Where the reeds and rushes are long and rank,
And the weeds grow thick on the winding bank;
Where the shadow is heavy the whole day through,
There lies at its moorings the old canoe.

The useless paddles are idly dropped,
Like a sea bird's wings that the storm has lopped,
And crossed on the railing, one o'er one,
Like the folded hands, when the work is done;
While busily back and forth between
The spider stretches his silvery screen,
And the solemn owl, with its dull "too-hoo,"
Settles down on the side of the old canoe.

The stern half sunk in the silvery wave,
Rots slowly away in its living grave,
And the green moss creeps o'er its dull decay,
Hiding its mouldering dust away,
Like the hand that plants o'er the tomb a flower
Or the ivy that mantels the falling tower,
While many a blossom of loveliest hue
Springs up o'er the stern of the old canoe.

The currentless waters are dead and still,
But the light wind plays with the boat at will,
And lazily in and out again
It floats to the length of the rusty chain,
Like the weary march of the hands of time
That meet and part at the noontide chime,
And the shore is kissed at each turning anew
By the dripping bow of the old canoe.

Oh, many a time, with a careless hand,
I have pushed it away from the pebbly strand,
And paddled it down where the stream runs quick,
Where the whirls are wild and the eddies are thick,
And laughed as I leaned o'er the rocking side
And looked below in the broken tide,
To see that the faces and boats were two
That were mirrored back from the old canoe.

But now as I lean o'er the crumbling side,
And look below in the sluggish tide,
The face that I see there is graver grown,
And the laugh that I hear has a soberer tone,
And the hands that I lent to the light skiff wings
Have grown familiar with sterner things;
But I love to think of the hours that sped
As I rocked where the whirls their white spray shed,
Ere the blossom waved or the green grass grew
O'er the mouldering stern of the old canoe.

—*Authorship unknown.*

THE ASSAULT UPON MESSRS. VAUX AND BURCHARD.—The trial of the two men who assaulted Messrs. Vaux and Burchard on Staten Island came up for trial on Monday, but was again postponed for a week until May 23 at 4 P. M., before Justice Powers at West New Brighton.

THE RACING AND CRUISING CANOE NOTUS.

WHILE the results of last season's many and important races were not as exact and conclusive as it was hoped they would be, there was at least one point on which each individual canoeist was fully resolved—that his own special craft was not so good and perfect that she could not be improved. The result of this has been much alteration and building during the past winter, the old boats being altered and a number of new ones being built. Among those who had new boats last year was Vice-Commodore Gibson, whose old Snake gave place to a new racer and cruiser, the Vesper, a boat whose performance in no way discredited her designer, but which, nevertheless, did not fully satisfy him. Late last season Mr. Gibson set to work on a new design from which the canoe shown herewith has been built in the winter, her trial trip being made last month. The Notus, as she is named, is a 16×30 canoe, much like the Vesper, her 6in. waterline being the same; but she is cut away more under water forward, giving a slightly hollow entrance, to improve her performance in rough water. The same long, fine bow and full stern already tested by Mr. Gibson has been retained, but the extremely broad and long floor is modified, Notus having about 10in. flat and an elliptical form of midship section, leading into the turn of the bilge, which gives remarkable strength. The stability is not perceptibly diminished by this slight rounding, and it probably assists turning, which Notus does with the greatest ease. The canoe was built in Albany under Mr. Gibson's personal supervision, and is a remarkably fine piece of work. She is a smoothskin, with only three planks to a side, the ribs spaced 6in. and fastened with brass screws from the inside. A few screws were required from the outside, but they are 12in. apart, leaving the bottom absolutely smooth. The planking and decks are of white pine, and the trimmings of maple and mahogany, two narrow beads along each side. The board is of sheet brass, 30×13×1-16in., dropping through a low trunk. There are four bulkheads, with a low hatch in the fore deck.

The dimensions of the Notus are:

Length over all	16ft.
Beam	30in.
Depth	10in.
Sheer at bow	8in.
at stern	6in.

The distances from fore side of stem are:

To Bulkheads	2ft. 6in., 5ft., 10ft. 6in., 13ft. 6in.
Mainmast	9in.
Mizen mast	11ft. 10in.
Board, fore end	5ft. 8in.
after end	8ft. 2in.
Coaming, fore end	4ft. 3in.
after end	11ft. 6in.

The table of offsets is as follows:

Station.	Heights.		Half-Breadths.					
	Rabbet	Deck.	Deck.	8in.	6in.	4in.	2in.	Keel.
0..	.....	18	0^{1}	0^{1}	.....	.....	.....	.....

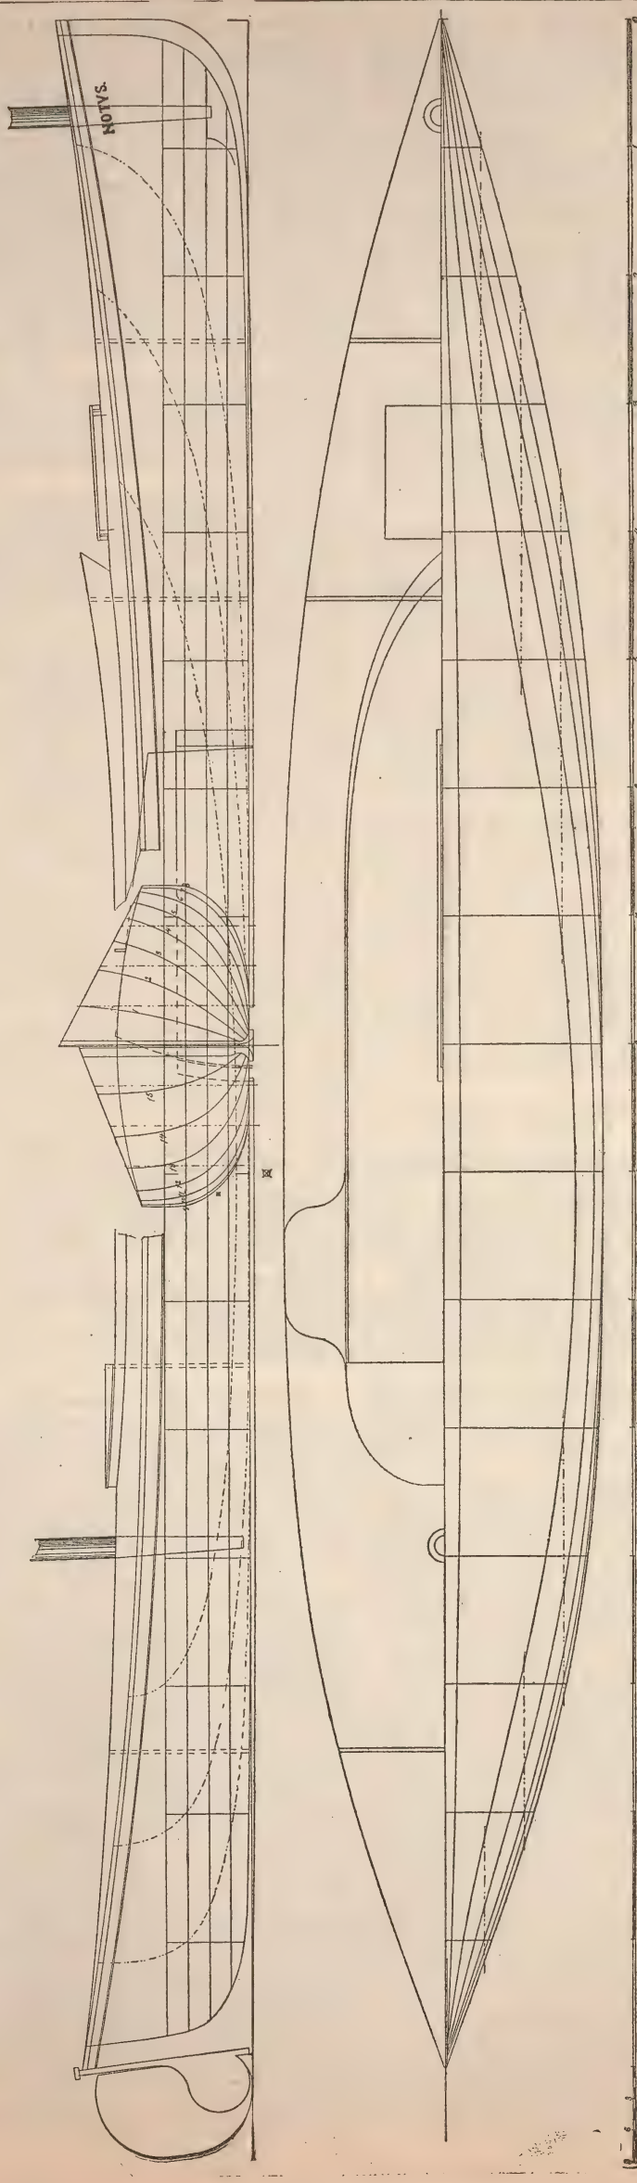
A NOVEMBER CRUISE IN RHODE ISLAND.

EXTREMELY cold was the night of Nov. 8, when the Scribe and his companion launched their canoe in the early morning in the waters of the little brook which runs nigh unto the home of the boat, and the cruise commenced. As we passed from the brook into the lake, the surface of the lake at its upper end was entirely covered with ice, which boded no good to the bottom of the canoe, if we attempted a passage. We decided, as the ice was very thin, to push on, breaking it within reach and trust to luck for the rest. Success attended our efforts, and we passed through to the open waters of the lake without damage. A half mile of paddling brought us to the first, and as it proved, the longest carry of the trip.



The Scribe adjusted the yoke and shouldered the canoe, while his companion tramped along under the fifty-pound pack containing the tent, blankets and other duffle. This carry we thought to be about four miles. We were told afterward that it was a mile and a half. We accomplished it, nevertheless, and launched in the dead waters at the head of what is known as Sherman's Pond. Here we agreed that our voyage proper commenced, and the Scribe took the stern seat, while Jink, his companion, grasped his Parker and seated himself forward.

The dead water stretches away for nearly a mile before entering the pond. The current is hardly perceptible. It is said to be a proper spot and feeding ground for woodduck and black duck. Accordingly the skipper, as silently and cautiously as his ability allowed, paddled along, while the Nimrod prepared himself to perforate the first thing of life which stirred in front. Silently the boat glided on, not a word being spoken, the dip from the paddle as it left the water the only noise to be heard. On we speed, carefully watching the rush-grown surface of the water as we round the constantly recurring turns and bends of the creek. Dead trees on the swampy banks seem silently to pass us by, their skeleton arms outstretched as if to point our way or direct our vision to hidden game in the sedgy grass at the water's edge. Indeed if such was their mission they did not belie their office, for even as the thought passed through the mind, out from the half hidden waters on our right arose two black ducks, straight away at first, then quartering slightly to the right they flew. Bang! sounded the Nimrod's gun, with the only effect the skipper could see of accelerating the speed of the flying birds. Once more before reaching the lake we started the affrighted pair, but too far away for an effective shot.

At the lake a strong northwest wind met us, rendering the efforts of the skipper to lay the course of the canoe in a proper direction anything but play, so the gun was laid aside and the second paddle took its place. For a mile or more we put in some strong paddling, which carried us across the lake and into a good lee near the outlet, which we presently entered, and were no more troubled by the wind.

A small lake of perhaps fifteen acres which has not been honored on the maps with a name, but which is locally known as the lower Sherman's came next. At its outlet commences the Chepuxet River, which, as it leaves the pond, and for perhaps half a mile on to where the Kingston road crosses, is quite deep; the current slight, but its line we thought very crooked; it afforded us, however, easy work with the paddle, and there were no obstructions, if I except one foot bridge, which would have saved us some trouble had it been a little higher. Below the Kingston road the river changes its appearance and condition entirely. It splits into narrow and shallow channels, almost precluding the passage of even so light and narrow a craft as our canoe (30in. being its greatest beam). The crew was obliged to disembark and assist the skipper from the shore by shoving and lifting and by finding the best channel. This condition of things continues for something like half a mile, when the river seems to gather together some of its strayed channels, enabling us to proceed more at our ease.

It seemed like a lost and forsaken land through which we were passing. The bed of what I conclude would be the river in time of freshet, all choked and grown full of the various sedges and

CANOE "NOTUS."—Designed by R. W. Gibson, Albany, N. Y.

grasses of the swamps, their spring-time green changed to the yellow of approaching decay, the old, the dead and dying trees plentifully sprinkled along our route, each outstretched arm hung with a long fringe of moss draped as it were in the habiliments of death, the river itself our only friend, ever binding itself in the constant turns it makes through this apparently interminable river bottom. Yet here were the historic lands of the Indian. These silent waters on which we floated were once cleft by the canoes of the Narragansetts.

The surrounding country was once the happy home and hunting grounds of Canonicus and his braves. On our left and right were the closing scenes of King Phillip's war enacted; scenes of unrecorded valor; scenes of individual privation and endurance on that cold December day which witnessed the close of the red man's power in Rhode Island.

Silently we paddled along the miles of this tortuous stream until the never varying scenery began to tire the eye and the distant trees to cast long shadows.

The splash of an occasional muskrat would sometimes break the quiet and twice the sudden rise and flight of ducks startled us into something like excitement. The trees at last seemed to part and presently through the vista of their opening we saw the glimmering bosom of the great pond of Rhode Island. Grass Pond, or Worden's Pond, as it is called on the map, has an area of about 1,000 acres. Great Swamp surrounds the greater part of this lake, very little high land reaching the water, therefore as might be supposed it is a very shallow sheet for most of its area, the depth in no part of the two miles which we passed over exceeds 2ft. and in many places, some distance from the shore, so shallow that the crew had to wade. Much of it is thickly grown with rushes and seemed like good ground for ducks, although we found none. The contour of the shore is very irregular, several points of land reaching far out into the lake. On one of these, which seemed of more solid ground than some of the others and moreover having a good growth of hardwood, we selected a spot on the dry sand and proceeded to start a fire, put up our shanty tent and generally prepare for the night. We had spun out a long day without a stop and should have pitched our tent earlier; however, by 6 o'clock we had had a good supper, our tent was up, our bed made and the blankets spread for the night.

The moon was just lighting the woods with soft, mellow light as the crew set out to forage for a proper supply of wood for our camp-fire. Looking down a couple of beech trees six or eight inches in diameter we dragged them to camp, cut them in proper lengths, and soon had a nice camp-fire burning brightly within three or four feet of the front of the shanty. Filling the dudeen for another smoke, we squatted on some convenient rocks watching the flickering fire as the flames curled in fantastic shapes in and around the closely piled wood. Weird sounds come from the woods, sounds which in daylight would be passed unnoticed. The rustling of the little field mouse in the leaves behind our shanty sounded to our strained hearing like the movements of larger game. We even fancied we could hear the flapping of an army of ducks as they settled in the lake. Could we have but heard the mournful cry of a loon coming across its moon-light surface we should indeed have fancied ourselves in the wilds of the north. As the tobacco burned low in the heels of the pipes we laid them one side and turned in, soon to fall asleep—that deep refreshing sleep which seems to come to a man in the woods more than elsewhere. In the small hours of the night the skipper turned out, replenished the fire and rejoined his fellow snorer to awaken again as the coming dawn tinted the eastern sky.

We made a quick breakfast of coffee, bacon and hard bread, made up our pack and got away before the sun had much more than shown its lower limb above the eastern hills. Not a breath of air stirred the face of the waters, and no sound marred the surrounding stillness save perhaps the dip of the paddle or the rushing of the canoe as it ever and anon glided through some patch of rushes. The temperature was just right—cool, crisp and invigorating—indeed, it was a morning to be enjoyed. The gun was held in readiness for any unwary duck which might be found feeding along our route. A mile or more was thus delightfully passed, no duck rewarding our vigilance, yet feeling well repaid that we were even permitted to be there. We presently began to pay more attention to the contour and appearance of the northern and western coast line, seeking to discover, if possible, the outlet by which we were to leave the lake and continue our cruise.

More by good luck than sagacity, for each new cove looked like its predecessor, the skipper pointed the nose of the canoe into the right cove and presently we entered the stream, which proved to be of good depth, narrow, and with a well-defined channel; but, oh! so crooked. I should think a proportion of four to one would be small in comparing the distance we paddled to the distance in a straight line from our entrance to our exit from the swamp through which it flowed.

This swamp might well be called impenetrable. It is a labyrinth of old trees, maples and oaks, with a thick underbrush of bullbriers and blackberry vines. A complete system of grape vines connects the whole.

The "nimrod" tried to make an excursion to where he thought he saw a gray squirrel whisk his tail, but soon returned with torn clothes and bleeding hands and gave up the job.

Four hours of pretty fair work carried us clear of the swamp and brought us to Kenyon's mills and the second carry. A mile beyond we ran into the first swift water we had seen, and in about three minutes the skipper managed to land the canoe about high and dry on a sunken rock. We shook her somewhat gently a few times, when she gradually slid off and we proceeded on our somewhat boisterous way. These rapids led into the milldam at Shamrock or Clark's mills, where the third carry was encountered.

Rapids met us below the dam, but presented no difficulties. Half a mile further we came upon the ruins of Shamrock Mills; the dam, however, was in good order, and necessitated a carry along the rocky, precipitous bank on the left. No immediate obstructions were known to be in the advance, so we took advantage of the tranquility of the slowly-moving river to solace ourselves with a bite of cold lunch.

The milldam at Carolina Mills caused the fifth carry. We landed as usual on the left bank and made a comfortable portage to the rapid water below. Here our little craft attracted some attention, and we rather divided the interest of the villagers with an itinerant photographer who was just entering the village as the Skipper, with the canoe on his head, crossed the road. One old resident inquired "where that pilgrim with his house on his head was going."

Below the dam and abreast the mill we found the most rapid water of the cruise; great black angular rocks stuck up in many places along the stream, seemingly placed purposely to wreck the unwary or unskillful cruiser. The channel as seen from the bank seemed very narrow, twisting and turning as the aforementioned rocks directed to the right or left. It was not without some trepidation that the Skipper took his position in the stern and made ready for a start. The "gals and fellers" stood at the mill windows and along the river walls, evidently ready to smile audibly if the Skipper took a dip. The passage was, however, happily made, and we continued on the way, believing that the last swift water and portage was passed. Four P. M. found us in the vicinity of Wood River Junction depot, where we telegrapbed a friend in Providence, who was to join us on the morrow.

As we reimbarked, the sky which for some time had been quite cloudy, became portentous of some immediate wetness. We hurried on, ever on the lookout for a suitable place to camp, the rain in straggling, intermittent drippings overtaking us. Low, swampy land formed the banks of much of this portion of the river, offering no inducements for a pleasant camp. Two miles from the Junction Wood River joins the Charles, and here, just as night was overtaking us and the rain had seen fit to cease its melancholy drippings, we found a desirable spot on the left bank of Wood River, where level, dry land came to the river's edge, and drew out the canoe and prepared to camp.

So tired were we with our long day's cruise and fast that only the most necessary work was done. The tent was set up in its crudest form. A cup of tea, some boiled potatoes and a bite of hardtack made our supper, and we turned in without the precaution of collecting wood, or even building more than the most temporary of night fires. About 11 we awoke shivering with the cold. The moon had dispelled the clouds of the early evening. The temperature which had prevailed when we turned in had lowered a number of degrees, and the air was nipping cold. Water left in the kettle where the potatoes were boiled was frozen nearly solid. A skurry for wood resulted in the lucky finding of a sufficient quantity of drift wood lodged in the fringe of bushes along the river's bank, brought down by the great freshet of February, 1886. In a very short time a blazing fire was sending its genial warmth into the furthermost corner of our snug little tent. Thoroughly warmed by our exercise in gathering the wood and by the fire, we again turned in.

Three o'clock found us up with our breakfast fairly under way for we had to make an early start in order to meet our expected friend on the morning train. Our bill of fare this morning consisted of boiled potatoes, hot Johnny cakes, broiled partridge and quail and hot coffee. It is perhaps needless to say we made a hearty breakfast. As soon as it was light enough to see our way up the river we started. A pleasant paddle of a mile landed us at the little mill village of Plainville, where the crew left to meet our friend at the depot, while the skipper started inland to find transportation to a proper spot for a more favorable camp.

The cruise proper of the canoe may be said to have here ended, although on the arrival of the others we did paddle a mile or more up stream to a point where we loaded everything into an ox wagon and were carried two or three miles into the back country.

The crew came to the front, took charge of the erection of the tent in manner and form as prescribed by "Nessmuk." The skipper took charge of the kitchen, and while the tent was being set up, prepared dinner for three.

Thursday—day and night was pleasant, all that could be desired even. Friday, which was to be the last of our camping, we designed to erect an ideal—a perfect camp-fire—which was to illuminate the night, warm the tent, and to burn long and slow, yet sure. Alas! for the best laid plans, etc. The morning dawned with every prospect of rain, and by evening the prophesy of the morn had become a fact. The wind changed from northwest to southeast, and blew almost directly into the tent, gradually increasing in violence as the hours passed by, the rain meanwhile falling very fast. Under such circumstances it was difficult to start the fire; however, it was at last accomplished, and we crawled into the blanket bags. Albeit we were a little moist in spots, we slept as tired men can sleep, turning out occasionally to replenish the fire as it burned low, again retiring for another nap or to listen to falling waters or to the roar of the blast as it tore around the tent, threatening to take it bodily from the ground. Between three and four o'clock, during one of our intermittent seasons of wakefulness, we discovered that the storm had ceased to be of an ordinary character, and that its velocity had become that of a gale, and rain was falling in torrents.

The fire still burned, but sleep was a thing of the past, and was no companion for the present status of the storm. As we sat or lay, seeking a little solace from the old "dudeen," wondering whether the fire would continue to burn or give up the struggle; whether we should long have a roof over our heads or not, there came a blast from old Boreas lustier than all the rest, and the query was answered, for the north side of the tent resigned its perpendicular, and now laid out nearly horizontal, flapping and snapping with the fury of the gale.

We managed after a little to draw it back to its proper place and to effect a partial fastening. Meanwhile the gale, as if the blast which wrecked the tent had been its climax, had sensibly reduced its force and the rain become light and fine. As the rain fell off and finally ceased, the fire burned brighter and better; we gathered around it, warmed, chewed and dried ourselves, made and drank a pail of hot coffee—'twas all the stimulant we had, 'twas all we needed—and finally concluded that the night hadn't been as bad as we imagined, and we really felt pleased that we had stayed in the tent and not emigrated to a neighboring barn, as had been suggested.

As daylight began to whiten the sky, we started the breakfast, shook out the blankets and placed them where they would dry, loosened the sides of the tent so the wind would draw through and dry that, picked up the loose and stray duffle, and so far as could be got things ready for the final packing.

The kitchen service, meanwhile, had been progressing rapidly, and the breakfast was soon ready—and was eaten with as good an appetite as if the previous night had known no rain and had been visited but by the gentle zephyrs of a perfect summer's night. By the time our friend with the ox wagon came lumbering over the hills, the duffle was dried and packed ready for transportation. Although but a short time had been passed amid the scenes we were about to leave, it was with regret that we bid them farewell. It was separating the last tie which bound us to the wild wood life; it was the end of the vacation; it meant our return to the haunts of men where quiet never reigns, where the eye forever rests on brick and granite, where the air which one breathes is dirty, smoky and laden with a thousand obnoxious smells; a return to the monotonous routine of business, necessary, no doubt, yet often disagreeable. There was one spark of cheer in the gloom of the parting. We might come again. With this thought we even, as man ever does, began to plan for the future. Thus the regrets were softened by the schemes of another trip.

Ten o'clock found us again in Plainville, where two of us decided to once more launch the canoe and paddle up to the station, while the crew went on with the luggage by ox power. It was a delightful paddle that the skipper and his friend had—more pleasant perhaps because of the two days' rest and that it would be the last for six months. One duck we started ere we had long been afloat, but he got off sound; we made ready to give him a warm reception should he in our path again.

Hugging closely the right bank of the stream, the Skipper silently paddled along; many bends we rounded without reward. Finally as the canoe noiselessly sped around a turn particularly short and sharp we almost ran on to her duckship and killed her before her wings had more than left the water. The Skipper doubted the shot striking the bird and rather held that he had killed it with the bows of the canoe. A close investigation, however, revealed the marks of a few shot, so the Skipper gave up the claim.

Too late for the morning train was the word the crew gave as he met us at the landing. We pulled out, interviewed the baggage master, weighed the canoe and checked the same with our duffle for home. The waiting hours were spent in the adjacent fields hunting quail, where some limited success attended our efforts. Four o'clock found us on the train for Providence and home.

All through this little State are a number of trips of like character to be enjoyed. The Pawtuxet, with its two branches, is a river open to canoe travel for quite a number of miles. Its headwaters are easy of access. I am sure a week could be well spent on this trip.

Queens River, the headwaters of Usquefang, Charles and Pawcatuk, as the river is known in the different stages of its journey to the Sound, will float a canoe from Fisherville, near the center of the State, to Westerly.

If this article be the means of interesting other persons in canoeing here at home, then the writer will feel that his object has in a great measure been attained. RHODY.

BROOKLYN C. C. CHALLENGE CUP.

THIS event came off Saturday afternoon, May 14, as announced. The Regatta Committee fixed the course in conformity with the conditions governing these races, to be a triangle, and chose that formed by the buoy off Fifty-sixth street, from there in a northeasterly direction to the first buoy off Thirty-ninth street, then out to Channel Buoy No. 20, thence to the starting point off the Atlantic Basin; distance about 3½ miles. The wind was southerly, of sufficient force to give the tiny boats all they could do to carry full sail, and with a promise of increasing force.

Seven entries came to the starting buoy, and were as follows: M. V. Brokay, Canoe 570 (holder of the cup); R. Blake, Kelpie (challenger); J. F. Newman, Sunbeam; H. C. Ward, Evangeline; F. Dunnell, Niente; W. S. Harriman, Nettie; Wm. Whitlock, Guenn. The starter and judge of the course were Messrs. Charles Gould and R. C. Tucker; A. C. A. rules to govern, and race to be called at 4:30 P. M.

Promptly at the appointed time the preparatory five minute signal was given. The tide was ebb and the wind strong southerly, which favored the waiting boats. The second blast of the horn gave the boats one minute to approach the line, and when the final starting blast was given a beautiful start was had, the boats crossing in the following order: Evangeline was first over almost with the blast. He chose the in-shore course, hoping to cheat the tide. He was closely followed by Commodore Newman. The Guenn was third over, followed almost instantaneously by canoe 570. The Nettie, Kelpie and Niente crossed in this order, not far behind, and the run for the first buoy saw few changes. Mr. Ward's curious shaped leg of mutton obstinately remained in front, very closely held by the Sunbeam, which even with a small rig astonished all the contestants.

The first buoy was rounded as follows: Evangeline, Sunbeam, 570 and Guenn close together, Kelpie, Nettie and Niente following. The gybe was successfully accomplished by all, and the reach across the strong ebb tide in the channel and before the freshening breeze soon showed some changes. Sunbeam and Nettie here dropped out, their owners not caring to take chances so early in the season. Guenn before long showed in front, and Evangeline and 570 alternately passed and repassed each other; each one gaining in turn as he took his opponent's wind. Finally 570 established a slight lead and the channel buoy was rounded by Guenn first, 570 second, Evangeline third, and Kelpie and Niente in the order named. The lead boat to windward now commenced in quite rough water, with a favoring tide against a strong afternoon southerly breeze, which gave the small boats all they could stagger under.

All the boats started on the port tack for a reach down the bay; Guenn momentarily increased her lead, 570 was first about and stood in shore, and was soon followed by the others, acting on the principle of not breaking tacks with your adversary, although, as it proved, it would have been better judgment to make a long leg to the southward. For three tacks Guenn maintained her lead, and at one time looked a sure winner, but the other boats, admirably handled by their respective owners, and perhaps aided by her being somewhat overcanvassed in the strong wind, finally passed her almost on the last leg.

The finishing flag was approached by all three boats together, less than 300yds. separating the first and third, and each tearing along under every stitch they could bear. The sight was a beautiful one, and even the usually unappreciative captain of the street department tugs was sufficiently impressed to stop his tow and allow the leaders to cross his bows. Mr. Ward was the first home and came tearing down toward the line, crossing it very nearly to south; 10s. later the Guenn came home, following his lead across the line, followed in 20s. by 570, who, uninfluenced by the example of his competitors, but with that cool head which distinguishes him, rounded the buoy correctly, leaving it to port and walked away with the hard fought for cup. The other two contestants finished as follows: Kelpie and Niente in the order named. The time was 50m. and 10s., second boat 50m. 20s., third boat 50m. 40s.

A more perfect day, a larger and more enthusiastic entry, and a more closely fought race, has never been the lot of the Brooklyn Canoe Club. Nothing but the unfortunate mistake of the Evangeline at the finish marred the day. The cup has been already challenged for again, and will probably be sailed for in two weeks.

The club visit in a body the Field and Marine Club on the 22d, and other cruises are under discussion. Many will go to the Shrewsbury on Decoration Day.

MONTGOMERY SAILING CLUB.—Norristown, Pa., May 16.—The third regatta of the Montgomery Sailing Club was held May 15. Course 5 miles, wind light from the south, making it a run to the buoy and a beat back. The start was made at 2 P. M., the boats finishing as follows:

	Length.	Finish.	Corrected.
Little Tycoon	16.00	4 19 20	2 19 20
Gracie	12.03	4 42 00	2 52 34
E. C. Potts	15.00	4 35 20	2 33 34
Igideous	15.00	4 34 20	2 33 48
Josephine	15.00	4 35 20	2 34 12
Ino	15.00	4 41 30	2 38 05
Cocktail	15.00	Withdrew.	
Flying Eagle	15.00	Withdrew.	

The Little Tycoon carried mainsail of 30yds., and in the run before the wind a 7yds. jib. The Gracie carried 75ft. in main and mizzen, the Ino, a ducker, carried 18yds., the other five boats being Delaware tuck-ups, carried the regulation racing sail of 28yds.—E. A. L.

THE HUDSON RIVER MEET.—Newburgh, May 14.—*Editor Forest and Stream:* Time is flying on apace, and ere many days have come and gone the blazing camp-fires the spring meet will be the center of attraction to jolly canoeists. With us Sing Sing and Decoration Day have become synonymous terms. We not only anticipate the pleasures of the cruise down—that is, some of us do—but we want to see some of the old faces again. We want to see those who made Plum Point a jolly camp in spite of hard stones. We want to see those who indulged in the luxury of shadroe at Rondout. We want to see the jolly faces of many we met at Grindstone. We have friends in Brooklyn whom we would like to see—in New York and Knickerbocker that would find hearty welcome. And if we don't find some Turtles sunning themselves we'll feel lost. Rondout—of course we expect to see them—and Poughkeepsie, too. We also want to see a lot of new faces—from Yonkers, from over in the Jerseys, from all along the line in fact, even from Amsterdam—yes, we want you there, too. We know we are going to have a good time, and we want a grand company to join in the fun. That's what is wanted by the DOCKRATS.

JACKSON C. C.—Jackson, Mich., May 10.—*Editor Forest and Stream:* The annual election of the Jackson C. C. was held on May 9, the officers being: Com., Sam B. Mettler; Vice-Com., Chas. A. Blair; Sec'y-Treas., John Helmer; Meas., Fred D. Welling; Member Executive Com., Ralph B. Gould. There are now some twenty canoes in the fleet and the club is in a flourishing condition. Your correspondent from Muskegon claims that the Muskegon C. C. made the first cruise on Grand River. This is certainly a mistake. For four consecutive years the Jackson C. C. has cruised from Jackson to Lansing, a distance of about 38 miles by rail but about 90 by river. Our innate modesty has kept us out of print heretofore, but we will try to let you know more about us in the future. —CHAS. A. BLAIR, Vice-Com. Jackson C. C.

A. C. A. MEMBERSHIP.—Trenton, N. J., May 13.—The following gentlemen have applied for membership in the A. C. A.: George C. Forrest, Hartford, Conn.; S. G. Barnes, Syracuse, N. Y.; H. C. French, Northampton, Mass.—WM. M. CARTER, Sec'y.

THE REVISION OF THE CONSTITUTION.—The committee on the revision of the A. C. A. constitution met in New York on Saturday and completed a draft of the proposed changes, which will be acted upon at the next meeting.

AN ALLEGHENY RIVER CRUISE.—A correspondent who contemplates a cruise down the Allegheny River this coming summer desires a campanion. Trip to last about two weeks. Address, ALLEGHENY RIVER, Hoboken, Pa.

CANOE RACE ON THE SHREWSBURY.—There will be a free-to-all canoe sailing race for champion pennant, second and third prizes, on the Shrewsbury River at Red Bank on Decoration Day. There are 21 entries at present.

THE LAUNCH OF THE TITANIA.

IN the ordinary course of things it has generally been the case that when a yacht was launched she was about half finished, and there was still some weeks work for riggers, joiners, painters and crew before she was in commission. It speaks well for the system employed in the yard at City Island that within a short time of her launch the new steel yacht Titania was under way for her trial trip, leaving the ways completely finished, except for the hanging of her board. On saturday afternoon the ways were ready, the sails bent, jib hoisted in stops, and the owner, Mr. C. Oliver Iselin, with his family and a number of guests, was on board before high water. The yacht was dressed for the occasion with flags from truck to bowsprit end and taffrail. The bottle of wine was fixed on the forward deck, a heavy shackle hanging over it from a line leading to the after deck. The space for launching is very limited, there being a bulkhead just below the ways; so two hawsers were led to piles on the shore to check the yacht's way if necessary. At 5:20 P. M. the yacht was cut loose and started swiftly down the ways, little Miss Norah Iselin breaking the wine bottle by releasing the line on the after deck. In its fall the heavy shackle struck the hand of one of the crew, cutting it badly. Before the yacht was water-borne the ways struck the mud and she settled heavily on them with a severe shock. She was at once lightened of some of her passengers and lines were carried to the shore and wharf, and by means of one from the masthead she was listed until she could be hauled off. Her centerboard was at once swept into place, mainsail set and jib broke out, and the Titania was under way for her anchorage off New Rochelle.

The correct dimensions of her spars as given in the designer's draft are:

	Ft.	In.
Mast, deck to hounds	53	
Mast, diameter		16
Masthead		10
Mast, diameter at hounds		14
Mast, distance from stem	27	
Topmast, fid to hounds	40	
Topmast, diameter		9
Boom	69	6
Boom, diameter		12½
Gaff	41	6
Gaff, diameter		9
Bowsprit, gammon to sheave	33	9
Bowsprit, gammon to end	35	5
Bowsprit, diameter		12
Spinaker boom	62	6
Spinaker boom, diameter		8
Topsail yards, { diameter, 6in	46	
Topsail yards, { diameter, 4½in	33	

Mr. Burgess was not present at the launch, being in Washington on business connected with the new government vessels.

GENERAL PAINE'S STEEL YACHT.

AT Pusey & Jones's yard the keel, stem and stern of the new yacht are in place, and the frames all bent and partly erected. She should be launched by June 15, after which she will be towed directly to Boston, where Lawley & Son will finish her. The inside work will be of white pine, varnished. The new boat is deeper in body than Mayflower, the extreme draft of 10ft. being amidships, instead of at the heel of sternpost. The beam is 3in. less, and about the waterline the midship section is intermediate between Mayflower and Puritan, showing less flare aloft than the former and more bilge just below water. Near the keel the new boat will be fuller than either of the others. The sheer plan differs but little except in the two points of a clipper in place of a straight stem and the increased depth and rocker amidships. The dimensions, as far as given, are:

	Ft.	In.
Length on l.w.l.	85	9
Beam, extreme	23	2
Draft, extreme	10	
Mast, from foreside stem at l.w.l.	32	9
Mast, diameter, partners		19
Mast, diameter, greatest		19½
Mast, diameter, hounds		18
Mast, heel to cap	86	
Topmast, heel to truck	48	
Topmast, diameter		9¾
Boom	82	
Boom, diameter in slings		13⅝
Boom, diameter, greatest		14
Gaff	50	
Bowsprit, gammon to sheave	38	
Bowsprit, gammon to end	39	6
Bowsprit, heel to end	53	
Bowsprit, diameter		15

LAKE Y. R. A.—FOURTH ANNUAL MEETING.

THE fourth annual meeting of the L. Y. R. A. was held at Belleville on Saturday, the President, Com. Biggar, in the chair. There were present Messrs. Biggar, Bell and Robertson, representing the Bay of Quinte Y. C.; Mr. Carruthers, Dr. Simpson and Major Wilson representing the Kingston Y. C.; Messrs. Mott, Phelps and Mitchell representing the Oswego Y. C.; Messrs. Jones, Malloch and Edwards representing the Royal Canadian Y. C.; Messrs. Cartwright, Wallbridge and Worts representing the Rochester Y. C.; Messrs. McGaw, MacMurchy and Evans representing the Toronto Y. C.

The president upon taking the chair congratulated the association upon the addition to their body of the Rochester Y. C. and upon the full attendance of all the clubs at the meeting. After the minutes of the previous meeting had been read and adopted it was moved by Mr. Robertson that the classification of yachts adopted by the association be as follows:

Class A.—All yachts over 50ft. corrected length.
Class I.—All yachts between 38ft. and 50ft. corrected length.
Class II.—All yachts between 25ft. and 38ft. corrected length.
Class III.—All yachts under 25ft. corrected length.

It was moved in amendment by Mr. Evans that the measurement for class be by waterline length and that the classes be as follows:

Class I., 55ft. and over.
Class II., 35ft. to 55ft.
Class III., 25ft. to 35ft.

It was then moved by Mr. Jones that vote be taken as to whether classification be by waterline length or corrected length, put to the meeting and motion lost. Mr. Evans then withdrew his amendment and the motion of Mr. Bell was carried. It was then moved by Mr. Jones and carried that the club under whose patronage the regatta is being held may make such conditions as to the fusion of classes A and the first class as the club may seem meet, in the event of not more than two yachts sailing in either class.

There was some discussion as to fixing a uniform scale of prizes for all the clubs but it was decided to leave this matter to the discretion of the different clubs.

It was moved by Mr. Worts and carried that the measurers of the different clubs send in the measurements of their club yachts to the honorable secretary of the Association.

Moved by Mr. Phelps and carried that the Oswego Y. C. Code of Signals be adopted as the Association Code.

It was moved by Mr. Evans and carried, that the racing rules of the S. C. Y. C. be incorporated in the new Association book.

It was moved by Mr. Adams and carried, that the clubs be recommended to give a yellow flag with the first prize money, a red with the second and a blue with the third. The flags to be the same shape and color in the three classes, but smaller in first class than in Class A and in second class than in Class I. Each flag to have the monogram of the club presenting the same in the center thereof. The flag to be the property of the yacht winning the same.

It was moved by Mr. Jones and carried that the question of the Association trophies, to be given to the yacht having the best record in each class in the Association regattas, be left to the same committee as that having charge of the matter during the former year. The fixtures for the regattas for season were then settled as follows:

Royal Canadian Y. C., at Toronto, July 26.
Toronto Y. C., at Toronto, July 27.
Rochester Y. C., at Charlotte, Aug. 1.
Oswego Y. C., at Oswego, Aug. 4.
Kingston Y. C., at Kingston, Aug. 8.
Bay of Quinte Y. C., at Belleville, Aug. 11.

The Association then elected its officers for the ensuing year: President, Com. Carruthers of the K. Y. C.; 2d Vice-President, Com. John Leys of the R. C. Y. C.; Hon. Secretary and Treasurer, George E. Evans of the T. Y. C. The next annual meeting was fixed for Kingston. The meeting then adjourned.

The delegates and some Belleville gentlemen, numbering thirty in all, were then entertained by the retiring President, Commodore Biggar, at a magnificent banquet, which was done most hearty justice to and at the close of which the usual toasts were given and responded to, the pleasant gathering not breaking up till well on the wee sma' hours.

ROYAL NOVA SCOTIA JUBILEE RACES.—The Royal Nova Scotia Y. C. has decided upon two days racing, either June 21 to 24 or July 18-19, as the visitors may prefer. The following circular has been sent to all yacht clubs on the seacoast:

"The citizens of Halifax have determined to celebrate the Jubilee of Her Majesty Queen Victoria by holding public festivities on the 21st and 22d June next. Among other features of the celebration it has been arranged to have a sailing regatta, the preparation for and management of which have been entrusted to a sub-committee. The committee in charge, in the name and on behalf of the general committee of citizens, have the honor to invite the officers and members of your club in the Jubilee regatta. The city offers a silver cup of the value of $500, and the Royal Nova Scotia Yacht Squadron offers two cups, to be sailed for by all British, American and Canadian yachts. There will be two days' racing, as follows: First day, the Halifax Jubilee Cup, open to all yachts. Second day, 1, the R. N. S. Y. Squadron Cup, open to all yachts over 70ft. l. w. l.; 2, the R. N. S. Y. Squadron Cup, open to all yachts 70ft. l. w. l. and under. Course, about 40 miles. Sailing regulations and time allowance of the New York Yacht Club to govern. Entries to be made on forms which will be forwarded on application to the secretary R. N. S. Y. S. In view of the fact that the date of the celebration is possibly too early to allow of the majority of your members attending it, the committee have been authorized to fix, if found advisable, a later day for the regatta, say the 18th and 19th July, in order to suit the convenience of yacht owners desiring to take part in the races. Will you, therefore, be good enough to inform us at your earliest convenience: Which of the above dates, June or July, would best suit your members? What number of yachts of your club would probably come to Halifax? We would add that a cup will be given for yachts of the smaller lengths, should any such enter. The warmest hospitality and the most cordial reception will, we need not assure you, be given to all visiting yachtsmen, both by the citizens generally and by the members of the squadron. Any further information your members may desire will be gladly furnished by this committee. A. C. Edwards, chairman; W. H. Troop and F. C. Sumichrast.—H. M. WYLDE, Secretary Royal Nova Scotia Yacht Squadron."

THISTLE'S CENTERBOARD.—According to a telegram received from New York, the owner of the Galatea has obtained another rise out of eager reporters, by expressing an opinion that so much secrecy was observed over the construction of the Thistle because that yacht has a centerboard. This news was too much for the equanimity of those who regard the centerboard as an American institution, and cablegrams have been sent backwards and forwards to test the correctness of Lieut. Henn's astounding opinion. Of course a moment's reflection would have saved all this trouble, as, if Thistle is fitted with a centerboard she cannot compete in any British regattas before starting; and, moreover, as she has over 14ft. depth of hold, she must draw at least 13ft. of water, and what would a yacht with such a draft as this want with a centerboard? The centerboard question is still eagerly discussed, and, while British yachtsmen mostly regard it as a mere contrivance for skimming over shoals or for reducing immersed surface when sailing large, Americans believe it to have the virtue of giving special weatherly qualities, which Lieut. Schank and Capt. Shuldham, of the British navy, claimed for it a century ago, when they invented it. How much more weatherly such yachts as Puritan and Mayflower are than Genesta and Galatea seems at present to be a moot point, as none of the matches yet sailed between these vessels have been of a crucial character. So far as the evidence which we published in September, 1885, goes, Puritan had no advantage over Genesta in light winds, but it would be very unsafe to take this as a final test. That Americans, who might be supposed to know, have some faith in the centerboard which we fail to appreciate, seems certain, or otherwise the new yacht now building to compete against the Thistle would not have been given so much board area.—*London Field, May 7.*

DEATH OF A SCOTCH SKIPPER.—Capt. Mackie died suddenly at his residence at Port Bannatyne, near Rothesay, on Thursday week in the prime of life, and without any serious preliminary illness, leaving a widow and four children. Mr. Mackie has been well known over a lengthened period in connection with yacht racing in Clyde, Mersey, Kingston and Belfast Loch. He began his racing career in the 40-tonner Alceste, built for Mr. Hugh Walker, of Greenock, and was in many a famous contest with Norman, Myosotis, Bloodhound, Eritannia and Coralie. After various changes he was in charge of the yawl Condor, cutter Vanduara, and yawl Wendur, all built for Mr. John Clark, of Paisley. When in command of Vanduara he raced her in the Thames, English and Irish Channel, and the Clyde, and secured for the new steel cutter the position of first yacht of the season. Mr. Mackie was an enthusiast in the sport, raced his boat with great spirit, and took pride in having her in the most perfect equipment. A well-known exhibitor at leading dog shows, he more than other man promoted the popularity of the hard-haired Scotch terrier, exhibiting from time to time the very best specimens ever seen on the show bench. Only the other day his well-known champion Dundee realized £120, by far the largest sum ever paid for a dog of his variety. With a brusque manner that was often misunderstood, Mackie was obliging, kindly and admittedly clever.—*London Field, May 7.*

ROYAL THAMES Y. C.—The steamer Norham Castle will accompany the Jubilee race, provided a large enough party can be made up. The *Field* speaks of the project as follows: "In connection with this race, we notice that a steamship company have advertised that they will start a 3,000 tons steamer to accompany the race, taking passengers at £26 5s. per head, the trip to be confined to a fortnight; but fancy paying such a sum for tediously drifting round Great Britain, when a return ticket to New York can be had for less money, with the excitement of an Atlantic passage made at the rate of eighteen knots an hour. Anything more appallingly tedious than dribbling round the British Isles at about four knots an hour it would be impossible to conceive, and we shall be very much surprised if the required one hundred and fifty examples of patience are got together to pay 25 guineas for such an ordeal."

AMERICAN Y. C.—On May 14 the building committee of the American Y. C., Messrs. Hall and Kennedy, broke ground for the new club house at Milton Point, Rye Neck. The house will be in Queen Anne style, 120×60ft., and two stories high, with a circular observatory 30ft. above the roof on one corner. The entrance hall is to be 25×14ft., with a wide, open fireplace at the end and a broad stairway. The parlor will be 40×40ft., dining-room 35×25ft., divided by two sets of folding doors. There will be also a coat room, billiard hall and reading and smoking rooms on this floor. Above will be 16 sleeping rooms, each 12×18ft., with bath rooms, toilet rooms and the servants' quarters. The lower floor will be finished in Oregon pine and mahogany. The 13 acres of ground will be laid out handsomely, and there will be sheds, stables and bath houses. The architect is E. A. Sargent and the contractor W. S. Wittmer.

PRISCILLA.—On May 13 Priscilla arrived off Staten Island and next day went over to Poillon"s yard, where she will complete her fitting out. During the winter she has been laid up at her builders', Harlan & Hollingsworth, Wilmington, where an iron keel has been added. This is of ⅝in. plate iron with a filling between the two sides of 2in. thick cast iron, the whole being 16in. deep at its lowest point. This keel begins about 15ft. from the stem and extends the entire length with a rocker. The weight is about 6 tons and the area 61sq. ft. The centerboard has of course been made deeper to correspond and has also been lengthened 2ft. The mast has been lengthened 3ft. 3in. at the heel and a new boom 1in. larger in diameter and 6ft. longer, being increased so that the sail area will be 540ft. more than last year.

A DINNER TO COM. GERRY.—On Tuesday night a dinner was given at the New York Y. C. club house to Com. Gerry in honor of his return from Europe. Besides many members of the club, Mr. Edward Burgess and Lieut. Henn were present.

FORTUNA has hauled out of the Simpson's dry dock, East Boston, to clean and repair copper. She will sail for England about June 1, under her winter rig, her racing spars being sent by steamer and shipped at Southampton.

SAVIN HILL Y. C.—Officers: Com., J. H. Stark; Vice-Com., H. I. Odell; Fleet Captain, H. G. Patten; Sec., W. P. Thayer; Treas., J. H. Stark; Meas, A. Lawrence Kidd; Delegate to the N. E. Y. R. A., F. J. Stark.

MEDUSA, Vice-Com. Centre, has returned from a cruise to New Bedford, and is lying off Bay Ridge. She grounded heavily in coming out of Port Jefferson, but was got off by her crew and proceeded.

DROWNED FROM A CATBOAT.—The body of one of the men drowned by the capsizing of a catboat off Communipaw on April 17, was found on May 11 entangled in a shad net off Robbins Reef.

ROAMER.—The draft of the cruiser Roamer, lately illustrated in the FOREST AND STREAM, should be 5ft. 9in., instead of 4ft. 2in., as published. This year she will be trimmed to draw 6ft. aft.

MAYFLOWER.—Capt. Haff has taken command of Mayflower, and she has hauled out from her winter berth between the Beverly bridges and will soon be in commission.

CLYTIE, sloop, of Boston, has had a lead keel of 1 ton added.

SOUTH BOSTON Y. C.—The rules given in the FOREST AND STREAM of May 5 for the race on Decoration Day have been found to conflict with those of the New England Y. R. A., so they have been changed as follows, to agree with the latter: This club being a member of the New England Y. R. A., this regatta will be sailed under the rules of that association, with the exception of the fifth class, which does not come under the rules, and in which class only there will be no restrictions in regard to sails or ballast. Sails—Yachts in the respective classes will be allowed to use the following sails, and no others: First, second and third classes—For sloops and cutters: Mainsail, forestaysail, jib, jibtopsail (see note), topsails and spinaker. For schooners: Mainsail, foresail, forestaysail, jib, flying jib (see note), maintopmast staysail, topsails and spinaker. For cats: Mainsail, spinaker, jib (any size) and topsail. Note—The terms "jibtopsail" in relation to sloops and cutters, and "flying jib" in relation to schooners, have been defined to include any "fore and aft" sail set on the topmast headstay. Fourth class—For sloops and cutters, jib, forestaysail and mainsail; for schooners, mainsail, foresail, forestaysail and jib; for cats, mainsail only. Ballast—"Shifting ballast" will not be allowed under penalty of the boat, and owner of the boat and any other boat belonging to him, being debarred from further entry or participation in a race given by a club in affiliation with the New England Y. R. A., and upon the application of the owner or sailing master of a competing yacht, at least four days previous to the day of the race, the judges shall order a man put aboard a yacht in the same class, said man not to count as one of the number of men allowed by the rules. Twenty yachts have already entered.

BORDENTOWN NOTES.—The shipyard of Mr. Harry Ford presents a very busy appearance at present. On May 5 Mr. Ford launched a cutter named Countess, built by him for Mr. A. C. McElroy, of Beverly. The Countess is 30ft. over all, 26ft. l. w. l., 10ft. beam, 5ft. hold, 4ft. draft, and has a 2,400lb. iron shoe. There is also another cutter building, which will be launched in about two weeks. This boat is to be named the Nydia, and is 33ft. over all, 26ft. l. w. l., 9ft. beam, 6ft. hold, 6ft. draft, and has an iron keel of 6,000lbs. This boat has a very pleasant and roomy cabin, having 6ft. of headroom in all parts. Prof. R. T. Richert, of Philadelphia, is to be the happy possessor of the Nydia. Mr. Ford is also improving the Lark, Minerva and Cora F., of Trenton. The Lark, which Mr. Ford built last year for Mr. G. Whitehead, of Trenton, has had her mast moved about 10in. forward and a general overhauling. The Minerva is having all her spars lengthened and will carry a cutter rig at the next Q. C. Y. C. regatta. The Cora F. is to be generally refitted and made to look like a new boat. As this is not the first work Mr. Ford has done for the Trenton Club, his work must be satisfactory. Two or three gentlemen around Beverly and Edgewater are talking of building and the contracts may come to this city as they favor Mr. Ford's work. Mr. Ford has also turned out a couple of sneakboxes with overhanging sterns, which were fine samples of workmanship.—LOUIS W. WYESE.

EMPRESS.—This yacht which has just been completed for Geo. A. Ballard, was launched on May 10 at 10 A. M. from the yard of Read Brothers, the well known yacht and boatbuilders at Fall River. The Empress is to be yawl rigged and was constructed with a special view—to comfort, as she will be used largely in cruising. Her dimensions are 32ft. over all, 26ft. waterline, 9ft. beam, 5ft. 6in. draft, with 6ft. head room in cabin, which is finished in cypress and mahogany; three swinging berths, similar to a sleeping car, can furnish sleeping accommodations for six persons. She has a toilet room, with set bowl and w. c., and ample room for sails, stores, etc., the planking is of yellow pine full length, without butts, her deck of white pine laid straight in full length; she is painted black with gilt stripe and all her interior and decks are bright finish, her companionway, stairs, bitts, skylight, cockpit, etc., are of mahogany. She has one of the American Ship Windless Co.'s yacht windlass, a complete outfit of Herreshoff phosphor bronze blocks, sails by J. E. Gifford. The steerer is one of Oliver Adams's patent.

SILK AS A MATERIAL FOR YACHT SAILS.—When it was announced some time ago that Irex was to have a silk spinaker, which when rolled up would go through a wedding ring, etc., it was thought that a new expense had been invented for the over-burdened yacht owner. But it seems that the new material is not so very costly after all, and on the Clyde has already, as one might say, become popular "before the event." Messrs. Lapthorne and Ratsey, of Greenock, have already made several balloon sails of the material, and they think it will soon supersede duck for light wind sails, and it is even suitable for small vessels, as it is so close, firm and light. Messrs. Lapthorne and Ratsey are making a 6in. suit of it for Mr. J. Grant's Una, and balloon topsails for the 10-tonners Melissa and Marguerite. Several others are also having sails made of the stuff, which is a mixture of cotton and silk and has been named "Union silk."—*London Field.*

SANDY BAY Y. C.—At the meeting on June 14 the following races were decided upon: June 11, first pennant race; July 9, the Harwood cup; Aug. 1, second annual open regatta; Sept. 3, final pennant race. There will be pennants for two classes, with cash for second and third prizes. The Harwood cup will be the first prize for July 9. This is a fine silver ice service presented by United States Engineer T. T. H. Harwood. The prize for the second annual regatta is a beautiful silver punch bowl and ladle, made by Messrs. Reed & Barten, valued at $105. The second prize and the second class first prize on this day will be the valuable cups presented by the Commercial Cable Company. Arrangements are being made to make this a gala day. The classifications are as follows: First class, 24 to 30ft. sailing length; second class, 20 to 24ft. sailing length; third class, under 20ft. sailing length.

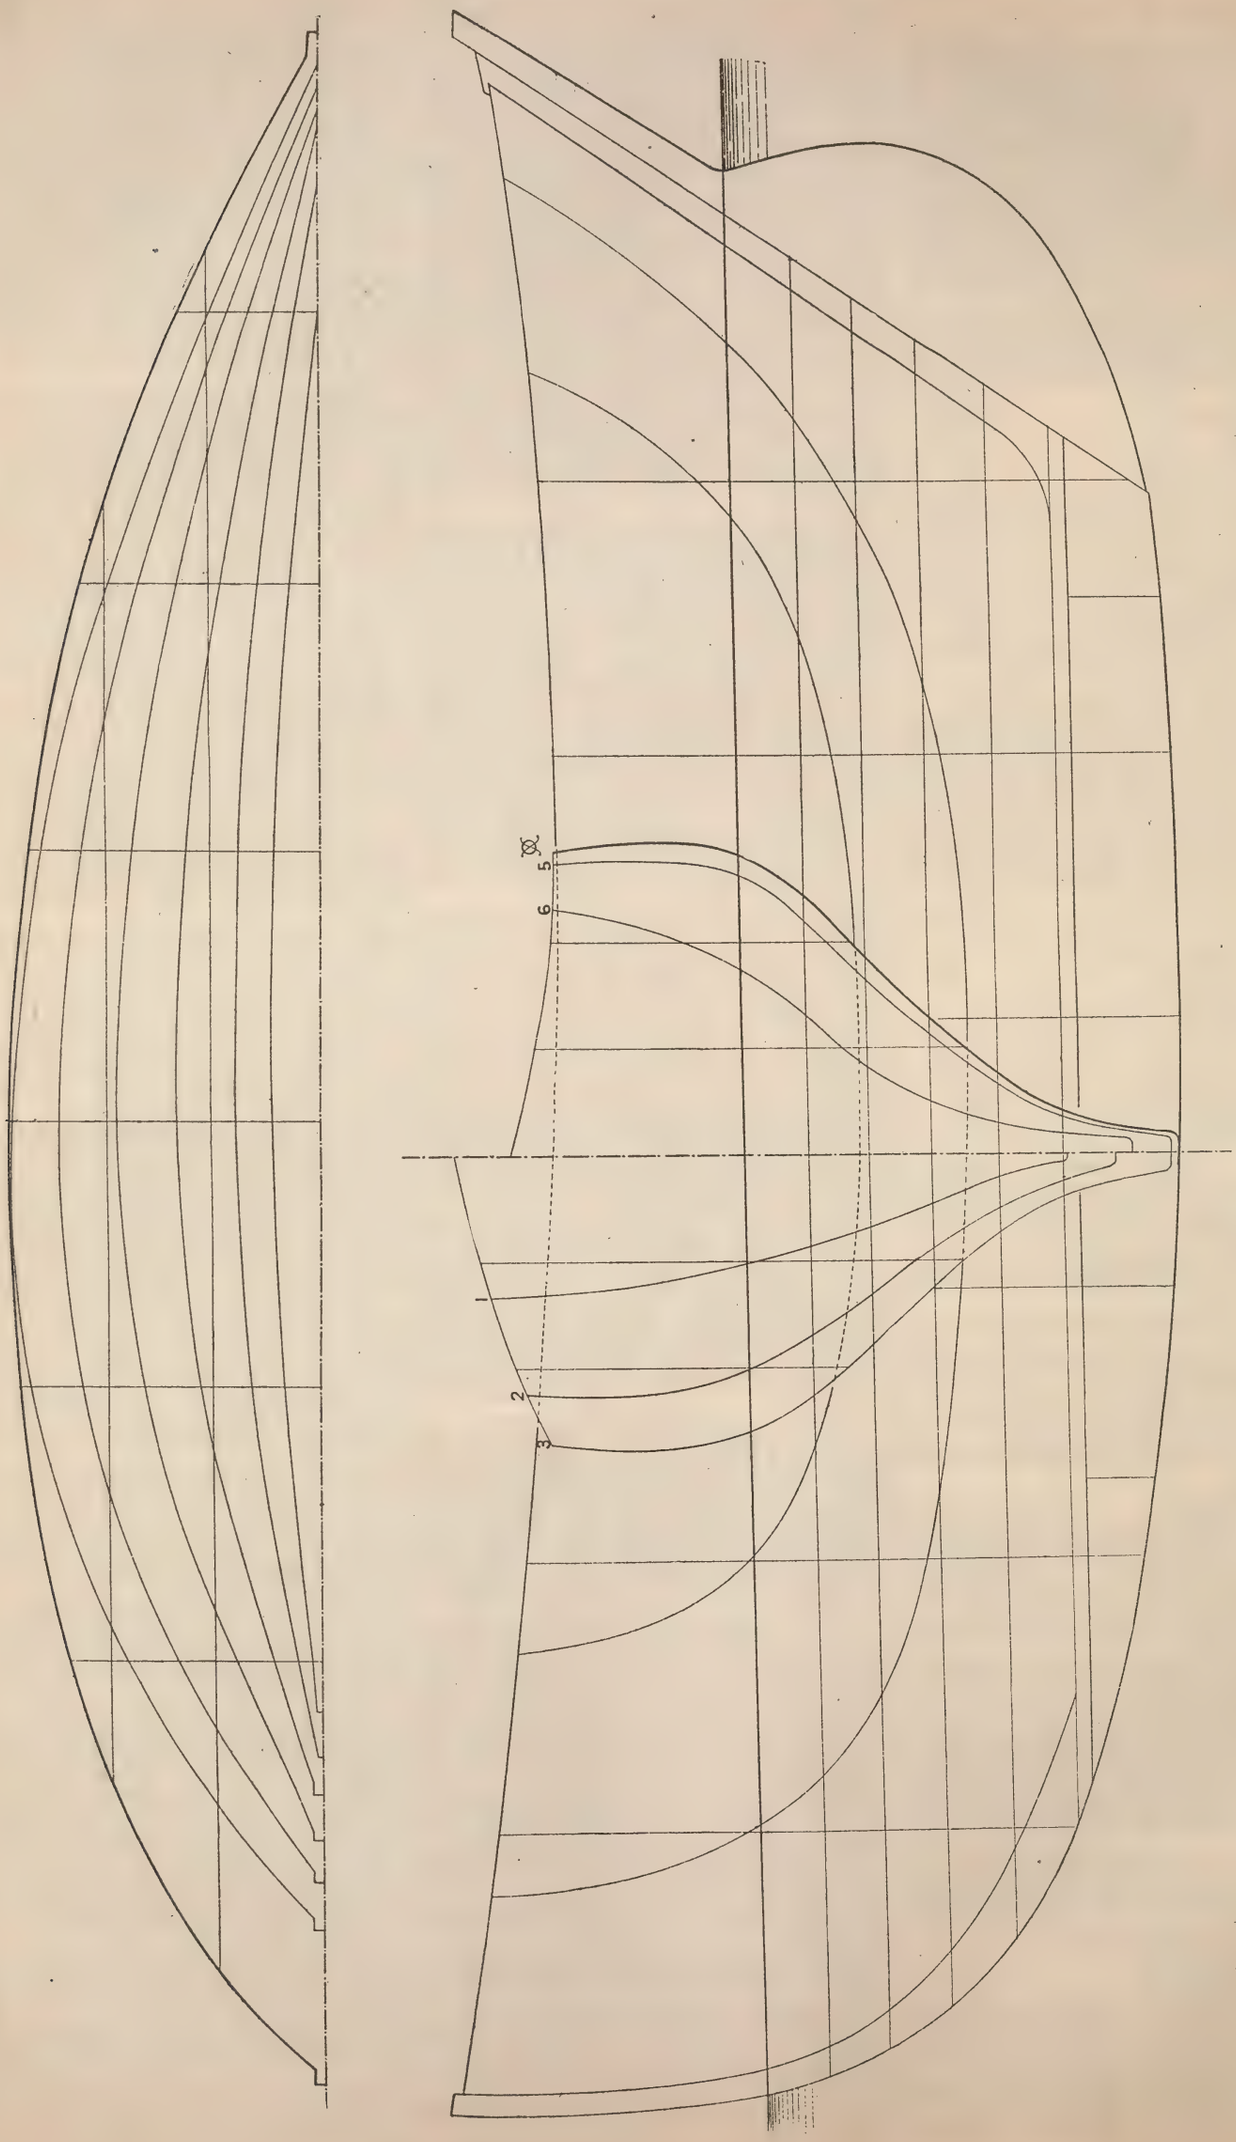
JULIA.—Mr. C. W. Chapin's steel schooner arrived in New York last week, and is now at Poillon's, where her racing rig will be shipped. On Monday she hauled alongside a ship, from the yards of which a fall was rigged, and her masts were lifted out and rigging removed. The masthead iron work was at once transferred to the new sticks. A single round stick will replace the bowsprit and jibboom, being 32ft. outboard in place of 23. The foremast is 7ft. 3in. longer, mainmast 8ft. 3in.; the foretopmast, 26ft. 6in., will be used, but a new maintopmast 3ft. longer will be carried. The new main boom will be 61ft. 6in. in place of 46ft.; gaff, 33ft. 6in. in place of 27ft. 6in. The topsail yards will be 41 and 29ft., and spinaker boom 57ft.

SAILOR'S LANGUAGE.—Mr. W. Clark Russell has done a good service in compiling the little glossary of sea terms which is published under the above title. In a compact little volume of 150 pages he has gathered together a great number of words and phrases in use by sailors. The definitions are clear and simple, and the book will be specially useful to those who, without being technical seamen, are interested in ships and yachts and their literature. It is well illustrated by woodcuts of typical vessels, old and new. Messrs. Sampson, Low, Marston, Searle & Rivington, London, are the publishers.

MICHIGAN Y. C.—This club will at once begin the erection of a house on Belle Isle, the cost being about $4,000. The officers are: O. W. Baker, Com.; Arthur E. Albertson, Vice-Com.; Fred C. Whitney, Rear-Com.; J. G. Battelle, Sec'y; F. C. Langley, Treas.; Dr. A. Thuner, Fleet Surgeon; Andrew Kramer, Meas. The first four-named officers are members of the board of directors, together with A. I. McLeod, C. D. Joslyn, Capt. Joseph Nicholson, Fred Fayram and S. Dow Elwood.

CAPE ANN Y. C.—Mr. A. J. Forbes has presented a handsome silver cup to the Cape Ann Y. C., to be sailed for this season. The races of the club, as far as dates are set, are: May 30, Gloucester, open club sweepstakes race; June 22, pennant race; July 4, open sweepstakes race; July 27, club race at Magnolia; Aug. 10, pennant race; Aug. 22, open regatta; Sept. 7, pennant race.

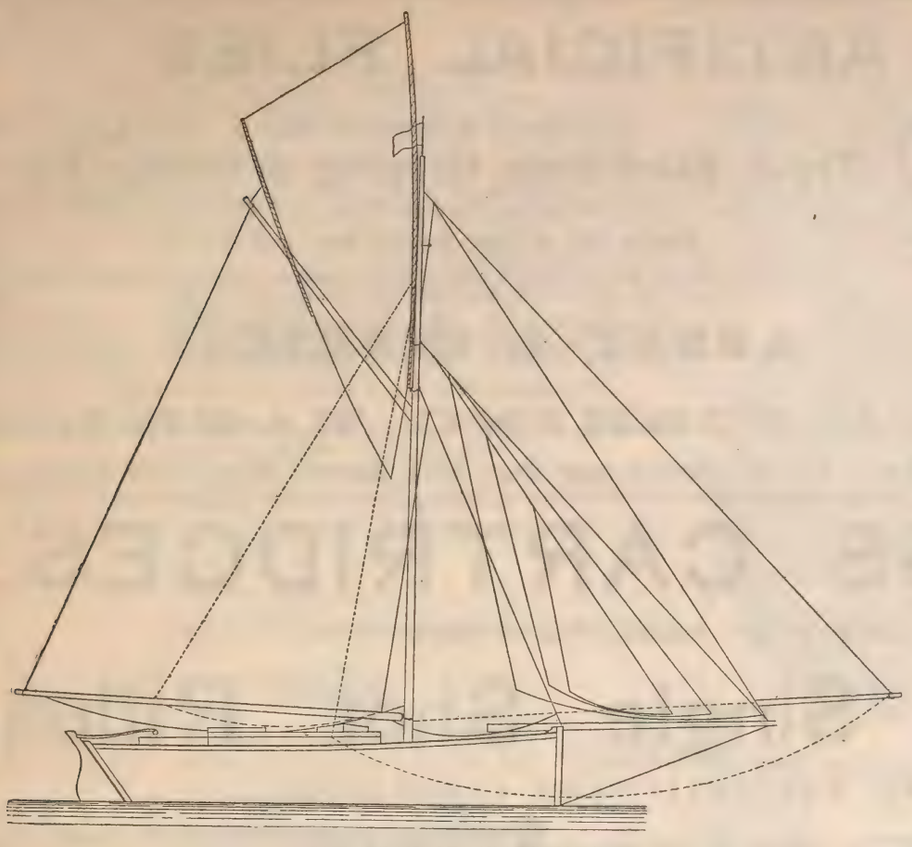
THISTLE,—The trial trip of the Thistle was made on the Clyde on May 11, and was vary satisfactory, as she carries her canvas remarkably well. On May 14 she was out again, and on the following day she had a trial with Vanduara, and easily left her. She is reported as very fast in light winds. On Tuesday she was to leave for the Thames, to be ready for the match in May 28.



CHANGES OF OWNERSHIP.—Romance, schr., of Boston, has been sold to Col. Granby S. Howard, Port Richmond, S. I. Active, sloop, has been sold by C. P. Kenney to F. C. Fowler, of Essex, Conn.... Wave Crest, sloop, E. R. Rogers, has been sold to G. W. Colding. ...Marie, keel sloop, has been sold by Jas. Hutchinson to W. O. Gay, of Boston.

YACHT HARDWARE.—We have received from L. W. Ferdinand & Co., of Boston, their new catalogue of boats, hardware, blocks and yacht gear of all kinds. The concern is one of the largest in the East, and carries a full line of all materials and fittings used by canoeists and yachtsmen.

MERLE.—This centerboard sloop left Boston last week for Oswego via New York and the canals. Captain Arthur Harding, formerly of the cutter Beetle, will take her out, the owner, Mr. Ames, and a friend, Mr. W. E. Lee, of Oswego, accompanying him.



NIRVANA, schooner, Gen. H. W. Perkins, returned to New York on May 5 from a winter's cruise in the West Indies, and has gone to Port Jefferson to refit.

DORCHESTER Y. C.—Capt. Samuels has been invited to lecture before the club on May 20, at the special meeting.

THE SINGLE-HANDER "DABCHICK."—Designed by Chas. Livingston, Liverpool.

From "Yachts, Boats and Canoes," by C. Stansfeld-Hicks.

SAIL PLAN OF "DABCHICK."

THE DABCHICK.

THE book, "Yachts, Boats and Canoes," contains a number of plans of single-hand yachts of various types, the accompanying drawing, which we reproduce from the plates, being the smallest, a boat excellently adapted to the wants of young amateurs. The Dabchick was designed and built by Mr. Charles Livingston, of Liverpool, the designer of the canoe Laloo, and an old correspondent of the FOREST AND STREAM. The boat was built by the owner, assisted by two ship carpenters, working only of evenings through the winter. The dimensions are:

Length over all	16ft. 9in.
Length, l.w.l.	15ft. 9in.
Beam	5ft.
Draft	3ft. 8in.
Displacement, tons	1.93
Ballast, keel	16cwt.
Ballast, inside	10cwt.
Ballast, total	1 ton 6cwt.
Mast, deck to hounds	12ft. 9in.
Mast, deck to truck	21ft.
Mast at deck	4½in.
Boom, diam. 3½in.	14ft.
Gaff, 2½	9ft. 6in.
Bowsprit, 3½ outboard	8ft. 6in.
Spinaker boom	17ft.
Topsail yard	13ft.
Jack yard	7ft.

The scantling is as follows: Keel, American elm, sided 10in., moulded 4in.; stem, English oak, sided 3in., moulded 6in.; sternpost and deadwoods of same, sided 3in.; planking, garboard to bilge, ⅞in. yellow pine, bilge to wale, ⅜in. white pine, and wale of birch; frames, American elm, 1¼x⅞in., spaced 7in., all steamed and bent; three oak floor knees, clamps 1x6in., deck beams 2x1¼in., knees and partners of English oak; planksheer, American elm, 3½x⅞in.; deck, white pine, ⅞in.; coaming, American oak, ⅝in.; deadwood and keel bolts yellow metal, latter 1¼in., and fastenings of handmade copper nails. The well is 9ft. long, but may when cruising be closed over by a trunk or hatch 5ft. 5in. long, with skylight and companion, making a snug cabin with 4ft. 2in. headroom and a cockpit 3ft. 6in. long. The sailplan is small even for one man in cruising. Mr. Livingston says, "I use oilcloth on the floor, as it is always dryer than carpet. For sleeping accommodation two iron frame cots which fold up against side in daytime and form comfortable cushions to lean back upon. Each contains a mattress, pillow and two blankets. Cots are certainly the best forms of beds for a small boat. They keep the blankets out of the way in the daytime, and I generally pack my change of clothes in one of them. Two cabin cushions covered with American cloth. One water breaker holding about five gallons. The cooking outfit includes a methylated spirit stove with two lamps, kettle (1½qts.), boiler, steamer, frying pan and small tin pot. All the utensils should fit the holes in the top of the stove and they will not tumble off if the boat is at all lively. I find that the most convenient way to carry the methylated spirit is in half gallon tins; three tins last about a fortnight with two living on board." Full tables of offsets and of blocks and cordage are given in the volume.

SEAWANHAKA C. Y. C.—The June meeting of the S. C. Y. C. will be advanced to May 24, the opening of the new club house at No. 7 East Thirty-second street.

VIKING, s. y., formerly owned by the late S. J. Tilden, has been sold to R. H. White, of Boston, for $35,000.

ATLANTIC Y. C.—The date for the annual regatta of the Atlantic Y. C. has been fixed for June 16.

CYTHERA, yawl, W. A. W. Stewart, is at Poillon's for a new rail.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

A. M.'s query will be answered next week.

E. D. P., Clinton, Mass.—For map write to Colton Bros., map publishers, William street, New York.

W. W. R., Newark, O.—1. Use Express bullets. 2. The Upper Peninsula of Michigan is a good deer country.

A. W. S., San Francisco.—The address is given as Edinburgh, Scotland. You may send by international money order.

FULTON COUNTY, Ky.—Will some of your correspondents kindly inform me through the columns of FOREST AND STREAM regarding the opportunities for sport with rod and gun, available for a single day's outing, to a person residing in the western part of Fulton county, Ky?—C. N. C.

VIM, Hartford, Conn.—I have a setter pup which is being housebroken. I shall be able to give him one week's practice only on quail and ruffed grouse this year, but I can give him almost daily practice on rail after Sept. 1. Would it be advisable to let him have this practice on rail before working him on quail or grouse? Ans. No.

R. M., Freeport, L. I., May 12.—Yesterday I caught a trout out of a stream in which we seldom find one, and this morning while dissecting it I found about 30 matured eggs which should have been deposited last fall, and at the same time eggs forming. Can you tell me how this happens? Ans. There are many similar instances on record. The American brook trout is quite irregular in its spawning habits, and the eggs also vary in size more than any other fish known to fishculturists. The late eggs you saw might be laid, but for lack of impregnation would have produced no fish. They are usually through spawning in February, but in Caledonia Creek eggs have been taken by Mr. Annin in March. As the fish had only 30 eggs left, she had probably laid the rest earlier in the season.

THE TRAVELERS of Hartford advertises what it HAS DONE, not what it is GOING TO DO; it HAS PAID over $11,20 ,000 to Policyholders in settlement of claims.—*Adv.*

MAN AND OTHER ANIMALS.

A few years ago several young men of Galt leased a lake in this county and went into the business of hunting for the market. They were quite successful, and finally struck a scheme which would have glutted the wild game market of the world if rival hunters had not interfered. One morning two of the hunters were coming to the city with a wagon load of game and had just crossed the railroad track when they discovered five dead ducks lying beside the track. "I wonder what killed those ducks?" asked the young hunter. "The telegraph wires, of course," replied his companion. "It very frequently happens that ducks, quail, and other birds which are rapid on the wing are killed by flying hard against the wires." "If that is true," said the first speaker, "why wouldn't it be a good idea to stretch lines of wire across our lake?" It was agreed that the scheme should be given a trial. A block and tackle were secured, and seven lines of wire, 100 feet apart, were drawn across the lake. The young men were up bright and early next morning to see what success they had. They took a boat, went out on the lake and picked up 107 dead ducks. The hunters laid aside their guns, quit purchasing ammunition and every morning for more than four weeks they secured a boat-load of ducks brought down by the small wires. The ducks would come into the lake like a shot, as darkness approached, dive down toward the water with terrific speed, and would be mowed down by the wires by scores. Finally older professional hunters became aware of the "fake" of the young men, cut the wires, and by threats prevented them from being again erected.—*Sacramento Bee.*

After the strikes alongshore were settled and the police reserves were withdrawn Capt. Gastlin obtained a short leave of absence to recruit his health, which had been somewhat impaired by his incessant work. He is a great sportsman and a crack shot. When, therefore, he announced that he was going South to do some hunting, some of his friends begged him to send them a souvenir of his prowess. Among the number was Fire Chief Benjamin A. Gicquel, who was anxious to get a bird. "No matter what kind of a bird it is," said he to the Captain, "if you can only get it alive send it along." The Captain promised. When he got down in Virginia he one day saw a coon. He was lively and went up a tree about as quick as a bird. A light dawned upon the Captain. Here was a good substitute. He hired a negro, got the coon alive, and sent him on carefully boxed and labeled. The animal arrived at the West Tenth street engine house, and the package containing him was opened a few days ago with great formality by Chief Gicquel. The bystanders say that coon went out like a streak of orthodox Jersey lightning, and it took half the engine company to secure him. He was promptly adopted by the fire laddies, however, and was dubbed "Gicquel's bird." A little coaching has given the coon an idea of discipline, and he shows promise of future usefulness. But Chief Gicquel has a little rod in pickle for Capt. Gastlin.—*New York Times.*

While making a call at Zinn's Hill, Salem, N. H., yesterday afternoon, Mr. and Mrs. Beriah Foster of this city witnessed by far the greatest exhibition of snakes ever coming under their observation. A woodchuck's hole on the farm of Rodney Woodbury had been dug out, and no less than 83 snakes brought to the surface in a torpid state, killed, and hung on a pole to dry. The collection included 78 black snakes, 3 adders and 2 striped. The largest snake measured 5 feet 2 inches in length, and 6 inches in circumference. Combined length of all, 327 feet. This is a big story, but a true one.—*Haverhill (Mass.) Bulletin, April 25.*

INDIAN POACHERS IN MICHIGAN Waters.—"It's a most infernal outrage," said Ed. H. Gilman last evening. "Just think of it! Fifteen of those Walpole Island Indians speared six barrels of black bass, the finest fish in the world, out of our spawning-bed in one day. They are Canadian Indians, and Canada gives them Walpole Island for a reservation. Then they go and lease it to the Toronto club under such strict rules that they cannot hunt and fish on the Canada side, and the blamed miscreants come over into American waters and spear our fish. It would be an outrage at any time, but to spear the fish now, before they have deposited their spawn, is terrible. Mr. Locke, a member of the St. Clair fishing and shooting club, came down on the City of Baltimore today and his attention was called to the six barrels of bass on board. The boat stopped at Bissell's dock, and Mr. Locke came direct to me to tell me the facts. About the time he reached me I received a telephone from Bissell stating that the fish were landed there, and that Joe Bedor had bought the six barrels for $14. I had been talking with Game Warden Smith at the Russell House, but I went back and laid this case before him. He was as much incensed as I was, and said he would look up the law of the State in the morning and see if there was any statute under which he could arrest the miscreants. If not he would proceed against them under the fishing treaty. He said he was determined to stop the practice of people from other States and Canada coming into Michigan and carrying off our fish and game. I tell you he is a good one. The State Sportsmen's Association has been working for eight or nine years to get laws that would protect our fish and game, but we had no one to look after them, and the state has been invaded by everybody. But now Gov. Luce has given us a man who is energetic and active; who knows his duty and will perform it. I estimate that those six barrels of fish represent about 10,000,000 black bass that would have been hatched from the spawning-beds in a few weeks more. Every man who has heard of it says it is outrageous for those Canadian Indians to come into our waters and take our fish in this manner. They cannot do such a thing on the Canadian side, and the game warden will see that they do not trespass on us in the future. A bill has just passed both branches of the Legislature, and only wants the signature of the governor to become a law, that will help to put a stop to this business. It makes the finding of fish in the possession of any man out of season prima facie evidence of a violation of the law. There is no doubt that the governor will sign it and that it will soon go into effect." Mr. Gilman was very earnest in his denunciation of the outrage on the part of the Indians and the man who encouraged them by buying the fish. He was not alone in his sentiments, but was warmly indorsed by several other sportsmen who heard the conversation.—*Detroit Tribune.*

Few people are aware of the fact that a life was lost in the destruction of the residence of Mrs. Carr; but such is really the case, and there is genuine mourning among the members of that once happy household. Their favorite house-dog Tip, so well known in this city, although taken repeatedly from the burning building, persisted in returning, until the cruel flames cut off his exit and poor Tip perished. Not many years ago, by the sagacity of this same dog Tip, a conflagration which might have proved quite as disastrous as the one we are now chronicling, was averted. Through the carelessness of a servant, the fence and side of the store in rear of Mrs. Carr's residence caught fire in the dead of night from an ash-barrel. Vigilant, watchful Tip saw the danger and set up such a howl of distress that the attention of Edwards House guests was attracted, and by them the fire was subdued. It was regarded then as a most fortunate escape, and to faithful Tip was accorded all praise and glory. While dropping a tear for poor old Tip, it is gratifying to know that our friend Joshua Blake succeeded in saving from the flames his famous dog King who with his kind master has crossed the wide ocean seven times, and is perhaps more widely known at fashionable resorts than any pet dog.—*St. Augustine (Fla.) Weekly.*

A private letter from Naples to a London correspondent contains the following: "If you like dogs you will be pleased with the annexed: At Ceriano a poor fellow who lived by hawking milk was buried under the ruins of his cottage a little way out of the town. As he usually set off on his rounds before four A.M., every one believed he was safe, but he too had celebrated the end of carnival by taking a little wine, and had slept late. His large dog, which used to drag the milk cart up the mountain roads, smelt out his master, and began to scratch away the rubbish until he laid his master's head bare, which was covered with wounds. Then the dog began to lick the wounds; but finding that the bleeding continued, and comprehending that he could not dig further, he ran off and seized by the coat the first individual he met, who, thinking the dog was mad, got loose and ran away. But a second person, guessing what the animal wanted, followed him, and consequently the poor milkman was released from his dangerous position. The Minister Genala paid him a visit, and found him with his head bound up under a tent, with the faithful dog lying beside him.

A remarkable illustration of the puzzling migratory habits of the herring has just been observed on the southwest coast of Norway, at the so-called Jæderen, between the towns of Stavanger and Egersund. This district used to be one of the richest herring-fishing grounds in Norway during the spring, but about twenty-five years ago the fish suddenly and completely disappeared from the coast. Last month enormous shoals once more came under shore, first "striking land" at the same spot as in former times. The quality of the herring is exactly the same as it was twenty-five years ago, and the shoals were accompanied by numerous "herring" whales.

THE KIND OF BIRD HE IS.—A "best on record" of an unusual kind has been made at Baberton, Cape Colony. An artist named Woodcock played the piano for twenty-four consecutive hours "without breaking harmony." During the twenty-four hours Mr. Woodcock took no other refreshment than some beef tea and an occasional cigar. He finished in capital condition, and subsequently performed at two music halls, at one of which he was presented with a gold watch and chain and the evening's takings.

The other day a portly, dignified-appearing gentleman walked along the street towing a pug dog by a leather leash. Near the Post Office the dog slipped his collar and left, but the owner walked on calmly and entered a neighboring store, holding the leash with the collar at the end as if the dog was there. He was well inside the store when he noticed the empty collar, and the next scene was a portly form moving rapidly up street looking for a dog that belonged on the other end of the string.—*Providence Journal.*

A wren has built her nest under the eaves of a car on a South Carolina railroad, and makes four trips over the road every day. The bird pays no fare, and does not appear to be entitled to a pass under the new law. Respectfully referred to the interstate commission.

When calkers or shipcarpenters are cut by an adze or other sharp tool they immediately bind the wound with oakum saturated with spirits of turpentine. This is a favorite remedy aboard ship, too.

San Diego fishing parties report fat takes. The barracouda bite like mosquitoes and pull like whales.—*San Francisco Alta.*

COUGHING, with interludes of wheezing and sneezing, are heard in all public places. Every one ought to know the remedy; and that is Hale's Honey of Horehound and Tar—an absolute and immediate cure of all pulmonary complaints. PIKE'S TOOTHACHE DROPS cure in one minute.—*Adv.*

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages. Price $1.00.

A WORD IN SEASON.

Readers old and new of the FOREST AND STREAM may be pleased to know that the paper is now at the close of 1886 enjoying the support of a wider circle of friends than at any former period in its history. This is an interesting fact, for it proves, with the best possible demonstration of success, the sound sense of the theory long ago adopted by editors and publishers, and steadfastly adhered to, that there is room in this country for a journal treating the subjects embraced by our departments, and depending for its support wholly upon what have been accepted by the conductors of the FOREST AND STREAM as legitimate journalistic methods. In other words, we have kept faith with subscribers by devoting our reading columns exclusively to honest reading matter, and have not given up our pages to extended paid puffs of railroad routes clumsily disguised as accounts of sportsmen's travel, nor alluring descriptions of wonderful agricultural regions, all paid by the column. The conviction that a sportsman's journal for sportsmen could be conducted without resorting to such questionable makeshift expedients have proved quite correct.

The tone and high character of the journal, as one fit for sportsmen to receive into their homes, will be jealously maintained. As there is nothing in the recreations of field and stream inconsistent with the highest type of manhood, so, the editors are convinced, there should be in a journal like the FOREST AND STREAM nothing to offend good taste.

The FOREST AND STREAM will be, in the future as in the past, thoroughly representative of the best field sportsmanship of America. It will maintain its position as the chosen exponent of those who seek recreation with gun or rod, rifle, canoe or yacht. Its character will be scrupulously preserved, and readers in 1887 may expect a rich fund of sporting sketches and stories, suggestions, bright sayings, prompt, reliable news, and interesting discussions. Angler, shooter, dog breeder, canoeist and yachtsman, may be assured that whatever is of interest in these respective fields in 1887 will find its way into the columns of the FOREST AND STREAM.

The Sportsman Tourist

columns are filled with bright sketches of travel, camp life and adventure, the reflected experience of a host of outers.

Natural History.

Papers descriptive of bird life, chapters of animal biography, notes on the ways of field, forest and water creatures as observed by sportmen, anglers and naturalists, make up these pages. The special work of the past year has been the establishment of the Audubon Society for the Protection of Birds, begun in February, and having now a membership approaching 20,000.

Angling and Shooting.

Time was when a single journal sufficed in this country for adequate discussion of all the heterogenous pastimes and practices dubbed sport. That time has long since passed away Some of the sports have been outgrown or put under a ban, others have developed to such a degree that each class requires a special organ. The particular fields chosen by the FOREST AND STREAM are those of angling and shooting. The pages given up to these topics are rich with the freshest, brightest, most wholesome, entertaining and valuable open air literature of the day. They have the sunlight and woodsy odor of the haunts of game and fish; they picture nature as seen by sportsman and angler. One has not long to read the FOREST AND STREAM before learning its attitude with respect to game and fish protection. The editors believe in conserving, by all legitimate methods, the game of fields and woods, and the fish of brook, river and lake, not for the exclusive benefit of any class or classes, but for the public. They are earnest, consistent and determined advocates of strict protection in the legal close season, and in restricting the taking of game both as to season and methods, so that the benefits of these natural resources may be evenly distributed.

The Kennel.

This department has kept even pace with the growth of the interest of breeding field and pet dogs. Reports of trials and shows are usually given in the FOREST AND STREAM in advance of other publications, and being prepared by competent writers their intelligent criticisms are of practical utility. This journal is not hampered by personal animosities. It has no judges to "kill." It does not decide a dog's merit by asking who the owner is. It treats all kennel subjects without fear, favor or ulterior motives, and in consequence enjoys a degree of public confidence and esteem denied to such as stagger beneath the incubus of malice and flounder in the bogs of ignorance.

Rifle and Trap Shooting

records scores of meetings and matches, discussions of topics pertaining to the butt, gallery and trap. Secretaries of gun and rifle clubs are invited to send their scores for publication.

Canoeing.

This country is a land of magnificent water courses, and Americans are just beginning to appreciate the canoe as a means of enjoying the delectable charms of river and lake, and bay and canal. The men who are making fortunes by making canoes know best how rapidly the ranks of canoeists are multiplying. Novices and old hands will find in the FOREST AND STREAM canoeing columns, in charge of a practical canoeist, accounts of cruises, lines of new craft, and hints and helps and suggestions without number. Closely allied is

Yachting,

in which the FOREST AND STREAM is the only competent, all-the-year-round, intelligent exponent. Our reports of races are full, prompt and accurate. The numerous illustrations of lines of new yachts make an invaluable record of the development of yacht building.

Weekly, $4 per year; $2 for six months.

AMERICAN MUSEUM OF NATURAL HISTORY.

AMONG the treasures exhibited at the American Museum of Natural History, perhaps nothing is more striking than the new exhibit of birds in their homes recently put on exhibition. This material consists of eighteen cases, in each of which is shown a mounted pair of birds with their nest and eggs and all their surroundings modeled after nature. The striking fidelity with which these surroundings are shown is explained by the fact that they are exact reproductions of the actual ground, leaves, shrubs and grass, on or over which these identical nests were found.

In the case of a ground-nesting bird, the soil is taken up in a block, and with everything upon it is transported to the museum, where impressions of all the perishable parts, such as green leaves, grasses, the soft parts of plants, etc., are taken, for reproduction by Mrs. Mogridge, in a composition which, to the eye, exactly represents the original vegetable material. This having been done, the block of soil is imitated by such a perfect representation as to mislead the most keen observer. Then it is placed upon a base or in a box. The models of the vegetation and the eggs and nest are put in position, and the birds, mounted in life-like attitudes by Mr. Richardson, the taxidermist of the museum, are placed on the ground or in the branches, and the whole thing is complete, and in a glass case might last a thousand years.

In the case of tree-nesting species, the shrub in which the nest was placed, together with the subjacent soil and all that was on it, is brought to the museum and treated in the same way. The leaves and flowers of the plant are reproduced, and the whole case seems like a little bit of the forest removed to the museum. A long description might be given to each of the eighteen cases which contain the different species which are here shown, but the cases themselves must be seen to actually appreciate the truth of these exquisite bits of nature.

The species represented are most of them our familiar birds: the robin, wood thrush, brown thrasher, song sparrow, field sparrow, swamp sparrow, seaside and sharp-tailed finches, yellow warbler, worm-eating warbler, red-eyed and white-eyed vireos, Louisiana water thrush, redstart, cardinal and rose-breasted grosbeaks, clapper rail and oven bird.

These beautiful scenes are but a beginning of what it is intended to show later on in the American Museum of Natural History. The birds are not to have a monopoly there. Arrangements are now on foot for representing the smaller mammals in their homes in the same way. An effort will be made to obtain specimens of these mammals and their young, as well as sections of their burrows, nests, or houses, so that visitors to this museum may see something more than the mere dried skins which ordinarily stare out of the cases in stiff and unnatural attitudes. It is purposed to give a representation, so far as practicable, of the life histories of these creatures, which will be far more interesting than any other method of showing them.

In order that this may be done as speedily as possible it is desired that specimens, or rather families, consisting of the male, female and young of each species be sent to the museum, together with their nests and their surroundings. In the case of burrowing mammals a section of the burrow should be sent, or, if the distance be not too great, the museum on notification will send a skilled person to secure and attend to the transportation of the material to the museum. The species especially desired at once are the following: mink, otter, skunk, woodchuck, gray rabbit, badger, muskrat, chipmunk, jumping mouse, star-nosed mole, common mole, white-footed mouse, and shrews.

Any of our readers who may have facilities for obtaining such specimens as those referred to, and who are willing to assist in so useful a work, are requested to communicate by letter with Mr. Jeness Richardson, American Museum of Natural History, New York city.

SHE DID IT.

THERE are some things for the full enjoyment of which a preparatory and reconciling experience is necessary. The glorious and exhilarating sport of water-killing deer at arm's length is one of them. The greenhorn, rowed up to his first deer, is quite likely to exhibit a bit of squeamishness. To pour a charge of buckshot into the struggling creature somehow goes against his grain; it is even on record that a certain clergyman, called upon to shoot an exhausted deer in the water, found it impossible to bring himself to the task.

An incident resembling this occurred on an Adirondack lake one September day not long ago. A city lady had heard her brothers brag so much of killing deer that she resolved to try it herself. They put her into a boat with a guide; the hounds drove the deer into the water; the boatman headed off the animal, quickly rowed up to it and directed the huntress to shoot it. "Oh, I can't. Let it go." "If you don't," he replied with an oath, "I will." And she shot it.

BOSTON NEWSPAPER ENTERPRISE.

BOSTON has again come to the front with special enterprise to meet the rapidly growing needs of yachtsman. The Eastern Y. C. has decided to sail a second regatta in August and will endeavor to secure the continuation of the N. Y. Y. C. cruise to Marblehead, and as an extra inducement the Boston *Herald* has offered a $1,000 cup as a prize for the large single-stickers. Not to be outdone the Boston *Globe* has arranged for an open regatta for all yachts of 40ft. and under, to be sailed off City Point on June 25. The details are in the hands of the South Boston Y. C., the expenses being borne by the newspaper. Prizes will be offered for fishing boats in a class apart from the yachts. While Boston papers are actively booming yachting in this way, where are New York's great dailies, which were so loud in the praise of ocean racing last January; what are they doing to help yachting? The *World* is just now engaged in the promotion of ballooning, a system of navigation that might be adapted to all parts of the country, even where yachts are unknown, but this sort of navigation is far less important just now than that which keeps alive the national interest in the pleasure and merchant marine, and the construction of fast American vessels. Perhaps when it has provided the denizen of dry land with a means of transport by which he will be independent of the railroads, it will turn its attention to the needs of New York yachting. There is a good opening just now in organizing an open race for small craft about New York, or for a special race for the first class yachts, and the other papers might find excellent opportunities for the investment of any surplus cash in similar directions. Certainly they owe much to the yachtsmen, who furnish them with pages of news in the dullest season, and they should not be slow, with the example of the Boston press before them, in making a suitable return in a manner that will aid materially the interests of New York yachting.

SNAP SHOTS.

IN another column will be found the text of the new Wisconsin law which makes the killing of many species of small birds for millinery purposes a misdemeanor, punishable by a fine of not less than $5 nor more than $100. Of this fine, one half shall go to the school fund and one half to the informer. The purpose of this law is most excellent, and it is hoped that it may do a great deal of good. It is open, however, to two most serious objections. On the one hand it will be difficult if not impossible ever to prove that any bird killed was killed for millinery purposes; and, on the other, a great number of birds which deserve protection are omitted from the enumeration of the species forbidden to be killed. The futility of enacting laws dealing with the intention of the possible misdemeanant has been so often shown that it is scarcely necessary to speak of it again. It is impossible to prove the motive which actuates one who commits a wrong. That motive can only be inferred. The killing, except for certain specific purposes, should be absolutely forbidden.

Our columns contain two instances of fishcultural success, which should be conclusive to our German friends who have been listening to croakings from Russia to the effect that the artificial propagation of fishes is a delusion. Here are two instances in which rivers have been stocked with species of fish which never existed in them before, and now they are found there in numbers. One of these instances is the introduction of shad on the Pacific coast, and the other is that of the salmon in the Hudson. The attention of our German friends is called to these facts, for they have been worried by the attacks of a Russian who, having failed in breeding fish, denounces all fishculture.

On Friday last Governor Hill gave a hearing to those interested in the bill which recently passed both houses of the Legislature authorizing the building of a fishway in the State dam at Troy. The opponents of the bill are the millers and the Troy Hydraulic Co., who have leases of the water, and claim that a fishway would be an injury to them. It was pointed out that the bill was not in the interests of sportsmen, but for the public good. The Governor said that the bill did not limit the size of the fishway nor recognize the rights of the lessees, and recommended that it be amended so that the size should be fixed and the time in which fishways should remain open.

Spratts Patent, of this city, received a cablegram yesterday from London announcing that a £10 cup would be given for the best foxhound owned by an American exhibitor at the forthcoming Jubilee show of the Kennel Club; and in another column is announced the shipment of a number of fox-terriers to be entered at that show.

The AUDUBON SOCIETY now numbers more than 32,000 members. The civilized barbarism which the Society was organized to combat has not been wholly abolished, but the outlook now is very different from what it was a year ago; and there is every encouragement in the new aspect of affairs.

Spring grass plover shooting, and potting on the ground at that, is the variety of sport indulged in in Texas in May. The justification put forward is the common one that migratory game must be taken whenever it can be.

There is good salmon fishing at Bangor, Me. Last Monday a New York angler took a fish of twenty-two pounds after a struggle of thirty minutes. On Tuesday twenty salmon were scored.

The weather yesterday was most propitious for the fly-casters at the Harlem Mere tournament, and in this respect the change from autumn to spring has proved to be a most sensible one.

The FOREST AND STREAM Decoration Day Trophy will be competed for next Monday by gun clubs representing fifteen States.

The Sportsman Tourist.

Address all communications to the Forest and Stream Pub. Co.

HALCYON DAYS.—VI.

AFTER a week of exceedingly cold weather, during which time the ground had been whitened by a light covering of dry snow, which in turn was drifted by the keen blasts of wind from the more exposed places into every nook and corner that would hold it, leaving exposed bare knobs and patches of yellow earth and ice, the sun, which had not shown its face through the dense gray veil of clouds that covered it, came out once more in short intervals of brightness, only to hide itself again, as if alarmed at its boldness in intruding upon a scene so dreary; but gaining courage after several more efforts, came out again in longer periods, until its influence began to be felt more strongly, and Boreas finally gave way, conquered, as it were, by its very gentleness. But in spite of the sunshine, which seemed powerless to do else than to give the scene a more cheery aspect, the atmosphere remained cold and raw, and those who had been allured from their homes by the pervading air of warmth and cheeriness, quickly found themselves disappointed, and returned to seek the more genial comforts of the fireside. Some, however, failing to realize their anticipations of a pleasant day, as if prompted by a mutual desire for companionship, had found their way into the little store, and were gathered in comfortable positions on the benches or stood watching the progress of a game of checkers between two players, one of whom, to judge from the frequent facial contortions of Waxy Latin, sitting on the edge of the counter above them, was making some very bad plays. There being an established rule that no outside influence, either by word or gesture, should be permitted during the progress of a game, Waxy, whose sympathies seemed to be with the poorer player, moved restlessly on his seat, unable to further conceal his impatience, and when an unlucky move on the part of his favorite gave his opponent a chance to turn the tide in his own favor so effectually as to win it, his feelings, no longer controlled, gave vent to a disgusted "A-w-a-w, gol durn it! why didn't ye move the other way?"

While the players were arranging their men for the commencement of another game, an individual whose presence had hitherto been unnoticed, owing to his position in an obscure corner, attracted by Waxy's exclamation and the chuckling laughter of the bystanders over the result, arose and shambled up to the outside of the circle, where he stood listlessly watching the board and the players. He seemed to take little or no interest in the game, his purpose evidently being to feel that he was in company and surrounded by spirits more genial than his own. His features bore many hard lines of dissipation, which, mingled with a presumptuous expression of self-importance, made him noticeable as a character in the village. Among his associates at the tavern he affected a pomposity of manner and speech, probably an inheritance of bye-gone days of prosperity and affluence, that ill became his general appearance; and being their superior in point of conversational and argumental ability, his tongue once oiled with liberal potations of "bug juice" ran in such unceasing strains of vulgar eloquence as to call forth the plaudits of his listeners and frequent demands upon the bar, though seldom at his expense. He was never known to get drunk, as the term was understood, that seemed impossible, for he had acquired a reputation of swallowing more whisky and standing up under it, or around it, than any other man in the vicinity. Here among his fellows he was considered a jovial, jolly good fellow, and almost a necessity to the life of a crowd who were willing to pay for his drinks for the sake of hearing him talk. But alas, for those who knew him best, at home his disposition was anything but what it appeared away from it. Neither did he presume too much upon the good nature of the company he was now in, for it was different from his choice, and he was satisfied to let his special talents remain dormant as far as possible rather than risk the chances of an unequal wordy collision with those whose argument he knew were better fortified than his own. At the tavern his voice would have been most conspicuous. There he felt that he stood upon equal ground and nothing would have pleased him more than to enter into a discussion on any subject, substituting a presumptuous familiarity for any deficiency in knowledge. Such was the appearance and character of Bill Carter, Chip's stepfather, who, for reasons best known to himself, had strayed away from his usual haunt and drifted into better company.

As the new game proceeded and the bystanders discovered that the principals were only ordinary players, their interest began to abate, and one after another casually withdrew from the circle to indulge in neighborly chat. Even Waxy, who had been called from his perch to serve a customer, did not see fit to return to it and remained on the opposite side of the room, where he sat industriously chewing his cud of spruce gum, stopping long enough, as Bill Carter shuffled over his way to inquire, "Wal, Bill, haow ye makin' aout these days? Duin anything naow?" And receiving the rasping, dignified reply he had expected.

"N-o, I have found nothing yet that suits me. Times are very dull, very dull indeed."

"Why, hev ye seen Mart Dewpew? he's bin lookin' 'raound fer men the last tew weeks, he's got a big contract with the railroad company to furnish 'em with I d'no haow many cords o' wood 'n' he's 'fraid he can't fill it. Ye c'n git an all winter's job with him, 'n' good wages, tu."

"Yes, Mr. Depew wanted to engage me. His terms are pretty fair, that is, as far as wages go, but he don't want to pay until spring, except in store orders. I prefer cash; cash, you know, Mr.—ah—Latin, is a very necessary consideration in these hard times, especially where one has a family to support."

"Wal, ye see, Mart can't pay cash till he gits it, 'n' he won't till he gits threw with his contract. I sh'ld think it 'ld be better 'n nothin'. Ye haint done nothin' all summer, hev ye?"

"W-ell—ah, nothing to speak of. I have been a great sufferer with dyspepsia and am consequently not able to do much manual labor. I would be very glad to help Mr. Depew out if he had some—ah lighter employment than chopping wood. I would not object to a clerical position, now, but of course Mr. Depew has nothing in that line. I think, however, that I will see if he can't provide something for Chip; you have no idea what trouble that boy has caused me, Mr. Latin."

"Wal, I don't thing he's causin' ye much trouble naow, 'n' I'd advise ye tu let him be where he is, 'n' ef I was yu I'd try 'n' set him a better example 'n loafing 'raound the tavern all the time. It's gol durned—" Waxy was growing indignant, and it was perhaps fortunate for Bill's peace of mind that he was interrupted before his feelings carried him beyond the pall of reasonable expression. The door opened, followed by a rush of cool air that caused Waxy to turn his head in time to discover Old Shack in the act of closing it after himself. Bill Carter, whose manner had begun to cringe before Waxy's unexpected tirade, was glad enough to take advancage of this opportunity to sneak back out of sight in the crowd which he evidently found unsuited to his taste, for he soon deserted it and was seen no more that day.

Chip Mason awoke early, and, casting his eyes toward the bark roof over him, discovered traces of daylight breaking through the cracks; but, not satisfied with his long night's sleep, drew his blankets closer about him and turned drowsily over on his side preparatory to a short snooze before rising. As he did so he noticed that the fire had been kindled in the stove and both Old Shack and Snap were absent. This was sufficient to fully arouse him, and, throwing off his covering, he swung himself feet foremost over the side of his bunk and began pulling on his boots, an operation that occasioned not a little tugging and kicking, for they were, as usual, frozen stiff and hard. While he was puffing and blowing over his exertion and kicking against the door post in his efforts to get them on, there came sniffing and pawing at the bottom of the door on the outside, and in a moment more Old Shack pushed the door open and Snap bounded in, nearly knocking Chip over as he jumped against him in his joy at seeing his master up; but Chip, who was more interested in the occupation of getting his heel beyond the sticking point than appreciative of the brute's affection, only rewarded him with an impatient "Git out, gol darn yer!" as he made a vicious, but unsuccessful, kick with the boot at which he was tugging.

"Hurry up 'n' git yer gun," said old Shack, "'n' I'll show ye as purty a shot as ye ever seen, I cum back after it 'n' tho't I'd surprise ye, but seein' 't ye 'r up yu'c'n hev the chance. Is it loaded?"

"Yep," said Chip, as his obstinate heel went to the bottom of his boot with a chug. "Wat is it, mushrats?"

"No, ye'll see purty soon ef ye hurry; ready, wal, cum on."

Chip got his gun, making so much noise in his excitement that Shack found it necessary to caution him. "Don't make so much noise 'r ye'll scare 'em; it's only a little ways f'm the shanty." Chip followed a short distance behind the old man, who proceeded cautiously until he came to a large tree, which shielded him from the view of what he seemed to be seeking, then turning he beckoned to Chip to come up, and as he drew near pointed to a limb of another tree a few yards away and whispered, "See 'em?"

"O, gosh! look out the way," and Chip nervously pulled at the old man's coat to get him out of the way.

"Hold on now, don't git excited 'r ye'll spile the fun; better let me shoot 'em."

"No-o, no, I c'n do it."

"Wal, then, rest yer gun on my shoulder 'n' take good aim. Be careful, now," he whispered, as he stooped, grasping the tree to steady himself, and Chip placed the gun on his shoulder. "Give 'em a side wipe 'n' ye'll rake 'em all off."

Half a dozen partridges were sitting in a row on the limb that Old Shack pointed out. He had discovered them while going down to the scow and hurried back to get the gun. Chip's hands trembled violently as he cocked the gun and it seemed to him as if he could never get it to bear on the right place as he took sight across the barrel, but while he was trying to steady himself his eye caught the movement of one of the birds' heads as if about to fly and he determined that the next time the muzzle wabbled on to the flock he would pull the trigger. It did a second later and with a sort of blind desperation he fired. Before the smoke cleared away Chip had dropped his gun and ran forward, and as he saw first one and then another of the birds fluttering on the ground he shouted as he made a dash for one that began to run away with a broken wing, "O, gosh! O golly! I got 'em all!"

"No ye ain't; ye ain't got that one yet," said Old Shack as the bird made a sudden turn and slipped away from him. "I seen two on 'em fly, 'n' thet one ye'r after won't be got onless ye'r purty lively."

Chip was bound to have it, however, and made a headlong dash just as it darted under a small bunch of twigs, and catching his foot on a projecting root fell flat over it, where he lay, afraid to get up, for fear it would get away again, until after fumbling around he caught hold of one of its wings and pulled it out dead. His weight had killed it.

"Ye made a purty good shot, anyway. Here's three," Old Shack said, holding up those that he had gathered while Chip was after the wounded one. "Purty good morning's work thet."

It was certainly a genuine pot shot, and one that would be greatly deplored, at least on paper, by the average sportsman of to-day; but neither Chip nor the old man thought of anything but the glory they had achieved, and Chip was so proud over it that he nearly forgot to pick up his gun when they started back to the shanty.

Breakfast was a simple affair with these two campers, and it was not long in preparation or dispatching. After Chip had washed the dishes and set things to rights, he stepped over to where Old Shack sat smoking, and picking up one of the birds, began to stroke its feathers and admire its plumage. Finally, after a thoughtful silence he said: "I wish mam had one o' these; I'll bet she ain't had nothin' 's good in a long time."

"Wal, there ain't no reason why she can't hev one. They're yours, 'n' ye c'n give 'em all tu her ef ye want tu."

"No, two of 'em 'ld be enough ef I c'd git 'em to her, but I dassent go home on account o' pap. Mebbe I c'ld git Waxy to send 'em up, though."

"I've bin kinder thinkin' o' goin' down tu the store this mornin' ef ye don't mind stayin' here alone. It looks 's ef it 'll be a purty nice day, 'n' one of us 'll hev tu go down soon, any way. Tell ye what," as an idea struck him, "I ain't afraid o' yer pap, 'n' I'll stop 'n' give 'em to her."

"Will yer? That's bully! Say, don't let pap see 'em, 'n' tell mam I shot 'em, will yer? Gosh, won't she be glad!"

"Yes," said Old Shack, laughing, as Chip hustled around trying to find a string to tie the bird together, and, picking out two that had the brightest plumage, he soon had them ready. Then the old man drew on his heaviest coat, and taking Chip's woollen comforter wrapped himself up about the neck and ears, was ready to start. "Better not go fur f'm the shanty," he said, as he opened the door; "but ef ye want to look fer them other partridges ye might find 'em down near the eddy somers. I don't think they went fur." And Chip was left alone.

Old Shack found Chip's mother busily engaged at some light sewing that she was doing for one of her neighbors to gain means to help provide her scanty table, and assuring himself that her husband was not around, presented the birds, faithfully delivering Chip's message in regard to their capture, and by way of encouragement added that Chip was "doin' well 'n' 'll make a man tu be proud of some day." Mrs. Carter accepted them gratefully, while the tears welled in her eyes and her voice almost choked her as she replied: "Oh, I'm so glad he has such a good place to stay. I know he is safe with you, and if you will advise him he will follow it. Here is something," she said, placing a small parcel containing a pair of heavy woolen socks in the old man's hand, "that I have been keeping for him until I could send to him. Tell him I will send him some more as soon as I can make them."

"Wal, I'll take 's good keer o' him 's I kin this winter, 'n' ef he strikes out right in the spring he'll git a start. I'd ruther he'd learn some other kind o' business 'n trappin', 'taint no kind o' business fer any one 'cept an old chap like me 't aint good fer nothin' else. I think ye c'n rest easy about him, tho'." With this assurance he left and proceeded to the store where, as he entered, he was greeted by Waxy with: "Wal' I'll be durned! Haow d'ye du, 't's good fer sore eyes tu see ye. What fetched ye daown?"

"Wal, ye see, I run out o' tobacker, 'n' they say 't nobody keep 's good tobacker 's Waxy Latin; so as one on us hed tu come, I tho't I'd stretch my legs a little, seein' it's sich a nice day. How be ye, Joe, John? Why, Bill, ez thet you? I ain't seen ye in a dog's age. Ye'r' lookin' well." This to Bill Carter, who had tried to retreat, but being cornered, could not decently escape the old man's conciliating hand. "Why—yes; that is, what is left of me, so to speak. I was just telling Mr.—ah, Latin, here—" But just then Old Shack was taken in hand by another of the party, and Bill Carter's grandiloquence was cut short before he could conclude his stereotyped tale of imaginary complaints. When the final handshaking was over, Waxy said: "Set daown, old man; set daown 'n' make yerself tu hum."

"No," Shack returned, "I ain't goin' tu stop long. I jist tho't I'd run in 'n' see how ye was 'n' git some tobacker. I ain't much 'f a hand fer comp'ny, ye know, 'n' I want tu git back. Mebbe I'll be down agin 'fore long."

"Wal, come whenever ye kin," said Waxy, as he handed him the paper of "Cut and Dry" and picked up the change; "ye're always welcome."

When Old Shack arrived within hearing distance of the camp he heard the sound of axe blows, as Chip was engaged in chopping a supply of firewood, and as he drew near Chip dropped his axe, and, picking up an armful of the wood, stood waiting until he came up. "Did ye git them other partridges?" the old man inquired.

"No," he said, "I couldn't find 'em. Did yer see mam?"

"Yes, 'n' I seen yer pap tu; but he wan't home. Here's suthin'," he continued, as they entered the hut and Chip threw down his armful of wood, "'t yer mam sent ye, 'n' she sed she'd send ye some more 's soon 's she could. Ye got a good mother, Chip, ef yer pap ain't what he ort tu be."

As Chip unrolled the package and discovered the socks that he knew was of his mother's knitting, he could not speak for a few moments; but when he finally regained his speech he said, as he began to fondle Snap's ears, whose head was lying in his lap, "By gosh! I'm goin' ter git some more partridge, an' I'll take 'em to her myself, pap or no pap."

Mansfield Valley, Pa.

WEWAHITCHKA.

COLUMBIA, Ala.—Nearly parallel with the broad Apalachicola, in Calhoun county, west Florida, is a fine body of water, variously styled Chipola, Dead, or Wewahitchka Lake. It is about 20 miles long and from 2 to 4 miles wide. It is formed by a considerable stream, the Chipola River. The lake swarms with black bass, rock fish, sturgeon, trout, shell cracker (the finest of all the perch tribe), bream, sucker, jack, cat, loggerhead and soft shell turtles and some alligators. Fishing on the lake is superb from April 1 to June 1 and from October to January. In the winter months myriads of nearly all the varieties of ducks, swan, geese and brant, and many smaller wildfowl flock to its feeding grounds. There are turkeys, deer and wildcats in abundance, with a bear occasionally met. The lake seems practically inexhaustible, as nature has provided it with all the accessories that go to constitute an incomparable fish hatchery.

Annually, for five years, the writer has spent a week in May catching the finny beauties, and during his last visit, May 1 to 7, the fishing was much better than usual. The water is clear and soft, and being near St. Andrews Bay a sea breeze is almost constantly blowing. The nights are cool and bracing, the country healthy; in fact there is everything necessary to constitute a sportsman's paradise. There is no sport in Florida where a few weeks could be more comfortably spent than on Lake Wewahitchka. You will find comfortable hostelries on either side of the lake, kept by J. Glen, R. M. Carter, Miss Hunter, and many others, where a guest can find all the home comforts and the best sport.

Should parties from the East desire to spend a while here in winter or spring, they could take cars and run down from Savannah, Ga., to Chattahoochee Junction, and then by steamboats to Iola, which is within two miles of the lakes; and parties from the West could go by New Orleans, Mobile or Pensacola, and to Chattahoochee and by steam to Iola.

VIATOR.

BEE HUNTING.

ONE warm and sunny afternoon, while swinging in my hammock under the shade of a wide-spreading maple, partly dozing, partly meditating, I was aroused by a cheery voice, "Capt, do you want to go bee hunting?"

I sprang out on the lawn and looked at my interrogator and answered "yes" in an instant. Six feet and over, tall and straight as a poplar, hawk-eyed and sinewy, and one of the best shots with a navy revolver I ever met, Morris Brandigee was a man you would delight to look on. I had met him in the woods while hunting not long before, and the attraction was mutual. He was out after rabbits, and had two in his game bag when I met him and had nothing in his hand but an old navy revolver—not much of a hand. "Do you shoot rabbits with that?" "Oh, yes; I walk them up; they're quite plenty round here; after they get under headway I give a whistle, the rabbit stops and I pop him through the head." Though I did not tell him so, I imagine my face expressed incredulity. "Do you see that knot on that tree?" he said, pointing to a gnarled oak 15yds. away. He drew his revolver, cocked and fired on sight, and the ball struck it square in the center. "That's the way I kill my game." "Well, Morris seeing is believing."

So we sat down on a log and had "a multiplicity of talk." I had said "I don't mind hunting rabbits, but I never hunt foxes." "Why not, Capt?" "It sounds very captivating," I replied, "to talk of the brilliant throng of horsemen, the high mettled steeds, the music of the hounds, the rush and sweep of the men over a five-barred gate, the dash of the dogs, reynard straining every nerve in his gallant fight for life, and all that; but I was hunted down by hounds near Savannah, Georgia, in the last unpleasantness, and I have never seen a pack of hounds since without a curious sort of sensation coming over me, nor a fox without feeling a genuine sympathy for him." "Well, come and go bee hunting with me," replied my guide. And so it all came about. Making our way leisurely over to a field abounding in wild flowers not far away, and bounded on its we tern slope by an extensive wood, Morris produced a sardine box partly filled with honey, laid it down on a rock near by and awaited results. "It won't be long before you'll see one of the little fellers tackle it." And so it proved. Buzz, buzz. We watched the busy worker fill himself up, which he soon did, and the next instant he was off like a flash. But the keen eye of the hunter followed him in his flight, as he said, "We will watch him when he comes back."

"When he comes back? Why how can you tell one bee from another? How do you know he will return?"

"He will be back before long Capt, and he will bring some of his friends with him. Catch one and dust a little flour on him and you will easily distinguish him."

"He'll get up and dust," I answered.

"Yes, that's it."

In a few minutes several bees were humming around the box and going through the same process of loading and flying off, Morris watching them intently all the while and noticing the direction in which they flew. Presently he took up the box and moved forward a hundred yards toward the woods, then put the box down and again awaited the result. I became very much interested, for I have always been a great admirer of the "busy bee," though practically I know more about "double Bs." There was a continuous line of workers coming and going, and I myself could p ainly mark their flight now for some distance.

"They're over in those woods and I guess we had better be moving," said Morris, so we took up our line of march, crossing the meadow over the fence and into the woods we plunged, my guide stopping occasionally and watching the flight of the bees. Finally he stopped, and pointing up to the top of a high tree, said: "There they are. Confound it! I hate to disturb the little fellows"—a feeling in which I heartily shared. He made his arrangements for the attack. First he made up his mind where he would "lay the tree," which he explained to me was cutting it in such a way as to make it fall as he desired; then he prepared his smudges to smoke them out, and then he set to work. What an axeman he was, to be sure. In an incredibly short time the tree nodded, tottered and came down with a crash. The smudges were lighted and applied, and springing up on to the fallen tree and showering down blow after blow, surrounded by swarms of the insects whose habitation he had so ruthlessly destroyed, he worked away as calmly and expeditiously as if their presence was unheeded, and soon laid bare a large amount of honey. For my part, as I looked on this scene of wholesale destruction I felt sorry enough for them.

> I've been an old soldier in my day,
> And taken part in many a fray,
> And in the "on to Richmond" fight,
> Put in and fought with all my might:
> But when these bees in countless horde
> Buzzed round my head, upon my word,
> I might as well own up and say
> My first thought was to run away.

"Captain, you've got good grit," said the old hunter as he pegged away. "Before now I've seen many a feller take to his heels."

I thanked him and said: "I proposed to fight it out on that line. But do they never sting you?"

"Oh no, Capt, I don't know when I've been stung. Never, well, hardly ever. I don't get 'het up,' and the bees don't attack me."

He was so cool, so quiet, so self-contained, that I do not doubt his way of accounting for it was the true one. Taking off the covers from two large tin pails which he had brought, and working in the same quick and quiet way he soon transferred the contents from the tree to the pails, and gathering up axe and revolver, we made our way out into the clearing. Twenty or thirty pounds of honey were the result of the hunt. I wish I could recall all the incidents he told me about bee hunting. When he had found a bee tree, as he often did out in the woods, he would mark the tree with a large M. B., and according to the law of the woods, no man would touch it.

"Well, yes, I have had a man steal my honey, but not often." Once out in the woods he came across a swarm of bees flying overhead. On the impulse of the moment he fired off his revolver and the whole swarm circled around and lit. "Some feller from York" had been out with the old hunter and had overpowered him with questions, not being able to see how the thing was done at all, at all. "I told them I generally carried a spool of thread, which I tied to the bee's hindleg, and then paid out on him, as a boy flies his kite." "You don't say so! I should think the bee would get entangled." "Ah, you don't know their wonderful instinct. Besides, they fly in a bee line." "Oh, yes."

"Well, Morris, old fellow, I owe you a thousand thanks. I have been very much interested in this novel hunt, and I can now say I've hunted bees, bears and butternuts."

"Yes, and been hunted, too, Captain."

By this time the shadows were creeping over old Showangonk. Reaching home, my friend gave me as much honey as I could carry. I did not insult him by thinking of offering him any compensation, and with a "Confound it, Captain, I hate to destroy the little fellers," and a hearty good-night, we parted.

CAPTAIN CLAYTON.

HYDE PARK, N. Y.

CONCERNING HERBERT.

IT has been said that of the dead no evil should be spoken. Yet, if anything is said, the truth should be told, for overpraise is as mischievous as dispraise.

One who will always be held in high esteem as an honorable sportsman and a graphic delineator of sporting scenes, seems sometimes overpraised by those whose youthful enthusiasm was first kindled by his glowing descriptions of field sports, and whose oracle he became. Indeed, he is almost deified by some of them, who deem it rank heresy to speak of him a word that is not laudatory.

He was assuredly an honorable sportsman, a man who despised pot-hunting and scorned to kill game or fish out of season, or by means that he thought unfair. And with all the strength of his pen he endeavored to make Americans understand that field sports were no vagabond pastime, but good and wholesome recreation, and to convince our people of the wisdom and justice of game and fish preservation. For these things let all honor be accorded him.

But as a writer on field sports and all pertaining thereto, he was almost always dogmatic and prejudiced; often superficial and inaccurate. What he asserted no man must presume to gainsay; what was not in accordance with English usage was unworthy his approval. By force of circumstances he became a bookmaker, and as bookmaker's work is apt to be, his books on game, fish and kindred subjects are inaccurate, superficial and contradictory. His arguments against the possibility of breech-loading shotguns ever coming into general use and favor are amusing reading in the light of these days, and so is his unfavorable opinion of the finest game bird of the Eastern States, the ruffed grouse, of which he evidently really knew but little, though a little more than of the Canada grouse, judging from the alleged portrait of that bird in his "Field Sports." One would think that at the time this book was written he might have informed himself better concerning the Rocky Mountain goat than to have confounded it with the bighorn, and that by taking ordinary pains he might have given a portrait of so common a fish as the pike-perch that he would not have been obliged to acknowledge in the appendix to "Fish and Fishing" as grossly inaccurate. But he had set about making a book of so many pages, apparently with very little care for the real worth of its contents. The nine pages of "Jasper St. Aubyn" given in "Fish and Fishing" remind one most unpleasantly of the advertising chapte s put forth by the story papers, "for the continuation of this thrilling story see *Graham's Magazine!*" In "Game Birds in their Seasons" he says that the bittern, known in some parts of the country as the "bluttery bump," "never booms, blutters nor bumps," when there is not a Yankee boy born within a mile of a marsh who has not heard the strange note of this bird in the spring!

He sneers at "the prowling backwoods gunner," abominates wild turkey hunting, reviles, as he ought, the wretches who crust-hunt deer, but writes pages in praise of the noble sport of killing yarded moose as practiced by the officers of Her Majesty's troops then in Canada. Calling a turkey within shot of an ambushed hunter is characterized as pot-hunting too mean for a sportsman to engage in. Perhaps it is; but if it is, why is not the calling of moose to an ambush, and why not a word in condemnation of the practice? The killing of more turkeys than a "backwoods gunner" knows what to do with is wanton butchery. Not so the killing of ninety-three moose "during a short hunting tour" by a party of twenty-three officers, nor the killing of seven moose in one day by a friend of Herbert's. "On these occasions immense sport was realized!" In short, his prejudices are so unreasonable, his inaccuracies and misstatements so frequent as to almost destroy one's faith in him on any point. Yet people who ought to know this continue to proclaim him the great and shining light of sportsmen's literature, and demand that all shall acknowledge him as such. They have given him too exalted a place, and they ask too much when they ask that all sportsmen shall join in unqualified praise of their idol.

In his writings concerning the outdoor life with which his memory is most intimately connected, there is not much that shows him to have been the close observer of nature that his opportunities should have made him—and that he should have been before attempting to write with any authority of the lives and habits of beasts, birds and fishes. The example of his own life is one that it would profit no man to follow. That troubled life is ended; let him rest in peace, by no means dishonored, but not more honored than his works and life deserve. VETERAN.

THE MASSACHUSETTS SNARING bill was introduced for votes, not "farmers' boys," and before long the woods will be full of snares and empty of game, and we must turn off into other States or else hire the right from these boys to shoot over their land and pay them not to snare. As long as votes can be gained and poli icians sustained just so long will our laws be a farce and game will be at the mercy of every jackanapes who wants a seat on Beacon Hill. With the present low prices for guns and the existing tendency toward still lower prices, why can't these much abused farmers buy guns for their boys and teach them how to use them? The short-sighted land owners only see one side of the matter, and have not the wit to encourage the increase of game and charge so much per gun that shoots over their land. A well-stocked farm in this way would gain more pin-money for the boys in five years than all the snares in ten.—E. B. (Boston).

PRAIRIE DOG HABITS.

TO those who have never traveled over the prairies of the great West, a prairie dog village would be a curious and interesting sight. To begin with, the ordinary prairie dog of Montana is a species of rat (a member of the rodent species), is about 13in. long, with tail 4in. more, and a most interesting little creature considered in every way. The color is a light reddish, cinnamon brown, of different shades, which will be found quite handsome upon investigation.

Prairie dogs are always in fine condition, fat, healthy, and prime for broiling. Nobody ever saw a lean prairie dog. They are an exceedingly social set, always living together in large families, and always carrying on some sort of gossip or conversation from the tops of their dirt mounds. They feed on insects, plants, grass and prairie clover. By the Crows and other Indians in this latitude they are called "wish-ton-wish." They build up little conical mounds around the entrance to their domiciles, on which they sit and chatter to passers-by in the most nonchalant and independent style. When danger approaches they tumble helter-skelter into their holes and disappear from sight. These little fellows are active, playful as kittens and very prolific. Some of the villages run up into the tens of thousands, notwithstanding the ravages of rattlesnakes and wild animals, who live for a great part on prairie dog diet. The flesh of these rodents is fat, tender and juicy; excellent food, as most of the Indians hereabouts will testify. I remember in the summer of 1881, while traveling over the Powder River country, of passing through a single prairie dog village which extended for 18 or 19 miles in length, not to speak of width, as on either side the village stretched out as far as the eye could see in the distance. This particular colony must have contained a million or more inhabitants.

On the prairie back of this fort, at the base of a group of bluffs rising perpendicularly out of the plain, is a large prairie dog town. It is quite a flourishing community and has been increasing in population every year. As this particular village had selected a bare and arid plain for a home—fully two miles from the river and no water in sight—I was curious to learn in what manner they obtained moisture; if, in fact, they needed or obtained moisture at all. Two or three of us started in one day to investigate the matter; but before getting half started found it a harder job than anticipated. We dug down some 13 or 14ft., but still there seemed to be no end to the tunnel. Upon going a few feet further, however, we found the descent sloping off into a subterranean horizontal channel, and in a few minutes more the mystery of the water question was solved to our entire satisfaction. We came upon a well, which proved that the industrious little rodents actually dug for water like any other white man. This also answered the puzzle why rattlesnakes always seek out the prairie-dog holes for a home—first, because the snake is too lazy to build a home for h mself; second, rattlesnakes must have wat r, as they perish without it; so, when far back on the prairie, distant from river, creek or water hole, the lazy rattler discovers the hole and takes this means of satisfying the necessity; third, nothing suits a rattlesnake better than to sup occasionally on nice young, tender prairie dog pups, and so that explains why the rattlesnake and prairie dog inhabit the same dwelling. The burrowing owl is another loafer who lives at the expense of the industrious prairie dog, and, like the rattlesnake, does his part in looking after the census of his landlord. It is an interes ing and instructive sight to watch these animals while at work building a home. One family occupies each "hole in the ground," and all assist in the general work of preparing it for habitation. One of the party (usually the oldest and father of the family) will commence with his forepaws and scrape away with such vigor and vim that it will be sent in a perfect shower above and behind him. When he gets down a little way he steps aside, sits on i is haunches much like the domestic dog, and another takes up the job where he left off. Each takes a turn at pawing. When the dirt begins to pile, some of the others gathers it in their paws and throw it further to one side. These underground galleries often connect, so that a large village may be in perfect communication below the surface. They are somewhat like the bees in laying aside stores for a rainy day, so to speak.

If investigation were to be instituted, no doubt it would be found that these underground warehouses contain hundreds of tons of hay, roots and grasses. In nearly every village, too, there is one dog larger than the rest (somewhat like the queen bee of a hive or the horse mackerel of a school), who is the president of the republic. He bosses the rest and lives by the fruit of their labor. Within a mile or two of Miles City (on the other side of Tongue River from here), in fact, on the site of the old town where the Yellowstone steamers used to land, is one of the largest and most progressive prairie dog villages in the whole Northwest. This village goes on thriving and prospering notwithstanding its proximity to civilization. The citizens of Miles City pay little heed to this curiosity almost at their doorsteps, because they are too busy rolling up wealth for themselves. Any one visiting Miles City should make it a point to visit the spot and see how a real, live prairie dog village looks.

It is now settled beyond all question that the prairie dog hibernates. That they migrate annually is not so certain; yet a circumstance that came under my own personal observation not long since would perhaps throw a little light on the matter. I have heard that there is a colony of black prairie dogs somewhere down in Nebraska or Colorado, or possibly Wyoming. Now I have been pretty well acquainted for some years past with the individuals composing the dog town back of this fort, yet I never saw until this year a sable prairie dog in all my life. I discovered one this summer and only one among all the hundreds who inhabit our neighboring town. This little fellow is almost jet black, though on the flanks the color is a rich dark brown, while under the belly it fades into a dirty cream shade. The tip of the tail is white and the tip of the chin is grizzled or gray, showing our new-comer to be rather advanced in years. I have never seen or

heard of another specimen being seen north of the forty-fifth parallel.

There is no doubt that with the gradual extermination or rather thinning out of the destructive wild animals in the Territories, farmers and cattlemen of the West will have just as big a job on their hands to get rid of the prairie dog pest. The former were a nuisance in their way, and the latter bids fair to be just as bad. If any one will stop a moment to think and consider facts, they will soon find that the prairie dog is multiplying at an alarming rate instead of retreating before the advance of civilization, and that the little pest is emigrating there can be no possible question; but the curious part of the matter is that he is migrating east instead of west. They meet civilization half way, and unless checked are certainly going to get the best of it. Man has destroyed wolves, badgers, panthers, rattlesnakes and other reptiles and animals which have preyed upon prairie dogs, and now the prospect in store is that the vast free ranges of the West, instead of being a cattleman's paradise, will before long become a veritable verdureless desert. Draw a line from the Red River of the north, south to the Gulf of Mexico, and you mark the present boundary of prairie dog emigration. Scarcely a dozen square miles of the immense territory west of this boundary is without members of the prairie canine or wish-ton-wish family. A few years ago the line was somewhere back in western Nebraska, Kansas and Indian Territory. When it is possible to get grain it is foolish to suppose that the little pests will feast on dry roots and grass. Western people are alive to the danger, and scarcely any Western paper is without an ad. to the effect that prairie dog poison is sold by so-and-so in unlimited quantities. It won't be long either before the Territorial papers will be offering a bonus and free strychnine to all who will use it freely and to some purpose. Cattlemen are aroused and they have good reason to be. On the ranges they are particularly dreaded, because they not only destroy the grass, leaving the prairie as bare as a billiard ball, but their holes are a constant source of danger to the reckless coyboys who are always galloping over the plains rounding up and cutting out beef cattle. Many a lariat swinger has been violently hurled to the ground and seriously if not fatally injured by his pony unwittingly plunging into some gaping prairie dog hole. It takes all the romance out of cowpunching after you get a fall or two and perhaps a sprain calculated to lay you up the balance of the season.

It is very funny to watch a tenderfoot fresh from the States, who has the reputation of being the crack shot of his locality, attempt to shoot a prairie dog sitting bolt upright on the summit of his mound. Experience teaches that it is better to aim 6 or 7in. lower than usual, although the reason for the deception is hard to explain. A man from the States, too, if fortunate enough to "plug a mug" as the saying goes, cannot understand why, nine times out of ten, the tarnal little miscreant escapes. It is sufficiently clear to those who know, because they are aware that the dying struggles are used in making their escape, and which, although shot to the death, is generally accomplished by wriggling and squirming back into the barren holes they call home. Prairie dogs are easily caught, that is, if you known how to go about it. Simply pour enough water into the aperture until the half-drowned creatures poke their heads out, then with a gunny sack or something else of the kind held ready, it is not a hard matter to make prisoners of a few. After being caught and kept awhile they become somewhat accustomed to civilizing influences, and you will find it not such a difficult matter after all to tame them like as you would a squirrel, rabbit, or some other animal *feræ naturæ*.

VICISSITUDES OF COLLECTING.

In an 1886 number of the *Ornithologist and Oologist* a very amusing article was written by one "J. M. W.," entitled "Pleasant." Nearly every collector has during his tramps more or less of these pleasant experiences. (He is a carpet naturalist if he don't.) Pleasant, perhaps, to look back upon, but not quite so delightful when viewed from the present tense. It is remarkably reviving after you have spent three-quarters of an hour shinning a smooth stub, barkless, and with none too many limbs, your poor body nearly blown inside out by your exertions, to gaze upon, instead of the handsome set you had hoped—expected to view, a solitary, dung-bespattered egg.

Take it in early June. Suppose you are out for a tramp and mark the fresh hollow of a downy woodpecker for future reference, a nest of the chewink with unfinished complement, and a tanager's poor excuse of a home containing a pair of beautiful eggs. Passing that way a few days later, you stop in to investigate the sapsucker's domicile, when lo! the hole has increased in size since your last acquaintance, and you mutter, "Boys!" and mad you are as you scale the wall, and down your heel comes on to as handsome a set of oven birds as you ever saw—that is, provided you are good enough judge to tell what the mess resembles. Disgusted, you pick yourself up, and after getting together, make a circuit, and after tacking right and left to get rid of that vile creeper, the "stop-a-bit" or "tear-all," as it is sometimes called, reach the little grove of scrub oaks, where you thought the tanager's nest was. But where is it? That is a query which the owner can answer better than yourself. And so I found myself gazing ruefully at the transparent platform of fagots, which was all that was left of what was once a nest. A valuable experience had been taught me, which I would, however, have gladly exchanged for the unhatched chickens I had been counting on. Moral: Never trust a tanager. "All is not gold that glitters."

The chewink's nest was the only one left me now, my only hope, I thought, as I crossed the sluggish creek which wound through William's back lots, and after descending a series of cascades transforms into a delightful little rivulet and at last empties into the river. On my chewinks I was not destined to be so badly disappointed as in the former cases. Here I had the punctured shells to show me that the loss of the eggs was not the cause of my own verdancy. This work was done by that miserable fellow, the bluejay, thinks I, but just you wait old boy, I'll pay you with interest when the chance offers. Later in the season a Wilson's thrush's home, for which I had made room in my cabinet, was also waited on by one of the rascals, but we gave him tit for tat by taking his own nest hard by.

Is there anything more aggravating than after spurring your way up a seventy-foot chestnut to find a trio of savage little buteos in place of the pretty set you had pictured? I think there is, for when the old lady swoops down and gives you as hard a crack on the head as she did to one of my companions, the fun in collecting eggs of *lineatus* looks decidedly obscure. On Rocky Hill, a sort of magnet in our collecting trips, we were once besieged by a pair of brown thrushes that kept up such a Bedlam of alternate chattering, scolding and crying that an inquisitive member of the party was tempted to see what such a fuss could be about. The thrashers led him to the densest tangle I ever had the luck to gaze upon. He tried to thread his way in the intricate mazes, but the further he got the more tangled up he became, and giving up all thought of the thrashers and all else except free air, he tried to back out. The wait-a-bit clung with surprising tenacity, and with his snuff-colored hunting jacket he resembled a fly in a cobweb as strongly as anything the imagination can picture.

In my spring collecting rambles I was led, with my two companions, to the borders of quite a body of water, where those dainty little warblers, the blue yellowbacks, were said to breed. Starting on our first morning at sunrise, we slowly sailed up the river, with the help of a slight southwest breeze, to where, I confess for one, we expected to "strike it rich." There seemed to be no scarcity of bird life. Red-winged and crow blackbirds were nesting by the water's edge, the latter invariably in some bush or tree. Now and then a heron of the pokeshite variety sailed over, lazily flapping its wings. Three sheldrake bound due northeast passed over within rifle-shot, and blue yellowbacks in the wet and swampy thickets lisping their *zeepy-zeepy-zeepy-zeep*. Not long had we been on the river when a nest was spied in the crotch of a maple bough overhanging the water. The ascent was quickly made, but after the limb had been partially severed it was found impracticable to reach the mossy home without the use of a forked stick. Measures were being made to procure one when the fearless female put in an appearance, and, oblivious of the fact that the branch was well nigh separated, entered her abode. Her tiny weight was sufficient to precipitate the contents to the water below. Then, elated as she seemed, her happy little song came grating from her throat, and we had no doubt but that she had an inward satisfaction at seeing us thus baffled. We could have encored, but felt a little too blue. We were partially appeased, however, by another nest low down in a huckleberry on the opposite side of the stream, containing the full complement.

The next discovery was a gigantic oak, draped with usnea, some rods away on a meadow. The marsh looked treacherous, but seeing cows feeding at no great distance I resolved to try it, and after some circuitous maneuvering succeeded in reaching the desired tree. A nest with contents secured, I started back. In returning I was not so lucky as on the previous detour. I tried to take the same course, but luck was apparently against me. Several times I was immersed to the hips in pure muck. My chief function was to keep the nest and its contents from danger. I had no box and the way they went up above my head when I sank would have made an ordinary martyr enviable. The boat at last reached, I was pretty well blown and wanted to get off my leaky rubber boots which were pumping water after the manner of an "improved centrifugal." My specimens were forgotten, and one of my companions admiring the architecture of the bird's nest, was greatly interested in the way the skillful little creatures had woven the bottom of the fabric. So the eggs took a trip to the thwarts, and the fresh yolks only made things more aggravating. We felt like getting out of the unhealthy region, so took advantage of a breeze which had sprung up and sailed out over the breakwater into the lake. Our troubles were not yet ended, however, for when we were reaching the wharf my companion was seated on the gunwale and the captain (my other companion), who was somewhat of a novice, made a slight blunder, and you all know what is liable to happen when she gibes, nautically speaking. Suffice to say my friend considered that he never had a better chance to sound the lake, which he did in a manner that gave him a good deal of credit.

An incident now occurs to me in which a green sportsman figured pretty strongly. I was out for "most anything" and would have given "most anything" to have bagged above all things some duck flesh. Singular to say my wishes seemed about to be gratified. I slowly rowed my fishing boat across the lake, and as I was rounding a little promontory I saw a fine male old squaw reposing in the sand not 15yds. away. I quickly concealed myself behind a huge pudding stone and tucked in two No. 4s and arose. There he lay as large as life and I was sure of him. But somehow he looked so comfortable that I took compassion on him. So I took a long aim and he never budged. He's dumpy, think's I, so I'll stand out in broad sight and give him some chance. So I drew another bead on him and there he lay as motionless as any decoy you ever saw. After seeing what kind of wood he was made of I left the clever image for the shot of some hunter who should show himself as unsophisticated as I had proved to be.

Taunton, Mass.

Grouse and the Snow Crust.—There can be no doubt that "Pine Tree" (Agawam, Mass.), in Forest and Stream of May 5, is correct when he states that he does not think that ruffed grouse ever get crusted in. In confirmation of this, I give the following information received from a friend and hunter whose accuracy I will vouch for: "When camping on the Nashwalk (a branch of the St. John) a number of years ago, I snared a spring partridge by a noose, which I threw over his head by means of a long pole. It was a very pretty cock, and I determined to carry him home with me, as I was about leaving in a few days. The crust at this time was so very hard that I could walk on it without snowshoes anywhere. I cut a square hole in this crust near my camp and trod down the snow in it, so as to make a roomy spot for my bird, which I put in it, covering him with the square piece, which I made fit in as a cover. On top of this I placed a heap of snow, and felt sure that my captive was safe. To my astonishment on returning at the expiration of two hours and a half I found that he had left. He had worked his way for about 3ft. from the hole, following where the snow was softest, and made a hole in the crust, through which he regained his liberty. The work had probably been done by his active bill."—Edward Jack (Fredericton, N. B.).

CARIBOU NOTES.

Fredericton, N. B.—As regards the female caribou having horns, it is a matter of frequent occurrence, but not an universal rule by any means. Gabe, the Abenaqui hunter, who resides opposite this city, tells me:

"When I first remember, caribou were very plenty in New Brunswick. When about fifteen years of age I first went out with the hunters, we then seldom saw on the plains less than fifty caribou a day. The best place for them was on the head of Cain's River, one of the branches of the Miramichi. They are yet tolerably plenty there. Formerly they remained on the barrens; now they seek the green woods more. This is owing to the great number of forest fires of late, which have burnt away much of the white moss on which they feed. They are also very fond of the black moss, which grows on the branches of the tamaracks and scrubby spruce trees which surround the barrens. For the white moss they will dig three feet beneath the snow. I never knew them to eat either the leaves or bark of trees, nor will they eat grass. They are not at all particular as to the quality of the water which they drink, they are not quick-sighted, nor do they seem to trust to their eyes. Sounds do not seem to disturb them. With the wind blowing toward them they will smell a man at 400yds. distance.

"They are great travelers. I have seen them asleep on the big barrens in very cold weather, when the northwest wind was blowing and the snow drifting, with only their heads above the snow, no other parts of their body being visible. Both bull and cow have horns, those of the bull being much larger and longer and having more branches than those of the cow. They shed their horns every year, the bull about November, the cow not until April. Two-year old bulls carry their horns until about March 1. The bull is in full flesh about August 1, when his horns are completely grown. In October his flesh is strong and unfit to eat. They calve on the edge of barrens in the month of May. I never saw more than one calf with a cow. I once killed a cow whose calf refused to leave its mother's body, but stood close to it until I killed it."

Edward Jack.

Old Pomp.—Philadelphia, May 18.—Old Pomp, the blind and toothless lion, died to-day in his cage at the Zoological Gardens. Pomp's wife, Sally, died a year ago and he never fully recovered from the shock. For the past two weeks Pomp refused to touch food, and this afternoon when Keeper Shannon went to his cage and pushed in some tempting morsels of beef the old lion rolled his sightless eyes mournfully toward his attendant, gave one last roar that shook the building, and died. Pomp was about 29 years of age. Lions in captivity seldom live to be over 25. He and Sally were purchased by the Zoological Society on Dec. 24, 1874, from Dr. Geo. R. Spaulding. He was considered one of the largest and finest specimens of the African lion in this country. George and Minnie, the two lion cubs in the adjoining cage, witnessed Pomp's death, and they refused to be comforted. They were much attached to him, and after his death none of them would touch food. Pomp was of an affectionate and gentle disposition, and was never known to attempt violence upon his attendants. His skeleton will be set upon frames and placed in the museum attacked to the garden.

"Copper Belly" Snake.—Aberdeen, Miss., May 15.—On reading the account of strange snake mentioned by "Coahoma" in your issue of May 12, I was reminded of a similar specimen that I saw a few days ago. This snake was between 3 and 4ft. long and shaped as the specimen detailed by "Coahoma." It was jet black on back and sides and underneath the tinge was quite red. I was in a vehicle some little distance from the snake and did not observe any white markings, although they may have been present. My companion and the negro driver pronounced it a "copper belly" and said it was venomous. I am inclined to doubt this latter statement, as its head was shaped very much like the ordinary black snake, and it did not coil when struck.—Will. [It is impossible to identify the species from the description given. Possibly it may have been *Farancia abacura*, the red-bellied horn snake, or *Abastor erythrogrammus*, the red-lined snake. Neither of these are venomous.]

Eagles Breeding in Captivity.—*Editor Forest and Stream:* My eagles have again bred in their cages. March 24 the female laid an egg, and on the 25th there were two eggs in the nest. May 1 one bird hatched, and on the 2d two young eagles were seen in the nest, the period of incubation being just thirty-seven days, a variation of two days from last year's hatching. The female stays close by the nest all the time while the male bird stands guard. When I give him a fish he carries it directly to the nest, gives it to his mate and comes back for another, which he eats himself. Last year's bird is a great pet and a fine specimen of the true American eagle.—Henry Hulce (Toledo, O., May 15).

Breeding Wild Geese.—Berlin Heights, O., May 17.—The wild goose came off the nest this morning with three young. I wrote you that she commenced incubating the 17th of April. Could any of the readers of Forest and Stream give the number of young usually produced each season in a wild state? A gentleman from Minnesota claims that the brood never exceeds five. Three seems to be the number of this pair.—M. M. Benschoter.

WISCONSIN SONG BIRD LAW.

Chapter 413. An act to prevent the killing of birds for millinery purposes. The people of the State of Wisconsin, represented in Senate and Assembly, do enact as follows: Section 1. That any person who shall shoot, kill or catch by means or use of any net, snare, trap, gin or spring gun, any robin, sparrow, thrush, bluebird, swallow, catbird, kingbird, woodpecker, flicker, pigeon, dove, blackbird, wren, finch, lark, pewee, oriole, humming bird, bunting, grackle, grosbeak, warbler, flycatcher, swift, waxwing, creeper, chickadee, goatsucker, tanager or whippoorwill, for millinery purposes, shall be deemed to be guilty of a misdemeanor, and upon conviction thereof in any court of competent jurisdiction within this State, shall be punished by the payment of a fine not exceeding the sum of one hundred dollars nor less than five dollars for each offense, to be collected as provided for by the law of this State for the collection of fines. One-half of such fine when collected shall be paid to the county treasurer, and by him paid into the school fund; the remaining half shall be paid to the informer.

Sec. 2. This act shall take effect and be in force from and after its passage and publication.

Approved April 11, 1887.

Game Bag and Gun.

G. T. T.

DECATUR, Wise County, Tex., May 13.—I wrote you several months ago that I had an idea of making North Texas my future home. From reports that I had heard of the country, and the vast amount of quail that were to be found everywhere, I expected that I was about entering a real sportsman's paradise, where I could kill enough quail every day for breakfast, dinner and supper, and lose not any time, or but little, from my business. I received a letter from a young man in Wise county last winter, stating that quail were as thick as bugs ever got to be in Mississippi, and that a quail could be flushed from under every bush in his father's pasture, which was composed of about three hundred acres of woodland. What a treat it would be to live in such a country, and what fun I would have kicking the birds from under the bushes and shooting them as they would fly away with a vain hope of finding another hiding place that was not already occupied by another bird: I decided to "Go to Texas," and sent my setter out the last of November, promising him that I would follow on as soon as I could wind up my business in Mississippi, and that we would have some rare sport—such as never fell to the lot of man and dog in Mississippi nor anywhere else, except in Texas. I did not suppose that I would need a dog to find the birds; but then it would be such a treat to my dog, and I could afford to let him point one occasionally just to keep from forgetting how a dog looked on a point.

I landed at Garvin, Tex., the latter part of February, and, as the shooting season was far advanced, I decided to lose no time, but would commence my quail shooting at once. I picked up my gun the next morning and started into that pasture where "a bird could be found under every bush," and as I saw that the bushes were thick and numerous, I smiled to think what sport I would soon have. My setter Robert looked wistfully after me, and the sorrow depicted in his face showed how much he regretted that I thought so little of him as not to invite him to help enjoy the sport that I was soon to engage in. I decided that Robert might be of some service in picking up my birds, and told him that he might accompany me, but that he must come to heel and behave himself as a Texas dog should, and not forget himself and imagine that he was back in Mississippi, where quail were so scarce that it required the services of a dog to get them up.

I lunged into the brush with thumb and finger upon hammer and trigger, and with a full determination that the first Texas quail that flushed should go into my game bag. The quail did not rise, so I strolled around from place to place, stumbling over the rough bushes until I saw that the birds did not intend to be scared up by a Mississippian. I then told Robert that he would have to take charge of that department of the business and get the birds up for me, for I expected after all that it would be best for us to fall back on the old Mississippian style. No sooner said than done. Robert let himself out at lightning speed, through the dry brush and over the ravines, making such a tremendous racket that it seemed that he would flush every bird that he came within a half mile of. All at once as he was passing a brush pile he came to a sudden stop, threw himself into a picturesque attitude, and became as rigid and stiff as Sut Lovingood's starched shirt. We have you now, I thought, the whole business of you has collected under that brush, and now the fun will begin. I cocked both barrels and advanced on the brush pile with a big intention, but the birds did not rise. I passed by it and around it, but still they refused to take wing. My patience was gone and there was nothing to keep me from acting rashly, so I lunged my foot into the brush and yelled at the birds to get out. There was a tremendous tumbling under the brush for a few seconds, then a little cottontail rabbit (those that don't like the appelation can read it "hare") shot out from under the brush and through the bushes, scared into an inch of his life, with Robert chasing after him at break-neck speed, in spite of all the calling and stamping that I could do. My fingers quivered restlessly upon the triggers, and my gun seemed anxious to leap to my shoulder, but I remembered Hammond's "Training vs. Breaking" and restrained myself for the moment. After a little deliberation, however, I considered that Robert had already had the necessary "training" in that respect, but departed from it, so I decided that a little "breaking" would be next in order, and broke me a post-oak limb and awaited Robert's return. After a considerable time he came sneaking back and prostrated himself at my feet, as much as to say, "I am at your service now. I could not stop when you were calling after me just now, for my legs were taking me off after that rabbit in spite of myself. I knew that it was wrong, for I had been trained better, but the fact is, I have suffered myself to keep bad company since I got to Texas and before you arrived, and we have been doing a great deal of rabbit hunting on our own hook."

I gave Robert a slight brushing as a gentle reminder of what would surely come if he persisted in his wayward course, and waved him off again. He seemed to hunt with renewed energy, and made the brush rattle in a fearful way. It was not long before he had another rabbit up and another exciting race. In a short while he came back, and when near enough to see me well, he stopped and looked at me as though he thought it doubtful whether I had seen the last race or not, and with a determination depicted in his face that he would show no guilt if I were ignorant of what he had done; but when I called to him to come in, his countenance changed, his head and tail dropped, and by the time he got to where I was, he seemed to regret what he had done even more than I did; but I chastised him, nevertheless, and sent him out again. Several times he repeated the rabbit chasing, and as often I administered the rod; but at last I discovered that I did not have patience equal to what it is said Job had—in fact, I am not really sure that Job ever had the trial of shooting over or trying to shoot over a wild, headstrong setter. I began to feel as if I had just as soon own a dead setter as one that I could not control, and I decided to administer a more lasting reproof as soon as an opportunity was offered. I was not long in getting the opportunity, for we had gone but a short distance, when a cottontail got up and let himself out as if he had urgent business ahead, and Robert after him as if it was his duty to see that the rabbit got there on time. I restrained myself for a second or two, but when Robert was about 40yds. distant, my gun leaped to my shoulder, my finger pressed the trigger and a load of No. 8 shot peppered Robert around and about that portion that bears the caudal appendage. With an unearthly squall he leaped into the air, and after falling back upon that part that was giving him the misery, as if he wished to crush his tormentor, he lost no time in getting to where I was and prostrating himself at my feet as if to plead for mercy. He seemed to think that he had been punished enough, but in order to show him that I did the shooting intentionally, and did not regret what I had done, I administered the rod again.

After a little persuasion I soon had Robert out again and hunting as busy as ever, and it was not long before another rabbit broke the brush and we had another brush, this time the rabbit going one way and Robert the other; nor did he stop until he was safe behind me. Then after looking for a considerable time in the direction the rabbit had gone, as though he regretted the rabbit's getting away, he looked up at me as if to say, "I am satisfied that I could have caught that one if I had not been afraid of that old blunderbuss of yours." We passed through the pasture, hunting it out well on one side and starting many more rabbits, but Robert never once seemed to think that it was his duty to try and catch them, but would often break back to me as soon as he saw the rabbit, as if he thought that there was really more pleasure in safety than in rabbit chasing.

But where were the quail? We had hunted one side of the pasture thoroughly and not one could be found, nor could we find any signs of their having been there. We then went into an adjoining pasture and hunted it with the same success. Then back into the first one again and hunted the other side on our way home. This side, however, was grown up in large timber and in many places there was no underbrush nor grass to form a hiding place for birds. We hunted through it, however, and were almost at the house when I saw Robert come to a sudden halt and his tail begin to quiver. He would smell on the bare ground a little and then raise his nose into the air with that peculiar quiver of the tail that I knew indicated game. I urged him on for a considerable distance and soon discovered ahead of us a small covey of quail that were trying very hard to find a hiding place on the bare ground, but they soon abandoned the undertaking as a hopeless one, and took wing when I was about forty yards from them. I succeeded in getting in one barrel and bringing one down. The majority of the covey took themselves to the tops of the trees, but a few made their way to a fence row and some treelaps not far off. I sent Robert to the fence row, and soon had the gratification of seeing him on a stiff point. As I walked up the bird flushed, but dropped at the report of my gun, and Robert brought it in. The dog next came to a nice point at a small pile of brush, and I walked up and kicked it. A quail flushed right under my foot, going straight off behind me, and at the same instant something tumbled out of the brush on the other side and ran off in the other direction. I first turned my attention to the quail, as that was the kind of game I was after, and succeeded in dropping it just over the fence. I then turned to see what had gone in the opposite direction, and saw an animal loping off slowly across the open ground. It seemed to be about the size of a young fawn, and somewhat resembled one, but its ears were much too large for a fawn. I sent a charge of No. 8 shot after it when it was about forty yards distant, which did not seem to have any effect upon it, but in following on with the hope of getting another shot I soon found it dead. I proved to be a large jack rabbit, the first I had ever seen. When loping slow and erect, with ears erect, I think that they very much resemble a fawn, but let one of them get scared, throw his ears back on his back, hump his back and get down to it right, and he presents a different aspect.

I went back to the fence row, and by diligent work succeeded in getting up one more quail, which was bagged. As the remainder of the covey were in the tops of the trees I gave them no further attention, but made my way to the house.

During the rest of that week, and for two or three weeks following, I hunted over the most of the grounds in that vicinity and found only three other coveys; one composed of six, another of about eight, and the other of ten or twelve birds. I killed only a few of these and left the others "for seed," thinking that birds were badly needed here for that purpose.

In complaining of my disappointment in not finding more quail in Texas, some of the residents told me that, as a general thing, the birds were very numerous here, but owing to the drought which had prevailed for about a year and a half it was impossible for them to get water on the high lands, and that they had all collected in the river valley. This looked altogether reasonable, and I believed that I would still enjoy the pleasures of Texas quail shooting, and accordingly made arrangements to go to the valley. My father-in-law proposed going with me and also proposed taking his pointer Zack. Now, I confess that I was not much of an admirer of Zack, for I did not think that he had had the proper training, and, besides, I had often heard that Zack was a very unsteady and headstrong dog, and would break shot and chase everything that got up before him; besides, I was satisfied that he was to blame for Robert's bad behavior the first time that I took him out, and that he had been persuading Robert off rabbit hunting of nights and at other times when he had a chance to boss the job. So I asked my father-in-law if Zack was not a little hard to control. He confessed that Zack would often break shot and chase things, but he thought that he was a capital dog in every other respect, and said that if he could only break him from this one fault his value could not be estimated; but it seemed an impossibility to break him, as whipping did no good whatever.

I thought I saw a chance to get revenge on Zack for teaching Robert bad habits, and told how easily and effectually I had broken Robert. He thought the plan worthy of trial and agreed to try shot on Zack in the future, so we started to the valley only a few miles off. I made Robert come to heel, but Zack scorned the idea of poking along behind, and took himself to the wayside, showing by his actions that he was determined to have a first-class rabbit hunt. He succeeded in getting up rabbit after rabbit, and having chase after chase, until he was puffing like a steamboat and seemed almost too tired to go further; but whenever a rabbit would get up Zack would gain new strength and have another race. My father-in-law shot at him several times, but always failed to hit him, notwithstanding he is a good shot and can hit other things as often as most people. I at last suggested that he must do better shooting if he had the desire to save his dog from utter worthlessness. He said he could not imagine why he could not hit the dog, and requested that I take the next shot, which I agreed to do, although I had entirely forgotten that I had just a few minutes before put in a cartridge of No. 7 shot for shooting some ducks we expected to find in a small lake close by. We had gone only a few steps when a jack rabbit seemed to spring out of the ground just in front of us, and had gone 50yds. before Zack seemed to know what it was. Although the rabbit had so much the start, and notwithstanding the fact that we used our best exertions to prevent Zack from going, he broke by us and started across the open valley in hot pursuit. When about 35yds. distance from us my father-in-law said, "put it to him," and although I thought the distance hardly great enough, yet I thought Zack needed a large dose of the medicine, and sent the charge after him. For about a half minute there was one of the liveliest performances there that that valley ever witnessed, Zack being the only performer and making all of the music. As soon as he was able to quit waltzing, singing and turning somersaults, he came back the bloodiest dog that I ever saw. He seemed to be bleeding from every part of his body and very profusely, and my father-in-law was afraid that he would bleed to death. I was afraid so, too, for I just then remembered that I had shot him with No. 7 shot; but I persuaded my father-in-law that the bleeding was caused from the dog being so hot from the many races that he had taken, so we carried Zack to the water and cooled and washed him, which had the desired effect and checked the blood.

Zack looked very sour at me, as if to say, "If you can't learn to shoot better than that you had better quit, for I was sixty or more yards behind that rabbit and there was no reason in your missing it and putting the whole load into me." I gave him to understand that the shot was intended for him and that it would not be good for him if he gave me cause to repeat it. We jumped quite a number of rabbits after starting again, but neither dog attempted to chase them; in fact Zack did not seem to be in much of a humor for the chase during the rest of the hunt till nearly dark, but failed to get up a single quail and had to gratify our detire for bloodshed by shooting a few jack rabbits.

I have never had an opportunity to hunt with Zack since, but my father-in-law tells me that he has done remarkably well and that he has had no trouble in controling him. I would not advise the shooting of a good dog, but whenever I own a dog that gets in the condition that these were I will try No. 8 shot on him, and if that does not break him I will try buckshot and get rid of him.

After satisfying myself that there was really no quail, or but very few in this country, I gave up quail hunting, came to Decatur and commenced business, but before doing so I traveled over portions of several of the adjoining counties and made particular inquiry about the game. I was told everywhere that quail was usually abundant in this country, and that in the fall and winter months geese, ducks, prairie chickens, etc., are sometimes plentiful, and that doves and plover were here in the greatest quantities. So far as doves and plover are concerned I believe the statement to be strictly true, for we have had rains here since the first of April, and the whole face of the country has been covered with doves and grass plover. Parties of two, three or four persons frequently drive out on the prairie from this place and bag large quantities of plover, and they are usually potted or shot on the ground. I have remonstrated with them for shooting birds so late in the season, and especially for shooting them on the ground. They excuse themselves by saying that the plover remain here only a short time, and are so wild that it is impossible to get near enough for a shot except from a hack or other vehicle, and that there are few opportunities offered for flying shots. In order to test the matter and satisfy myself I took my gun and went just outside the town one evening to try a few shots. I found no difficulty in finding plenty of birds, even before I was outside of the corporation limits, and went only a little way beyond the limits before trying the experiment, and it seems to me that as the birds are more likely to be harrassed near town than at a distance, they would be fully as wild here as elsewhere.

I selected a flock that seemed to be very wild. They had already raised their heads and given the alarm, and a few of them took wing and settled down about a hundred yards beyond. Instead of going directly toward the flock, I started in a brisk walk, as though it was my intention to pass considerably to the right of them. The birds then commenced running in the direction of where the ones that had taken wing had settled, and as some traveled much faster than others, the flock was soon badly scattered. I then commenced bearing in on them and the ones that were behind seeing that the course that they were going would bring them close to me they stopped and waited quietly for me to pass. As soon as I had the flock completely divided and was between them, I turned directly upon the ones that had stopped and walked within fifteen steps of them; they seemed to be perfectly bewildered and not knowing what was best for their safety. Although I stopped perfectly still these birds refused to take wing until I waved my gun at them, and when they did start they attempted to pass me and go in the direction of the rest of the flock. I got in both barrels very easily and secured a pair of birds.

I followed the same flock and tried the plan for the second and third time, always getting as near the birds as I could wish. Out of six shots I scored five birds, and the miss that I did make was caused from noticing that there was a cow beyond the bird, just as I was about to press the trigger. I will not say here whether I hit the cow or not, but I can say that I missed the bird. As the sun was nearly down, I gave up my plover shooting and returned to town. I have shot no plover since; but I have frequently tried this plan of getting near them, both on foot and on horseback, and I am satisfied that if a sportsman will use enough tact and caution that he can in this way get as many shots and as many birds as he should wish, and to me this kind of shooting is far more enjoyable than shooting the birds on the ground.

I passed through the valley of the west fork of the Trinity River about three weeks ago, and since the rains set in, and I saw an abundance of game. Ducks were in the most of the water holes, and plover, doves, jack rab-

bits, etc., were scattered over the open portion of the valley. I saw three varieties of ducks and three varieties of plover in the valley.

If it had been in the fall of the year and I had had my gun with me I could have made a large bag; but the shooting season is over, and artificial targets should take the place of living game until there can be a chance for what we have now to multiply and replenish.

FOREST FIELD.

RAIN AND MUD.

SOME time during the past hunting season, my friend Jethell and I put our guns and shells in our buggy, and started for a point on the Morrison Hill, about eighteen miles northwest of the town. Still later in the day, Dr. Still Weel and a boy who thinks himself of mature age and enlarged wisdom, went off on the same business. A little while before night we reached the dwelling we were seeking, and met a cordial welcome from the owner, Mr. Sim Chowdermilk. A substantial supper was served, and our horses and dogs cared for. We slept soundly, and at an early hour were summoned from our luxurious couches to breakfast, and then rode down to Buffalo Creek, one mile north.

Our route lay up the creek, whose broad bottoms, unacquainted with the shooting of bird hunters, afforded an inviting place. We had been told by parties who had chased foxes in that locality that birds were very numerous. A few minutes only passed before my irrepressible, untireable Argo had located a covey. Approaching cautiously, and well understanding on which side each was to shoot, we got in four barrels and bagged but two birds. Another was hit, but escaped. A cyclone in February of 1885 having passed right up the north bank of the stream, the birds made the fallen timber a convenient and safe retreat. Further pursuit was useless, and we went on. About 300yds. further on we got up another, and all escaped us, taking refuge in a pine thicket. Your correspondent succeeded in getting two birds out of it. In an old peafield the dog made another stand. But one was raised. Though badly hit, we did not get him. At this point some boys, one of whom was armed with an old muzzleloading rifle, made their appearance and proposed to be of the party. To this there was objection. They were told that rifles might do for squirrels, but were not fit for the kind of hunting we were doing. Besides, it was rather a dangerous weapon. They did not like it—but deferred to our wishes.

Proceeding up the creek we found a covey in the woods. My companion got a shot, missed the bird and we went on. Beautiful stubble fields were carefully hunted without success, until at last we got about eight in an open piece of ground. One only was killed, the others sought a bomb-proof. Turning back we met our companions who should have found us earlier, and for the rest of the day, with rare exceptions, we were on the border of fallen timber, tumbled in a confused and impenetrable mass by that fearful cyclone of February 9, 1885, which proved so destructive to that part of the country, the victim of its ravages. This jungle afforded a safe cover for the birds, and though we found quite a number of nice coveys our only trophies were obtained in the first rises, while the birds were seeking a safe retreat. In consequence of this when we returned to our quarters we had only about thirty birds.

The next day, though the clouds gave evidence of rain, we concluded to try our luck in a different place. Accordingly at an early hour we were in our buggies, driving rapidly down hill to a point near Little River, where it receives the waters of Buffalo Creek. Leaving the vehicle at a convenient spot, we soon got up some birds, and either by skill or accident bagged several before we reached the hunting grounds which we were seeking. When we got to them we were having an uncomfortable drizzling rain, which made the mud stick to our feet and caused our clothes to feel far from comfortable. Still as our "blood was up," we toiled on "with hope elate," expecting a good deal of joy to recompense us for the labors which we were undergoing. Near the mouth of Buffalo and on both sides of the river we found birds abundant. But we were subjected to the almost universal annoyance which is met by persons who hunt near a stream. A flushed covey goes at once to the other side and it is not always convenient to cross. Boats and logs are not at the right places. Thus we found it. Nevertheless we got quite a number of shots. Some were successful and some were not. At night we had forty-one birds. Getting into dry clothes and having the advantage of a crackling fire of oak logs, we were ready at an early hour after our return to the dwelling to enjoy the coffee and other "creature comforts," which our host and hostess had liberally provided for our entertainment. And soon we were ready for bed and pleasant dreams.

The following morning the clouds were lowering, and by breakfast time were dropping their condensed vapor upon the lands. The hunt was over, and with a few birds in the bags, we returned home to see our families and look at the "wee things," while they enjoyed the succulent morsels which Bob White can afford.

At some time hereafter I may feel inclined to let you have some other sketches of gala days and ambrosial nights. I shall not attempt to follow the plan of the "Wizard of the North," as Prof. Wilcox is sometimes called. If I did I should not succeed. I may give quite as good a description of quite as good a hunt as his opening chapter portrays—but then the *noctes* were of a character with which I have no acquaintance, and the *dramatis personæ* would not embrace the Ettrick Shepherd, Syme, Ebony and Maginn, and the subjects discussed would not relate to literary matters far beyond the knowledge of ordinary mortals. My narrative may speak of the philosophy of Mud, the quaint humor of Crickett, the solid talk of Dit, the jokes at Mud's expense by Teceel, the innocent boasting of Gully, the incredible stories of Gaffey, and the stupidity of Wells. Whatever they may be I shall hope to afford some little entertainment to your readers, untainted by the inculcation, directly or indirectly, of any thoughts which tend to human degradation. All my desires are that what I shall write will afford pleasure without consequent sorrow, and ennoble a pastime which when properly followed strengthens the muscles, aids the digestion and dulcifies the feelings.

ROCKINGHAM, N. C. WELLS.

THE TRAVELERS, of Hartford, does not have to rely on "growth" for the security of its policies; its surplus of $2,089,000 is a sure foundation.—*Adv.*

MICHIGAN.—At a recent meeting of East Saginaw sportsmen, Mr. W. B. Mershon presiding, a county game club was formed to "back up" the game warden in his work. The following committee was appointed to solicit funds for game protection: Messrs. V. Kindler, H. A. Pratt, Frank Goddard, Henry Turner and E. N. Briggs, of East Saginaw, and J. K. Stevens, Frank Emerick, Harry Jerome, Gid Estabrook and Hugh Smith, of Saginaw City. Ferd. A. Ashley, J. K. Stevens and Louis Kreis were appointed as a finance committee to receive and disburse the funds of the soliciting committee until the organization of the club is perfected. The fining of violators of the game laws was next discussed, and Mr. Connors, the Deputy Warden, expressed the feeling of a good many sportsmen that he had met on the subject. The laws, however, provide fines in nearly every case, and nothing was done, but the feeling of the meeting was for fining violators to the full extent. The officers are: Pres., Isaac Bearinger; Vice-Pres., E. N. Briggs; Sec., Louis Smith; Treas., Vincent Kindler; Finance Committee, A. K. Penny, B. F. Cheeseborough, Frank Goddard. A fund of $250 has been raised.

SAUK CENTER, Minn.—There seem to be more ducks and geese hereabouts this spring than for quite a while back. Probably they know they are protected from the spring fusilade. I noticed the "Game Law" posted up in the L. F. & D. railway depot at this place the other day, so that all may see and govern themselves accordingly. Prairie chickens wintered finely and bid fair to make first-class sport next fall. The late burning of the prairies and meadow land may have a tendency to decrease some of this year's crop, but I think from present indications there will be good shooting this fall.

VIRGINIA.—Mappsburg Station, May 9.—Atlantic coast birds, all the sorts, are plentier with us than for years. Trout are in abundance. Lovers of shooting and fishing may for the ensuing thirty days have excellent sport.—T. G. ELLIOTT.

THE NEW YORK GAME LAW.

ALBANY, May 23.—During the past week the Governor has signed several game bills and they are now added to the list of those that have gone before. It is certain that they will not be lonesome, because there are altogether too many such laws now; and, in the second place, more bills of the same sort are yet to come.

The bills signed by the Governor are these: Moore, amending the song bird act of 1886 in the interest of science; Hogeboon, forbidding shad fishing in the Hudson on Sundays; Brundage, relating to the sport of fishing in Steuben county, and Bulkley, forbidding the taking of fish in the town of Cape Vincent within a mile of the shore, except by hook and line. The latter bill was permitted to become a law by the Governor under protest, and he transmitted the following message to the Secretary of State along with the new law:

"STATE OF NEW YORK, EXECUTIVE CHAMBER, Albany, May 18, 1887.—Memorandum filed with Assembly Bill No. 915, entitled: An act to prevent taking fish from the waters of Lake Ontario adjacent to the shore of Cape Vincent by other means than angling, which, not having been returned to the house in which it originated within ten days, became a law pursuant to Article IV., Section 9, of the Constitution.

"So far as I understand the object of this bill, it does not meet my entire approval. It seems to unduly sacrifice the interests of business fishermen for the sake of preserving game fish for sportsmen. But for over a year past I have made it a rule to refrain from interfering with the many local game and fish bills passed by the Legislature, because of the utter impossibility, owing to my other official engagements, of fully comprehending the circumstances of the locality to which they apply.

"While I cannot express my approval of this bill by signing it, I am reluctantly compelled, for the reasons aforesaid and by my necessarily imperfect knowledge of the local situation, to adhere to my former policy, and I therefore allow this bill to become a law without my signature.

"In such matters as local game and fish laws the Executive must rely upon the representatives in the Legislature from the locality directly interested to correctly express the wishes of their constituents, and upon the Member and Senator from the district affected must mainly rest the responsibility for legislation of this character.—DAVID B. HILL."

The Senate has passed Winne's Catskill deer park bill.

The Assembly has passed Reeves's bill extending the exemption clause to Gardiner and Peconic bays, so as to allow the shooting of wildfowl from boats.

The Governor has now in his possession, awaiting his signature, Emery's bill forbidding the setting of pound nets, trap nets and other kinds of nets in the waters of Lake Erie adjoining the shores of Erie county; also Sime's bill providing that the bills of State fish protectors shall be audited by boards of supervisors, as other bills are audited.

The Assembly has passed Sweet's bill relating to fishing in Cayuga Lake.

The Senate committee on game laws has reported Fitch's appropriation of $5,000 for the fish hatchery at Cold Spring Harbor, and it is expected that the bill will be passed before adjournment.

Assemblyman Moore thinks that his bill amending the penal code relative to the dredging by steam to the injury of oyster beds will not come out of the judiciary committee before adjournment.

On Friday evening Senator Comstock's bill providing for a fishway in the Hudson at the State dam, Troy, was discussed before the Governor. There was a large number of interested persons present. In favor of the measure were: Dr. Schuyler, E. M. Green, W. Hagar, L. C. Griffin, Mr. Burdette, Mr. Knickerbocker. Against: J. A. Manning, A. A. Hall, M. Orr and Mr. Boswell. The bill has been recalled for amendment.

The Assembly amended Senator Murphy's bill relating to the sale of fish and game taken outside of the State so that such fish and game should only be sold in New York city. Murphy tried to confirm the Assembly action in the Senate, but he failed.

The Cornwell game bill relating to Seneca Lake has been so amended as to allow spearing any fish but bass and pike in Seneca, Keuka and Canandaigua Lakes, and also drawing of seines for the catching of bait. In this shape it has gone to the Governor.

By far the greatest excitement during the past week was in regard to the Assembly game law bill (which was Reeves's bill worked over) relative to the protection and cultivation of oysters. In my last letter it was stated that the finance committee of the Senate had so completely reversed the bill that it was unsatisfactory to Reeves and his friends, and that it would be killed rather than passed in that shape. Soon afterward, however, after a long consultation, the bill was amended so that it resumed almost its original shape, and in that form has gone to the Governor.

RIFLES AND BULLETS.

A MAINE reader of the FOREST AND STREAM writes to Major Merrill as follows:

MAJ. H. W. MERRILL—*Dear Sir and Comrade:* Permit me to call you comrade although we have never drunk from the same canteen. I recall your article on Capt. Martin Scott, in FOREST AND STREAM, of May 21, 1886, and as I have no recollection of an article by others, I trust you will redeem your promise to write one. I inherited a love of rifle shooting, and since quite a small boy have used one constantly, and while yet in my teens commenced the career of a hunter and trapper, and was for many years located in the vicinity of Bennington, Vt., where Scott was raised; and I often heard through mutual friends of his wonderful exploits, such as shooting swallows on the wing, and tossing two potatoes up and splitting both, and so I came to look up to him as a demigod. When his earthly career so untimely, though gloriously, ended in Mexico, I sincerely mourned him, and ever since he is often in mind.

Anent the rifle controversy, I am on the side of the muzzleloader vs. breechloader; but for many years past my life has been passed in the far-back forests among the big game, and for convenience's sake I have used a breechloader; but often, when I have to give the game several shots to stop them (because of the inaccuracy of the breechloader), I have wished for one of my old-time rifles that would place the ball where I aimed. I hunt bear, deer, moose and caribou, and once in a while kill with one shot; but it also often happens I have to shoot from three to seven bullets into one.

The last muzzleloader I owned was a 22lb. telescopic-sight target rifle, and what a delight it was to me. Its accuracy was perfect when all conditions were perfect, and I had everything in its use "down fine." And I often carried it all day in picking off crows, hawks and woodchucks and did not care for its weight.

I am now using a single-shot Winchester, .45-60-300, but it has too much curve. I am trying to find a hollow-pointed and lighter bullet, so as to get higher velocity and something that will "mushroom" when it strikes. I used a repeater a while, but discarded it for several reasons; one, the fact that in very cold weather the frost in the action made it useless.

A MASSACHUSETTS VOLUNTEER IN MEXICO.

Sea and River Fishing.

Address all communications to the Forest and Stream Pub. Co.

A SIERRA FOOTHILL STREAM.

ON THE 12th of April I was called to visit a patient in a sparsely settled portion of our foothills, where I had never visited before, and which lay fifteen miles away. For ten miles the way was thoroughly familiar, but the remaining five ran through a tract of the foothills of which I had no knowledge. Here I made a discovery. Within half a mile of my patient's house I crossed a beautiful little stream of clear, crystal water that babbled "trout" in every intonation of its voice, as it foamed away in mimic froth and fury to join a "slickens" polluted stream two or three miles further on. Arriving at my destination, I fear that I plied more questions regarding the stream than I did as to the ailments of my patient, and I learned that the waters did contain trout, but that no one could catch them, as they would not bite. I was also informed that it was better fishing, or at least that there were more fish, further up the stream, as in the lower part of its course it went dry for a part of the season, excepting in a few deep pools, and in those pools the dynamite fiends had been in the habit of killing everything, big and little, for several years past. In the upper reaches, the stream was ever living, and the trout, being more widely distributed, had a better chance to escape extermination. It made my blood boil to hear of such diabolical fiendishness. If there is anything on the face of God's earth that I hate, it is the skulking, cowardly, lazy libel on humanity that slinks along a stream, avoiding the eye of his fellows, and watching his opportunity to slip a dynamite cartridge into some well-stocked pool and destroy every living creature it contains. This is a curse that I think California suffers from more than any other part of the Union, as our long dry season always reduces the smaller streams to a string of pools in which all the fish congregate, and which offers the dynamite fiend just the opportunity his apology for a soul craves. But this is a digression into which the holy hatred in my heart has led my pen, and now to my subject again. I received the information regarding the non-biting qualities of the trout *cum grano salis*, and after hearing of the great size to which the trout in this particular stream attained, I was then and there seized with a severe attack of *febris piscatorialis*—fishing fever—for which there was no cure but a day's angling.

On my return I imparted my discovery to a friend, and he also contracted a severe attack of the fever which was burning in my veins. We laid our plans to go and stay one night, so as to have the evening and morning fishing, and set the day on which to start. This we did for half a dozen different times, but something always occurred to one of us to prevent our going. At last, when everything seemed propitious, my friend was taken with a sharp attack of rheumatism, which, in the language of the turf, "put him out of the running;" and after he had passed the crisis of the disease I determined to arise early the next morning and start alone for a day's angling.

The time had run along until it was May-day morning, when I arose at 4 o'clock and started.

It was not yet day, and the morning air was chilly; but the anticipations of sport, which a short time ago had been unhoped for until my annual summer holidays came around, gave a glow of light and warmth which supplied their lack in the atmosphere. In a short time Old Sol came driving his fiery steeds over the summit of the Sierras, lighting up such a landscape as can be seen nowhere but in our lovely golden State. I will stop for a moment on my journey and try to describe the outlines of the picture which lay spread before me.

My route led directly north, and on my right towered the grand and beautiful Sierra Nevada peaks with their summits clothed in unsullied white, and their sides enveloped with empurpling shadows. Then, stretching down to my very feet, come the yawning cañons, the long sloping ridges and mountainous spurs of the range, clothed in the grand majesty of the primeval pine forests, which the vandalism of man is fast sweeping from their rock-ribbed sides. On the left roll down the fruit and vine-clad foothills, until some miles away and two thousand feet lower, they melt into the great central valley of the State, through the middle of which can be plainly seen the silvery streak of the Sacramento River. North and south, further than the eye can reach stretches this fertile plain, clothed with emerald fields of wheat and dotted here and there with the "cities of the plain." Yonder a dusky line obscures the burnished silver of the river. 'Tis where a river steamer is pouring out a cloud of smoke as she slowly plows her way against the current with a huge lumber laden barge in tow. And beyond all, with their snow-capped peaks blending with the clouds on the western horizon, rises the coast range, shutting from view the rolling expanse of the Pacific Ocean. The fields around are a poem in blue and gold with the bloom of lupins and escholtzias, and the air is redolent with the scent of the mountain birch and red-bud, in the blossoms of which the bees are commencing their day's labor. It is well worth while, even for this view alone, to arise at 4 A. M. before the midday haze has obscured the vision.

But this is not fishing, and to your correspondent who only wanted the arithmetic of an angling excursion, I fear will be dry reading. But then, I hope your readers are not all "built that way." I am not. The roads for the last five miles of the journey were bad, and there were numerous rickety and contrary gates to be opened and shut, and it was after 7 o'clock when my destination was reached. After caring for my horse and eating

lunch (I had had no breakfast), I put my rod together and affixed my reel. And then came a time of trouble and a trial of patience. I had a little Fowler reel, carrying 40yds. of line, to which I am very partial, owing to its lightness and the rapidity with which it gathers line. But alas! it has one bad fault. It retrieves the line through a narrow, fixed slot, and the line piles up, then falls over, giving it slack, and in this slack kinks will form—and then—well, you know how it is yourself! The more you try to get a kink out of a line the more it gets in. I finally tried to take the reel apart, and then came the old frosty winter of my discontent.

The pesky thing would not come apart, and after consigning it and its inventor many times to the realms of Pluto, I gave up the job and returned its screws to their places and kept patiently at work until it finally started off with a merry click, as if nothing ever had been the matter with it.

I attached a short leader with two flies, as the stream is to small for more, and at 9 A. M. made my first cast.

What a waste of golden moments that contumacious reel has cost! I flattered myself before this occurrence that I was too old a fisherman ever to be caught unprepared when the fishing grounds were reached, yet here had I, like the merest tyro, lost an hour and a half of the best fishing of the day. For when the sun mounts the sky there is no more fishing under his fiery eyes until the shadows of evening darken the gliding ripples.

The point where I struck the stream was at the foot of a rocky gorge in which were two beautiful pools. At the head of the lower one was a fall of 6 or 7ft., and at the upper one of some 5ft. The water in each was all of 10ft. deep, just the home for a fine trout. The second cast brought a rise and I hooked a beauty. Great Scott! see him break water—half a pound if he's an ounce! And here I stand, on a rocky shelf, with scarce room to turn around, and no landing net. I never expected to get such a large fish in this small stream, so did not bring one with me. Well, he must be thoroughly tired out before attempting to land him. This is the only way out of the difficulty. Up and down the pool he goes: now breaking water at the head, then at the foot; now boring down to the bottom to rub his head against the gravel, followed by another wild rush. At last, completely exhausted, he turned belly up, and submitted quietly to be lifted by the leader up to where I was standing. But, alas! "there's many a slip," etc., for when I reached down to put my fingers into his gills he gave one last despairing kick, unhooked himself, and went tumbling back down the rocks into his native element.

Of course I felt for a moment as if all joy had departed out of this cold and unfeeling world, and that a poor orphan had no chance anyhow. No doubt this was the largest trout in the stream, and I "ne'er would see his like again."

A few more casts and I hooked and landed a fair trout, but he was not more than half as large as the one that escaped. Then I whipped away for fifteen or twenty minutes without a rise, following slowly up the stream until I came to a small pool with a fine ripple at its head. At the first cast I hooked a magnificent fish, larger than the one I lost. What should I do? The banks on each side were lined with thick brush, the tops of which hung over into the water, and if he once made a dash into the entangling branches it would be good-bye trout. Taking this all in at a glance, I took all the chances and gave him a "yank" that would have done credit to the most excitable novice, and landed him 10ft. away among the brush. He came down free from the hook, and there was an instant's circus among the grass and dry leaves; then an ominous splash—then silence. *Mort à le Diable!* What's the matter now? An instant's examination revealed all too plainly. There was a treacherous little rill trickling down the bank, with just enough water in it to enable a trout intent on business to make his way back into the main stream.

Then and there something broke loose. There was a certain angler about that time that caught hold of a stout sapling that grew near by to steady himself, took a long breath and ——!! ——!! ———!!! but what's the use dilating upon the sad scene?—you all know how it is yourselves.

After a time "the clouds rolled by," and I went to fishing again. I soon caught another fair-sized fish, and from that until past noon I whipped and whipped without a rise. Under California's sunny sky the middle of the day is n. g. for fishing.

Returning to the carriage, I ate some more lunch, filled my pipe, and stretching myself under the shade of a kingly oak, proceeded to console myself with the care-dispelling weed. And there I lay and smoked and mused three happy hours away, with the soft grass beneath and the trembling leaves of the oak above, with orioles and house-finches darting in and out of the dancing shadows, the soft west wind whispering of the ocean whence it came, and the fretful murmur of the little stream in my ear as it chafed and complained in its boulder-strewn channel. Ay, ay; surely it is true that "it is not all of going a-fishing to catch fish."

What time is it? Four o'clock, as I am a sinner! I must be up and at it again, as at 5 P. M. I must start for home, as I have many a tussle in prospective with contumacious gates and misleading by-roads, before darkness settles down.

For half an hour I whip the stream downward in vain. Not one single rise rewarded my labor, barring one, and that rise was made by myself, and I succeeded a very sudden fall on a treacherous and slippery rock. Contrary to a trout's custom I did not bite when I rose, it was when I sat down that I bit—my tongue.

Well, I must turn and retrace my steps. I have only half an hour left and, I fear, no prospect for any more fish. Ten minutes more pass and still no rise. Discouragement is fast settling down upon my spirits when —ah! you beauty, I have you firmly fastened! I know it by the natural intuition of an angler. Away he rushes—up, out of the water he leaps—down he bores, with his head scrubbing against the bottom, then out again, his sides gleaming in the rays of the setting sun and his head shaking like a bulldog's. In fact he goes through all the antics of a wily trout. If I lose him, my heart will break sure, for I am certain he will weigh a pound. The pool is a favorable one and I give him all the play he desires. At last he comes gasping to the bank fairly conquered, and I lift him out, kill, and lay him on a grassy spot to admire him. Oh, what a shame to kill so gloriously beautiful a creature. See the iridescent colors playing on his sides. See the beautifully swelling shoulders, lovely as a woman's bust, and the shapely head and tail. Surely there is no more beautiful nor hard-fighting fish in creation than a California rainbow trout. I slipped the hook of a pocket scale into his gills and he pulled down 1½lbs. exactly.

This was joy enough for one day if I did not catch another fish. From this on until my appointed time, and I far a little later, I caught them as fast as I could save them, and when I reeled up my line I had ten trout in my basket that weighed six pounds in the aggregate. This may seem to be a poor and tame day's sport to numerous anglers, and many times under more favorable circumstances it would have been so to me, but coming as it did, in such an unexpected time, and getting such large and fine fish in such a tiny stream, gave the day's outing such a surpassing zest and pleasure that I could not help trying to share it with your many readers in part return for the delight so often derived from your columns from the pens of others. Perhaps, after my annual summer's outing in the mountains, I can tell you stories of days of greater success and far larger fish, but none, I am certain, can I tell of more thorough enjoyment. AREFAR.

AUBURN, Cal., May 17.

THE ADIRONDACKS.

THE weather throughout central New York is very dry, and trout fishing in our numerous streams has not therefore been as good as usual. But fishing in the various lakes is unusually good. Many Syracusans have gone to or are seeking the Adirondacks, where the best fishing of the season will be realized during the next two or three weeks. Few cities can boast of so many expert anglers as Syracuse has, from chief-justices of the Court of Appeals and bishops all the way down to the "chalk-line" fisherman in more humble pursuits. Justices Ruger and Andrews, of the Court of Appeals; Justices Vann and Kennedy, of the Supreme Court, and Judge Northrup, of the County Court, can all whip a stream in the most expert manner. Bishop Ludden, of the See of Syracuse, enjoys both fishing and hunting. The Rev. Dr. Lockwood, Rector of St. Paul's Cathedral, spends his vacation in the Adirondacks each year, and is well acquainted with woodcraft. And so the list might be considerably extended. D.

SYRACUSE, May 19.

I am on my thirty-fifth annual spring trip. The trouting season opens here exceedingly favorable. Fly-fishing has commenced, and also trolling, and a few well-known old sportsmen are enjoying the waters. WOODS.

SARANAC LAKE, May 16.

"Piseco" sends us this note from an Adirondack guide whom he indorses as A No. 1:

BLUE MOUNTAIN LAKE, May 12.—I think you miss it by not coming to fish. The ice went out of Blue Mountain Lake May 8. Yesterday I caught 32lbs. of brook trout, weighing from ¾lb. to 3lbs. apiece, and sold them to Geo. Tuncliff to-day. You could get here next Tuesday, May 17, and have two weeks of as good trout fishing as you want. I will guide you for nothing if you don't have as good time as any man can wish for.—HENRY E. TAYLOR.

[No one knows better than "Piseco" that he "misses it," but once in a while there are lions in the path that the most enthusiastic angler in the world cannot pass to reach the trout waters.]

THE NIPISSING REGION.

IT is about this time that the lover of the woods finds that he has been working too hard, that he is getting run down, etc., and he explains to wife and family that nothing but a trip to the North Woods, Moosehead Lake or Nipissing will give the necessary rest and tone to his system. And it is true enough that a little camp life in the wilderness usually is of great benefit to those in need of change and rest. For the last two years we have spent a few weeks each summer at Trout Lake and vicinity (Nipissing region), and while there may be more desirable points, still it will be hard to find places where so good fishing can be had so quickly and so easily. It takes two nights to reach North Bay, the intervening day being mostly spent in Montreal. The train reaches North Bay about 9 o'clock A. M. and Trout Lake is but four and one-half miles away with a passable road leading to it. It is easy to get breakfast, buy provisions, etc., and reach Trout Lake by noon.

We had dinner at Jessup's and went into camp seven miles down the lake at Big Camp Island. Trout Lake is connected with Turtle Lake, and there are many smaller lakes and ponds in the immediate vicinity which have been fished very little or not at all. A splendid canoe trip would be to go by rail to North Bay—Canadian Pacific Railway—thence to Trout and Turtle lakes, then over a very short portage to Pine Lake, from here an easy portage of perhaps a quarter of a mile takes you to Talcon Lake, through this fine lake to its outlet the Mattawa River, which joins the Ottawa; thence down the Ottawa to Pembroke or any point below, or even to the St. Lawrence. In addition to good fishing and fine scenery, this route is rich in historic interest, as Champlain and his soldiers passed over it as long ago as 1615, and for nearly a hundred years it was the regular route of the voyageurs and trappers of the northwest, and its rocky portages are well worn by the feet of thousands of hardy men. The Hudson's Bay Company once had a post on Trout Lake, the remains of which can still be seen. Near it is a grave marked with a wooden cross and inclosed with a fence of heavy timber.

Though so easy of access this region is virtually a wilderness, no one living on Trout Lake but R. B. Jessup, the guide. The nearest post-office is North Bay. Among the pleasant memories of last season is that of a day on Lost River, the outlet of Turtle Lake. At the foot of rapids and in pools we caught 37 fish, mostly bass, in probably two hours' fishing, the total weight being 60lbs., running from ¾lbs. to 3lbs. We used live bait and "Caledonia minnows" with equal success. The water was shallow and you could see the fish dash for the bait, sometimes from a long distance, and it was great sport. Had we used heavy tackle we could have taken as many again probably. We caught in the lake bass of 4lbs. weight, and the largest maskalonge weighed 28lbs. On Balsam Creek we caught 50 nice brook trout in an hour's fishing, though none weighed over a pound. B. AND H.

MAINE WATERS.

THE trout season may now be considered to be fairly begun in Maine waters, and yet the scores are still not very satisfactory. Indeed up to the present time they may be said to include no large fish of the class *Salmo fontinalis*. But this can hardly be considered strange, from the standpoint of a veteran angler, who remarked yesterday that the seven-pounders and above are rarely taken previous to Decoration Day in the Rangeley waters. Indeed the early fishing could hardly be expected to turn out very well this year, above all others, when the water has been so remarkably high, roily and full of snow water. My guide, who has had many years of experience in the Maine lake regions, as well as his father before him, is at our camp on Richardson Lake, where he has been for the past ten days—finds the fishing to be poor, and remarks in his last communication that there are more fishermen than trout. He also says that the water is the highest ever known, with still a plenty of snow in the woods. However, this will all pass away in good time, and there will be a limited run of good fishing. There are reports of some very fair scores of trout from the brooks in Maine and New Hampshire, where the water has gone down, and the chances are that Decoration Day will add to these scores. It is worthy of note that the trout scores of the early arrivals at Rangeley Lake are sprinkled with landlocked salmon, all the results of fish propagation, since they are not native to the waters of those lakes. The landlocked salmon fishing in the Sebago and adjoining lakes has not yet been very satisfactory. Commissioner Stilwell was there last week, en route to visit the hatcheries of the Commission at Eads Falls, where they were so successful in obtaining landlocked salmon eggs last fall, from the fact that a weir and dam were so constructed that not a breeding salmon could go up the river without falling into the net of the State, to be used for breeding purposes and then turned loose, either to breed again or to fall a prey to the angler's hook. The Commissioners were quartered at the club house near the mouth of the Songo River. They fished a part of two days, with the result of one fine salmon that weighed 8lbs. and a number of trout of very respectable size. There were other sportsmen there, both ladies and gentlemen, but the fishing was not very satisfactory, though some fine salmon were caught. Still the number of fish was not more than four or five to a dozen anglers. Such fishing is not satisfactory, especially to those who do not land the fish. Commissioner Stilwell is of the opinion—and Commissioner Stanley agrees with him—that the stock of landlocked salmon is not one-fourth part what it should be in those waters, where there is an abundance of food and also an abundance of room. The trouble always has been the destruction of the breeding salmon on the spawning beds in the little streams which flow into these lakes.

Maine's quota of shad fry passed through Boston on Sunday in the United States Government baby fish car, which car has already been described in FOREST AND STREAM. The car was destined for Augusta, where it was to be met on Sunday night by the Fish Commissioners, who were to be occupied for two or three days of this week in putting the 2,700,000 shad fry into the Penobscot and Kennebec rivers. This looks like a pretty strong stroke toward stocking those waters with shad.

Still the salmon fishing at Bangor is not up to that of last year. The result of Saturday's fishing—there were a number of boats engaged—was the hooking of 12 salmon, with the landing of only four. It is thought that the fish which have the courage to rise to the fly through such cold and roily water as has prevailed all the season so far are especially gamy and hard to capture. The chances are that there will yet be a number of days of good salmon fishing at Bangor. Fish Commissioner Stanley is expected here on Wednesday, and as he is an expert with the fly-rod, using flies of his own tying, it is likely that he will take a salmon or two. He has already been quite successful at Weld Pond, I understand; a fine sheet of water that never contained a salmon till the Commissioners put them there. Now the report says that in one day this season over 150 were taken, weighing all the way from one to eight pounds. There is something in an old saying about the man who makes two spears of grass grow where only one grew before, being a benefactor to his fellow man, and surely it would seem that a fish commission that had brought a pond up from a few scattering trout to the position of producing 150 noble salmon in one day, it would seem that such a commission was worthy of some credit. SPECIAL.

BOSTON, May 24.—*Editor Forest and Stream:* Better salmon fishing at Bangor yesterday; seventeen were taken. There are nearly twenty noted sportsmen there. One million two hundred thousand of the shad fry go in the Penobscot. SPECIAL.

A SHORT KEY

TO THE TWELVE COMMONEST FAMILIES OF FISHES.

1. Toothless; single dorsal of less than 10 rays....Cyprinidæ—Minnows.

2. Eight barbels about mouth....Siluridæ—Catfish.

3. Toothless; dorsal of more than 10 rays....Catostomidæ—Suckers.

4. Dorsals 2; anal 1 or 2 spines; size small....Etheostomidæ—Darters.

5. Adipose fin; body scaly; head smooth....Salmonidæ—Salmon.

6. Four barbels in row, front of mouth....Acipenseridæ—Sturgeon.

7. Single dorsal 8 to 12 spines; anal 3 to 9....Ichthelidæ—Sunfish.

8. Dorsals 2; ventrals thoracic I-5; anal 3 spines....Labracidæ—Bass.*

9. Dorsals 2; ventrals thoracic I-5;† anal 1 or 2 spines....Percidæ—Perch.

10. Ventrals thoracic; vent jugular, in front of ventrals....Aphredoderidæ—Pirate perches.

11. Lateral line continuous (*i. e.*, running up to last scale and often on to the caudal fin); vertical fins bearing scales; dorsals 2, often connected, soft part most developed....Sciænidæ—Maigres or Drums.

12. Cheeks mailed; body naked; eyes high up, near together....Cottidæ—Sculpins. SYRACUSE.

*Do not confound the Labracidæ with the bass of sportsmen. The latter belongs to the Ichthelidæ.

†1-5 means "one spine and five soft rays."

"RARE OLD BEN."

Editor Forest and Stream:

Sadly and with heavy heart I take up the unwilling pen to tell the brethren of the rod of the death of B. F. Renshaw—"Rare Old Ben"—whose quaint stories, genial, unselfish ways and sterling worth made him dear to all the hearts of the "Kingfishers," and—I may indulge the hope—to all the gentle craft in some measure, who made his acquaintance in the "Camps of the Kingfishers" on Black and Carp lakes.

He was taken down with lung fever on the 2d of April, which developed into typhoid pneumonia; and he died on the 15th at the residence of his brother, John Renshaw, on their farm a few miles north of Decatur, Ill., in the fiftieth year of his age.

He was a plain, unassuming farmer; a bachelor, making one of the home circle in his brother's family; a man of rare good sense—good "old-fashioned hoss sense," as he would have called it; large-hearted, tender as a girl in his nature, and a sportsman in the best sense of the term, for he loved the woods and the waters, his dog and gun, his rod and his neighbor, and had ever a kind consideration for even the lowliest of God's creatures—qualities that, I take it, leave nothing lacking in the make-up of one who claims kinship with the brotherhood.

Utterly unselfish, always cheerful and obliging, ready at all times to engage in any undertaking that promised sport, turning the gravest mishaps into a source of fun, full of "yarns and reminders," he was the life of the camp and beloved of all his associates.

We were looking forward to the coming annual summer's camp as one among the many pleasant ones to be remembered and talked over when the long winter evenings come, for Ben was to have gone along; but now we will miss his kindly old face, his inimitable "yarns," his ever ready jest, his brotherly solicitude for the comfort of others, his fund of humor and quaint sayings that were wont to set the camp in a roar, but more than all will we miss him as the most self-denying, the gentlest and truest comrade who has broken bread at our rude table wherever we have built our camp-fire, beside stream or lake, in all the past years; and none may fill his place, for his like is not, to quote one of his favorite phrases, "on the face o' this livin' a rth."

Rare Ben! our hearts are bowed down with grief at his loss. Peace to his memory, and may his camp in the happy hunting grounds be made beneath the fragrant canopy of woods of evergreen, beside some meandering stream whose wimpling melody will soothe his spirit to peaceful rest till joined, at the Master's call for the final round up, by his old comrades, the Kingfishers.

KINGFISHER.

LOPEZ CREEK.

"I DON'T knaow what to do with meself to-day," said my Eastern friend the other day.

"Let's go fishin' up Lopez Creek," I suggested, "there's a mighty lot o' trout up there."

Before two hours the ponies were hitched to the buckboard, loaded with blankets, grub, horse feed, cooking utensils, a shotgun and ammunition. We were soon off up the beautiful Arroyo Grande. I have traveled far and seen much. My boyhood's home was on the upper waters of the Abana, and over the range was the beautiful Pharpar. Naaman asked of Elisha, "Are not Pharpar and Abana, rivers of Damascus, better than Jordan?" And yet I ask myself, are not Arroyo Grande and Lopez better than all the rivers in the world? My soul answers, yes!

There was exhilaration in the fresh sea breeze that struck us in the back as we sent the ponies whirling along up the easy grade of the winding stream. On either side the busy farmer was planting the unpo tic bean. The young orchards in their wealth of fresh new leaves clustered around each cosy cabin, and away ahead of us the spurs of the San Luis Mountains showed the lights of wild oats on the southern slopes, and shadows of live oak, sage brush and chemisal on the northern slopes of its dark cañons.

About eight miles from the village we came to the junction of the Ranchita and Lopez creeks, which form the Arroyo Grande. I had said nothing to my friend about the change of scene he would meet, and he was utterly taken by surprise as we turned into the Lopez Creek Cañon. Below the scene was quiet, peaceful and happy—a valley of half a mile wide, devoted to orchards and bean lands. But the houses were now scattered out to a mile apart, the great rocks rose in sheer precipices. The water, while not of that hissing, foamy, frothy nature of Colorado's mountain streams, took more life from its surroundings, and whirled and dashed at a much more lively rate. Here and there a mimic waterfall sent a stream, such as might come from a garden hose, down a little fall of 10 or 15ft.

Three or four miles up a very rough road, and as many houses passed, we arrived at what C. called the "jumping off place." We had come to the end of the wagon road. Leaving the wagon, we piled blankets, grub boxes and fishing baskets on old Chappo's back in as neat and compact a pack as we could, and made our way up the trail for two or three miles further, at what is known as "fall cañon." About a hundred yards back a little tributary came dashing down a 15-foot fall into a large pool of c ear water.

On our way up we met two young men from San Luis on their way out. "What luck?" was answered by "About two hundred; just stayed over night; came up last evening." "Wat dum lies!" said C., *sotto voce*. I said nothing, as we had not come for a "killing." I thought that the trout must be in their usual good appetites. Picketing out the horses, we took our rods and started out just to try their temper and found they took the fly very well. We fished together and tried only the most likely places. We went further than we intended, but fishing over ground that had been already gone over that day, we only caught forty-six. We got in late, built a fine fire out of oak and laurel (a species of bay), and soon the coffee-pot was sending out an aroma that would make your hair curl, and the trout were sizzing and sputtering in the bacon fat. You never saw people eat as we ate that night. The trout right from the brook, a good beefsteak, coffee, bread and butter, canned apple sauce, and that sauce that makes a good appetite—hunger, made us enjoy as grand a supper as heart could wish. An after supper smoke, a few yarns, and spreading down our blankets in that glorious (I believe they call it) climate of California without a tent, without a fear of rain or storm, we needed no rocking to send us to sleep, for were not all the night voices of our good old mother nature singing us ln laby.

"Let's have an early start" was the last word at night, and at dawn we were up and after bathing in the creek were busy at breakfast, which was eaten as heartily as though we had gone to bed hungry. Before sunrise—I don't know when sunrise is in Lopez Creek cañon; we did not see the sun until ten o'clock—we were up and away up the creek to the great fall in the creek five miles off. Civilization had entirely disappeared. Stopping here and there to drop in a line where the trail crossed the creek we worked our way up through brush and chapparal, over level, open then by wooded forest glades, through ferns, poison oaks, blackberry bushes, willows. Away up the slopes on one side the hills were covered with the green-black live-oaks; on the other side grease wood, sage chemise, brush, tyone, and away to the top the bright green wild oats. Rocks and landslides scarred the face of the mountain away off nearly to the tops, which were only seen when some small cañon ran into the larger one, opening out our view to the distant summit. We caught so many fish before we were half to the falls that we considered it prudent to *cache* them.

The trout were in that fearless, snappy mood that delights the sportsman's heart. We caught them in pools, in eddies behind rocks, on the riffles, everywhere. C. declared one came out on the bank where he had laid his rod down, snapped up his hook and made off with it. We caught fish until we dreaded to throw in for fear of catching a large one. We finally made the big falls, which were in no way remarkable, being only a fall of 5 or 6ft. Above this there is no fishing of any consequence, as the creek breaks up into a number of small streams. With already tired bodies we started for our five mile trip through brush and over rocks back to camp. With inward groaning at the additional load to be taken on at our *cache*, we limped and stumbled along. We found all the fish there, and more too, it seemed to us. Fortunately we had brought the horses up a mile and a half or so, and when we got them we strapped our baskets and barley sacks (for baskets had overflowed) of trout to the saddle, and reached camp in pretty good shape about 1 o'clock.

After a lunch a start was made for Arroyo Grande, or, as it is familiarly called, "The Arroyo." We reached the Arroyo in good time for supper, and a count was made. Each kept his own count separate. C.'s was 153, while mine was 162. In the morning catch I was only two fish ahead.

This is a trip I have made a number of times in the last three years. Three of us once caught 600, but we were gone two nights. The fish caught were the common California rainbow trout. Lower down salmon trout are the only ones caught, which, though larger, are not so game as their red-striped cousins. LA PANZA.

ARROYO GRANDE, California.

IDAHO NOTES.

HOPE, Idaho, May 9.—I wish all you sportsmen could be here and enjoy some of the fine fishing we are having now. I never had grander sport in my life, and yet there is a certain amount of wounded pride connected with the sport. After trying my full stock of flies and trolls with poor success, I was compelled to go to the noble red man and learn the best bait to use. After a liberal donation of cigarettes, I succeeded in learning their secret from the Chief Monshelle. Now you needn't think I am going to give it away, but will reveal that to secure the right bait I shouldered an axe, and after a vigorous onslaught on decayed trees and stumps, and after exhausting my vocabulary of adjectives against the large ants that kept looking for soft spots on my lower extremities, I secured a large can full of "pish muck-a-muck"; and I have been having good success so far in landing nice ones.

The past week, however, has been one of rain and high winds, and has kept us indoors nearly all the time, and it is trying.

The o her evening, as I sat thinking of the sport we had been having and the grander sport we are going to have, the thump, thump of hurrying footste s startled me, the door flew open, and the white, scared face of Lew, my chum, appear d, and after many vain efforts to speak, blurted out, "Frank—there's—a—big bear up at hotel." I shouldered my rifle, buckled on my knife à la frontier scout, and after climbing the hill Lew showed me where the bear was and then made a break for the house in search of an axe; and it's my opinion he would have been looking for it yet if I had not yelled to him, "You great fool, it's my black hog and no bear, and the next time you rout me out at 10 o'clock to kill my own hog there will be blood shed sure." Of course, Lew has a different version, and when he gets an opportunity to relate o any one (in my hearing, of course) his tale reminds me of the old story of "How me and my Betsy slaughtered a b'ar."

The hotel will probably be opened soon. Already we have had several tourists, and they have had rare sport. Mr. Lougee, of San Francisco, spent two days with us with good success. He is one of the most enthusiastic sportsmen I ever met, and if all his fish weighed as much as he estimates at the first pull, a small number of them would sink a boat. C. E. Newton and Dr. A. H. Porter, of Spokane Falls, also spent wo days here, and although the weather was cold and windy, they were we l satisfied, carrying home about 25lbs. of nice trout. I succeeded in capturing a fine char (10lbs.) last Tuesday.

F. T. A.

SUNAPEE TROUT.—The first big fish of the season taken from Lake Sunapee was caught Saturday by W. L. Reed, A. F. Stocker and Ira Stowell. Its weight was 4lbs., and it was one of the "What-is-its;" in other words it was one of the new trout of the *oquassa* type, about which there has been so much discussion. Amos O. Woodbury, of this village, is a gentleman of keen observation and a scientific turn of mind. Besides, few men have had more experience in handling the rod about Sunapee Lake; and few, if any, have been more successful in angling for the trout which inhabit that beautiful sheet of water. Mr. Woodbury says that the new Sunapee Lake trout, about which so much has been said, is not of the *oquassa* type, but that it is a hybrid, produced from the mixture of the landlocked salmon and the *Salmo fontinalis*, which have always been found in the lake of a very large size.—*Newport (N. H.) Argus, May 20.*

THE ANGLING TOURNAMENT.

AS we go to press the fifth annual tournament of the National Rod and Reel Association is being held at Har em Mere, Central Park, New York city. The first contest is called for 10 A. M. on Wednesday, and there are classes which will occupy all of Thursday also. In our last issue we gave directions to find the grounds, which we now repeat. The contests take place on the northeastern side of Harlem Mere, at the corner of 110th street and Fifth avenue, opposite the Polo Grounds. There are two ways to reach the place: Take the Third Avenue Elevated road to 106th street and walk north and west, or go by Sixth or Ninth Avenue Elevated road to 116th street and walk back to 110th street and then over to Fifth avenue. There are often hacks to be found at these stations, but not always, although they can be had at the Polo Grounds for return. A full report will be found in our next.

THE ICHTHYOPHAGOUS CLUB.

THE Ichthyophagi dined at the Murray Hill Hotel last Saturday night. As a rule there have been too many persons at the dinners to make them enjoyable and it was decided to limit the number on this occasion to about fifty. Chas. R. Miller presided, and among others present were Senator Griswold, Assemblyman Robert Ray Hamilton, ex-Assemblyman Hotchkiss, Assemblyman D. E. Ainsworth, of Oswego, ex-Assemblyman Leverich, Assemblyman A. E. Stacey, Assemblyman H. A. Reeves, Postmaster Hendrix of Brooklyn, Chas. A. Dana, Bernard Gillam, Henry L. Nelson, Clerk of the Senate John W. Vrooman, ex-Assemblyman Lyon, Dr. E. C. Spitzka, Dr. W. E. Brill, Dr. Paul H. Kretzschmar, Eugene G. Blackford, Fred Mather, Amos Robbins, Wm. Ottmann, E. H. Hammond, F. G. Mather and H. S. Cunningham.

No new dishes were eaten, the club having about exhausted the list of aquatic monsters. The bill was: Bisque of crabs, bouchées of squid, sheepshead farci, with port wine sauce, skate à la Hollandaise, turban of filet of sole, sea robin, sauce rémoulade; German carp, with horseradish sauce; capon à l'Arthur, cold asparagus, Ichthyophagous punch, salmon braisé, Nesselrode pudding, coffee and cakes.

The sea-robin was excellent and almost rivaled the sheepshead, while the carp was lightly touched. It is not possible to report the bright speeches and witty stories which keep this club at table for five or six hours, and it will be enough to say that there was no lack in that direction.

OLD AND NEW RECORDS.

WASHINGTON, D. C., May 11.—I quote the following from Walton's "Compleat Angler:" It shows what grand fishing there must have been in those old days. It records ten years, one month and five days of angling.

Fish taken in the counties of Carmartken and Glamorgan, commencing April 11, 1753, to April 14, 1754, inclusive, 6,272.

In the counties of Pembroke, Carmartken, Glamorgan and Derby from April 11, 1754, to Oct. 24, 1756, 3,758.

1756. In the counties of York, Salop and Glamorgan, 3,739.

1757. In the county of Glamorgan, 9,275.

1758. In the counties of Glamorgan, Brecon, Radnor Hereford, 1,762.

1759. In same counties, 3,490.

1760. In county of Glamorgan, 2,150.

1761. In same county, 2,522.

1762. In the counties of Glamorgan and Carmartken, 3,783.

1763. In the county of Carmartken, 3,158.

1764. In the county of Carmartken to July 23, being my last days angling in the principality. As it is the whole given to the public, 47,126.

Many pike, eel and chub taken, but not included in the above. F. Q. T.

Compare with the above the following record of trout taken from one stream, Castalia Creek, in Ohio, by members of the club leasing it. The report is given by Dr. E. Sterling, in the Cleveland *Plain Dealer*, May 4:

The following is the total number of trout taken by the Castalia Sporting Club from their fishing grounds for the last six years, the fishing season beginning March 15 and closing Sept. 15. No trout less than 8in. in length taken from the stream and all fishing done with artificial flies:

1880—1,497 trout	524lbs.	1883—2,203 trout	783lbs
1881—1,789 trout	556lbs.	1884—2,725 trout	906lbs.
1882—1,776 trout	676lbs.	1885—3,058 trout	992lbs.

J. L. Yale, of Cleveland, made a very handsome catch March 30, 1885, of 26 trout weighing 15lbs. 2oz., the weight of the largest being as follows:

One trout, 16in. long, weighing 1lb. 10oz.
One trout, 15 n. long, weighing 1lb. 4oz.
One trout, 14in. long, weighing 1lb. 4oz.
One trout, 12in. long, weighing 1lb.

Six trout, average weight, 12oz. The average weight of the 26 trout was between 9 and 10oz.

No record was kept at the Cold Creek Club previous to 1884, but since that time the catch has been as follows:

1884—4,275 trout	1,123lbs.	1886—2,800 trout	839lbs.
1885—3,651 trout	1,023lbs.		

So far this season, 496 trout, weighing 186lbs.

Considering that Castalia Creek is a comparatively new trout stream, the catch and weight of fish is exceedingly large. In five years from this this trout stream will be unsurpassed by any like stream on this continent.

A NEW BASS FLY.—That indefatigable black bass fisher, Mr. A. N. Cheney, has devised another feathered temptation to lure the wary bass to his destruction. As Mr. Cheney is purely an amateur fly-tyer, our professional friends will not feel sore if we say that it is a fly that looks as if a bass might rise to it. The fish can surely see it if placed within its angle of vision, for the colors are white and black. A long white mid-wing is overlaid on each side by a short black feather which has two white eyes in it, body white chenille with silver tinsel ending with red silk; hackle black, tail black with white end. We have two of them and will try them before long. The fly is named the "Marston," after Mr. R. B. Marston, editor of the London *Fishing Gazette*.

SALMON IN THE CONNECTICUT.—Hartford, Conn., May 18.—This year, as usual, a few salmon have been caught in the Connecticut River in shad nets and pounds. On Wednesday last, the 11th, a salmon weighing 10lbs. was caught in a gill-net off Saybrook Point, just below the Shore Line Railroad bridge. On Friday, the 13th, a very fine salmon was taken in one of Mr. Chalker's pounds, just east of Saybrook Light. It weighed 18½lbs., and attracted much attention in a market in this city where it was exhibited. Another salmon is reported to have been caught in Wethersfield Cove, three miles below Hartford.—E. H. F.

ST. JOHN RIVER SALMON.—Fredericton, N. B., May 20.—The first salmon caught in this section of the St. John River this season was taken by Mr. Lunt, of Crock's Point, ten miles above Fredericton, on Tuesday, May 17. It weighed 11lbs., and was purchased by the proprietor of the "Queen" at 25 cents per pound.

HUDSON, N. Y.—Our game protector Mathew Kennedy caught with a net in the river near this city a salmon weighing 17lbs. He will send it to Governor Hill as an incentive to his reappointment as game protector. What is the law on taking salmon, can they be netted?—G.

MR. THOMAS J. CONROY, 65 Fulton street, New York, has just issued a retail price list of fishing tackle, with hints on fishing and camping. It is a full octavo of 129 pages, fully illustrated.

A NEW JERSEY SALMON.—Red Bank, N. J., May 17.—An 18lb. salmon just caught at Port Monmouth in a pound. Boiled salmon, green peas, with gold seal; dinner at 5.—WILD.

STRIPED BASS.—Red Bank, N. J., May 10.—Took first striped bass last Wednesday, May 5, weighed 1¼lbs. This is the earliest I have ever taken one.—WILD.

"ESCUMINAC" advertises elsewhere to put a party of anglers on Canadian waters where fish are sure to be found and when found sure to bite.

BOOKS RECEIVED.

THE ART OF ANGLING; HOW AND WHERE TO CATCH FISH. By Wakeman Holberton. New York: Dick & Fitzgerald. This is a little book suitable for the pocket. There are only 96 pages, but it is full of valuable suggestions to the angler, young or old. Mr. Holberton is well known as an expert fly-fisher.

Fisheulture.

SHAD CULTURE.

THE present season has been the best one for shad fishing in all the rivers of the Atlantic coast that is on record, and the yield of eggs has been enormous. The United States Fish Commission began work with the expectation of getting a large number, which was set at 30,000,000, and up to May 19 over 35,000,000 had been taken. Under the exact system of measuring the eggs these numbers may be relied on as exact. Three cars have been busy in transporting the fry, and under the improved methods of Col. McDonald it is now possible to hatch the fish in the car in a very small compass which was not thought possible when the cars were built. Eighteen McDonald hatching jars will hatch a million eggs and only occupy a table 6ft. long in one corner of the car. We inspected car No. 3, in charge of Mr. F. T. Ellis, at Albany last week, where 1,000,000 eggs were being hatched for the Hudson, in addition to 1,500,000 fry which were taken in the car from Washington. On the night before there had been 850,000 fry planted at Greenbush, from the hatchery at Cold Spring Harbor, from eggs previously sent from the Potomac. This car had previously taken 2,500,000 to Wilmington, Del.; 3,000,000 eggs and fry to Columbia, S. C.; 5,000,000 eggs to Cold Spring Harbor, N. Y.; and has now gone to Augusta, Me., with 2,000,0000.

Car No. 2, in charge of G. H. Moore, has been to Montgomery, Ala., and to Mississippi with 1,000,000 for each place. Car No. 1, Newton Simmons in charge, has been distributing from Battery Station, at Havre de Grace, while Mr. Page, of the Central Station at Washington, has been hatching and distributing by messengers to the Upper Potomac and the Chesapeake.

From Cold Spring Harbor, Mr. Mather has distributed to the Hudson and to rivers on Long Island at Smithtown and Brookhaven. Col. McDonald is in charge of the whole work of distributing the fish, and, while almost overwhelmed at the magnitude of the season's work, has so perfected the arrangements that the eggs have been taken care of without delay. As the fish hatch in from three to six days, according to temperature, this work needs prompt attention and speedy action. The eggs, it will be remembered, are taken from fish caught for market and which would otherwise be lost. The men who take the spawn watch the fishermen and save the ripe eggs.

On the Pacific coast shad have been plenty in the Sacramento River and have strayed up as far as Puget Sound. The first plantings were made in the Sacramento some six or eight years ago; previously no shad were known on the Pacific slope. The New York Fish Commission will hatch shad about Catskill; the fish in this river spawn later than in the Potomac and more southern waters.

SALMON IN THE HUDSON.

IN our last issue we predicted that before long we would hear of captures of salmon in the upper Hudson. On Saturday last we saw a 14lb. salmon at Mr. Blackford's which was taken at Nyack. Mr. Gresham, of New York, had a letter from Mr. L. B. Hoyt, of Troy, saying he had taken a salmon with hook and line off Green Island, between Troy and West Troy, which weighed 28½lbs., the largest fish yet taken in the river. Mr. Mathew Kennedy, of Hudson, took a 13-pounder near that city on Saturday last. In spite of these evidences of the success of plantings by the U. S. Fish Commission it looks as if the movement to build fishways in the upper Hudson would fail this year. The mill owners oppose the bill, fearing that the fishways will diminish their water supply. The facts are that the salmon run up in May and June when the water is plenty, and during the August drouth the fishways are not needed. If the State of New York cares to preserve the salmon which have been planted in this river, and have proved by their return that the river is adapted to them, then fishways should be erected in order that the fish may reach the spawning grounds; and the fish should be protected from capture until the river is firmly established as a self-supporting salmon stream, or one that can furnish eggs enough to keep up the stock.

FIXTURES.

DOG SHOWS.

May 24 to 27.—Inaugural Dog Show of the Michigan Kennel Club, at Detroit, Mich. Chas. Weil, Secretary, Newberry and McMillan Building, Detroit, Mich. Entries close May 10.

Sept. 1 to 3.—Inaugural Dog Show of the Pacific Kennel Club, at San Francisco, Cal. J. E. Watson, Secretary, 516 Sacramento street, San Francisco, Cal.

Sept. 12 to 17.—First Show St. Paul and Minnesota Kennel Club, St. Paul, Minn. W. G. Whitehead, Secretary.

Oct. 12 and 13.—Stafford Kennel Club Show, Stafford Springs, Conn. R. S. Hicks, Secretary.

FIELD TRIALS.

Nov. 7.—Third Annual Field Trials of the Western Field Trials Association. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 21.—Ninth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

December.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5036.**

AMERICAN KENNEL CLUB METHODS.

Editor Forest and Stream:

As you were kind enough to publish my letter under the above caption I will, with your permission, proceed further with the story, directing attention this time to the protests which came up for discussion.

The first was the Glenlivat case, which will never be heard of more, though it would have been had it not been my misfortune to have him accidentally killed a week ago. In FOREST AND STREAM'S report of the A. K. C. meeting the case is briefly dismissed in these words: "In appeal against Watson's protest delegate Peshall was sustained." It was not my protest at all, nor will you ever catch my name attached to such a silly protest as that was. And I am glad to say that Mr. Terry acknowledged he had not been informed of the whole circumstances, otherwise his name would not have been attached to it. That leaves three other protestors to be accounted for, and of these one had what I cannot help calling the hardihood to tell me half an hour after the protest had been turned out of court that had he known I had indorsed my entry blank he would not have joined in the protest. The peculiarity of this statement can best be understood when it is known that this gentleman was present before the Newark show committee and heard the indorsement on the entry blank read and discussed, and an hour later was present as the representative of the protestors when Mr. Peshall again discussed the force of the indorsement and unhesitatingly overruled the committee.

As Mr. Wade has referred to the Glenlivat case, and I do not now see any prospect of it ever coming up for decision on its merits, I think it due to myself that the whole story be told: It appears that Mr. Kyle desired to breed his bitch Mavis to Mr. Jas. Lindsay's Rex. Mr. Lindsay has stated that Mr. Kyle was present when Rex and Mavis were mated. This, Mr. Kyle tells me, was not so. He sent Mavis by express to Jersey City and then, deciding to go to New York on business, went over to Jersey City. He waited at Mr. Lindsay's until it was time for him to leave, and just as he stepped out of the house the express wagon drove up. He, however, could wait no longer and left Mr. Lindsay to attend to the mating, and on the following day Mavis was shipped back to her owner. After the birth of the puppies, Mr. Kyle tells me, he felt convinced that they were not by Rex, and decided to have Mr. Lindsay come up and see them. After several requests Mr. Lindsay visited Sound Beach, and on being shown the puppies acknowledged that they were by Strephon. On the return of Mr. Kyle and Mr. Lindsay to the house from seeing the puppies, and while seated on the verandah, Mr. Kyle tells me that Mr. Lindsay gave him the following explanation: He brought Mavis into the passageway of his house, left her there and went for Rex, who was somewhere in the house. When he returned with Rex he found that Strephon had slipped in unobserved and the damage was done. This story he gave Mr. Kyle as from one Mason to another. Mr. Kyle was much put out at having his suspicions verified, and did not want any of Strephon's puppies. Mr. Lindsay was doubtless only too glad to get them, and a deal was made. Mrs. Kyle, however, said she wanted one and picked Glenlivat. This almost broke the sale off, but it was again made all right, and Mr. Lindsay got two bitches and a dog. Nothing further was made public about any of the litter until Mr. Lindsay entered his two bitches in the collie sweepstakes and the purchaser of his dog puppy also made an entry, all as by Strephon out of Mavis. I came across Glenlivat at the Winsted show and persuaded Mr. Kyle to enter him in the collie sweepstakes. He said he was willing, and I wrote to the Collie Club secretary asking him to please accept the entry if the books were not closed—I knew they were being kept open after Dec. 1. This letter I mailed for Mr. Kyle. Mr. Smith, the secretary, says I made the entry in person, but his memory is incorrect on this point. The entry was accepted.

Shortly afterward Mr. Shotwell unearthed the notice of the service of Mavis by Rex in the *American Kennel Register* and then the trouble began. Mr. Smith endeavored to make a telling point on me by saying I had said that the entries in the Collie Club sweepstakes should have been made with both sires. The point failed, however, when I willingly acknowledged the statement, but that subsequent information had caused me to believe that Rex had never been used.

Perhaps I had here better state my connection with the dog. I purchased him on Feb. 28 and it was before that that Mr. Shotwell's discovery was made public, by which the onus was thrown on Mr. Lindsay. He sought to get out of the difficulty by saying he had never sent the entry to the *American Kennel Register*. In a footnote to Mr. Shotwell's letter to the *American Kennel Register* (see January, 1887) I said: "It is for Mr. Lindsay to rise and explain about the breeding of Mavis. The entry in the Breeding Register was sent us by Mr. Lindsay." In a letter to me dated Feb. 3 he says: "You make a mistake when you say I sent notice of her breeding to Rex to the *American Kennel Register*. I never did; must have been Mr. Kyle."

I commenced thinking over the case, and bit by bit it came back to me. I soon distinctly recollected getting a letter from Mr. Lindsay, in which he asked me to put in the breeding of Mavis to Rex, and he went on to tell me a queer story of the condition Mavis was in when received by Mr. Kyle from Dr. H. M. Perry. I further recollected that as Mr. Kyle was not then allowed the privilege of the *American Kennel Register* I placed the letter aside for one month's issue to give it further thought. Before the number for February, 1886, came out I again had a lively note, asking me to be sure and get the Mavis—Rex entry in, and it was decided to do so. Mr. Lindsay at the same time sent in other entries, which also appeared in the February number. I did my best to get hold of the letters, but could not find them, search as I might. I felt convinced I had kept the first one, but the second being only a short note of request I did not expect to get.

On Feb. 9 I wrote Mr. Lindsay and said I was certain he had made the entry. On Feb. 10 he wrote, "You make a mistake when you think I sent in record of Mavis's breeding." I replied the same day, stating my recollection of his letters of the year before, and on Feb. 12 he again wrote: "When I first met Mr. Kyle I saw Mavis and she was lame, that I remember writing you. But I did not write you saying that she was bred to Rex. I made a correct statement. Should I on the other hand have said they were Rex pups what would the result have been, any man can see Strephon in them." After this Mr. Lindsay wrote to the *A. K. R.* and his denial of his having sent notice of the service was published without comment, as I did not wish to enter into a controversy without proof.

A few days before the Newark show I at last came across the missing bundle of letters, and among them was this one:

"JERSEY CITY, N. J., Jan. 23, 1886.—MR. JAS. WATSON—*Dear Sir:* A. R. Kyle bought collie bitch Mavis (formerly La Reine, A.K.R. 1651) and had her bred to Rex on the 18th of this month, and he wants me to have the breeding recorded in the *Register*. What do you say about it? The more I hear of Dr. Perry the worse he appears. This bitch Mavis has had her hip disjointed and is lame for life. * * * Yours truly, JAS. LINDSAY."

I give the last sentence only to prove the correctness of my recollection when I endeavored to prompt Mr. Lindsay's memory.

Perhaps I seem to have given too much space to this point, but as the whole thing hinges upon Mr. Lindsay's veracity and the value to be placed upon his statements, it is only proper a determinable piece of evidence of this kind should be fully set forth.

As soon as I bought the dog I petitioned the American Kennel Club to appoint a committee to investigate and decide the question of paternity. I had by that time heard three separate and distinct stories of the breeding of Mavis The one Mr. Kyle got from Lindsay, on the word of a Mason, another directly from Mr. Lindsay, and the third from the secretary of the Collie Club. All could not be correct, for if one was the other two were not. Subsequently I heard two variations of previous stories and had such an ample assortment to select from that I preferred to keep my choice as the dark horse. Now that the best collie ever owned in this country is dead, and his pedigree is of concern to no one, I will state what my opinion and belief were. My opinion was that if an accident had happened there would have been but one story afloat as to how it occurred. My belief was that Rex was not capable of earning his stud fee. Therefore I chose to throw the onus of a decision upon the alleged governing power of dogdom.

Some day I may refer to the underhand work of certain persons between the time of my purchasing Glenlivat and exhibiting him at Newark, but that does not form a part of the case as before the public. The dog was protested and, as stated by Mr. Wade, the committee meeting was brought forward with seemingly the special object of throwing this dog out. People said I was a fool to take the dog there in his condition—lame from a blow from a horse's hoof—but, my good masters, there was a method in my madness. The delegate to the A.K.C. of the New Jersey Club, Mr. Peshall, is a lawyer, and with any person of legal training I felt safe. Just as I expected, the show committee made a mistake and chose to consider themselves entitled to investigate a pedigree and decide it on ex parte evidence. I think the counsel for the plaintiff at that Newark meeting must have felt flat. When we were all in the upper chamber Mr. Lindsay was, with great ostentation, called upon as a witness, and three or four leading questions put to him, and then with a Louis XIV. air I was requested to cross-examine him. They mistook their man. I was there to prove that the dog was identified as called for by Rule II., not to establish a pedigree at a few moments' notice, with every witness I could produce to testify to the various stories I had heard as coming from Mr. Lindsay fifty or more miles away. Leaving Mr. Lindsay alone, I did my best to impress upon the committee the fact that they were not investigating the dog's pedigree, but his identity; but they preferred their own course, and in language only a grade less refined than the offensiveness of the protestors, alleged my being party to a misstatement.

Mr. Wade has told the story of the disgraceful efforts to turn me and my dogs out of the ring. I am only surprised that men who did not hesitate to speak of my quietly asserting my rights as "a damned outrage," etc., did not stop at personal violence. Perhaps the practical lesson I administered to one of the parties the previous day had its effect. If Mr. Wade had known as I did that the person who was ordering him to turn me out of the ring was doing it simply as a fellow exhibitor he would have given him the proper answer.

This same exhibitor appeared as special counsel for the protestors when Mr. Peshall heard my appeal. I do not think I said six words to Mr. Peshall beyond saying that my only defense was my entry form. That was produced, and notwithstanding the pitiful pleadings of the protestors' attorney, the committee's decision to throw the dog out was "unhesitatingly overruled." The court was still instructing counsel for the respondent on the law of the case when I left the room. The judging was then resumed, and my poor lame dog, that had had no attention for three hours, had to be hurried into the ring. The result matters not now, but the horrible example he made of the sweepstakes entries is not likely to be forgot by those who were spectators of the scene.

I did not propose saying anything about the Collie Club in connection with this affair, but I cannot refrain from giving one incident. I was much surprised to receive from the Collie Club secretary a letter to the effect that if no objection was raised by Mr. Shotwell, whose entry came next to Glenlivat in the decision of the sweepstake, I would be paid the money awarded to my dog. Mr. Shotwell, the secretary informed me a few days later, had no objection, provided I agreed to give it back if the dog was thrown out. I never asked for the money, never even suggested that it be paid over, for I knew a little more than to expect to get cash "attached" by a protest. Still the only one who had claim to the money having waived his right, one would suppose that it would have been paid over as promised. Judge of my surprise, however, when I received a letter from the secretary saying the Collie Club committee had decided not to pay the money until the appeal was decided. Bear in mind that it was perfectly well known to all that the indorsement on the entry form had saved the dog from disqualification, and yet we find the committee saying the money should not be paid, although the only person they were protecting had at their request waived his claim, and at the next stage of the proceedings Mr. Terry of the club committee and one of the prostestors rises and says if the indorsement had been known the protest would not have been made. There is a nasty mess then somewhere.

Mr. Peshall hit the nail on the head when on looking over Glenlivat at Newark he quizzically said: "It looks as if they had reason to protest the dog."

The Glenlivat case is settled, and I think those who have followed me thus far will say they are glad of it. Still, gen-

tlemen, if you had experienced one fraction of the miserable, slimy persecution which dogged every step of my ownership of the dog up to the time I demonstrated I had the best in the country, it would have taken more than columns of FOREST AND STREAM to have chronicled your tale.

Mr. Editor, on mature reflection I think it would be advisable to head this letter with the old elastic line "Collies at Newark," in which everything under the sun can be treated of except the one at issue. JAS. WATSON.

BEAUFORT—PATTI M.

Editor Forest and Stream:

As you have called attention to the protest made by Mr. Munhall at the Waverly show to the award made by the judge to Beaufort, and the action of the A. K. C., or I should say the actions of the A. K. C. in the same, please permit me to explain the case from first to last.

After the entries for the Waverly show had closed the following special prize was offered:

"Class XX. The president of the New Jersey Kennel Club offers a special cash prize of $50 for the best pointer dog or bitch, open to all comers. Entry fee $5, which will be added. Entry to be made with secretary of the club by Wednesday, Sept. 15, 10 A. M. The regular entry fee of $3 will be charged to all dogs entering for this prize not already entered in the show."

Mr. Mason, the owner of Beaufort, had been selected to judge some of the classes, and he had entered his dog Beaufort as "not for competition." The dog was entered long before the entries closed, and this prize was not offered until some days after the entries had closed. As you will see, it was in the nature of a sweepstake; the $5 entry was to go to the winner as well as the $50 prize. Three dogs were entered to compete, viz., Beaufort, Patti M. and Nick of Naso. Davidson was judge and awarded the prize to Beaufort. Mr. Munhall, the owner of Patti M., protested upon the ground that Beaufort was entered in the show as not for competition. The Bench Show Committee refused to sustain his protest, and he appealed to the local delegate of the A. K. C. The local delegate sustained the finding of the committee, from which finding Mr. Munhall appealed to the American Kennel Club at the meeting of the club held at the Hoffman House on Dec. 6. The appeal was heard by the A. K. C., and it was decided to sustain the finding of the local delegate. This I presumed was final, and settled it.

At the last meeting of the A. K. C., held at the Hoffman House the first week in May, Mr. Munhall, delegate from the Cleveland Club, further protested the previous finding of the A. K. C. upon the ground that Mr. Vredenburgh had voted to sustain the local delegate's finding, and that as he was secretary of the club he could not vote, and cited Article IV. of the constitution, which reads as follows:

"Officers of the American Kennel Club shall not be privileged to vote upon business before the executive committee unless regularly elected delegates from their clubs, except the president, who shall have the casting vote in case of a tie."

The above is a portion of Article IV. It prescribes the duties of officers. If the officer is a delegate he can vote and always has voted when he held a proxy. If Mr. Munhall will look at the latter part of Sec. 2, Article III., he will find the qualifications for a delegate or a proxy, viz., "A person to be eligible to act as delegate or proxy for a club or association, whose regularly elected member or representative is absent, must be a member of a club one of the members of this association, but in no case shall any delegate act as proxy for more than one other member of this organization."

The section of the constitution that Mr. Munhall cites simply prescribes the duties of officers. The section I cite prescribes the qualifications for delegates. Any club could have elected Mr. Vredenburgh delegate, or any delegate could appoint him his proxy. Mr. Vredenburgh was fully qualified to vote.

When Mr. Munhall made his motion to reconsider I raised the point of order that he was not recorded as voting with the majority at the previous meeting, and consequently could not move a reconsideration. It was so held by the president. Mr. Vredenburgh, who was and is the secretary, then stated that he voted at the previous meeting with the majority, and although he did not have a proxy for this meeting he would move to reconsider. The president accepted his motion, and it was voted to reconsider. Now we find, according to Mr. Munhall and the A. K. C., that a secretary with a proxy cannot act as delegate; but that a secretary who has not a proxy can act for some club as a delegate. It was then moved to reverse the finding of the local delegate and sustain the protest; and the votes recorded in favor of reversing the decision of delegate Peshall were as follows:

First—Cleveland Club, by its regularly elected delegate, Mr. Munhall, the owner of Patti M., and the party who made the protest.

Second—Cincinnati Club, by Mr. Munhall, proxy for Gen. Shattuc, the regular delegate, by Mr. Hanua, proxy for Mr. Munhall, the owner of Patti M. and the aforesaid party who made the protest.

Third—The Hartford Club, represented by Mr. Rendle, proxy for Mr. Collins.

Fourth—Pittsburg Club, by Mr. Richards as the proxy for Mr. Gregg.

Fifth—Mr. Newberry, regular delegate from Michigan Club.

Sixth—Mr. Drake, the regular delegate from the St. Paul Club.

And the votes to sustain the local delegate were as follows:

First—Rhode Island Club, by Mr. Seabury, regular delegate.

Second—Boston Club, by Mr. Grosvenor, the regular delegate.

Third—New Jersey Club, by Mr. Peshall, regular delegate.

Fourth—Philadelphia Club, Mr. Winslow, regular delegate.

Absent—Mr. Donner, Westminster Club; Mr. Watson, Hornell Club; Mr. Terry, Fox-Terrier Club; New Haven Club and Wisconsin Club.

Consequently we now find this state of facts to exist: That the bench show committee of the New Jersey Kennel Club's finding and decision, and the decision of the local club delegate of said club, and of the American Kennel Club itself, have been reversed by two newly elected members not having been present at any former meeting, in fact, just having been admitted; by one vote of the plaintiff, by one vote of the sub-proxy for the plaintiff, and by two proxies.

While the vote was being taken, I remembered that when I wrote my decision as local delegate, I said something about it being in bad taste for a judge in other classes at shows to compete; and I at the time having some faint idea that a protestor might have some slight prejudice, or in other words, that his opinion might be slightly influenced, suggested that under such circumstances the protestor should not vote upon his own protest, for fear he might unconsciously become influenced. But my suggestion did not become a winner. The same unconscious influence might unconsciously to a slight degree also influence a sub-proxy, when the proxy for the sub-proxy was the protestor.

I am very sorry that the A. K. C. has got itself into such an unfortunate position. Unless delegates and officers take interest and attend the meeting promptly, and show an interest by taking part and doing away with proxies and all semblance of the town meeting order of settling questions, and by deciding all matters quickly and rightly, regardless of who the parties may be, the club will soon come to an end.

In the beginning there was nothing in this case. The wording of the prize settle it. It was not even an open question; and the A. K. C. by its own fooling action and the lack of interest of delegates has permitted this unfortunate state of facts to exist.

I do hope that as soon as Mr. Drake of the St. Paul Club and Mr. Newberry of the Michigan Club read this article and this statement of the case, they will each of them forward to the secretary a resolution asking that the vote taken on this subject at the last meeting be reconsidered. This should be done at once. I do not believe that either of these gentlemen fully understood the case at the time they voted, as it was the first meeting they had attended; and having voted with the majority, they can ask that the vote be reconsidered. They can mail this motion to the secretary. I submit that this is a matter that should receive the immediate attention of the club.

Mr. Munhall has written to the secretary of the New Jersey Kennel Club demanding the amount of the prize. The prize was long since paid. C. J. PESHALL.

ARE SHOW SPANIELS SUITABLE FOR WORK?

PERHAPS there is no greater favorite among all sportsmen and exhibitors than the spaniel—that is to say, the sporting spaniel, whether he be the Irish water, the English water, the Sussex, the field, or the nimble cocker. He is known to be so sagacious, so good-tempered, and so forgiving, and so rarely to be found ill-tempered or vindictive. Every one knows the old saw—that "the more you beat a spaniel the more he will cling to you," and few have found this adage to be wrong. But I must keep to my text or heading, and trust that what I have to say of the modern spaniel may not be taken in ill part.

Any man who has stood near the spaniel benches at some of our large shows must have heard remarks such as: "What on earth is the use of those lumbering creatures?" "They can't do any work." "I could walk one of those down in two hours," &c.; and really, I firmly believe these people are not far out of the way in their remarks. I will take the field spaniel, the favorite color of which is black, and ask—Where in the canine world can a more beautiful creature be found than this lovely long, low, and heavy animal, with his flat, glossy coat, profuse feather, nice head, with an expression that is unequalled by any other breed of dog living? Yes, I admire them as such, and know full well the difficulty of breeding them to this standard, and what a hard job it is to get them long, to keep them down, to secure bone and to get flat coats, and how years and years have been spent by breeders to still improve upon these points, but with all this I must say it is my opinion that the working spaniel is deteriorating in the same ratio as the show spaniel is improving. I should like to know what is the use of the present cumbersome spaniel that has gone crooked on his legs because of his body being so long and heavy, and who is therefore almost a cripple, and is of as little use to the ordinary sportsman as a heavy brougham or cart-horse is over the Quorn country. I hope it may be kindly taken of me if I say the present spaniel is but an "old man's dog," as to my mind he is certainly too slow for a man in the prime of life. I know it is argued that a sportsman wants a slow dog, so that he can keep up to him, and not let him go too far, so as that the game may be flushed out of range; but I think this is all bosh, as a spaniel should be so broken as to keep within range—that is, in the open or on a fence.

Then, again, what is the use of a heavy spaniel working a wet bog or water course for snipe or wildfowl? Why, he plods on through it like a small crocodile, and you can hear him coming at a distance of 70 to 100yds., and how far the wary snipe or other water or wildfowl can hear him, goodness only knows. Then, again, in a thickset cover, where gorse and brambles are intermixed in an endless and indescribable entanglement, his short legs are certainly of some use to him here, but his other properties are not; he has to pull his long body through, and his coat—and that, too, often very spare so as to get it flat—is but a poor protection to his thin, fine skin, and often have I seen a poor brute held as fast by his ears as Abraham's ram of old was by his horns. I will now take the modern spaniel when the snow lies thickly on the ground, as it has for two or three seasons, and it seems to me that the recurrence of "old-fashioned winters" is altogether unfavorable for the lovely dogs on our show benches. You will then see the short-legged and heavily-feathered dog just as useless as one could possibly imagine, and as he plods about and gets up to his belly every step he takes, it makes the man who is out with him wish he had left him at home, and taken a terrier or some dog as nimble. Yes, such is the case, and that is the reason why most of our old sportsmen are wont to laugh at some of our specimens of dogs of all breeds that they see at our shows. Why is this? I think it is that in breeding for length and lowness the working spaniel has been lost sight of, and, indeed, what is known as "character" is too often now conspicuous by its absence in nearly every breed of dog. I take it that shows are held for the improvement of the different breeds of dogs, but should like to ask, Does the improvement lay in the way of the work these breeds are suitable for, or in the direction of fancy points as in pigeons or rabbits, where color and markings are very considerable points

I have always believed in the saying "that a good horse can never be a bad color." Then why on earth cannot the same thing apply to dogs? at least those breeds that are bred for work and not for household pets. What has become of the old liver-and-white field spaniel that would kill three long and low ones in a day, and get over twice the work to boot? We don't find him but very occasionally on the show bench, for all our judges, with the exception of one, refuse to look at him, and he is generally the first sent out of the ring. No, we do not find them at our exhibitions, but if we get round the kennels of shooting men, we find nothing else, and furthermore these gentlemen swear by them, and laugh at our show animals. And therefore, here it comes in, that we have one dog for weekdays and another for Sunday—one to stop at home to do the work, another to bring out to be scanned by an admiring public. I should like to know the proportion of our show spaniels that have ever heard the report of a gun, or have slobbered over the scent of a winged bird or a legged hare? Yes, it is to me a thousand pities that we are losing sight of our old friend, the dog that can afford a man a day's sport, but, at the same time, do not deny that the show dog is very beautiful to look upon—but why not combine the two qualities? If you show a "spaniel man" a shortly-backed, strongly-loined one, with rather long *but straight* legs, over 25lbs, in weight, he will turn up his nose at it and laugh it to scorn, and it certainly would be just as good for a man to throw his entrance money into the sea as to exhibit that spaniel, as he would be considerably out of pocket. Still we often hear the proprietor of this kind of dog challenge the owners of other animals that he will back his dog to find more game than a brace of them together, and so on, and it's ten to one that he knows what he is talking about. I am fond of spaniels. They were and always have been my favorite "fancy," and I have probably handled every dog of any note of this breed in the kingdom, and have always criticised them according to the scale of points laid down by the Spaniel Club, as, "when we are in Rome we must do as Romans do;" but still at the same time it has invariably occurred to me, What is the use of these lovely dogs for a day's work? I cannot for the life of me see they are suitable for it—hence the reason of this paper. I know from experience the immensity of trouble there is to breed them to points, and how the most difficult points to attain are the most valuable in the ring.

All this is very good in its way, but as the world cannot get along with "mashers" alone, I would suggest that we look a little more after the interest of our workmen, which are to be found in the spaniel world in shorter-backed, longer-legged, and less-feathered specimens. Then we could have one breed of spaniels, instead of so many, that would be useful for all kinds of work, if I except that of retrieving heavy birds from a rough and fast-running sea; then you are bound to have a stronger animal, such as the Irish or English water spaniel—the latter-named dog, by the way, seems to have gone out almost entirely. I was very much struck with some supposed specimens of this breed that were exhibited at the last Royal Cornwall show held at Saint Austells. They were certainly peculiar-looking creatures, and were more like liver poodles than English water spaniels. Still they had that workmanlike build and intelligent expression that one was not surprised when told they were admirable field and water dogs. However, again to the point—"Are show spaniels suitable for work?" and I am bound to answer in the negative; but at the same time it must be remembered that I admire the present show dog as a specimen of what careful breeding will do, but still think that good looks are not the only things to be bred for.—*The Wanderer, in Vinton's Gazette.*

THE DETROIT DOG SHOW.

[Special to Forest and Stream.]

DETROIT, Mich., May 25.—The Detroit show, which opened yesterday, bids fair to be a success and to take its place among the good shows of 1887. The attendance so far has been fair.

AMERICAN KENNEL REGISTER.

FOLLOWING are the numbers of the dogs entered in the May number of the *American Kennel Register:*

BEAGLES.

4969. Zulu, Sagamore Kennels.

BULLDOGS.

4970. Belle of the Ball, E. S. Porter. 4971. Carmen, J. E. Thayer.

COLLIES.

4972. Capt. Bixby's Lassie B., Capt. F. G. Bixby. 4973. Haddie Darling, O. Detchon 4974. Prinsor Lad, O. Detchon.

DEERHOUNDS.

4975. Oscar, A. W. Smith.

MASTIFFS.

4976. Beech Grove Juliette, C. F. Matteson. 4982. Sandycroft Bessie, V. M. Haldeman.
4977. Homer, Jr., J. E. R. Boudreau. 4983. Sandycroft Blucher, V. M. Haldeman.
4978 Juanita, J. M. Chaplin. 4984. Sandycroft Brag, V. M. Haldeman.
4979. Sandycroft Baffle, V. M. Haldeman. 4985. Sandycroft Burly, V. M. Haldeman.
4980. Sandycroft Beauty, V. M. Haldeman. 4986. Romeo, C. T. Matteson.
4981. Sandycroft Belle, V. M. Haldeman. 4987. Vulcan II., F. A. Dwight.

POINTERS.

4988. Boski, C. W. Winship. 4992. Floss II., H. J. Gerald.
4989. Climax, E. W. Briggs. 4993. Lambert's Bang, H. Flint.
4990. Dido II., T. L. Douglas. 4994. Little Eula, T. L. Douglas.
4991. Fan, J. Zimmerman.

PUGS.

4995. Juno L., A. C. Lewis. 4997. Santa Claus, Forest City Kennels.
4996. Ko Ko II., M. Smith. 4998. Topsy L., A. Lichty.

ST. BERNARDS—ROUGH-COATED.

4999. Bonnie Gipsey, G. F. Erbe. 5002. Phil Bernard, F. W. Burns.
5000. Duke III., W. Van Wyck. 5003. Princess, W. B. Allen.
5001. Nutmeg, C. A. Houck.

SMOOTH-COATED.

5004. Speranza, T. M. Burk.

SETTERS—ENGLISH SETTERS.

5005. Bellgore, W. H. Fuller. 5007. Maggie Dale, W. P. Mills.
5006. Bess III., J. B. Murphy. 5008. Rim, F. Marsh.

GORDON SETTERS.

5009. Neva, F. M. Harris.

IRISH SETTERS.

5010. Bend Or, J. Work. 5013. Max II., T. Mullin, Jr.
5011. Glendalough, J. H. Cocks. 5014. Nell III., J. Work.
5012. Mahdra Rhue, W. Ross Proctor. 5015. Teddie, F. L. Cheney.

SPANIELS—FIELD AND COCKER SPANIELS.

5016. Beatrice W., J. P. Willey. 5021. Nick, J. A. Nickerson.
5017. Dandy W., J. P. Willey. 5022. Star, W. H. Forsyth.
5018. Flirt W., J. P. Willey. 5023. Topsy W., J. P. Willey.
5019. Jeanie, C. W. Horne. 5024. Trixy, J. P. Willey.
5020. Miss Newton Obo, J. P. Willey.

IRISH WATER SPANIELS.

5025. Conn, A. B. Elford. 5026. Irish Girl, A. B. Elford.

TERRIERS—BLACK AND TAN TERRIERS.

5027. Cherokee, S. Cunningham. 5028. Gipsy Queen, A. W. Smith.

FOX-TERRIERS.

5029. Bayonet, A. Belmont, Jr. 5032. Richmond Myrtle, J. E. Thayer.
5030. Media, A. Belmont, Jr.
5031. Richmond Dazzle, J. E. Thayer. 5033. Tancred, A. Belmont, Jr. 5034. Tinsel, A. Belmont, Jr. 5035. Wasp II., J. E. Thayer.

SCOTCH TERRIERS.

5036. Judge Pepper, R. F. Shannon.

DISGORGING FOOD FOR PUPPIES.—St. Joseph, Mich., May 11.—I heartily enjoyed "C.'s" description of the coon hunt in issue of April 21, in which I became so interested that by the time the climax was reached I could see that whole outfit, and I laughed heartily. I have "cooned it" many times in different parts of the country and recognize some of the dogs he so faithfully describes. I was very much struck by reading in a recent issue about the bitch that fed her puppies by vomiting her own food, as it was far ahead of anything I ever saw or heard of; but my foxhound bitch has done the same thing at least every day for the last week. I first noticed her seven-weeks-old puppies eating something odd-looking last Sunday, and upon investigation discovered that it was what had been vomited by the mother. I refused to allow them to eat it, thinking the bitch (who stood looking on) had eaten something which had caused sickness, but on Monday I discovered her in the very act of disgorging, and if ever an animal's face betokened shame, hers did. I myself and quite a number of others to whom I had related the circumstance, have watched her and have seen the same unusual performance every day for the last week. She leaves her kennel immediately after being unloosed mornings, returning in about twenty minutes to feed her puppies. She seems to be very careful not to disgorge when she notices any one looking, and is much more motherly with this litter (her second) than the first one. Would you consider it detrimental to the puppies to allow them to eat such food?—J. C. S. [No.]

THE POISON FIEND.—Allegheny, Pa., May 21.—Let me report to you that the scoundrelly dog poisoner has been at work here yesterday and succeeded in killing half a dozen valuable dogs and a few curs. Among the former was my German mastiff Cæsar, who was brought by me two years ago from Germany. He was a noble, harmless beast, and a general favorite in the neighborhood. He clawed the floor for about half a minute, stiffened out and died without a struggle. The police department refuse to do anything to further the arrest of the miserable scoundrel. Would it not be well to protect owners of valuable dogs by passing and enforcing a strict ordinance bearing on the subject?—E. P. HODGES.

MERCHANT PRINCE.—Mr. E. H. Moore's well-known rough-coated St. Bernard dog died last Monday, May 23. He was born May, 1883. Breeder, G. Kirkham. Sire, champion Bayard. Dam, Pastime. Winnings: First, St. Bernard show, 1884; first and silver cup, Crystal Palace; first, Otley; first, Glasgow; first and special, Heckmondwike; first, Harrowgate; first and cup, Bangor, beating champion Bayard; first, Darlington; first, Chester, C. St.; first, Boston; first, Skipton; first, Bishop Auckland; first, Birmingham; first, St. Bernard show and silver cup, all in 1885; first, Boston; first, New York; first, Hartford; first, Stafford; champion, Boston and New York, 1887. Cause of death, inflammation of the bowels.

THAT PILL LETTER.—In our issue of May 5 was published a letter written by Dr. Perry, of Boston. The original was sent to a young man in this city who had been for several weeks developing himself into a monomaniac on the subject of citrate of iron and strychnine pills. The copy published by us was one sent to Mr. W. Wade, of Pittsburgh, Pa., who on his own responsibility sent it to us. It did not come to us from Dr. Perry, but we are not advised that that gentleman has any fault to find with Mr. Wade for sending it to us.

AMERICAN EXHIBITORS AT THE JUBILEE SHOW.—Mr. August Belmont, Jr., has sent to England for entry in the Jubilee show the fox-terriers Lucifer, Bacchanal, Diadem, Verdict and Tiara. They were shipped from this port on the Helvetia, May 18, German Hopkins in charge. Mr. Fred Hoey's Valet went under the same care. The performances of these dogs on the other side will be watched with great interest.

WHY DOES A DOG TURN AROUND?—If "Jay Bebe" will turn to my letter in your issue of March 17 he will see that I there proposed the theory which he says none of your correspondents have touched on. Surely this theory is most probably the correct one.—CLUMBER.

LOST.—The black spaniel Donuil Dhu, at Bergen Point, N. J., on Sunday afternoon between 3 and 6 P.M. All black, tail docked short, weight about 30lbs. Thought to have strayed away. A suitable reward. Return to A. C. WILMERDING, Bergen Point, N. J.

SAFETY.—Mr. August Belmont, Jr., has lost his fox-terrier bitch Safety, poisoned by eating a piece of meat doctored with strychnine and picked up on the roadside. The bitch was due June 13 with five pups, sired by Lucifer.

YORKSHIRE TERRIERS AT NEW YORK.—In our list of awards at the New York show an omission occurred. Mr. Thos. W. Burke's entry in the Yorkshire terrier bitch class took second prize.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Ajax, Abel, Atlas, Asia and Andrea. By Richland Kennels, Wahpeton, Dak., for two brindle and one dark fawn, black points, mastiff dogs and one fawn and one light fawn, black points, bitches, whelped April 23, 1887, by Turk (A.K.R. 2222) out of Sylvia (Major—Celeste).

Amoror. By E. S. Bettelhein, Bath Beach, L. I., for orange and tawny St. Bernard dog, whelped April 8, 1887, by Manon (Herr Carl—Zean) out of Zada (Wilhelm II.—Zeltic).

Gunner the Second. By E. S. Bettelhein, Bath Beach, L. I., for red Irish setter dog, whelped April 18, 1887, by Gunner (A.K.R. 3637) out of Madame Stone (Buck—Juliana).

Richland Kennels. By Orton Gifford, Wahpeton, Dak., for his kennel of English mastiffs.

Orchard City Kennels. By G. W. Schenck, Burlington, Ia., for his St. Bernard and Newfoundland kennels.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Sylvia—Turk. Richland Kennels' (Wahpeton, Dak.) mastiff bitch Sylvia (Major—Celeste) to Minnehaha Kennels' Turk (A.K.R. 2222), Feb. 23.

Romp—Johnny. H. W. Windram's (Bostom, Mass.) Clumber spaniel bitch Romp, pedigree unknown, to F. H. F. Mercer's Johnny (Ben—Joan), April 14.

Bessie—Johnny. H. W. Windram's (Boston, Mass.) Clumber spaniel bitch Bessie (Jockey—Romp) to F. H. F. Mercer's Johnny (Ben—Joan), April 8.

Fly—Mainspring. Mr. Swain's (Bronxville, N. Y.) pointer bitch Fly to Jos. T. Perkins's Mainspring (Mike—Romp), May 20.

Rosa—Mainspring. J. P. Cartwright's (Augusta, Ga.) pointer bitch Rosa (Boon—Rena) to Jos. T. Perkins's Mainspring (Mike—Romp), May 17.

May Belle—Sir Dash. Dr. J. R. Housel's (Watsontown, Pa.) English setter bitch May Belle (Guy—Pearl) to his Sir Dash (Tucker's Dash III.—Roberto Laverack), May 7 and 10.

White Maid—Sir Dash. Dr. J. R. Housel's (Watsontown, Pa.) English setter bitch White Maid (Banjo—Countess Zoe) to his Sir Dash (Dash III.—Roberto Laverack), May 9 and 15.

Roberto Laverack—Dash R. Dr. J. R. Housel's (Watsontown, Pa.) English setter bitch Roberto Laverack (Robin Hood—Conestoga Belle) to Thos. Blyth's Dash R. (Ripple—Ruth), April 2.

Canada Beauty—Paxtang. Dr. J. R. Housel's (Watsontown, Pa.) English setter bitch Canada Beauty (Paris—Dawn) to F. W. Seiler's Paxtang (Count Noble—Fate Gladstone), May 14 and 15.

Lady Isabella—Naso of Devonshire. Floyd Vail's (Jersey City, N. J.) pointer bitch Lady Isabella (Beaufort—Fanny Turner) to his Naso of Devonshire (Nick of Naso—Devonshire Queen (A.K.R. 3127), May 21 and 22.

Dame Blanche—Otho. The Hospice Kennels' (Arlington, N. J.) rough-coated St. Bernard bitch Dame Blanche (A.K.R. 3010) to their Otho (A.K.R. 483), May 22.

Tromba—Otho. The Hospice Kennels' (Arlington, N. J.) rough-coated St. Bernard bitch Tromba (Brown's Sultan—Swiss Beda) to their Otho (A.K.R. 483), May 17.

Queen of Sheba—Hector. The Hospice Kennels' (Arlington, N. J.) smooth-coated St. Bernard bitch Queen of Sheba (A.K.R. 4429) to their Hector (A.K.R. 4425), May 18.

Dido K.—Don Quixote. Don Quixote Kennels' (Worcester, Mass.) pointer bitch Dido K. (Bob—Daphne K.) to their Don Quixote (Robin Adair—Lady Belle), May 14.

Nell—Don Quixote. Don Quixote Kennels' (Worcester, Mass.) pointer bitch Nell (A.K.R. 1354) to their Don Quixote (Robin Adair—Lady Belle), April 30.

Betsey—Don Quixote. F. E. Loring's (Oakham, Mass.) pointer bitch Betsey (Sancho—Floss) to Don Quixote Kennels' Don Quixote (Robin Adair—Lady Belle), April 30).

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Minnetonka. J. M. Fronefield, Jr.'s (General Wayne, Pa.) Lavcrack setter bitch Minnetonka (Don Juan—Petrel III.), May 19, seven (four dogs), by Wash A. Coster's Buckellew (Druid—Hamilton's Ruby).

Sylvia. Richland Kennels' (Wahpeton, Dak.) mastiff bitch Sylvia (Major—Celeste), April 23, six (three dogs). by Minnehaha Kennels' Turk (A.K.R. 2222).

Nellie Sting. Pittsburgh Kennel Club's (Pittsburgh, Pa.) bitch Nellie Sting (Sting—Novelty), May 18, seven (two dogs), by their Count Noble.

Ione. F. G. Stewart's (Hoosick Falls, Mass.) mastiff bitch Ione (A.K.R. 3122), May 4, ten (three dogs), by Duke de Richelieu (A.K.R. 4566).

Little Nell. C. A. Barnes's (Boston, Mass.) bull-terrier bitch Little Nell (A.K.R. 2905), Feb. 8, three (two dogs), by F. F. Dole's Count (A.K.R. 3178).

Metchley Princess. Kilmarnock Collie Kennels' (Braintree, Mass.) collie bitch Metchley Princess (Charlemagne—Mint), May 10, nine (six dogs), by S. Boddington's Rob Roy McGregor (E. 18,558).

Winnie. Kilmarnock Collie Kennels' (Braintree, Mass.) collie bitch Winnie (Gairlock—Laurie), May 20, ten (two dogs), by their Kilmarnock Bruce (Marcus—Drumlin Isle).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

La Rosa. Lemon and white pointer bitch, whelped April 7, 1887, by Tammany out of Lady Vinnie, by Clifton Kennels, Jersey City, N. J., to Mr. Martineze, New York city.

Trailer—Gypsie whelps. White, black and tan foxhound dog and bitch, by F. G. Stewart, Hoosic Falls, N. Y., to E. W. Jester, St. George's, Del.

Private H Warren, 1st Cadets	3	2	5	5	0	0	2	3	2	4—24	
Private Thayer, 1st Cadets	4	5	3	3	4	4	4	4	4	4—36	
Private Hatch, Co. L, 8th	3	4	5	3	4	5	3	3	5	3—38	

THOMASTON, Conn., May 21.—The air full of smoke from heavy forest fires, with an intermittent 9 o'clock wind. Subjoined are the scores:

G C Canfield	10	6	7	6	6	8	10	10	9	9—81	
G A Lemmon	4	7	7	8	10	6	7	9	8	4—70	
F A Perkins	4	7	10	6	10	10	6	4	7	4—68	
C F Williams	4	7	4	9	4	0	4	7	6	5—50	

NEWARK, May 20.—This evening the final match between the Rutgers and Our Own clubs was shot at Rist's range, Orange street, with the following result: Rutgers—J. Hillenbrand 85, G. Meise 98, Wm. Clark 102, H. Allen 97, E. McCraith 106, W. Frost 90, H. Snyder 102, M. J. McArdle 105, F. Dietz 102, J. Farrell 102, total, 989. Our Own—Fred A. Freinsehner 108, C. Weeks 111, J. Kiefer 84, G. Dietzel 92, F. Smith 99, Fred Freinsehner 93, W. Drexler 96, E. Bertram 95, W. Weider 100, Mr. Friedenheit 96, total, 974. The grand total of the three series of matches was: Rutgers, 2,838 points; Our Own, 2,817; Rutgers winning by 21 points. The match was one of the most interesting and closely contested that has been shot in this city in a number of years. The Rutgers began the match with 6 points in the lead, but lost it early in the evening, when the Our Own secured a strong lead. In the 16th round fortune again smiled upon the Rutgers, giving them a lead, which they continued to increase to the finish.

HAVERHILL (MASS.) RIFLE CLUB, May 21, 200yds., off-hand, standard target:

S E Johnson	6	8	8	7	6	9	8	7	10	10—79
J Busfield	8	8	10	6	8	8	8	5	7	8 10—78
J F Brown	7	6	10	8	6	7	7	6	10	10—77
R Griffin	7	6	8	5	7	10	7	9	9	7—75
F Merrill	7	6	6	4	9	6	7	6	9	8—68

THE REVOLVER SHOOTING TOURNAMENT at Conlin's gallery, Broadway, New York, came to a close last Thursday night, after a close contest lasting ten days, in which a great many fine scores were made. Mr. George Bird had the honor of winning the first prize, a handsome gold medal, winning it from Mr. J. T. B. Collins in fine style, with a score of 210 out of a possible 216 points, on the Massachusetts target reduced. Mr. Collins is an old-time shot, having been on the first American team and the winner of a great many hotly-contested shooting matches, and is a hard man to beat in a match. It looked for some time as if he would win, but Mr. Bird, although a young shooter, is a hard man to walk away with. Mr. Collins won the second prize, also a gold medal, with a score of 208 out of a possible 216. Mr. A. P. Kelly won the third prize with a score of 206 out of a possible 216. This is Mr. Kelly's first revolver match, and he hugged the leaders very close on the last day of the match, making two 68s and one 69 out of a possible 72. Among the other revolver shooters were A. Brennan, W. C. Southwick, J. B. Millen, Capt. T. H. Swift, F. Schuchardt and many others.

TORONTO, May 19.—Col. Gzowski, late president of the Dominion of Canada Rifle Association was to-day presented with a fine sporting rifle by the members of the Association Council. Col. Kirkpatrick presented the address, which said in part: "The regret we feel at the severance of our official connection is only exceeded by the pleasant recollections we have of our past relations under your guiding and successful administration. Your untiring and self-denying services in the cause of rifle shooting have helped in no slight degree to stimulate the militia of Canada to maintain rifle associations and to perfect themselves in the use of the rifle, and thereby have added to the general efficiency of the militia force of the Dominion." Among those present were Lieut.-Col. Kirkpatrick, Kingston; Col. Ouimet, Montreal; Lieut.-Col. Macpherson, Lieut.-Col. White, Major Tilton, of Ottawa; Lieut.-Col. MacDonald, Guelph; Lieut.-Col. Gibson, Hamilton; Lieut.-Col. Tyrwhitt, Bradford; Lieut. McNaughton, Cobourg, and Lieut.-Col. Otter, Toronto.

SAN FRANCISCO, May 15.—The regular monthly shoot of the San Francisco Schuetzen Verein was held to-day at Shell Mound Park. The weather was not at all propitious for target shooting at long range on account of a light wind that prevailed throughout the day, yet excellent scores were made. The shooting was at a 25-ring target, 200yds. range. Louis Haake won the medal for first-class shooting, having scored 409 rings. In the second class Captain Huber won a medal, being credited with 364 rings. The medals for the third and fourth classes were won by H. Kurdfinkle and A. Lemare, who scored 347 and 227 points respectively.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

DECORATION DAY TROPHY.

THE entries for the FOREST AND STREAM DECORATION DAY TROPHY number thirty-five clubs, represented by fifty-one teams. A number of entries, mailed after the time prescribed, have been returned. The competing clubs are as follows:

LIST OF ENTRIES.

South Harrisburg Gun Club, Harrisburg, Pa.
Northside Gun Club, Indianapolis, Ind.
Onondaga County Sportsmen's Club, Syracuse, N. Y.
Wayne Gun Club, Philadelphia, Pa.
Johnstown Gun Club, Johnstown, N. Y. (2).
Middlesex Gun Club, Dunellen, N. J. (2).
Yonkers Gun Club, Yonkers, N. Y. (2).
Bristol Gun Club, Bristol, Tenn. (2).
Taunton Fish and Game Prot. Asso., Taunton, Mass. (2).
Washington Heights Gun Club, New York city. (2).
Kalamazoo Sporting Club, Kalamazoo, Mich.
Fountain Gun Club, Norwalk, Conn. (2).
Booth Gun Club, Osborn Hollow, N. Y.
Forest City Club, Wachita, Kan.
Knoxville Gun Club, Knoxville, Tenn.
Oswego Falls Gun Club, Oswego Falls, N. Y. (2).
Saratoga Gun Club, Saratoga Springs, N. Y.
Hill City Gun Club, Rome, Ga.
Jamestown Shooting Club, Jamestown, N. Y. (2).
New York German Gun Club, New York city.
Scioto Game Association, Portsmouth, O. (2).
Algonquin Gun Club. New York city (3).
Wingohocking Club, Germantown, Pa.
Athens Gun Club, Athens, Pa.
Bay Ridge Gun Club, Bay Ridge, N. Y. (2).
Baltimore Gun Club, Baltimore, Md.
Freeburg Gun Club, Freeburg, Ill.
South Side Gun Club, Newark, N. J.
Smith & Wesson Shooting Club, Chicopee, Mass.
West End Gun Club, Long Branch, N. J. (3).
Springfield Shooting Club, Springfield, Mass.
Parkersburg Gun Club, Parkersburg, W. Va.
Solomon Gun Club, Solomon City, Kan.
Spring Hill Gun Club, Blauveltville, N. Y.
Monticello Gun Club, Monticello, Fla.

The conditions have been so explicitly stated in the circular sent to each team that there should be no ground for any dispute. Attention is called to the rule that scores must be made out in ink or with indelible pencil and mailed within twenty-four hours after the shooting. The result of the match can not be given until our issue of June 9.

The TROPHY is now on exhibition in the window of Merwin, Hulbert & Co., West Twenty-third street, near Broadway.

BOSTON, May 18.—*Editor Forest and Stream:* The vote at last meeting of executive committee, of which I wrote you, in regard to shooting for your trophy, appears to conflict with our previous arrangement in regard to shooting on May 30 according to our programme, clay-pigeons only to be shot on that day. We shall have a set of traps specially arranged to throw Ligowsky birds for your prize and shall be happy to accommodate any team which enters to shoot on them; but hardly see how we can arrange to throw any other target.—C. B. SANBORN, Sec. N. E. T. A.

SAN FRANCISCO, May 14.—To-day a large delegation of sportsmen representing the Eureka Gun Club met at Bird's Point, Alameda. It was the third monthly shoot of the club. On the previous shoot the day was very disagreeable, and the members found it an unpleasant task to stand before the traps while the cold, crisp breeze from the ocean almost necessitated the wearing of overcoats. To-day was very pleasant, and the gentlemen present enjoyed a splendid afternoon's sport. Mr. Bird provided an exceptionally strong lot of pigeons, which darted from the traps with such surprising alacrity that some of the best shots found a task. The shooting was under Hurlingham rules. Following is the score, Davis, Chapin and Sanborn 28yds.:

Haskell	1111111101110—10	Sanborn	1001111111111—10
Goodall	0010110111011— 7	Adams	0111111111111—11
C W Kellogg	1111001111111—10	Maynard	0111111111011—10
Dr Mayhew	0001011111111— 8	Dean	1101001110001— 6
Davis	1110110111111—10	S I Kellogg	1110110100010— 7
Chapin	0110011001110— 7	Golcher	1111001101100— 7
Schwerin	1111111111100—10		

Immediately after the regular shoot a sweepstake, $2.50 entrance, was inaugurated, 30yds. rise, 6 birds. It was won by Mr. Maynard, who knocked over six of his birds in excellent style. Appended is the score:

Milton	011111—5	Schwerin	101111—5
Golcher	111001—4	Maynard	111111—6
North	111011—5	Smith	withd'n
Sanborn	111011—5	Knight	011010—3
Fraser	010101—3		

WATERTOWN, N. Y.—A new gun club has been organized in this city called the South Side Gun Club, with a membership of twenty and grounds on the south side of the city. The officers are: President, Edward Sterling; Vice-Pres., Alex. Allingham; Sec'y, H. C. Whiting; Treas., J. C. Ayers. Regular club practice every Thursday afternoon. The members are making great progress, and will shoot for a club medal in June.—E. W. S.

CARVER VS. BREWER.—The score of the first match at Philadelphia, May 23, was Carver 86, Brewer 80.

THE MISSOURI STATE SHOOT.

PALMYRA, Mo., May 17.—Rain began falling early last evening and continued until 10 o'clock this morning. It looked for a time as if the shoot would be a failure, but by noon the clouds broke and the shoot began. About fifty participated in the first shoot, St. Louis having about fifteen. The first shoot was for $100, 10 birds, 21yds. rise. Thirteen men tied on 10, 15 on 9 and fully as many on 8. The ties were shot off and Messrs. Underwood and I. R. Riley of Kansas City, John Lemmons and John Gash of Palmyra tieing, divided first honors and the money. Rightmyer, of Palmyra, carried off second money, $76. Messrs. Bates and Tuley, of Palmyra, Bingham, of Kansas City, and Edington and Cole, of St. Louis, tied on 9, and after a half dozen contests these were narrowed down to Bingham and Cole, who divided second tie honors. The attendance was unusually large for the first day. St. Louis had parts of four clubs—the Excelsior, the Western, the Missouri and Sportsmen's. There are fully fifty St. Louis men in the city. Excelsior had thirty-five men and established headquarters on the grounds with a tent, flag and silk banner. Kansas City had parts of three clubs—the Jefferson City, Gun club and the Butler club. In addition to this large numbers of individuals were present. The pigeons were lively, the afternoon fine and the sport excellent. Old members of the club say the best shooting ever done was done this afternoon. This evening Hanley's opera house was crowded with sportsmen assembled to elect officers and attend to other business. The members discussed the game laws and amendments and passed resolutions against the adoption and enforcement of stringent laws. The meeting lasted until near midnight.

PALMYRA, Mo., May 19.—Three shoots took place to-day and the teams were well filled in the first shoot of the day.

Shoot No. 5—Twenty-four men entered, shooting seven single birds, 26yds. Lyman, Smith, Cockrell, Bates, Bennett, Hatcher, Baehr and Jacobs tied on 7, and in the shoot-off, 3 birds at 26yds., Hatcher and Bennett lost and the remaining six divided the money, $50. Loerke, Thornton, Watson, Mensing and Shaw tied on 6 and divided second money; Riley, Mitchick, Youmans, Den, Denser, Kelly and Reeves tied on 5. Youmans, Den and Denser won on the shoot-off and divided. Fields, London, Underwood and Fairman tied on 4, and London and Fields in the shoot-off and divided.

Shoot No. 6—Twenty-four men entered, and Mensing, Caldwell, Loerke, Riley, Watson and Baehr tied, on 8 in the shoot. 4 pair of birds, 18yds. rise, ties 1 pair at 21yds., and in the shoot-off Caldwell, Riley, Watson and Baehr tied and divided the $36. Lyman, Bates, Youmans, Elliott, Thornton and Lemmons tied on 7, and Lyman and Lemmons won in the shoot-off and divided. Fields, Cockrell, Den and London tied on 6, and Caldwell won in the shoot-off, $18.24. Gash, Underwood, Haworth, Ryan, Denser and Reeves tied on 5, and Ryan won at the shoot-off.

The last shoot began late this evening, and by noon to-morrow the programme will be wound up. Most of the clubshave left the city.

PALMYRA, Mo., May 20.—This was the last day of the great shooting tournament, and only two shoots of any consequence took place.

Shoot 8. Seven single birds, 26yds., was shot off by twenty-four men, Baehr, Underwood and Watson dividing first money; Mensing and Webber, second; Thornton and Caldwell, third.

This ended the main programme, but several side shoots for entrance fees took place this afternoon.

The following are the official scores of the teams which competed for the tenth annual State tournament. Terms: 5 birds each at 21, 26 and 31yds. rise:

St. Louis Gun Club—Pitts 10, Coles 15, Peck 14, Wilson 15—54. First place, 1887.

Independence Gun Club, Kansas City—Bingham 23, Bingham 14, Anderson 12, Anderson 14—53. Second place.

Keystone (Cameron, Mo.)—Cockrell 14, Mitchick 13, Watson 12, Caldwell 13—52. Third place.

Gate City Club (Kansas City, Mo.)—Mensing 15, Savage 12, Fairman 12, Reeves 12—51. Fourth place.

Missouri Gun Club (St. Louis)—Griesidieck 12, Weiber 15, Schaaf 11, Fink 13—51. Fourth place.

Mound City Gun Club (St. Louis)—Sieminskie 13, Wells 10, Grether 12, Field 14—49.

Belt Line Gun Club (Kansas City, Mo.)—Denser 11, Baer 13, Hubbs 14, Godfrey 11—49.

Palmyra Gun Club (Palmyra, Mo.)—Bates 13, Hatcher 11, Lemmons 11, Gash 10—45. Winners last year on 52.

Excelsior Gun Club (St. Louis, Mo.)—Kulage 12, Loerke 8, Weber 12, Rinkle 15—45.

Kansas City Gun Club—Riley 11, Underwood 14, Smith 11, Bassett 8—44.

DAVIS VS. CANNON.—The adjourned match between these two trap-shooters came off on the grounds of the J. C. H. G. C. on the 21st inst. The day was fine, the birds a trained lot, furnished by Miles Johnson and Al. Heritage, and the number of interested spectators large. Representatives were present from New Jersey, Long Island and Staten Island, knowing that this match was no hippodrome affair, but would be shot on its merits, the best man (at least on that day) to win. Davis was in fine condition, taking the lead early and keeping it up. He shot in fine form, making some very brilliant kills. Cannon, though cool and plucky, was decidedly off, and missing five straight gave Davis a big percentage. We have never seen a more plucky shooter than this one-armed Cannon. He was not only jolly throughout, but continued to back himself with his own money, even when the match was half over and it was almost a foregone conclusion that he would be shot out and that soon, but he improved some and was not shot out until the 43d bird. Cannon had rather the hardest birds and let them get too far away from the trap before shooting, while Davis got on to them almost instantly. Davis had only one dead out of bounds, while Cannon had 3, his 41st dropping through a hole in the fence. There was some good shooting by both men, but we are of the opinion that Cannon has no business fooling with George Davis, and his nerve or pluck will only cost him so much more money. There was some talk of another match between the two men, but nothing definite was settled upon. South Paw's Duke, assisted by De Junge's pointer Frisco, did the retrieving. Match between Geo. Davis, of Greenville, N. J., and W. S. Cannon, of Newark; 50 birds each, $250 a side, Hurlingham rules, except weight of gun. F. Quinlan, referee, F. Satterthwaite, scorer:

Davis (30)	111112106111o02020121111—19
	11110101111011110110201021—18—37
Cannon (30)	201o012000001010lc1221101—13
	01001110221111lo11012022—18—31

o Dead out of bounds. "2" signifies used both barrels and killed.

Two barrels used to kill—Davis 6 times, Cannon 8 times. Birds fell dead out of bounds—Davis 1, the fourteenth, and Cannon 3, the fourth, eighteenth and forty-first. Davis killed 17 drivers, 7 right quarterers, 8 left quarterers, 1 incomer and 4 hoverers; total, 38. Cannon killed 21 drivers, 4 right quarterers, 4 left quarterers and 2 incomers; total, 31. Davis had 12 birds from trap No. 1, 14 from No. 2, 7 from No. 3, 12 from No. 4, 5 from No. 5. Cannon had 8 birds from trap No. 1, 16 from No. 2, 6 from No. 3, 13 from No. 4, 7 from No. 5. Time of shoot, one hour and fifty minutes.

After the match a sweep was engaged in, $5 entrance, 5 birds; and here is where Cannon's pluck came in again and to some purpose, as he outshot all the old trappers with a straight score, J. C. H. G. C. rules:

Cannon	1 1 1 1 1—5	Lindsley	1½ ½ 1 1—4
Von Lengerke	1 1½ ½ ½—3½	Cook	1 1 0 1—4
Davis	1 0 0 1 1—3	Winans	½ 1 ½ 1 1—4
G Freche	½ 1 0 1 1½—3	Williams	1 0 ½ 1 1—4
Dickens	½ 1 1 1 0—3½	D Terry	1 1 1 1 0—4
Kent	1 0 1 1 1—4	Creeley	½ 1 1 0 1—3½
Quinlan	1 ½ 0 0 ½—3	W Siegler	1 0 1 1 1—4
Perment	½ 1 1 0 0—2½	W Terry	1 1 1 1 0—4
S Castle	1 1 1 ½ ½—4		

Cannon first, $42.50; D. Terry, Wm. Siegler and W. Terry divided second, $25.50; Dickens and Williams divided third, $17.

Second sweep, 19 entries, Lindsley took first money, Hedden and Castle divided second, Hoffman third, Kinsey fourth.—JACOBSTAFF.

SARATOGA GUN CLUB.—Scores made on May 2, 9 and 17, American clay birds, 16yds. rise, second barrel ½; highest is entitled to 20 extra shots:

McVair	1 1 1 1 1 1 1 1 0—9	Meehan	1 0 0 1 1 1 0 1 0 1—6
Bockes	1 1½ 1 1 1 0 1 1—8½	Pike	1 0 1 0 1 0 0 1 1—6
Lev'gston	0 1 1 1 1 1 1 0 1—8	Gage	0 1 1 0 1 0 1 0 1 0—5

Monday May 9:

Levengston	1111111111—10	Meehan	1110111111—9
Bockes	1111111011—9	Pike	1011101001—6
Gage	1111011111—9	Stevens	1011100110—6

Monday, May 16:

Levengston	1111111111—10	Clark	1011110001—6
Meehan	1101111111—9	Cramer	1000101011—5
Bocke	1111111011—9	Putnam	0100010111—5

At 15 birds:

Bockes	111111111101100—13	Levengston	111111101101111—13

JOHNSTOWN, N. Y.—There will be sweepstake shooting on May 30, 9:30 A. M., at blue rocks, clay birds and glass balls.—GEORGE YOST, Pres.

THE COLT GUN CLUB, of Hartford, Conn., had a sweepstakes shoot May 20. All the best shots from New Haven, Bridgeport, Wallingford, Springfield and surrounding towns participated. They shot all day. No. 1. State shoot, 6 clay birds, 8 angles:

Miner	101001—3	Nettleton	000010—1
Thomas	100010—2	Vibbarts	101100—3
O Treat	000101—2	N Folsom	010100—2

SAN FRANCISCO, May 15.—The Lincoln Gun Club held its regular monthly clay-pigeon shoot to-day on its grounds near Aalmeda Point. There was a large attendance of the club members. Although all the conditions were favorable to good shooting only average scores were made. The day's sport began at 10 o'clock with the second shoot of the season for the first and second class club medals. The rules were 15 single birds, 18yds. rise, from 5 screened traps. Following is the score of the first-class medal shoot:

Dunshee	1110110100101110 — 9	Richter	1010100001100000 — 5
Cate	0011111101101001—10	Edlar	0100001100 — 2
Campbell	1110010000001110 — 6	Potter	1010011010110001 — 7
Parks	1100000011011— 7	Bruns	1010010111111011—10
Ford	0010111011101110 — 9	Schendel	1101101011000111—10
Rose	0111011100110001— 9		

The three ties were shot off at double birds, Schendel taking the first-class club medal.

For the second class medal the following is the record, Quinton winning it with a score of 10:

Holmes	0001100010001010— 5	Horber	1011100000100001— 6
Venker	1011000110000100— 6	Booll	0110010000100010— 5
Kamer	0000110010001111— 6	Brown	0001000001000001— 3
Cohen	1000000000011011— 5	Quinton	1111101111010010—10
Wunil	1100111010101001— 9		

After the medal shoots, the following pool, $1 entrance, was shot:

Ford	1111011011—8	Bruns	1110111101—8
Cate	1110111110—8	Holmes	0100111000—4
Campbell	0110101101—5	Wenzel	1101011111—7
Quinton	0111000101—5	Scovern	0101110101—6
Druskee	1101001100—5	Parks	1110101101—6
Parker	1101010001—5	Fanning	1111100111—8
Larney	1000100010—3	Brown	0010000110—8
Burt	0110110010—5	Lendstrom	0101111000—6
Hooker	1000000000—1		

The four ties were shot off at double birds, resulting in a tie between Ford and Cate. Cate won finally.

NEW YORK, May 19.—A few members of the Eureka Gun Club had a shoot at their grounds on May 17. A number of ladies, friends of members of the club, were present, adding much to the pleasure of the occasion. Mr. S. acted as scorer, giving perfect satisfaction. The weather was all that could be wished for and the sport was very much enjoyed by all.

First shoot, 10 American clays:

Strope (2d)	1111010111—8	Quick (3d)	1010010111—6
Ring	1000100010—3	Swindell (1st)	0110111111—8

Second shoot, 6 live birds, 25yds., second barrel ½ bird:

Strope	1 1 1 1 1 1—6	Swindell	1 1½ 1 1 1—5½
Ring	1 1 ½ 0 1 1—4½	Ficken	1 1 0 1 ½ ½—4
Quick	1 1 0 ½ 1 ½—3½		

Third shoot, 10 American clays:

Strope	0110100111—6	Swindell (3d)	1101101111— 8
Ring (2d)	1110110111— 8	Ficken	11011w
Quick	1111111110—10	Dische	10011w

Fourth shoot, 10 blue rocks:

Strope	0110101111—7	Quick (2d)	1110111110—8
Ring (3d)	1011100111—7	Swindell (1st)	0111101111—8

Fifth shoot, 10 American clays:

Strope (2d)	0110111011—7	Quick (3d)	1101011101—7
Ring	0110001101—5	Swindell	1110110111—8

Sixth shoot, 10 American clays:

Strope	1110101011—8	Swindell	1001101100—5
Quick	1110011011—7		

E. D. STROPE, Sec.

NEW YORK STATE SHOOT.—The twenty-ninth annual convention of the New York State Association for the Protection of Fish and Game will be held at Utica, N. Y., commencing June 6, under the auspices of the Oneida County Sportsmen's Association. The shooting tournament will be held upon the grounds of the Utica Base Ball Association at Riverside Park, five minutes' walk from Bagg's Hotel. All the contests of the convention will be governed by the rules for shooting Cleveland blue rocks, except otherwise noted. There are eight contests with prizes aggregating in value $8,326. Address M. M. Brunner, Sec., Utica, N. Y.

COLLEGE MARKSMEN.—The first inter-collegiate shotgun match ever held in New England took place at East Watertown on May 11 between teams representing the Harvard University and the University of Pennsylvania. The wind was a gusty one, blowing directly across the range, and it proved a puzzler to the visitors. At the end of the first round Harvard had a lead of 9 birds, which at the end of the second was increased to 7, and then to 13 in the third, 17 in the fourth and 15 in the fifth and last. For Harvard the best work was done by Clyde, who shot 14 birds straight, and Austin and Mead, who each shot clean rounds of 5 birds. Randolph and Chew did the bulk of the work for the Pennsylvania. It is but fair to say that the visiting team were handicapped by lack of practice at clay birds, as it is their custom to shoot at live pigeons. They have also been practicing at open traps and were considerably bothered by the screen used on the Harvard grounds. About 50 spectators were present; 25 birds per man, thrown at 18yds., rotation of 5 angles, score by rounds:

Harvards.		University of Pennsylvania.	
Clyde	2355s—19	Randolph	12233—17
Green	44433—18	Chew	34432—17
Austin	52425—18	Freeman	33224—14
Mead	42453—18	Smith	33221—10
Palmer	43223—14—87	Dolan	11012— 5—62

Referee, S. Bradstreet, J. P. G. C.; judges, Capt. J. S. Sawyer, M. R. A.; A. B. Bradstreet, J. P. G. C.; scorer, J. A. Frye, M. R. A.

TORONTO, May 14.—The Toronto Gun Club held its fourth weekly shoot at the Woodbine this afternoon. Those who missed the previous shoot made the following scores at 20 clay-pigeons, 18yds. rise:

W Felstead	18	R J Kidd	16
J T Bayles	8	T Sawdon	5

The scores of the regular shoot are:

A Ellis	15	N Gardner	10
W McDowall	15	J T Bayles	10
W Felstead	15	H M Rupp	9
R J Kidd	14	W Pearson	8
G Pearsall	11	T Sawdon	4

The members of the Owl Gun Club have determined to hold a Peoria blackbird tournament on Wednesday and Thursday, June 21 and 23, at Charles Ayre's grounds, Eastern avenue, for $300 in cash prizes. The managing committee comprises W. McDowall, C. Ayre, A. R. Lockhart, J. R. Humphreys (president), J. C. Unwin (secretary).

SAN FRANCISCO, May 15.—The Occidental Club held a pigeon-shooting match to-day at the Six-mile House. There were nine entries, each shooting at 12 birds. A strong breeze was blowing and some fine fast birds were provided The prize of $30 was won by P. J. Walsh:

P J Walsh	011111111111—11	T Schach	100101100111— 7
F Williams	111011111011—10	W Garno	011011111110— 9
H Blanken	111011111110—10	T Pearson	111110000110— 7
J M Ropes	111101111011—10	J Swan	111101010100— 7
T Smith	101010101101— 7		

After the club shooting was ended a match was arranged between Messrs. Schultz and Walsh for $50 a side, each shooting at 15 birds. Walsh proved the victor after a close contest. The following score was made:

Walsh	011111111111111—14	Schultz	101111111111101—13

MIDDLESEX GUN CLUB.—Plainfield, N. J.—The following new members have been added: Charles Richardson, New York; James Riggott, Rockaway, N. J.; J. Lawrence, Rahway, N. J.; A. F. Quimby, Newark, N. J.; Wm. Hughes (the "old man"), Jersey City. The club now numbers over 100 members. The furnishing committee's report for the month of May showed that the receipts had been (less dues) $467.57, expenses $427.97, leaving a balance of $39.60, which was turned over to the treasurer.

NEW YORK CITY, May 18, 1887.

The U. S. Cartridge Co., Lowell, Mass.:

GENTLEMEN—I wish to thank you for the very excellent shell you are putting on the market. I refer to the "Climax." *I swear by it*, not at it, as I have had to do with other makes. It has given me unqualified satisfaction ever since I first began to use it, and that is since its introduction. Don't allow it to deteriorate, and sportsmen will call you "blessed." Very truly yours,

—*Adv.* (Signed) C. W. CUSHIER.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

The Royal C. C. will sail their Challenge Cup Race on Hendon Lake, on June 11, 1887, and invite American canoeists to attend and compete.

MAY.

28-30. East. Div. Spring Meet, Haddam Island.
28-30. Hudson Meet, Croton Point.

JUNE.

5. Oakland, Edwards Cup.
18. Brooklyn, Annual, Bay Ridge.
25. New York, Annual, Staten Island.

JULY.

3. Oakland, Edwards Cup.
4. Passaic Meet, Dundee Lake.
18-31. W. C. A. Meet, Ballast Island.
24. Oakland, Mayrisch Badge.

AUGUST.

1-12. Northern Division, Stony Lake.
7. Oakland, Edwards Cup.
12-26. A. C. A. Meet, Lake Champlain.
13. Lake St. Louis Chal. Cups, Lachine.

SEPTEMBER.

4. Oakland, Edwards Cup.

OCTOBER.

9. Oakland, Edwards Cup, Mayrisch Badge.

NOVEMBER.

6. Oakland, Edwards Cup.

DECEMBER.

4. Oakland, Edwards Cup.

A. C. A.

FOR membership apply to the Secretary, W. M. Carter, Trenton, N. J. Required age, 18 years or over. Application to be accompanied with $3. Sec'y A. C. A. Central Div., E. W. Brown, 4 Bowling Green, New York. Sec'y A. C. A. Eastern Div., W. B. Davidson, Hartford, Conn. Sec'y W. C. A., J. O. Shiras, Cincinnati, O.

TWO IN A BOAT.

THE Ides of March, 1886, found me as restless as ever for the woods; and this year mingled somewhat with the glorious recollections of birds and trees and lofty altitudes came visions of a summer's surf beating against an iron-bound coast, and then again, further to the south, a long stretch of sandy beach, up whose gentle declivity the same mad surf rushed in eager haste to lap the trunks of the trees growing far above the water's edge. Then I bethought me of the low strains and glees and carols of all the wood birds found even in the far North, mingled with the doleful cry of the great northern diver, rearing its young amid the wild solitudes and bays of the Lake Superior coast, and all these thoughts crowding upon me in a throng almost drove me mad; and I said to myself, "I will go and live in the forest for a brief spell this summer, if all the business accumulations of years hie themselves unto hades." Actuated and inspired by these longings, it became necessary, of course, to have a confidant, and who was so fit a confidant, who so appreciative of my desires and tastes, as she who had in her younger days been herself a wild wood bird, a creature of the woods and snows of a semi-Arctic region? Besides, was she not the partner of all my joys and sorrows, and was it not at least fair of me to suppose that she cherished like longings with myself? Whereupon I communicated to her all these things, and she said, "I will go with you." And thus it came to pass, when the fierce dog star was rolling high in the heavens, that we listened to the gulles of the passenger agent of the Northern Pacific Railroad, and leaving Buffalo on a New York Central train, were hauled swiftly along the banks of the Niagara, saw the mists and spray ever rolling upward from the mighty chasm, and then breathlessly slid along under the lofty precipices of Lewiston, just across the river from Queenston Heights, and were speedily transported to the steamer Chicora, erstwhile a blockade runner, seeking to introduce arms and ammunition among our rebellious brethren at the south, but now peacefully and successfully engaged in passenger traffic. With the same speed as of yore, she crossed the western arm of Lake Ontario just as night closed down, and landed us in the Canadian city of Toronto. The following morning the railroad again took charge of us and transported us up to Owen Sound; where we found the Clyde built steamer, the princely Alberta, awaiting us, and the throb of her mighty engines rapidly propelled us northward and still further northward, until a second day found us through the locks of the Sault Ste. Marie and cleaving the deep blue waters of Lake Superior in an air-line course for Port Arthur on the north shore.

A few days were spent here with a party of friends in yachting and fishing, and steaming up the devious and curiously winding Kaministiqua, a fit modern prototype of the ancient Meander, until I felt that my days were growing precious, and I began to look about for the means of passing over to Isle Royale, lying dim and blue and cloudlike in the distance, which was the goal of my summer desires. No other conveyance offering, we at last took passage in a little sailboat belonging to the keeper of the Passage Island Lighthouse, a small island lying some three miles to the eastward of Isle Royale, and with two weeks' provisions Mrs. B. and myself loaded ourselves on board the light-keeper's craft about 3 o'clock in the afternoon of a bright, sunshiny day, whereupon his assistant, a bright specimen of the typical French voyageur, pushed off the boat, and amid the solemn warnings and the tearful wishes for our safety of some kind friends on the plazza of the Northern Hotel we hoisted sail and bore away for the Sleeping Giant, stretching his slow length along the rocky promontory which forms Thunder Cape. Right here our troubles began with the boat, which was of the composite type, being quite deep draft and possessed of a ponderous iron centerboard; the craft was entirely decked over, except a small and very deep cockpit aft, and was rigged with an amount of aggravating cussedness that would have spoiled the temper of an angel. She had two masts, the foremast being set well up into the eyes of the boat, and hoisted by a single halliard a gaffsail and gafftopsail in one piece on each mast, the gaff being split and the halves clamped on each side of the sail. Probably a more awkward or embarrassing arrangement of canvas was never conceived of man, and to add to our difficulties she had no headsail to keep her off, and by simply letting go of the tiller she could be depended on to luff and go about on the other tack at least four times per minute. In length she was about 26ft., with 8ft. beam.

The wind was very light, and the light-keeper, who was a Dane, held her so close that we made almost no headway at all, until I applied for the position of helmsman, and insisted upon keeping her full, no matter how much the rudder dragged across her course. In a couple of hours we had got out into the sea which sweeps up between Pie Island and the mainland, and found it a very nasty lump, although the wind had increased but slightly, and it was dark before we were in the lee of the Welcome Islands. Then the wind began to rise, and by 8 o'clock it was blowing in sharp gusts from the southwest, and the seas broke on the deck at intervals. Hour after hour went by, and still Thunder Cape light seemed as far away as ever. The moon, just setting, to show us the angry rocks shutting out to the eastward from Pie Island, and the lofty, overhanging heights of Thunder Cape above our heads. At midnight the Frenchman, whom I had posted forward, reported Thunder Cape light about a mile off the port bow, and said that in his judgment it would be safe to run around the head of the cape at that distance from the shore. Meanwhile, the Dane, whose flow of talk seemed interminable, sat in the stern with Mrs. B., and added to her other discomforts of the night. In a few minutes more we were by the cape, and just as I had feared, found ourselves in a strong ground swell, with a stern wind barely sufficient to move the boat. It was obviously impossible to reach Passage Island, still twenty-five miles away, that night, and with the present wind, probably not until late the next day, to say nothing of the possible dangers and extreme discomforts of tossing about in those rough waters in that tub of a boat.

Great Tee and Little Tee harbors were only a mile up the shore, nestling right in among the cliffs at the Giant's feet and some fishermen had their huts there who might give us food and shelter, but in the darkness I feared to make for the narrow mouth of the harbor, which in the impenetrable gloom, we could not have distinguished from any other part of the rocky coast line, so I insisted on running up the shore to Silver Islet, some five or six miles away. The Dane at this point said that he was thoroughly familiar with the outline of the shore and would go forwaad and act as lookout, while I brought the Frenchman aft, where he busied himself with a long oar in keeping my little 16×28 boat from either smashing her nose or her counter. The roar of the surf as we alternately rose and fell in the deep trough of the sea was the most terrifying that I had ever listened to and argued ill for our lives in case we should make a mistake and strike a rock. The wind was light with a constant tendency to shift, and in order to prevent jibing I had the mainsail lowered, letting her run slowly along with the foresail housed out with the wind. Four o'clock came, no Silver Islet in sight; 2 o'clock came and the lookout ordered me to keep out further from the shore, although I barely had steerageway on her, as he fancied there was a rock ahead. A moment later he shouted: "It's all right, there is Silver Islet out there and here is Burnt Island on our left; turn in close around the point of the island." Obeying his instructions, I turned in so closely that our old iron centerboard reached the tops of numerous rocks underneath the water and bounded and thumped along at such a rate that Mrs. B., for the first time, lost her nerve and intimated a strong desire to walk ashore if possible. However, we passed in safety and shot out in the perfectly smooth water between Burnt Island and the shore and saw the old docks and rotting dwellings of an abandoned mining location perhaps a hundred yards above us. The wind now began to freshen and our clumsy old craft declined to beat up in the narrow channel, so there was no help for it but to get out a couple of ungainly sweeps, apparently intended for a Mississippi River coal boat and laboriously work our way up to the dock.

The boat securely fastened to a spile, Mrs. B. and myself dragged ourselves ashore almost too stiff and lame to walk, and seeing a light in a little house up on the bank, rapped loudly at the door for admittance. A tall figure clothed in a shock of black hair and a night shirt, stated that the house was full and that they were not in the habit of giving lodging to tramps. Whereupon he slammed the door viciously. I resumed my by no means gentle rappings, and stated in somewhat firmer tones that we were not tramps, that there was a lady with us, and that we proposed to have shelter and warmth if we had to make a bonfire of the location to do it. Our abrupt friend thereupon emerged from his habitation, and, becoming convinced of the truthfulness of some of my statements, kindly volunteered to see what could be done for us next door, with so good a result that a short ten minutes found us safely and comfortably quartered in the house of a Mrs. Fenn, whose efforts to see us comfortable and provide for the necessities of Mrs. B. we shall not soon forget. At 3 o'clock we dropped off to sleep, if you can call a dull stupor following upon such labors and anxieties as ours sleep, and at 9 o'clock we were down to breakfast, somewhat refreshed, and feeling at least a quarter of a century younger than we did the night before. Our interlocutor turned out to be Mr. Gifford, clerk and assayer of the mine in its prosperous days gone by, who, with Mr. Coe, still remained in charge of the stores, etc., and they proved to be delightful gentlemen, hospitable and kind to the last degree, and whose isolation in this God-forsaken spot in the wilderness is a cause of amazement to us yet. All that day we spent visiting with them, looking over the mine under their guidance, and listening to pleasing legends of blocks of silver and tales of Golconda and Eldorado, until we felt surfeited with riches, and no longer bemoaned the fact that our account was low at an Eastern bank.

Lying a little over one hundred feet from Lake Superior, and twenty-seven feet above it, is Surprise Lake, perhaps half a mile long and one-third as wide, running back into a nook in the hills that probably nature had provided for it, a never ceasing wonder to the stranger or the scientist, lying in such proximity to the larger body of water and at such an elevation above it without any outlet or inlet that has as yet been discovered. The next day we were visited with sundry heavy thunder squalls, but about 11 o'clock, wrapped in oilskins and blankets, we bade our Samaritan friends good-bye and shot out into the lake for Isle Royale or Passage Island. The wind was stronger than we had it in crossing Thunder Bay, and about 3 o'clock we slid gently over a mass of rocks which climbed up from the bottom so fast that it seemed to threaten our little bark with destruction, but still had ten feet of water on top of it, and found ourselves in a sylvan paradise, a fairy amphitheatre, near the mouth of McCargoe's Cove on Isle Royale. Here we transferred our duffle to the little cockleshell towing astern, and Mrs. B. and myself took our position in it and bade adieu to our kind friends of the sail boat, they presenting us as a farewell gift with a dozen fresh eggs which we would not have exchanged afterwards for nuggets of gold. I took the oars and Mrs. B. hid herself behind a barricade of tent, blankets, photographic apparatus, firearms, fishing-tackle, cooking utensils and grub, and expressed herself as perfectly happy. Of this more anon. The shore at this point seemed to have been scalloped out by no uncertain or inartistic hand in chaotic days, presenting an appearance of successive little bays in whose waters the surrounding trees were strongly mirrored; while up and back on the island the land gradually rose in rough and rocky steps until at the summit it attained a height above the water of perhaps seven or eight hundred feet. I had a chart of the island which I had secured from the coast survey, and with this spread on the bottom of the boat between my knees I paddled along to the westward about a mile until we saw McCargoe's Cove running back into the island at least two miles, and looking like a gigantic cleft that some Titan hand had made in a fit of anger upon the rocky face of nature. The trees grew thick and close down to the water's edge, consisting of birch and spruce and cedar, and occasionally a maple, but cedar predominated very largely.

We rowed rapidly along, and 5 o'clock found us unloading our duffle on the old dock away up at the bight of the cove, and within sight of some of the old houses and huge rock piles of the dead and gone Minong mine. It was dreary and desolate enough to satisfy the most exacting recluse, and the long drawn out, mournful cry of the loon added terror to the solitude. There were loons to the right of us, loons to the left of us, and loons swam in all sorts of little bays and notches in the rocky island, who all took up their cry of horror at our sacrilegious approach, until it required no vivid imagination to fancy that the whole island screamed in protest. With the tent roughly pitched, and eggs and bacon and coffee cooking over the alcohol stove, we began to lose some of our sense of fatigue, and after a hasty supper sat out on the end of the dock and watched the fish jump, and listened to a thousand strange sounds of the forest, until darkness and the mosquito warned us it was time to retire. We had barely withdrawn to the shelter of our tent before a severe thunderstorm, which had been grumbling and muttering around Thunder Cape all the afternoon, came rapidly across the eighteen miles intervening between us and it, and burst over our heads with an added protest against our trespassing upon its favorite solitude. Then it passed away as rapidly as it came, and the stillness became oppressive. Some animal prowling along the bank above our heads loosened a clod of earth and stones, which came rolling down with prodigious clatter and tuning our already excited nerves up to a still higher pitch.

It was our first night out in the woods for years, and though it all seemed natural, we were so far from our fellow beings and on an unknown island that we feared everything in the night time. Presently some small animal bounded lightly up to the ridge pole of the tent and gave vent to a mournful cry, while a field mouse ran slowly up the prostrate form of my wife and took a hasty survey of her hair, apparently with a view to pre-empting it. "Shooed" him away, and he departed with an injured air that showed plainly he understood his rights and was disposed to insist upon them. After such an interval of silence as only our camping place or the dark cell of a prison can possess, another heavy shower burst upon us with even greater fury than the former, and after a while we listened to a third, which was loud enough to suggest the dissolution of this mundane sphere. Again the perfect silence, and a noise of something crashing through the bushes near us, and so we passed the night, nervous and excited almost beyond endurance, until the first break of day seemed like a pardon from on high, and after a short debate as to the propriety of spending part of the day where in such indifferent style we had passed the night, took the affirmative, and the negative, ably represented by Mrs. B., stated that they would rather die than spend another night in that entrance to the lower regions; the decision was given to the latter by a narrow majority, and we began to pack up and start for a pleasanter clime. The chart showed it to be thirteen or fourteen miles in an air line to Blake's Point, the eastern extremity of the island, probably eighteen as we would have to go, and at 7 o'clock we took our places in the boat and began the long struggle with sleep and wind and sea, determined to cross from Blake's Point the three miles to Passage Island if the water was smooth enough, and if not, to reach the location of the wreckers at work on the hull of the Algona, ten miles up on the south side of Isle Royale.

Half an hour took us out of the cove, and after crossing the open bay where we had left the lighthouse keeper, we kept due N.E. through the passage, locally known as McClellan's Channel, between Angydaloid and Fish islands, with a strong wind dead ahead and the fog so thick that we could only see about 300yds., or the width of the channel. The shores were rocky, but heavily covered with evergreens and birches, as indeed is the entire island, and the moss in places was very thick. Landing at 10 o'clock in an old log fishing shanty, apparently deserted several years before, we found the moss knee deep in it, and a more gruesome place I was never in. The water in the channel was very deep, and it would be a good harbor for any vessel on the lakes knowing how to get in. Its length is about four miles. At noon I saw a small opening on our right, with a small fall or rapid, and ran down it into a small pool about 50ft. in diameter and nearly as deep. The water was clear as a crystal, and the light-colored rock so rounding underneath that we christened it the Devil's Punch Bowl, and a right handsome use he must make of it. There was a little current, but we must suppose the rapid must have been caused by the wind piling the water up in the channel. It was a sylvan scene of rare beauty, the trees hanging over the pool on all sides, and Mrs. B. was so impressed that she breathed freer when we had breasted the current and left the fairy lake behind us.

At 1 o'clock we turned off into a wide shallow bay, thick with islands, and landing on a huge rock, raising his gray back a few feet above the water, we discussed canned tongue, crackers and cheese beneath a huge cedar trunk, gnarled and twisted as the trees that placed it at the gates of Eden. This, we flattered ourselves, was a spot never before trodden by human foot; but alas! happening to go around the trunk I found a deep surveyor's blaze on the eastern side. Why won't those surveyors let somebody else discover something?

Two o'clock found us again on our way, with rocks and islets all around us. By this time my severe and protracted labor at the oars had blistered my hands so badly that I cringed at every stroke, and made the recover with my thumbs. The wind was still fresh, and our little craft tossed and pitched in the choppy sea in a decidedly uncomfortable manner. In order to let me get a few minutes' rest, Mrs. B. now took the oars for a mile or two, while I reclined in the stern and exulted in the magnificent panorama the shores presented. Then we drew around Lock's Point, where I resumed charge of the motive power and slowly we crossed Duncan's Bay and found ourselves beneath the lofty and picturesque cliffs of Blake's Point. We had intended to visit this bay, it being one of the most exquisite bits of water known on the lakes, but it is over three miles deep, and if we intended to round the island before dark it must be done soon, as it was already after 5 o'clock. Meanwhile we paddled slowly along and glutted our admiration of the rocks above us, they being somberly decorated in all the dull reds and greens and yellows of a Turkish rug. Lichens made fantastic faces on them and one "study" of a beautiful woman engaged in tying her bonnet strings appealed strongly to my companion who thought dubiously of her own Tam o' Shanter and the possibility of her never seeing civilization again.

As we approached Blake's Point the wind died away, but the sea was all that our boat could stand and live. However, at 6:15 P. M., we rounded it in safety and disembarked on a small island, near the remains of an Indian camp, where we cooked our supper and speculated on the prospects of reaching the wrecking camp, twelve miles up Rock Harbor, before giving out entirely. I hoped it could be done by midnight, but the fog was again coming up so thick that it looked very doubtful. Passage Island was not to be thought of in our cockle-shell, especially as its exact whereabouts was hidden by the fog. At seven we resumed our labors, but the numerous islands constantly looking up out of the fog and as rapidly disappearing would have unnerved a pirate. Soon it got dark, a darkness augmented and thickened by the fog until it was fairly sticky, and all bearing vanished into utter oblivion. To keep from running into the open lake I carefully opened and fastened the chart on the floor of the boat, laid my compass on it, and by occasionally looking at it by the light of a fusee, succeeded in keeping generally in the desired direction. But it was ticklish work, and several times we nearly knocked an island into the lake, to say nothing of discovering dozens of rocks, submerged and otherwise, set down on the chart.

About 10 it began to rain, but covering my wife with a waterproof and our duffle with the tent, I kept up the monotonous pull at the oars, half asleep and wholly afraid we were heading for some western territory we did not care to visit. Presently we heard the old Thunder Cape orchestra tuning up, and knew there was music in the air. In a few minutes it started, roared distantly across the water, swept grandly up the northern slope of the island, and rushed down upon us with a scream and a jump like a West Indian hurricane. It was pitch dark, and when the wind struck us the water on all sides burst into a foam, frightening my better seven-eighths out of her wits, as she wildly implored me to "pull for the shore." As the rain was falling in torrents, I pointed out to her as well as I could in the confusion the small margin of difference between being upset and staying in the boat; but, womanlike, she was deaf to reason, and insisted upon reaching *terra firma*. It was only about a hundred yards to the land, and as soon as we struck it she sprang out of the boat and asked for brandy.

A hurried examination revealed the fact that the brandy bottle was not wet through, and satisfying myself to that effect I handed it to her, when part of its contents disappeared like a flash. I then pulled the tent over some low bushes growing on the rocks, put her under it, for I saw she was thoroughly chilled and soon had our baggage inside. The oars served as tent poles, and lashing the ropes to huge stones I crawled in myself and removed my wet clothing, putting on dry found in our bags. The waterproofs and blankets failed to hide the existence of nature's bones, but tired and exhausted as I was after a thirty mile pull, I dropped off to sleep with a stone under my head and at least a hundred under my back and slept the sleep of a hard working man. Mrs. B. woke me up about four, when I found she had another chill, but our old friend the brandy helped that and we slept on until morning, when a suspicious feeling in my feet convinced me that all was not as it should be. So I arose and investigated, finding that I had slid down until the waves slapped the soles of my feet as they ran up on the gravelly beach.

Mrs. B.'s watch said it was 8 o'clock, and as the sun was shining brightly, the fog had disappeared, and we did not know where we were, we concluded to make another effort and try to reach somewhere before night. While bacon, eggs and coffee (our entire *menu*) were preparing by the cook, I rowed out on the water and found we were O. K.; that four miles more and the goal of our temporary desires would be attained. So we ate breakfast, loaded the boat, and were just about to start when a large sail came around the point above us, and never was sight of vessel to shipwrecked mariner more welcome. A hail brought her alongside, when a hasty conversation killed all our plans. They were the wrecking party, and had had the misfortune to sink their tug the night before; so there was no way of putting us on a passing vessel until another tug arrived from below. This might be a week or more hence, and, as I saw Mrs. B. was pretty well used up from our rough experiences of the last two days, I decided to return to Port Arthur in the sailboat. Our stuff was transferred, and the flat-bottomed clinker-built sloop filled away.

But our troubles had not ceased. All day long that old tub pounded and fell off in the heavy sea, occasionally shipping a little water to sweeten her bilge, while the whole of us sat up to windward and tried to hold her down. At last my remonstrances caused a reef to be taken in the sail, when she rode better, and supper time saw us beating up to the landing at Silver Inlet, tired, hungry and mad, but filled with a grim determination to try the trip again in a modern keel boat, large enough to sleep and live in, when wind and rain and sea would have no terrors for us. A chance fishing tug, the Kitty Marks, carried us back to Port Arthur, where our friends welcomed us as arisen from the dead, and where the reaction laid us by the heels, but did not finish us.

Next year we hope to explore Isle Royale from truck to keelson, and if any one on fishing bent longs for an almost unknown island, forty-five by eight miles, filled with lakes and bays and streams, containing trout who have never heard of a fly, or even a fisherman, and surrounded by waters abounding in lake trout and pickerel, with lofty scenery and dense forests, wherein rumor hath it the pixies dwell, and in whose rocky bosom ancient pits, and still more ancient and primitive tools, tell of the great prehistoric race who came from the West for copper, found it, cut it by their rude instruments when red-hot from fires kindled on it, whereof the remains are yet to be seen, and then one day left and never came again, let him gather a small and congenial party, equip themselves with plenty of provisions and a small steam launch, and after a month's sojourn around the shores of Isle Royale, if they don't thank me for my suggestion, I will go to jail for five years, and that is almost as long a sentence as this is.

AHMEEK.

THE NEW YORK C. C.

THERE is nothing that tests the stamina and backbone both of individuals and clubs like a little hard luck and adversity, and it is hardly too much to say that if one succumbs it is only in accordance with the just law of the survival of the fittest. A very good exemplification of the sweet uses of adversity is found in the New York C. C., which two years ago was saved from dissolution only by the hard work of three or four of its members. Driven from its home by the encroachments of a railroad, with an empty treasury, and weakened at the same time by serious dissensions among some of its members, it seemed a hopeless task to keep up the club organization. Since then it has built a temporary house that, while far from perfect, still answers very well; it has carried on two seasons of racing, and last year organized and carried out alone the most important series of canoe matches yet sailed by any club. To-day it has a membership of 98 active members, 25 associate members and 8 honorary. Every member is an active canoeist, unlike some boat and canoe clubs, which many join for social purposes, and many have honorable records as racers and cruisers. The fleet includes forty-eight canoes, three being club boats, and six sailing boats, including one sailing skiff, one Rushton cruiser, one sneakbox, two Barnegat cruisers and one canoe yawl. The club has lately improved the house at the Corinthian Y. C. Basin, at Tompkinsville, so as to give larger and more comfortable quarters, which are more accessible than any other about the city.

Two difficulties have always impeded its growth, the membership being scattered over a large territory it has been difficult to unite the men and to have them meet frequently; and further the difficulty of obtaining a suitable permanent location has prevented the erection of a suitable house. The latter is likely to disappear, as steps are being taken to secure a permanent site, on which a fine house will be erected, giving all facilities for camping and reunions and to a great extent removing the first trouble. The club holds the International Cup, offered by it last year and won by Mr. Vaux, for which it is prepared to receive a challenge from any foreign canoe club.

CANOE RACE IN FLORIDA.—A canoe race formed one of the features of the Florida Y. C. regatta on May 12, the entries and times being as follows:

	Start.	Finish.
Madaline, B. Barnett	3 25 21	4 54 00
Annie B., Courtland Buckman	3 25 00	4 55 52
Irene, Robert Buckman	3 25 41	4 57 30
Louise	3 25 50	4 57 38
Ida C	3 26 00	4 57 50
Pelicon	3 26 15	. . .
Eriola	3 25 07	. . .

THE ASSAULT ON MESSRS. VAUX AND BURCHARD.—The case of Vaux against McTamany came up on Monday last, the defendant being fined $10 by Justice Powers. The charge against Johnson will be tried on Tuesday next. The case of Burchard against McTamany will be brought before the Grand Jury.

A. C. A. MEMBERSHIP.—Trenton, N. J., May 21.—*Editor Forest and Stream:* Messrs. George Stanton, Jr., and Cassius Thayer, of Grand Rapids, Mich., have applied for membership in the A. C. A. —W. M. CARTER, Sec.

A CRUISE DOWN THE DELAWARE.—Several members of the Mohican C. C. will make a cruise down the Delaware, starting this week. Messrs. Brown and Stanton, of New York, will join them.

A. C. A. REGATTA PROGRAMME.

Monday, Aug. 15, 1887.

No. 1. Paddling, Class I.—This race exempt from "one man, one canoe" rule; 1 mile with a turn.

No. 2. Paddling, Classes II. and III., exclusively.—One mile with a turn. Men entering in this event shall not enter in event No. 3. Record event.

No. 3. Paddling, Class IV., exclusively.—One mile with a turn. Men entering in this event shall not enter in event No. 2. Record event.

No. 4. Paddling.—Open canoes with single-blade paddles; one mile with a turn.

No. 5. Paddling Tandem.—On the triangle, A and B sailing canoes, decked with wood; 1½ miles.

No. 6. Paddling Tandem.—On the triangle. Open canoes; 1½ miles.

No. 7. Paddling Upset, Classes II., III. and IV.—No special appliances allowed. At signal every canoe must be turned completely over, righted, and with the crew inside paddled across the finishing line.—240ft. Record event.

No. 8. Paddling and Sailing Combined.—On the triangle, Classes A and B., paddle ½ mile, sail ½ mile, paddle ½ mile, sail ½ mile, paddle ½ mile, sail ½ mile; 3 miles. Record event.

No. 9. Sailing—On the triangle, Novices, Classes A and B. No limit to rig or ballast. Open only to members who never sailed a canoe prior to Sept. 1, 1886; 1½ miles.

No. 10. Sailing, on the triangle, Classes A and B.—No limit to rig or ballast; 4½ miles. To be started in squadrons. See Note B. This will be the trial race for places in the American squadron in the trophy race. Record event.

No. 11. Sailing, on the triangle, Classes A and B.—Sail limited to 75sq.ft. No limit to ballast. To be started in squadrons. See Note B; 3 miles.

No. 12. Sailing, on the triangle, A. C. A. trophy, Classes A and B.—No limit to rig or ballast; time limit 3 hours; 7½ miles. The American squadron will be selected according to the result of the trial race, viz., event No. 10, with the exception, however, that the regatta committee reserves the right to name three of the American squadron independent of the result of the trial race.

No. 13. Sailing, Club Race.—Each club shall be entitled to three entries. The first canoe to cross the winning line shall count as many points as there are starters in the race; the second shall count one less than the first, and so on to the last, which shall count one, and the aggregate of the score of the canoes starting for each club shall be the club score. To windward or leeward, 1 mile and return, for a prize banner.

No. 14. Sailing, Consolation.—Winners of either first or second places in events Nos. 8, 9, 10, 11, 12 or 13 excluded. No limit to rig or ballast; 1 mile to windward or leeward and return.

No. 15. Sailing, Upset, Classes A and B.—No special appliances allowed. Canoes to carry between 50 and 75sq.ft. of canvas in two sails. No limit to ballast. At signal, canoe to be tipped over until top of the foremast touches the water. Canoe to be righted and to cross finishing line under sail or paddle; ⅛ mile. Record event.

No. 16. Sailing, "Man Overboard."—While under way, at signal, some object that will float, and at least as large as an ordinary cushion, shall be thrown overboard, aft, out of reach. The same must be recovered and the race continued to the finishing line; ¼ mile.

No. 17. Hurry-Scurry Race.—100yds. run, 20yds. swim, 200yds. paddle.

No. 18. Grand Review of the Entire Fleet.—This is announced on this programme at the suggestion of the commodore.

No. 19. Presentation of Prizes.—To take place at the A. C. A. business meeting.

No. 20. Pyrotechnics, and Illuminated Procession on the Lake.

NOTES.

Note A.—As any programme for a fixed day, which includes sailing races, is subject to the risk of being disarranged by a lack of wind, the committee has decided not to have any stated programme for each day, but to announce on the bulletin-board at 8 A. M. each day the races to take place in the forenoon, and at 1 P. M. each day the races to take place in the afternoon, with the hour of starting each race. The first race of each forenoon will start at 9:30 o'clock. The first race of each afternoon will start at 2 o'clock.

Note B.—The unlimited and limited sailing races, viz.: events Nos. 10 and 11, will be started in squadrons, by signals, as follows:

First Signal, 5 minutes before the race, "fleet assemble," one gun will be fired from, and the A. C. A. flag run up at, the starter's station.

Second Signal, 4 minutes later, "first squadron prepare," one gun, and A. C. A. flag hauled down.

Third Signal, 1 minute later, "first squadron start," one gun, and red flag run up.

Fourth Signal, 4 minutes later, "second squadron prepare," one gun, red flag hauled down.

Fifth Signal, 1 minute later, "second squadron start," two guns, two red flags run up.

Sixth Signal, 4 minutes later, "third squadron prepare," one gun, red flags hauled down.

Seventh Signal, 1 minute later, "third squadron start," three guns, three red flags run up.

The number of signals will be increased on the same plan to cover the number of squadrons into which the fleet may be divided. The clerk of the course will assign contestants to the different squadrons by lot, and any contestant starting in any squadron other than that to which he has been assigned will be disqualified.

A time allowance between the several squadrons will be given corresponding with the starting signals.

Note C.—The committee reserves the right to amend this programme at any time, and also to cancel any event in which the entries are not, in the opinion of the committee, sufficiently numerous to warrant a race.

ROYAL C. C.

A MEETING was held on Tuesday, May 10, at which Commodore Edwards of Peterboro, Canada, was elected an honorary member of the club. This well-known Canadian canoe sailor is visiting England to compete in the Royal C. C. matches at Hendon, and for the £50 challenge cup. John McGregor, Rob Roy, the captain of the club, was in the chair. The sailing matches on Heudon Lake promise to be, as regards entries, the best that the club has held during its twenty-one years of life. Competitors, in addition to Commodore Edwards, of Canada, are expected from America, from Liverpool, the Clyde and Hull clubs, and the headquarter list of probable starters includes already some eighteen canoes. There is a large amount of "new blood" afloat in the club this season, and also a considerable augmentation to the fleet in new boats. Both Stewart and Baden-Powell have built new craft with many novelties in form, construction and equipment, which as to rig, may probably be classed as "inventions." Tredwen, it is thus far understood, will sail the Pearl of 1886, the craft which Stewart sailed in the American matches, and which is known to many by a nickname, the "oystershell" (she having a mother-of-pearl badge on each bow). That she is not the mother of a new Pearl many are regretting, as the production from the brain-pan of Tredwen of a new design—after the experiences of 1886, and simultaneously with the building of the two flyers aforesaid—would have added in no small degree to the racing excitement of the season. Yet Pearl is a very hard shell to crack, and her elder sister (also Pearl) is by many good judges considered even a faster boat; anyhow, this pair in the hands of two brothers, will give the best of the fleet enough to do to get the weather gauge.

The Nautilus of 1886, which was raced in the American matches, is at present looking for an owner, and therefore not to be counted on at present in the racing fleet; but her sister boat, now named the Diamond, has already on the lake shown such a clean pair of heels, especially to windward, that her flag may confidently be looked for in the leading division, if not actually heading it. Of the performances, so far as new boats are concerned, little can be said at present, as fitting and stretching sail is hardly completed with those afloat, and the majority are still in the builders' shops. But as regards the older craft, the deeds of the two Pearls on the Thames have been brilliant in competitions with the decked and half-decked sailing boats of the Thames clubs. The Nina, a beautifully fitted canoe, has been doing some wonderfully good sailing at Hendon, in company with Diamond, Kitten and others. The second class canoes, limited as to sail to 75 sq. ft., are showing up in great force this season, and five new ones added to the list will cause a considerable flutter among the flags of the older craft; hardly, however, will they ruffle the flag of Sabrina, whose doughty skipper is widely known as "Spinaker Boom," from his fondness in carrying a spinaker in all weathers and on all points of sailing, often, thereby, obtaining the "bath" without the knighthood. The racing at Hendon will take place on the 21st, at 3 P. M., and following Saturdays through Whitsuntide. By the 21st the new craft will be afloat, and we may then be more in position to describe their points, peculiarities, and improvements.—*R. C. C., in London Field, May 14.*

HAMILTON C. C.—This club will make a cruise in company with some canoeists from Brantford, down the Grand River on June 22-24.

THE EASTERN DIVISION MEET.—Arrangements for the division meet at Haddam Island, May 28, 29, 30 and 31, are now nearly completed. The terms at Rock Landing Hotel will be $1.50 per day, or breakfast 35 cents, dinner 50 cents, supper 35 cents, lodging 50 cents, and those wishing to engage rooms at the hotel, or straw for their tents, must send word as soon as possible to Dr. Parmele, 17 Haynes street, Hartford, Conn. All who send their canoes via the steamboat from Hartford, should, to save delay, have them in Hartford not later than 3 o'clock P. M., Friday, May 27, otherwise, owing to local complications, they will not reach camp until Sunday morning. Buy steamboat tickets to Rock Landing, and railroad tickets to Walkley Hill. Those who come down the river from Hartford by Saturday afternoon boat cannot land at Rock Landing, but must go three miles below the island to east Haddam, Upper Landing (the better way is to go down by train). For the benefit of canoeists who are photographers, the committee will try to provide a dark room. The programme for Monday's races is as follows: 9:30 A. M., paddling, ½ mile with a turn; 10:00, hand paddling, 150yds.; 10:20, tandem paddling, 1 mile with turn; 11:00, novice sailing race, ½ mile; 11:45, standing paddling, 400yds.; 12:00 to 1:00, dinner; 1:30 P. M., sailing, limited to 75ft., 3 miles; 2:15, sailing, no limits, 3 miles triangular; 3:00, combined, paddle ½, sail ½, paddle ½, sail ½, 2-mile race, finish under sail; 3:45, open sailing race, any canoe owned by A.C.A. members, 3 miles; 4:30, consolation sailing and paddling races, paddle ½ mile, sailing 2 miles. A novice is a canoeist who has not sailed a canoe prior to 1887. Open sailing race will be governed by A. C. A. rules, except regarding measurement. A canoe of any size may enter.

OAKLAND C. C. SPRING CRUISE.—On April 28 three canoes of the Oakland C. C. were shipped by rail to Healdsburg, and next day they were joined by a party of five bound on a cruise down the Russian River. After stopping at the hotel over night, on the morning of April 30 the party, consisting of Com. W. W. Blow and his daughter in the Zephyr, Vice-Com. A. D. Harrison in the Snoligoster, an Alaskan sealskin canoe; and Mr. and Mrs. G. T. Wright, in the Columbia, launched at the railroad bridge at Healdsville and started down stream. The day's run of 20 miles was made through many rapids and some quite difficult places, the ladies resting at night at a farmhouse, while the gentlemen slept in their canoes. Starting early next morning a run was made through the redwood country, the river winding with many turns around the foot of the hills. During the day the Zephyr came to grief by striking broadside on to a small island in a rapid. Her lady passenger leaped ashore dryshod, but the canoe was capsized and much of her load lost. After repairing damages with the help of the other canoes, the cruise was resumed, and at 3:30 P. M. camp was made a mile below Guerneville. Starting at 10 A. M. next day, they ran on until a strong head wind was met, which made progress slow. Further on was a broad shoal, where the crews had to wade and drag the canoes. The end of the cruise, Duncan's Mills, was reached at 3:30 P. M., and friends were found awaiting their arrival. The canoes were taken to the railroad and shipped home, and the party spent the night at the hotel, returning by rail next day.

PRIZE FLAGS FOR THE A. C. A. MEET.—*Editor Forest and Stream:* In February last the regatta committee sent to each member of the A. C. A. a most beautifully decorated circular letter, mildly suggesting the propriety of members contributing flags for the Bow-Arrow Point regatta. It will require about forty flags to satisfy the greed of the chronic prize winners on that occasion, yet up to the present time the committee has received promises of only twelve flags. A few days since I was honored by a call from the Commodore, who informed me that the expenses of the regatta committee would have to be limited to a sum he named, which is barely sufficient to buy champagne and cigars for the committee, therefore nothing will be left for flags. Of the twelve flags contributed, five will have to go as record prizes, and three were specially contributed for prizes in the trophy race; this leaves but four flags toward those needed for the general programme. Unless there is a more generous response by the members the committee will be forced to offer as first prizes tissue paper flags, and as second prizes, bone collar buttons.—HENRY STANTON, Chairman Regatta Committee.

PITTSBURGH C. C.—*Editor Forest and Stream:* At a recent meeting of the Pittsburgh C. C. the following officers were elected for the ensuing year: Reade W. Bailey, Captain; W. E. Woodwell, Mate; W. W. Lawrence, Purser. After the meeting the members of the club adjourned to the Hotel Duquesne, where they partook of the annual dinner. The personnel of the P. C. C. has probably changed less than that of any other club connected with the A. C. A. All of the original members are still connected with it and the majority of them were present on this occasion. The annual Decoration day meet will take place as usual on the Monongahela River. The sailing race for the club cup will be the leading event and a strong effort will be made to wrest it from our champion sailor, Mr. Bailey, who has held it for the past two years.—REBA.

EASTERN Y. C. REGATTAS.

THE Eastern Y. C. has decided on June 23 as the date for the annual regatta, and has also decided to start the race off Half Way Rock, instead of Marblehead Rock, as formerly. This will avoid some of the trouble caused by the selfishness of the owners of the hosts of small boats that last year anchored directly in the course and refused to move out of the way of the yachts. It is not yet decided whether the course shall be to windward or triangular, but after last season the club cannot do better than to take a similar course. It is urged that the work of handling sails and spars over six short legs of five miles each is too heavy, but it is only by such drill, in actual races, that boats and crews are got into shape for the more important races that are to come, and a little hard work is well spent in tuning up the crews, while for the spectators no better course could be had. Another important change this year is the addition of a regatta on Aug. 12, in which the New York fleet is expected to join, coming round from Newport after the Goelet Cup race. The Boston *Herald* has offered a cup to cost $1,000 as a prize for sloops and cutters in the race of Aug. 12.

SOUTH BOSTON Y. C. OPEN REGATTA.

THE open regatta of the South Boston Y. C. will be sailed on May 30, starting at 2 P. M., and will be open to yachts of 16ft. and over, sailing length, enrolled in any yacht club belonging to the New England Y. R. A., and all boats under 16ft. sailing length whether belonging to any club or not. Entries must be made in writing, giving name of yacht, owner, club, rig, centerboard or keel, length over all and on l.w.l., and aft overhang, to G. F. Clark, 43 Milk street, Boston, before May 28 at noon. The first circular has been suspended and a second issued, containing some important changes in the rules. We print the circular in full:

PRIZES, CLASSIFICATION, MEASUREMENT, ETC.—First class: All yachts measuring 23ft. and less than 38ft. First prize, keels, $25; second, $15; centerboards, the same. Second class: All yachts measuring 23ft. and less than 23ft. First prize, keels, $20; second, $12; third, $8; centerboards, the same. Third class: centerboard yachts measuring 19ft. and less than 23ft., and all keel yachts under 23ft. First prize, keels, $20; second, $12; third, 8; fourth, $5; centerboards, the same. Fourth class: Centerboard yachts measuring 15ft. and less than 19ft. Prizes, first, $15; second, $10; third, $5. Fifth class: All boats measuring 12ft. and under 15ft. Prizes, first, $10; second, $.

Measurements.—Yachts will be classified according to sailing length, which will be waterline measurement, plus one-fifth of after overhang. Time allowance will be figured on the basis of the Jeremoff table of allowances. Schooners will sail at ⅞ of their actual measurement. The official measurer of any yacht club will be accepted, this club reserving the right to re-measure any yacht, and in case of conflict of measurement, to take its own.

Start.—The start for all classes will be from anchor. At 1:30 P. M. the first or preparatory gun will be fired, and the club flag hoisted on the judges' yacht, which will be the signal for all classes to form into line between flags bearing the number of their class. Yachts will start at the following time and signal for the respective classes: 2:00, second gun and lowering of club flag, for first, second and third classes. 2:05, third gun and hoisting of club flag, for fourth and fifth classes. If, in any case, there should be a failure to fire the gun, the specified lowering or hoisting of the flag will be the signal to start.

Courses.—First Class: From starting point, leaving Red Spar Buoy No. 2 and Thompson's Island on the starboard, Spectacle and Long islands on the port, Rainsford's Island, Wilson's Rock Buoy and Toddy Rocks Buoy on the starboard, Point Allerton Bar Buoy on the port; returning through "The Narrows," leaving George's and Galloupe's islands and Nix's Mate Black Buoy No. 9 on the port, Lovell's Islands and Red Buoy No. 8 on the starboard, Long, Spectacle and Castle islands and Black Buoy No. 9 Upper Middle on the port, to finishing point. Distance, 14 miles. Second Class: From starting point, leaving Red Spar Buoy No. 2 and Thompson's Island on the starboard, Spectacle and Long Islands on the port, Rainsford's Island and Wilson's Rock Buoy on the starboard, George's Island Buoy No. 7 on the port, returning through "The Narrows," leaving George's and Galloupe's islands and Nix's Mate Black Buoy No. 9 on the port, Lovell's Island and Red Buoy No. 8 on the starboard, Long, Spectacle and Castle islands and Black Buoy No. 9 Upper Middle on the port, to finishing point. Distance, 11 miles. Third Class: From starting point, leaving Cow Pasture Red Spar Buoy No. 6 on the port, Black Can Buoy No. 7, off Fort Independence, on starboard, Spectacle Island, Sculpin Ledge Buoy, Red Can Buoy No. 6 Lower Middle and Black Buoy No. 9 Upper Middle on the port, to finishing point. Distance, 9 miles. Fourth Class: From starting point, leaving all of the following buoys on the port: Cow Pasture Red Spar Buoy No. 6, Red Spar Buoy No. 2, N.E. of Thompson's Island, Black Can Buoy No. 7, off Fort Independence, and Black Buoy No. 9 Upper Middle, to finishing point. Distance, 6 miles. Fifth Class: From starting point, leaving stakeboat off K street and stakeboat off City Point pier on starboard, judges' yacht on starboard, and repeat, passing between judges' yacht and stakeboat at the finish. Distance, 4 miles.

The finishing point will be an imaginary line drawn between the judges' yacht and stakeboat, all yachts must cross this line at the finish. By the kindness of Commodore Arthur Fuller, of this club, the flagship Frolic will be used as judges' yacht, which will be for the exclusive use of the regatta committe and judges.

Rules and Regulations.—This club being a member of the New England Yacht Racing Association, this regatta will be sailed under the rules of that Association, with the exception of the fifth class, which does not come under the rules, and in which class only there will be no restrictions in regard to sails or ballast. Sails—Yachts in the respective classes will be allowed to use the following sails, and no others: First, second and third classes—For sloops and cutters: Mainsail, forestaysail, jib, jibtopsail (see note), topsails and spinaker. For schooners: Mainsail, foresail, forestaysail, jib, flying jib (see note), maintopmast staysail, topsails and spinaker. For cats: Mainsail, spinaker, jib (any size), and topsail. Note—The terms "jibtopsail" in relation to sloops and cutters, and "flying jib" in relation to schooners, have been defined to include any "fore-and-aft" sail set on the topmast headstay. Fourth Class—For sloops and cutters: Jib, forestaysail and mainsail. For schooners: Mainsail, foresail, forestaysail and jib. For cats: Mainsail only. Ballast—"Shifting ballast" will not be allowed under penalty of the boat, and owner of the boat and any other boat belonging to him, being debarred from further entry or participation in any race given by a club affiliated with the New England Yacht Racing Association, and upon the application of the owner or sailing master of a competing yacht, at least four days previous to the day of the race, the judges shall order a man put aboard a yacht in the same class, said man not to count as one of the number of men allowed by the rules. No water shall be started from, or taken into the tanks after the signal to start has been made. No more than the usual anchors and chains shall be carried during the race, which must not be used as shifting ballast, or for altering the trim of the yacht. Ballast shall not be shifted or trimmed in any way whatever during a race. A race re-sailed, shall, as regards this rule, be considered a new race. Yachts will be furnished with two cloth numbers, which must be sewed or fastened one each side of the mainsail, as near the middle as possible. Numbers must be in place before going into line, and remain until the finish. Yachts not complying with this rule will not have their time taken, nor allowed in line. The courses must be sailed in four hours. Yachts will be allowed to carry one man for each 5ft. of waterline length, or fractional part thereof. Yachts will not use any means of propulsion except sails, and are not forbidden to anchor during the race, but on resuming the race they must weigh anchor. No person shall own the whole or a portion of more than one yacht competing for the same prize. If any owner or a captain of a yacht has any complaint to make, he must present the same in writing to the judges, within half an hour after returning. The decision of the judges shall be final in all cases. No second prize will be awarded in any class unless three or more yachts start, no third prize unless four or more, and no fourth unless five or more. The result of the regatea will be published in the daily papers, and the owners of the winning yachts notified by mail when to obtain their prizes, as none will be distributed on the day of the race. No sharpies or catamarans allowed in this regatta. The numbers allotted to yachts belonging to this club, entered for this regatta, will be their racing numbers for future races of the club during the season. Owners will therefore please preserve them. Regatta Committee—Arthur Fuller, A. H. Hall, F. T. Christian, F. G. Cooley, James Bertram, J. J. Bligh, J. W. Sherman, Jr., W. J. McArdle, Gunford S. Reed.

CAPE COD Y. C.—This club was organized on April 9 with the following officers: Com., J. H. Cummings, Orleans, Mass., yacht Madge; Vice-Com., H. H. Sears, Dennis, Mass., yacht Ariel; Fleet Capt., F. S. Allen, Brewster, Mass., yacht Percy Allen; Sec'y-Treas., E. D. Crowell, East Dennis, Mass., yacht Iris; Meas., Joshua Crowell, East Dennis, yacht Gracie. The fixtures thus far are: May 30, June 17, July 4, all club races with cups to first boat and cash prizes to second and third in each class. Crews are limited to one man for each 5ft. or fraction of waterline. No light sails and no shifting ballast. The club burgee is blue with white letters C. C.

YACHT RACING AND RACING RECORDS.

WHILE the claims of racing as a factor in the development and extension of yachting are admitted even by those whose only pleasure is in cruising, it is certain that there is a point beyond which racing cannot extend without injury to the sport at large. It will probably be a long time before this point is reached in America, but there can be no doubt but that it has been passed abroad, and with bad results. Without stopping to consider just how much of this was due to the adherence to a rule of measurement that had ceased to work for good, it is only necessary to call attention to the fact that with a fleet of over 4,000 yachts, the racing last year in Great Britain was mainly confined to two large cutters, a few small ones, and several yawls, while the schooner class was dead. This year it would no doubt have been far worse but for two or three special occurrences; the rule has been changed for one far more liberal in its action, Thistle and the international races here will have a favorable influence on the racing, especially as the wide boat will meet Irex in the early season, and the general activity of the Jubilee year has extended to yachting as well as other sports. Thanks to these circumstances, British yachting is given an opportunity to recover from the straits it has fallen into of late years, and to make a new start under more favorable circumstances. The lesson, however, should not be lost on Americans now that we are entering upon a period of successful racing that is likely in time, as most things are, to be greatly overdone. Until a few years since yacht racing was carried on here in a very unsystematic and desultory manner, the races, few in number, being managed by the different clubs without regard to each other, measurement, classes and sailing rules all being different. The interest in the races, except in a few cases, such as the Cup contests, were entirely local, and few knew or cared much about boats that they never seen and hardly heard of.

Of late years this has changed in a marked degree, the whole tendency of American yacht racing has been toward a national system; and though the progress has at times been slow, and the task seemed hopeless to the few interested in it, there can be no doubt but what great progress has been made. Much has been done in the matter of time allowance, the vital point of yacht racing; not only have the clubs generally adopted far better rules, but the length and sail area rule has become so well known, and has been successfully tried by so many that it seems probable that it will be universally adopted at an early day. In the kindred matter of classification less has yet been done, but the clubs have been aroused by the efforts of the FOREST AND STREAM to the importance of the question, and the action thus far indicates that the subject will soon be satisfactorily and permanently settled. In the matter of sailing rules some of the leading clubs have devoted a vast amount of care and labor to the perfecting of their own rules, and these have been taken in turn by the smaller clubs, the faulty rules that date back to the early days of yacht racing being abandoned. In this work the Seawanhaka Corinthian Y. C. is far ahead of all others, having lately given to yachting a set of rules which it is very probable will be adopted soon by all the racing clubs. Thus all seems tending to a time when a general uniformity in the rules and methods of the now separate and disunited yacht clubs will lead to a union similar to the British Yacht Racing Association, the American Canoe Association, the National Association of Amateur Oarsmen, and similar bodies having charge of the development and welfare of other national sports.

An important feature of this great change that is going on is the interest taken by yachtsmen in the national fleet and its movements, as well as in their home clubs; for instance, the advent of a new yacht, such as Sachem or Cinderella last year, and Titania or Shamrock this season, will excite almost as much interest among yachtsmen at a distance, many of whom may never even see the yachts, as would the addition of a new racer to their own class in their home clubs. Thanks to the yachting periodicals, the boats are already known to them, and the races will be watched as intently, by those at a distance, through the columns of the FOREST AND STREAM, as the members of the New York clubs will watch them through their glasses. Every one knows that Mr. Burgess has designed a yacht for the Oswego Y. C., and her doings in the early sails and the round of the L. Y. R. A. will be watched eagerly by many who never saw the great inland seas, and who know her rivals, Iolanthe, Garfield, Katie Gray and Laura only through the FOREST AND STREAM.

Naturally each man's interest is first centered in his own boat, no matter how small she may be, and the boats with which he races, but next to this he wants to know what the great world of yachting is doing; about Thistle, Irex, Genesta, Wendur, Queen Mab and Marguerite, down to Doris and the tiny 3-tonners; about Mayflower, Puritan, Priscilla, the new steel yacht, Sachem, Julia, and Montauk, down to Shadow, Shona, Cruiser, Fairy, Jewel and the smallest of the fleet. To tell this story each week through the season and to tell it with a fair degree of accuracy and detail, has been the endeavor of the FOREST AND STREAM for many years, but the field is each year larger, while fuller and more accurate records are at the same time demanded, and in order to give them we venture to call on those directly interested, the clubs themselves, to aid us. The extent of the work may be gathered from the fact that some 350 races are sailed each year between the last week in May and the middle of October, or an average of 15 per week, the number at times running up to 25. These races are scattered over the entire United States and Canada, from Nova Scotia to New Orleans and from Boston to San Francisco. The larger ones of course demand special exertions and expense to secure full and complete reports by experts who are present in person, but with the majority this is not necessary, and even if it were it would not be possible, owing to the distances and the number of races at the same time. What is needed in the great majority of cases is merely a clear statement of the yachts which compete, the conditions of weather, wind and tide, the courses and prizes, and if possible a brief *resumé* of the leading maneuvers and interesting points of the race. Such a record it is the duty of each club to preserve for its own use, though it is not always done, and such, for its own interest, it should also make known to fellow clubs through the proper channel, the journal which carries the news to all.

The importance of keeping full records of boats and races, as well as of all club matters, is seen in a moment if we consider how little is known of many famous yachts, even the lines and much of the history of such a world-renowned craft as the America being involved in much doubt. It should be the duty of some careful and reliable man in each club to attend solely to such matters, as the most trivial occurrences to-day may prove of the greatest interest in the future. As to the second point, it is of the first importance to a club that its races and all its public business should be correctly made known to the rest of the yachting world. Many instances might be given of small clubs in unfavorable locations that have been built up solely by the labors of an energetic secretary who has fully understood the responsibility and opportunities which accompanied his office. The position which each club takes beside its fellows does not depend on the size and number of its yachts, on the wealth of its members, or on the waters on which it sails; but on the manner in which it deals with the important questions always before the clubs, on the spirit with which its races are conducted, both by owners and regatta committees, and by the reputation of its members as thorough sailors and yachtsmen. This is particularly the case with some of the smaller clubs about Boston, clubs whose boats are all under 30ft., and yet which, by the number and character of their races, have made themselves known throughout the country. The club whose actions and surroundings are purely local, that goes quietly on its way without regard to what others are doing, may continue in the same course for years, and yet its boats will never be familar to outside yachtsmen, its races will attract no attention, and it will remain in a position far below that which its size entitles it to. While it is to the interest of the FOREST AND STREAM as a newspaper to collect all the news in its different departments, it is none the less to the interest of every club that its movements should be fully and truthfully reported, and we therefore venture to ask the aid of the clubs, through their secretaries or other proper officers, in the following manner:

The FOREST AND STREAM has prepared a blank form on which may be entered the necessary information concerning each race, copies of which form will be sent to any club desiring them. What we ask is that one of these be filled out at once on the conclusion of a race and mailed to our office. The form will also be found very useful for keeping a permanent record for the club. What is needed in a report of the average yacht race; not fine descriptive writing à la Clarke Russell; not glowing eulogies of the beauty and the costumes of the ladies on the club steamer nor the ordinary personalities about gallant Captain X. or handsome Captain A., that go so far to fill up many reports. What the yachtsman desires is a plain story of the race, the yachts and owners, the weather, wind and tide, the courses and distances for each class, the winners and prizes, and a brief notice of the leading points throughout the race. Of course many events demand more than this; but in the greater number of races such a condensed account, if accurate, is better than a longer one. In the blank which we have prepared all these details are provided for in a way that makes it easy to fill out without omitting any important detail. Most of the races occur on Saturday, and in order that the account may appear in the following issue of the FOREST AND STREAM it is necessary that it should be received as early on Monday as possible. The matter is prepared for publication on or before Monday, only the most important of the news received on Tuesday being taken, while on Wednesday, the day the paper is printed, nothing is taken that can possibly be left over. In most cases the main entries may be made during the race, only the times at finish, elapsed and corrected times and winners being added, so that the report may be mailed the same day, reaching us by Monday. There are now some clubs which send regular reports of all their races, and we hope with this system to have many more; for those which do not care to work with us in the matter we can only promise to make the best use of such material as we may obtain through the means of our exchanges. In many cases we receive from members of clubs the local papers with reports of races, but while these are sometimes useful in connection with other information they are of little value in themselves, as the ordinary reporter deals with a yacht race as with a horse race, ball match, fashionable wedding, or political meeting, and such minor points as the maneuvers of the yachts entirely fail to interest him. In addition to the reports we would ask from club secretaries copies of the club book each year, notice of changes in rules, of meetings and elections, and also, when possible, charts or sketches of racing courses, for publication and for a better understanding of those unfamiliar to us. This season the racing promises to surpass anything yet known in American yachting, and with such help as the clubs can give, we propose to make special efforts to give full and reliable reports. Of course, many errors will creep in, but these should at once be pointed out, so as to be corrected as soon as possible, and it is desirable in such cases that the correction should come from the club rather than the individual, before any change be made in the official record furnished by the club.

Now, before the season opens, a few suggestions may prove useful to the new regatta committees, many of which have had no experience in the management of races. To do this well requires a knowledge and experience which is only obtained by long practice, and we would say to all clubs, when you get the right men on a regatta committee keep them there, do not let club politics or any similar cause operate to remove them. The position is a thankless one, involving not only hard work but much responsibility, and there are few who can and will fill it properly.

In order to carry out successfully a sailing regatta a thorough system is necessary, the innumerable details must be arranged well in advance, and there must be nothing forgotten at the last moment. The conditions of the race, the classes, entries, courses, crews, rules and prizes, should all be settled well in advance and full notice given. If necessary, blanks should be prepared for entries. The yacht should be accurately measured by the club measurer some days before the race and their measurements filed with the regatta committee in time for the allowance to be computed at least on the day before the race. This will not in all cases be possible, but the measurement should be taken as nearly correct as may be, and in the event of the boat taking a leading place it can be officially verified before the prize is awarded. The courses being fixed upon, they should be well marked with flags where necessary, before the day of the race; or where this cannot be done, flags, boats, buoys and moorings should be ready over night at the club house, and should be set out as early as possible next morning. Promptness and punctuality are the two things necessary to successful yacht racing, both on the part of the owners, crews and regatta committees, and nothing must be left until the last moment.

A word as to courses. In order to avoid collisions and disputes the starting and finishing lines should be always at right angles or very nearly so to the first and last legs of the course, and a portion of each line should be clearly marked by boats or buoys with flags, between which the yachts must pass in starting and finishing. The length of lines thus laid off must be regulated by the size and number of starters, so that there shall be ample room for the necessary maneuvers at the start and yet it shall be small enough to keep the boats within easy sight in timing. If there are half a dozen or so of 20ft. boats 100yds. would suffice, increasing to a quarter of a mile for a big fleet in a breeze and tideway. Whatever the distance is it should be plainly marked so that no boats can straggle across half a mile from the fleet, and no dispute can arise as to a proper crossing of the finish line. Unless the fleet be small and the boats well known each should have a number, figures not less than 2ft. in height, in black paint on white muslin, furnished by the regatta committee, to be securely sewn or fastened with the patent pins made for horse blankets about the intersection of the two diagonals of the mainsail. These numbers are usually placed where most convenient, but if in the throat or at the peak they are often hidden. They must all be placed on the side of the sail on which the committee will be to time the start, so as to be readily seen.

A suitable steamer should be provided for the committee, a comparatively easy matter in these days of small launches and swift steam yachts, and it should be under the exclusive control of the committee.

At the time of starting the wind and tide must be considered by the committee as well as by the skippers, but the committee boat should be at the starting point half an hour before the time, the final instructions, if any, should be given to the fleet and promptly to a second the first whistle should be blown and the Union jack set in place of the ensign. At the expiration of the proper interval the starting whistle should be blown and the club burgee set in place of the jack, the flag in every case being changed with the whistle, so that any one in doubt may see by the jack that the preparatory interval has not expired, or by the burgee that the start has been made.

A whistle is always the best for signals, as there is no missing fire, but a reliable man should be stationed by the cord with a large and heavy club for the "Give her a toot" fiend, who somehow finds his way even into the best regatta committees. The indiscriminate blowing of steam whistles, pleasant as it is to steamboat men, is only annoying and confusing to the yachtsmen, and the club steamer may at least set an example to the other boats. It it sometimes the custom to give a short blast as each boat is timed at the start or intermediate points and it is useful as enabling those on the boats as well as the spectators to catch the official time, but all indiscriminate whistling, as when the 19th boat passes an unimportant mark because Tom or Jack or Billy is on board is only childish.

One of the most import duties of a regatta committee is the timing, and this, in every case, should be beyond question. To do it properly two good watches are necessary, to be compared before and after the race. To catch the times of twenty boats crossing a line within five minutes is no easy matter, but if managed properly it may be done with the greatest accuracy. Two men are necessary, one stationed on the starting line ready to call the number of each boat as her mainmast crosses the line, one with watch in hand, and one to take down simply the numbers and time as called off. At about half a minute before the starting time the timekeeper begins to count seconds aloud, 30, 31, 32, etc., until he comes to 60, in place of which he calls the actual minute, on which the man at the cord blows a long blast on the whistle. The timekeeper does not stop but counts on in seconds, calling each minute as it occurs. Meanwhile the first man watches the fleet and sees that number three will be the first to cross. As her bowsprit is near the line he says "Ready, three," and as the mast is in the line he calls "Three." The third man, who is ready with pencil and paper, catches the number three and at the same time the second, as called off by the timekeeper, and wri es both down as rapidly as possible. He has already taken the hour and minute, for instance, 11h. 5m., and he hears first "Ready, three," then "three," and at the same time catches "Fourteen" from the timekeeper. He writes 3 before the hour and minutes and 14 after them, and is ready for the next boat. "Ready, seven," comes from the first man; he writes down 7 below 3; then comes "six minutes" from the timekeeper, which is also written below the 5 in the column of minutes; then when he hears "seven" again from the first man he catches the corresponding second from the timer with it and writes it down. All this is done very quickly, and it may be necessary to call out the number only once as the boat's mast crosses the line, and often two or three are so close that their times are almost the same; but the order at least can be taken, even if two cross in the same second. The entire results of a close race may depend on the accuracy of the timing at the start, and every care should be taken to insure it. No noise or conversation should be permitted while it is going on. A second man may be at hand to record the times as a possible check; it is well, too, to have a member of the commitee who is disengaged to look out for fouls, as those engaged in timing can do nothing else.

The engineer should be instructed to have a good fire and plenty of steam, and if anchored, all must be ready to get the anchor as soon as the last boat is over, especially if the start is down wind and with a lee-going tide. There are always some laggards who will not have crossed when the last whistle is blown and the handicap time has expired, but there is no obligation to wait for them, unless it can be done as well as not. In starting a race the invariable rule should be to blow the whistle on the exact second, no matter where the yachts are. There may be occasional exceptions to this rule but they are few, and if strictly enforced men would soon learn to be ready in good time. Accidents will occur to all, some lubber puts his boom end through your mainsail and there is a hurry job for the sail maker, or some important personage, who cannot well be left ashore as he deserves, keeps the gig waiting until the whistle has blown; but in the long run these delays are diminished rather than increased if it be generally understood that the race waits for no one, but the whistle will be blown on the exact second. It is a premium to the careful man who has all ready in time, and he should not be robbed of it to oblige some laggard.

Should there be any doubt of the committee boat returning in time for the finish, some one should be placed in the stake boat to time the yachts on their return, otherwise the entire race may be in vain. If the course is crooked and the steamer can cut across the corners, or if it seems likely that she can go near to the turn and yet run in while the yachts are beating home, it may be all right, but if the course is straight and before a good breeze the yachts are likely to outrun the steamer, and she must either not go out to the turn or some one must be left at the finish to time the yachts.

Once away the place for the steamer is with the yachts, to leeward or otherwise out of the way, but near enough to see all of the sailing and to watch closely the leading boats for fouls. The fleet may be so scattered that this is difficult, but with a speedy steamer and a careful engineer it may generally be done. That it often is not done all who have had experience can testify. An instance occurs that happened not long since within a thousand miles, more or less, of Long Island Sound. The regatta committee started the fleet, some twenty yachts, in a light breeze in which the steamer could have easily kept abreast of them, instead of which, as soon as they were well away, those on the steamer produced a big pail, some bottles, lemons and other ingredients, and proceeded to mix a punch, the steamer meanwhile heading off for a distant part of the harbor. The fleet sailed out, failed to find the stakeboat provided by this regatta committee, and straggled home, each yacht having turned a different mark and claiming it as the right one. The regatta committee was on hand to time them. The various awards were disputed and a great deal of ill-feeling ensued, the results being to the injury of the club; but the regatta committee had an elegant time, and that was all its members cared for. In one of the principal races of last year the steamer, instead of following the yachts as she was fully able to do, was taken off in another direction to engage in a friendly race with a rival tug on which were some friends of one of the committee, thus losing much of a very important and interesting race. Contrary to a very common idea, there is very little fun in the work of a regatta committee, and if any go on it with only that end in view, it will pay the club to give them a pleasure outing, with plenty of liquid comfort, on some other day, on condition that they stick to business and Appollinaris water during the race.

Once well away there is little to do save to look out for any possible fouls or violations of the rules, and perhaps to complete some of the calculations of measurement and allowances of boats not measured in time. If possible, the times of the leaders should be taken at the mark, as in a long race they often show some most important facts that would not be suspected from the mere elapsed times. The relative times down wind and to windward are specially interesting between different types. If the steamer cannot run out full to the mark she may take the best position possible and time the boats from it, the times being fairly correct provided she remains in exactly the same spot while taking all. The fleet is apt to be so scattered on the way home that the steamer can only accompany the leaders, but at any rate she should try to be on the finish line before the first boat comes up. It is usual to salute the winner with as much noise as can be made, but what we have said concerning the abuse of the steam whistle applies here as well as in other parts of the race. If a short blast only is given as each yacht crosses the line, her time may be taken by all in the fleet, and just at this time it is very acceptable to some, if not as welcome to others. All should be timed, to the very last, if possible, as the man who has sailed a losing race and comes in at the tail after a hard fight, is at least entitled to the official recognition of his having gone the course.

The yachts all timed, there yet remains the calculation of the elapsed and corrected times; but if the records have been properly posted thus far, this will not take very long. All calculations should be verified by two or more persons to insure their absolute accuracy, as nothing is so likely to produce discontent and ill feeling as the reversal of a decision that has once been made public. Should any protests arise they must be decided by the committee according to the evidence given by both sides and the rules of the club; and in such matters the decision of the regatta committee is final and beyond appeal. It will be seen that the reputation and welfare of the club is entirely in the hands of the regatta committee on the occasion of every race, and this fact should be borne in mind by every member in voting for men to fill such important positions. Their influence for good or ill is far greater than that of the commodore or any other officer; their positions involve much work and small thanks if they attend properly to their duties, and when men are found who are both willing and competent to undertake the task they should be retained in office as long as they will remain, as their work is sure to improve with practice.

THE HISTORY OF THE MUSQUITO.

Editor Forest and Stream:

I was very much interested in the article "Fifty Years of Yacht Building," by Dixon Kemp, in the FOREST AND STREAM of May 5 inst. The article is very interesting all through and I desire to thank you for its publication. He gives some interesting particulars of the famous old yacht Musquito. The following notice, together with the working drawings, was published in the *U. S. Nautical Magazine*, August, 1857, Vol. VI., No. 5, page 399, by John M. Griffiths, Naval Arctitect:

"The Musquito is the famous British yacht that won a race in a contest with the renowned America; after she had passed from the hands of our countrymen, however. Her history is singular, and affords a hint of the value of seamanship in bringing out the qualities of a sailing vessel. She is built of iron, by Mare, of Blackwall, in 1848. There appears some doubt in regard to whom the honor of her design belongs. Ditchburn and Watchurn both claim it. On her first appearance she won a prize, beating the Arrow, Heroine and others, but for some years she was rather an unfortunate vessel, being generally beaten. In 1852 she changed commanders, and the result was soon manifest. In 1852 and 1853 the Musquito was engaged in sixteen races and was beaten but once, by a foot or two only. During this victorious career she was opposed to nearly every fast yacht afloat."

The America, Arrow, Alarm, Volante, Cynthia, Aurora and Julia were among those that had to acknowledge the wonderful sailing properties of the formidable Musquito. An English writer remarks;

"The Musquito, although constructed in 1848, possessed many of the qualities for which the America was so much admired three years afterward. The l.w.l. forward in the former is but one degree less acute than in the latter, and the position of the several centers of gravity and of the midship section is further aft than was usual. By a careful comparison of the elements of their construction, we shall find that in many principal proportions there is great similarity between the America and Musquito. It may be doubted whether the Musquito would have answered had she been constructed of wood. Her keel and garboard plates were of very thick iron, weighing several tons. This, added to the thin material of her bottom, admitting the ballast to be stowed near the keel, brought the center of gravity of the ballast very low down, and enabled her to carry immense sails. She differed from the generality of racing yachts in one important particular, as she had large cabin space and had upward of 7ft. height between decks; and in complete opposition to the commonly received notions concerning racers, that internal fittings are detrimental to speed, she had five complete bulkheads across her, besides two half partitions. As it may be interesting to many yachtsmen to know in what manner she was prepared for racing, I may state that on no occasion was any bulkhead ever removed. The doors were sometimes taken down, the sofa lockers removed and taken out of the vessel. The contents of the forecastle and sail room aft were transferred to the main cabin, together with the windlass, anchors and any weighty part of the equipment, which were placed under the platform of the cabin."

The principal fault in the construction of the Musquito was the excessive fullness of her waterline abaft, which caused her to drag a large wave on the lee quarter.

Length on loadline	59.2ft.
Load displacement in cubic feet	2,424
Load displacement in tons	60.25

The dimensions of her spars were as follows:

Mast, heel to cap	51ft. 10in.
Diameter	13¾in.
Hoist of mainsail	37ft. 3in.
Length of masthead	9ft. 7in.
Topmast, heel to sheave	37ft. 6in.
Boom, length	23ft. 6in.
Diameter	12in.
Gaff, length	26ft.
Bowsprit, length	46ft. 6in.
Diameter	13in.
Housed	12ft. 6in.

D. C. W. GOODSELL,
429 FIRST STREET, San Francisco, May 12,

SEAWANHAKA CORINTHIAN Y. C.

THE parlors of the new house of the Seawanhaka Y. C. were well filled on Tuesday evening with the members and guests of the club, gathered to celebrate the successful inauguration of the new scheme which has been in hand since the early winter. The house leased by the club, a large brown stone residence, No. 7 East Thirty-second street, next to the Knickerbocker Club, has been completely refitted to adapt it to the uses of the club, the parlors being used for a meeting and reception room, while the dining-room is now converted into a library and reading-room. In the basement is a billiard-room where models and samples of gear and materials of all kinds will be on exhibition.

The upper stories, except a part reserved for committee and toilet rooms, will be leased for bachelor's apartments. The parlor has been handsomely fitted up, the furniture being oak and russet leather. Around the room are horizontal strips attached to the walls, from which the models are hung. The center of the library will be taken up with a large oak table containing drawers for charts and the valuable lines in possession of the club. On the roof is a flagstaff, from which the U. S. Signal Service flags will be displayed, by special arrangement with the department at Washington, while the official notices from the Lighthouse Department of changes in marks and buoys will be posted in the meeting room. Full sets of the Government charts will be preserved in the library, being carefully corrected, as errors and changes are reported.

The June meeting of the club was advanced in date to the opening night, and Com. Canfield called the assembly to order at 8:30 P. M., telling in a well-delivered address the work that had been done, the great progress already made, and outlining the principal features of the scheme—the establishment of a fitting headquarters and rendezvous for yachtsmen, where books, charts, periodicals and the literature of yachting would be accessible to all, the collection and preservation of authentic models and drawings, the instruction of members in all relating to yachting by means of lectures by experts, and the organization of a naval reserve or militia of the sea. After the commodore's address the constitution was read and adopted, and a motion was passed to divide the schooner classes at 75ft. in place of 85, as formerly. It was also decided to offer prizes of $25 in each class for the opening race on Decoration Day.

The commodore called attention to the need of a more thorough system of classification that should be permanent and of general adoption, and it was resolved that he should appoint a committee to consider the subject and recommend some plan for adoption after the close of the racing season. The trustees reported the election of twenty members, with nearly thirty names now before the club. The secretary reported the membership on Jan. 1 as 208, and now, including those proposed, 270 active members. At the conclusion of the meeting dinner was served in the library. Mr. J. F. Tams has been appointed fleet captain. The fleet will rendezvous off Stapleton on May 30 at 10 A. M., captains reporting on board the flagship at 10:30 to decide upon the cruise. In the evening a supper will be served at the club house.

AN OPEN RACE AT BOSTON.

THE Boston *Globe* has arranged for an open regatta to be sailed on June 25, following the E. Y. C. regatta, the races to be managed by the South Boston Y. C., but all the expenses being paid by the newspaper. The regatta will be open to all yachts without regard to clubs, but in other respects will be sailed under the N. E. Y. R. A. rules. The conditions are as follows; the courses, etc., will appear later. The boats will be classed thus: Special Class.—All fishing schooners over 60ft. in length: First prize, $75; second, $50; third, $25. There will be no restrictions as to sail or ballast, and no time allowance in the special class. First Class.—All yachts measuring 30ft. and less than 40ft.: First prize for keels, $40; second, $20; centerboards, the same. Second Class.—All yachts measuring 24ft. and less than 30ft.: First prize for keels, $30; second, $20; third, $10; centerboards, the same. Third Class.—All yachts measuring 21ft. and less than 24ft.: First prize for keels, $25; second, $15; third, $10; fourth, $5; centerboards, the same. Fourth Class.—All yachts measuring 18ft. and less than 21ft.: First prize for keels, $20; second, $15; third, $10; fourth, $5; centerboards, the same. Fifth Class.—All yachts measuring 15ft. and less than 18ft.: First prize, $20; second, $15; third, $10; fourth, $5. Sixth Class.—All yachts under 15ft.: First prize, $10; second, $5; third, $3.

Measurement—Yachts will be classified according to "sailing length," which will be waterline measurement plus one-fifth of after overhang. Time allowance will be figured on the basis of the Herreshoff table of allowances. Schooners will sail at seven-eighths of their actual measurement. The official measurement of any yacht club will be accepted, this club reserving the right to remeasure any yacht, and in case of conflict of measurement to take its own.

Regatta Committee—Arthur Fuller, ex-officio, chairman; John J. Blight, secretary; A. Henry Hall, Fred G. Cooley, J. W. Sherman, Jr., Frank T. Christian, James Bertram, W. J. McArdle, Guilford S. Reed (ex-officio). The judges are Geo. A. Stewart, chairman; William Morris, Thomas Christian, W. H. Godfrey, C. McKenna, J. P. Bullard, G. F. Clark, Hubert Pope, Charles Griffin.

Entries must be made in writing, giving name of yacht, owner, rig, centerboard or keel, length over all, on waterline and after overhang, if known, and must be sent to G. F. Clark (Boston Yacht Agency), 43 Milk street, Boston, where numbers can be obtained on or before 12 M., Friday, June 24. Entries for fishing schooners must be made at the same place, giving name of vessel and owner. All entries to close at 12 M., Friday, June 24.

THE BRITISH RACING SEASON.

THE presence of Thistle in the early matches in British waters will make them specially interesting to American yachtsmen who wish to gauge the powers of the new challenger. She will make her first effort on Saturday over the fifty miles from South End to Harwich, in the match of the New Thames Y. C. This race is open to yachts of any rig or class, over 9 tons, to sail in cruising trim. The prizes are £50, £25 and £15. On the following Monday the Royal Harwich Y. C. will hold its annual regatta for yachts of all rigs, the prizes being from £40 down. On Tuesday the club will sail its Channel match, from Southend to Harwich. On Wednesday, June 1, the Royal Thames Y. C. will sail its first match from the Lower Hope, round the Mouse Lightship, and return to Gravesend, also a match from Lower Hope, around West Oaze Buoy, and return to Gravesend. On June 4 the same club sails its Channel match, from the Nore to Dover, open to the New York and Havre Yacht Clubs. On June 14 the ocean race, around the United Kingdom, will start from Southend at noon, the first prize being £1,000, with a gold medal to every yacht which sails the course. On Aug. 12 the Royal Victoria Y. C. will sail its Jubilee Race, twice around the Isle of Wight, passing outside the Noman Fort and Bembridge Buoy, the prize being £500, the race being open to yachts of any recognized yacht club in the world.

SAVANNAH Y. C. TWELFTH ANNUAL REGATTA, May 10.—Rain, hail squalls and calms conspired to spoil the regatta of the Savannah Y. C. on May 10, but still a close race was sailed by all four classes. In the morning there was a heavy rain, followed by hail, then a flat calm, and later a breeze for the finish. The summary was:

	Start.	Finish.	Actual.	Corrected.
FIRST CLASS.				
Claude	12 59 30	6 05 45	5 06 15	5 06 15
Glance	1 01 27	5 58 30	4 47 03	4 49 27
Vernon	1 02 00	6 00 15	4 58 15	4 50 13
Irene	1 01 30	6 06 40	5 05 10	4 53 53
Etta	Withdrawn.			
THIRD CLASS.				
Zinga	1 09 15	5 59 45	4 50 40	4 50 40
Jennie S	1 10 30	5 59 56	4 49 26	4 47 33
FOURTH CLASS.				
Gertrude	1 14 05	6 07 05	4 53 00	4 53 00
Nettle	1 14 00	6 07 10	4 43 10	4 39 55
FIFTH CLASS.				
Siren	1 15 00	6 03 10	4 48 10	4 48 10
Nana	1 15 06	6 09 53	4 54 44	4 53 59
Seca	1 15 30	6 06 22	4 50 52	4 44 07

MONTGOMERY SAILING CLUB.—Norristown, Pa., May 23.—The fourth race of the Montgomery Sailing Club took place May 22, course, five miles. The wind was light from the south, making it a run to the buoy and a beat home. The Igidious, with three men aboard, capsized without any apparent cause, about three-quarters of a mile from the finish line. There was but one boat, the Cocktail, ahead of her at the time of the capsize. The race was started at 9 A. M., the finish and corrected time being as follows:

	Length.	Finish.	Corrected.
Cocktail	15.00	10 45 49	1 44 16
Ino	15.00	10 54 33	1 51 08
E. C. Potts	15.00	10 53 39	1 51 53
Gracie	12.00	11 03 20	1 53 44
Elsie	15.00	11 04 04	2 00 39
Little Tycoon	16.00	11 03 41	2 03 41
Igidious	15.00	Capsized.	

The captain of the Igidious has sailed the winning boat in two of the four races. The Little Tycoon is the possessor of a 40ft. jib. She attempted to carry this sail in the first race, but drifted on the comb of the dam below the starting line. She sailed in the second race without the jib and came in last. In the third race she carried the jib and distanced the remainder of the fleet. She did not carry the jib in the fourth race and was placed last.—E. A. L.

FLORIDA Y. C. ANNUAL REGATTA, MAY 12.—The annual regatta of the Florida Y. C. was sailed on May 12 over a 20-mile course, in light wind, part of the time accompanied by heavy rain. The preparatory signal was given at 11:05 A. M., the start at 11:15, the yachts crossing and finishing as follows:

	Start.	Finish.
FIRST CLASS.		
Mikado, Stephens	11 18 26	. . . .
Estelle, Merry	11 18 42	2 49 09
Chemaun, David Kemp	11 19 01	2 43 42
Arrow, Canova	11 19 19	. . . .
SECOND CLASS.		
Arthur B., Napoleon Broward	11 18 00	2 05 19
Katie B., Williams	11 18 42	2 02 13
Tempest, Dempsey	11 19 01	. . . .
Hero, Charles Fozzard	11 19 19	2 01 35
Elly, John Green	11 19 19	. . . .

Chemaun, a boat once well known around New York, took first prize, and Estelle second. In second class the first prize went to Hero, second to Katie B. A canoe race in the afternoon, reported in another column, finished the day's sport.

LAKE CHAMPLAIN Y. C.—This club was formally organized at Burlington, Vt., on May 16, with the following officers: Pres., Ex-Gov. J. Gregory Smith; First Vice-Pres., Dr. W. S. Webb, of New York; Second Vice-Pres., Hon. Henry Ballard; Treas., Horatio Hickok; Sec., Joseph Auld; Ass. Sec., T. A. Taft; Executive Committee—U. A. Woodbury, W. H. H. Murray, A. C. Tuttle, F. W. Smith, D. N. Robinson, Rev. C. F. Carter, Prof. N. F. Merrill, Elias Lyman, R. G. Severson, Horatio Hickok, Joseph Auld, A. C. Whiting, H. M. Phelps, C. A. Murray, of Burlington; F. E. Smith, of Montpelier; E. C. Smith and S. W. Cummings, of St. Albans; J. G. Hinds, of Vergennes; Building Committee—W. A. Crombie, Elias Lyman, R. G. Severson, George R. Holt, U. A. Woodbury. A constitution was adopted and a club house will be built at once.

THISTLE.—Prior to her start for the Thames on May 18 Thistle has had several trials under canvas, reports of which have been received here by cable, but which amount to nothing. She has beaten Vanduara and Cruiser, but one is an old racer with foul bottom and old canvas, and the other a little cruising cutter of 40ft. However, the accounts agree that she is going fast in light winds and carrying her sail well. On May 22 she arrived at Cowes after a rough passage, on which she lost her bowsprit and bulwark and fourth jib. She also picked up three men in a lifeboat from the steamer Harkaway which had foundered, so the gale must have been very severe. On Saturday she makes her first trial at racing.

LLOYD'S YACHTREGISTER.—With each succeeding year this valuable work increases in size and accuracy, the present volume being larger than its predecessors and containing a fuller list, over 4,000 yachts being included. A new feature this year is the addition of colored plates of racing flags of the leading racers. But few American yachts are represented in these plates, but the publishers desire to add them next season, and will be glad to have sketches of flags and names of racing yachts from American owners. The book contains the full rules and specifications for the construction of wood, iron and composite yachts.

LARCHMONT Y. C. SPRING PENNANT REGATTA.—The spring pennant regatta of the Larchmont Y. C. will be sailed on June 4, the start being made at 10:45 A. M., a pennant being awarded to the winner in each class, to be held for the rest of the season unless challenged for. If only one yacht starts she will receive a pennant, but second and third prizes will be given for three and five starters. The regatta committee includes H. B. Willard, F. C. Griffiths and Geo. L. Forman.

PERTH AMBOY AND RARITAN BAY.—*Editor Forest and Stream:* Yachting about Perth Amboy promises to be lively this season. Hitty Maginn, La Fantaisie, Lorna Doone, Venture and Mamie P. Mead are overhauled and ready for business, and Skylark, Moya and Petrel (cutters) are already afloat. Mr. Langley's schooner Comet is overhauling at Brown's across the Sound on Staten Island, and Sagitta is doing the same at Rutan's hard by.—J. L. K.

A CRUISER FOR SALE.—The cruising boat built this winter by Wallin & Gorman, is offered for sale in another column, as her owner is called away by business. She is built in the best manner and designed for one or two men in cruising or for a small party in afternoon sailing. The hull is all copper fastened, lead keel and ballast, and there is a good-sized cabin, with cockpit. The boat is now ready to be set afloat with all gear and anchors.

YACHTING NOTES.—Edith, s. y., has been sold to H. E. Converse, of Malden, by R. H. White....Maggie, cutter, has been sold by L. Cass Ledyard to Frederick Roosevelt....Circe, cutter, a 5-tonner, designed by Watson and built in 1881, has been purchased by S. Grosvenor Porter, Cor. Y. C., and will arrive here on the Circassia....Hildegarde, schr., lately purchased by Geo. Gould, is on her way to New York.

FORTUNA.—The start for Scotland will be made on June 1, from Marblehead, only Com. Hovey and Mr. Chas. Longfellow being in the cabin. The course will be north of Ireland to Greenock, where the racing spars will be shipped by Warren Line steamer. Fortuna will visit the principal yachting ports, and may enter in some races, returning by the 1st of September.

OSWEGO Y. C.—The opening cruise, to Big Sodus Bay, will be made on May 28, sailing at 1 P. M. The run out will be a pennant race, the yachts being timed at the Oswego Beacon Light and the pier light at Big Sodus. A tug will carry the regatta committee and some members of the club. Further orders for the cruise will be issued at Big Sodus.

BLACK CLOUD VS. SILVER CLOUD.—A match was sailed on May 21, at Gloucester, between these two boats, the course being 10 miles triangular, two rounds, in a fresh N.E. breeze. Silver Cloud led to the buoy off Eastern Point, but was passed by Black Cloud, the latter winning in 4h. 23m., with Silver Cloud 5h.

LAUNCH OF THE SUSQUEHANNA.—On May 21 a steam yacht by this name was launched at Wilmington by the Harlan & Hollingsworth Co., who built her for Joseph Stickney, owner of the steam yacht Falcon. The Susquehanna is of iron, 150ft. long, 22ft. beam, 13ft. hold, with triple expansion engines.

CLARA.—We learn from private advices that Mr. Sweet, who had a crew and captain ready to send out to Clara, is detained for a couple of months more by business in England, so will not race her this year and she is still for sale.

CLEVELAND Y. A.—The fifth annual squadron sail of the Cleveland Y. C. will start from the breakwater at 9 A. M. on May 30, the destination being Rocky River, where arrangements have been made for dinner.

NAMOUNA, steam yacht, Jas. Gordon Bennett, called at Castlemare on May 10, leaving for Nice, where her owner landed, going to Paris by rail. The yacht will return to England in time for the Jubilee regattas.

GALATEA has completed her fitting out at Twenty-eighth street, East River, N. Y., and was towed to Sands Point on May 20, starting from there under sail for a cruise around Long Island. She will return to New York by next Monday for the S. C. Y. C. cruise.

CORONET.—The steamer Venitian, arrived at Boston May 18, passed the Coronet on May 8 at 6 P. M., in Lat. 50° 36′ N., Long. 25° W. She reports all well on board.

PURITAN.—Capt. Crocker will sail Puritan in the principal races, but in cruising Mr. Forbes will command her, with Capt. Ryan of the Thetis as mate.

ALTERATIONS TO THE ARROW.—Mr. Chamberlayne is at work on Arrow, putting her in racing shape. New lead and wood keels will be put in.

PIONEER, steam yacht, built for Dr. Cattanach, was launched on May 20 at New York. She is 23×6ft., and will be used on Lake Ronkonkoma.

NEW YORK Y. C. CRUISE.—The rendezvous for the annual cruise this year will be at New London, on Wednesday, Aug. 3.

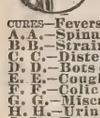
ARROW.—This once famous sloop has been sold by Wm. P. Douglas to Robt. Lenox Belknap, S. C. Y. C.

FANNY, sloop, has been sold by the executors of the late Wm. R. Travers to F. B. Fiske, A. Y. C.

ANSWERS TO CORRESPONDENTS.

H. E. B., Detroit.—The number cannot be supplied.

J. W. D., Albany, N. Y.—Mr. Moore's bill in the New York Legislature is simply to amend the song bird law so that certain stupid or bad blunders may be corrected.



C. B. S., New London, Conn.—I send you a bird I secured from a black snake yesterday; please identify. Ans. It is a black and white creeper (*Mniotilta varia*), one of the Sylvicolidæ or wood-warblers.

THE BIGGEST ONE GOT AWAY.—Salmon fishing with a fly in the Penobscot River has been rewarded at last, notwithstanding the high water which seriously inconveniences the fishermen. Yesterday afternoon William A. Munro hooked a fine specimen of the noble fish and landed him after one hour's play. He weighed 19 pounds and was a perfect beauty. Soon after Mr. Munro landed his Mr. F. W. Ayer, Bangor's most noted devotee of the rod and line, hooked a fish, and after landing him was so unfortunate as to have him slip off the ledge into deep water and out of sight. It was estimated that the salmon would weigh 25 pounds. This forenoon Dr. W. L. Hunt caught a beauty of an 18-pounder, and probably before this item reaches the eyes of our readers many others will have been taken. Sportsmen from away will now commence arriving here as Officer Allen notified many of the anxious ones by telegraph last night. The water is falling so very rapidly that there will be good fishing all the while now.—*Bangor (Me.) Commercial, May 18.*

THE HORSE-HAIR SNAKE MYTH.—Mr. George D. Griffin, of Parkdale, Ontario, thus writes to the Toronto *Mail:* "The 'horse-hair' question can be answered in this way. The roots of the hair must be with it or it will not become a 'living snakelike' existence. In muddy, tepid water it, through the roots, in accordance with the law of life by the law of affinity, absorbs vitalizing elements the same as it did when on the animal. And the substance of the hair being animal life as well as vegetable, it is naturally more or less sensitive to touch. I have seen the horse-hair phenomenon, and I once saw it duplicated a thousandfold in a stagnant pool where the hair of a slaughtered hog had been thrown, and in handsful as pulled out by the roots they exhibited the same kind of life, but more active than the horse hair does, and yet all this does not help the evolutionist a hair. For there is not and cannot be any reproduction, without which their whole faith is a delusion."

COUGHING, with interludes of wheezing and sneezing, are heard in all public places. Every one ought to know the remedy; and that is Hale's Honey of Horehound and Tar—an absolute and immediate cure of all pulmonary complaints. PIKE'S TOOTHACHE DROPS cure in one minute.—*Adv.*

CANOE HANDLING.
By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners: and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO. 39 Park Row.

"Forest and Stream" Fables.

BY AWAHSOOSE.

1. The Puppies Who Didn't Know It Was Loaded.
2. The Wise and Foolish Pike.
3. The Fox and His Guests.
4. The Foolish Fish.
5. The Robin and the Pewee.
6. The Unlucky Bass.
7. The Shrike and the Hawk

A series of seven fables in prose and to every one a picture. All of them have pith and point best appreciated by anglers and sportsmen, but not a one of them is without a moral for the wise and foolish of the world in general. Price 10 cents. For sale by all newsdealers.

FOREST AND STREAM PUBLISHING COMPANY,
39 Park Row, New York.
LONDON: DAVIES & Co., 1 Finch Lane.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages Price $1.00.

ANSWERS TO CORRESPONDENTS.

BRASS MEDALS.

THE pewter medals given for silver at Pittsburgh in 1886 have passed into history, and the brass medals of 1887 now take their turn. The prizes offered for the champion classes at the dog show of the Western Pennsylvania Poultry Association were announced to be "gold medals." These were to be, the Association ordered, gold not in name merely, but actual gold. The discovery that the supposed silver medals of the year before were pewter, had disgusted a number of the directors of the Association, and we have the very best authority for stating that definite instructions were given to those who had the show in charge, that if medals were offered this year they should be what they were represented to be. How these instructions were followed out may be seen from the fact that the "gold" medals given this year have now proved to be a composition of brass, plated with gold. The men who are responsible for this petty swindling, for this obtaining money by false pretenses, for this luring people to their show by representing that they should receive as prizes coin, and then paying them in counterfeits, are reputable men of Pittsburgh, men whose standing in the business world is fairly good. They are not thieves, nor gamblers, nor blacklegs, but in their own world and with their own class they stand well.

People often express surprise at the moral obliquity of men who in their own business are honest and straight, while in matters connected with dogs and dog shows they are guilty of practices which would forever damn them in the commercial world. But the explanation is not difficult. Such men are honest in commercial affairs because to maintain any standing at all they have to be so. But they have learned that in dog matters such honesty is not an essential to good standing. A man may be guilty of tricks of all sorts and yet suffer no penalty. The supposed governing body in the dog world, the American Kennel Club, says in effect, that swindling of this kind meets its approval.

At its last meeting the committee on Pittsburgh pewter medals reported and submitted the evidence on the subject, and the report was accepted and laid on the table. There, no doubt, it will continue to repose until the subject of the brass medals shall come up, be reported on, and also laid on the table to keep it company. There, side by side, the brass and the pewter, they will be likely to remain for ages, suggesting sweet memories of Pittsburgh and of the methods of the A. K. C. It is very difficult to see how this body can hope ever to gain the respect of the dog public if it is to follow up the line of conduct which it seems to have laid out for itself. "Good fellow" methods were all very well years ago, but people interested in dogs have got tired of them, and look for intelligence and honesty from the body which is supposed to govern kennel matters. If such moral standards are to rule in the dog world, honest people want to look on from a safe distance.

We have enough confidence in the inherent honesty, uprightness and love of fair play of American dog owners to believe that acts of this kind will not be allowed to continue. That they have been permitted is due as much to the good faith and simplicity of some gentlemen, who are above suspicion, as it is to the knavery and trickiness of those who have been able to deceive them. But it is certainly time that the knaves and the fools be thrown down from their seats of authority, and that honest, capable men take their places.

As for the Pittsburgh show, it was all through, from the Bryson incident to the brass medal discovery, so disgraceful a piece of business that it is unpleasant to write about—nobody likes to handle a skunk if he can help it. It was made disgraceful, not by the directors of the association, but by the stupidity and dishonesty of those to whom they intrusted the management.

PROTECTION WHICH DOES NOT PROTECT.

FROM the condition of having almost no laws for the protection of fish and game, which this country was in within the memory of living men, it seems to some that it is getting into that of having too many, which they think is almost as bad as the first. Wherein are we better off, they ask, with a complication of statutes too ambiguous to be understood by even those trained and schooled in the legal profession, and too ponderous and unwieldy to be enforced if the best possible means were provided, as they seldom are, for that purpose? Wherein is there more protection with laws unenforced than in no law at all? An honorable man will not knowingly violate one of these statutes, though in his judgment it is unjust and unreasonable; neither would an honorable and thoughtful man violate one of the plain laws of nature for the preservation of fish and game, laws which the wisest and best of human enactments only reiterate, while they specify a penalty more immediate in effect than the extinction of species, which is nature's sometimes slow but always certain punishment for unseasonable and excessive slaughter. These laws are not made to regulate and control the actions of such men, but to restrain the sport-loving instinct of the thoughtless and the greed of the selfish and vicious, and if not faithfully enforced are as ineffectual as the Pope's bull against the comet, and worse than this, they are positively mischievous, for laws which are a dead letter breed contempt for all law.

In this there is weighty matter for the consideration of all those who are interested in protection. It is evident to every one who has watched it at all that legislation on this subject is apt to become more and more unwieldy and contradictory with each yearly or biennial legislative tinkering, that good laws are often repealed or made ineffective, and also that with all the new acts and "acts to amend acts," there is in but few States any more adequate provision made for their enforcement. It seems to have become as much the fashion for some legislative bodies to make game protection law, as to legislate on education and temperance. While ignorance holds its own, intemperance does not decrease, and unseasonable killing of game and fish is almost unnoticed and seldom punished. There is an infinite deal of loss but little protection. All laws for the protection and preservation of fish and game should be simple, reasonable in their exactions, easily enforced, and then—enforced.

TROUT WATERS are just now in their prime and every fisherman who can get away is improving the golden hours as they fly. The salmon streams are also affording capital returns, and the fishing at Bangor, Me., is remarkable.

THE WELLINGTON SHOOT.

THE enthusiasm which marks the sport of trap-shooting at present and which calls for a supply of millions of artificial targets annually, finds a marked expression in the Wellington shoot, now going on in the Boston suburb. Every preparation has been made there for a good time, with plenty of real, honest sport, where rivalry will help on the enjoyment and where the rules will see to it that the best man shall win in every contest. The managers of this tournament have sought to put the whole country under obligation in furnishing a supply of contestants, and men have come from the far West to show the Eastern shooters a few wrinkles on marksmanship, while locally a whole flock of trap-shooters has sprung up to make a lively fight for the honor and profits of the occasion.

These big contests are but indications of the growing conviction that among field sports trap-shooting holds a favored position. It is eminently a gentlemanly sport, where one can so easily pick his company in the way of fellow-contestants. There is little expense attached to it, any clear space of unused land will suffice for a shooting-ground, and for the man who is busy through the day with engrossing business cares, there is no task of enjoyment which he can set himself which will so readily take his thoughts from the office and the desk as that before the trap. Each target thrown is a challenge flung in the face of the marksman, and soon the keen sense of conflict, which is the very essence of the sport, is felt in all its bracing activity.

It is a sport which does not weary and grow stale. Take up any club list, read over any roll of entries, and see the number of names of men who have been popping away with muzzleloader and breechloader and later with hammerless, lo! these many years. So long as the sharp, quick eye is supplemented by limber muscles, so long the enjoyment of trap-shooting remains.

The FOREST AND STREAM match, even in its initial year, has shown in some measure the wide-spread desire for a trial of merit. Before the same trap, with shooters side by side, this feeling is much stronger, and in such a gathering as the Wellington shoot any trap devotee may be sure of adding something to his stock of practical knowledge, if in nothing more than by enforcing upon him the conviction that there is a great deal he does not know.

THE NEW YORK LEGISLATURE has adjourned and the great grist of game and fish bills has come to an end. Of the three general bills, termed by their authors codifications, none passed, and the laws are for the most part unchanged. A number of unsigned bills now in the Governor's hands will doubtless receive his approval. Among them are a restoration of the six-inch trout clause and the bill forbidding capture of salmon save with hook and line. The one disgraceful piece of legislation at the last session—there is at every session one new law worthy of this distinction—was the repeal of the short lobster law. This was done at the instance of parties in this city who had fines to pay under the old law; and it was engineered by Finn the Park Row free-lunch man.

THERE are in this world a number of well-meaning individuals who are more than ready to croak at the good works accomplished or attempted by other people. There are the querulous carpers, for instance, who have their little wail about the undertaking of the AUDUBON SOCIETY. There are millions of human beings in distress, say these croakers, and yet here is the AUDUBON SOCIETY with its thousands of members bothering themselves to preserve the birds, but forgetting all about suffering humanity. Such critics go to bed hungry if they cannot have the whole loaf. It is a good rule in this world to do all the good you can, even though greater wrongs go unrighted.

PRESIDENT CLEVELAND is angling in the Adirondacks, and the reporters are on hand with spy-glasses and ear trumpets to chronicle his minutest risings up and sittings down, what the President and his wife have for breakfast, how many times he casts his fly, how many fish he does not get, and the number of times he slaps at the punkies and musquitoes. Evidently the reporter believes that it is not all of fishing to fish.

THE DECORATION DAY TROPHY scores are coming in, but the result cannot be known for some days yet. The full scores will be given in our next issue.

THE DIAMOND HITCH.

I.

INTRODUCTION.

IN the rugged mountains of Western America, where roads, even now, are not too common, freight is transported on the backs of animals. The load is tied on the saddle with ropes, and the burdened beast can travel over rough country or through forests where the timber stands close together, going wherever a man can ride a horse.

Down in old Mexico they have been carrying loads on mules' backs for more than three hundred years, and from there we have received a system of packing which is perfect for its purpose. The manner in which the single rope passes over and about the pack, in a regular symmetrical fashion, is called the diamond hitch. In this hitch there are no knots which can untie or become loose; the rope pulls always against itself. By means of this method in Mexico they will pack a twenty-gallon keg of water on a mule's back over the mountains day after day.

The origin of the diamond hitch is, so far as I know, buried in obscurity. Whence it came, or how, I cannot tell. Possibly the old Aryans, when they poured into Europe from the East, lashed their household goods on the backs of horses with this hitch, and thus transported them over the rough mountains of Transylvania. Or it may be that the Moors brought it from Africa into Spain, and that so it came to Mexico. Perhaps it is a slow development, painfully worked out little by little after years of patient thought and study, or it may be that it was the brilliant inspiration of some genius among packers. At all events, we have it to-day, the most satisfactory system for lashing a load on a saddle of which we have any knowledge.

Of the methods employed in packing in other countries I am ignorant, but I am told by a gentleman who was for many years resident in India and who has traveled extensively in the Himalaya Mountains, where packing is the only means of transportation, that the sawbuck and aparejo, or saddles essentially similar in type to these, are in common use among the Mahomedan people of India, the former for loading camels, the latter for mules. He believes, too, that the method of lashing with the diamond hitch is essentially the same.

If this is the case we are perhaps warranted in assuming that it was introduced into both Europe and India by the early Mahomedan conquerors, reaching this country through the Spaniards. This would put the Aryan people out of the race as regards any credit to the invention, leaving the rival claims of the Semitic and Tartar races whose united forces constituted the conquering armies of the Middle Ages. At that period it may have been in general use by the people of both races from the wall of China to Asia Minor, for the conquerors, whether Arab or Tartar, introduced it wherever they went. The invention might possibly be traced back to a far more remote antiquity if Chinese records were investigated.

The diamond hitch may be thrown in several ways, and from either the near or off side of the animal. The method with which I am most familiar, and which is generally employed in Montana and Wyoming, is called the "old Government hitch." It is perhaps the most simple. There are some minor modifications of this which it is quite unnecessary to give. The essentials are always the same, while almost every packer has his own way of attending to the details.

The amount which an animal can carry depends of course on the size of horse or mule, and somewhat on the shape which the load takes. Thus a heavier burden of oats could be transported than of bird cages. From 200 to 250lbs. is a good load for a fair country. Much more is sometimes put on, but it does not pay to overload. If animals have too much to carry, they are almost sure to get sore backs. One hundred and fifty pounds is enough for a moderate-sized animal.

Strictly speaking, but two types of saddles are used in packing. The aparejo, which is of leather, and the sawbuck, of wood, may be taken as representatives of these types. Old-fashioned wooden pack saddles with rings are still sometimes used, and an ordinary riding tree makes a very good pack saddle. Nothing, however, is so easy on a mule as an aparejo. It will carry, without injury, a much heavier load with one of these than it possibly can on a wooden saddle. This is due partly to the fact that an aparejo is more flexible and yielding than wood, and partly to the fact that its bearing surface is much greater than that of a wooden saddle, and that the weight is therefore more widely and more evenly distributed.

The aparejo consists of a flat rectangular leathern bag, a little more than twice as long as wide, or sometimes of two nearly square leathern bags laced or sewed together along the edges which are to go over the animal's back. The sides of these bags are held apart by small willow twigs introduced through the hand holes on the inside of the aparejo, and are stuffed with fine springy hay. A reference to Fig. 1 will show that the aparejo is placed across the mule, either end of the bag coming down on the sides nearly to the belly and close behind the forelegs, while the after edge is just above the short ribs. To the after edges of the bag on either side is sewn a strip of leather 10in. wide. Each of these runs well back around the hips, curving up on the lower side until they meet

tion, need not be described. It requires much experience and can only be performed by a competent *cargador*.

The wooden pack saddle, from its shape commonly termed a sawbuck, consists of two thin flat boards shaped to fit either side of the animal's back, screwed to stout crosspieces, which meet and are firmly bolted together in front and behind. Fig. 3 gives an idea of the saddle on the animal's back. This is by far the most common form of saddle in use in the mountains, and is convenient enough for short journeys and for light loads. Its popularity is chiefly due to the readiness with which it can be made, and its small cost as compared with the aparejo, but it is not nearly so good to pack on. The aparejo being made of leather throughout, and either laced or sewed, by hand or on a machine, is much more expensive, the three different sizes costing from $15 to $30, while a sawbuck, with ropes, cinches and all, costs only from $5 to $10, according to the character of the rigging. Notwithstanding this difference the more expensive saddle is to be preferred for long trips.

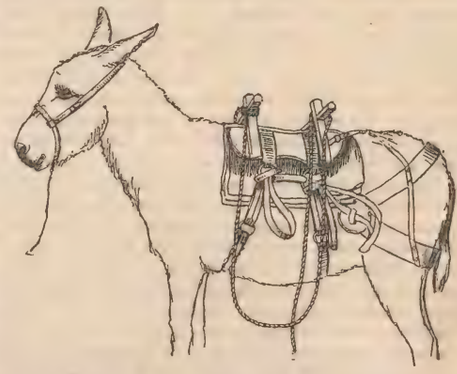

FIG. 3.—SAWBUCK. SLING ROPES IN POSITION.

The aparejo is put on by a wide, heavy cinch, usually of canvas, which passes about the middle of the aparejo and under the animal's belly. At one end of this cinch is a broad ring, or better a piece of hard wood somewhat longer than the cinch is wide, an inch thick from above downward and two inches wide from side to side. Through this from above downward are cut two long, narrow slits, through one of which the canvas of the cinch passes to be sewed to itself again, and the other is to receive the latigo. A foot or 18in. from the other end of the canvas cinch, a small ring is laced to it, by one side, and to this ring the latigo is attached. This is a flexible strap, 1½ to 2in. wide, and perhaps 10ft. long, tapering very gradually to its free end, where it is perhaps an inch wide. When the aparejo is put on, the canvas cinch is thrown over the animal, the wooden piece is brought up to within a foot of the nearside of the aparejo; the latigo passes through the slit in the wood, then up and through the ring, down again through the wood, and so up and down several times. Then a strong pull on the latigo draws the cinch tight. The aparejo must not rest close to the ridge of the animal's back but must be lifted up before cinching so that it and its blankets do not touch the backbone. A wooden pack saddle is usually put on with double cinches in the ordinary way.

A pack saddle, whether it be an aparejo or a wooden saddle, requires plenty of blanket under it. There should be enough to thoroughly protect the animal's back, and yet not so much as to make it possible for the saddle to slip or work. But the blankets must not set down close over the animal's backbone; they should be lifted up off it so that the air can circulate through them, otherwise you will have sore backs. Just before cinching, grasp the blankets over the backbone with the right and left hand behind and before the saddle, and pull and lift them well up into the crotch of the saddle and off the animal's backbone. The saddle must be so tightly cinched that there is no possibility of its turning. Dead freight is much more severe on a horse's back than is live weight. There is no spring or give to it, no relief to the animal. It bumps down with a heavy jar all the time. It is, therefore, of the greatest importance that the saddle should stick close to the animal and the load close to the saddle, so that there shall be no motion between the various parts of the load, and no motion to it as a whole, apart from that of the animal that is carrying it. The pack must, therefore, be lashed on the animal's back as firmly as possible, and every effort made to keep the ropes tight and the load compact.

Two ropes are used in packing, one for slinging the side packs on either side of the animal, where they balance each other, and one for lashing the whole load on the saddle. If the lash rope remains tight the slings will probably do so also, but the lash rope must be kept tight if the load is to stay on. The office of the sling ropes is a minor one, and after the pack is securely lashed on they may even be removed and the load will ride well, but if the lash rope becomes loose anywhere, the incessant jolting of the pack makes it constantly more so, and presently the load tips to one side or falls off, so that the pack has to be taken off and put on again. This takes time and is to be avoided, if possible. The skillful packer arranges his loads so that they will not be disturbed, except in case of accident, during the day. Nothing more than an occasional tightening of the ropes should have to be done.

These ropes are stubborn things to handle. In damp or wet weather they shrink and in a dry time they stretch. However tight you may pull them they will always take a little away from you again. Moreover, often the articles to be packed are perfectly hard and stiff—as mess boxes—and do not yield at all to the rope, and if there is the least play in such a case it tends always to become loose; while if it passes over something soft, such as a roll of blankets, which yields to the strain and then springs out when it is relaxed, the rope loosens much more slowly.

When you know how to do it, to throw the diamond hitch is as easy as "falling off a log." Until you understand it thoroughly, it is a most complicated operation. You may watch its execution and may have it explained to you a thousand times, and may still know nothing more about it than you did the first time. It is necessary to have an expert show you each operation in detail, but when you have once fairly mastered the subject, you will be surprised at its simplicity.

So far as I can learn, nothing has ever been written about the method of throwing the diamond hitch. Good packers are not very numerous, even in the western country, though there are plenty of men who can lash on a load in a slovenly fashion, so that it will ride for a few hours. In this matter, as in so many others, constant practice is required to attain perfection, and it is only the man who has had this practice who is really master of his art. The good packer not only has no trouble with his loads, but his animals seldom, under ordinary circumstances, have sore backs. His eye is quick to catch the first indication of a tipping load, and he at once remedies it.

Whether it is possible for any one to learn by reading about it how to throw the rope is doubtful; but I am quite sure that the person who has once had the intricacies of the diamond hitch explained to him, will afterward, by references to these papers, be able so to refresh his memory that he can always throw the ropes, and after a little practice become a skillful packer.

In the papers to which this is the introduction I shall endeavor to explain as clearly as possible what I consider the simplest method of throwing the diamond hitch. I shall give first the operation as performed on the ordinary pack saddle or sawbuck, and afterward say something about packing with an aparejo; for, although the system is the same in both cases, the differences in the saddles necessitate certain variations of detail which must be explained.

Here and there will be found allusions to and directions for some of the ordinary duties of camp life in the mountains, but it must be understood that these are only mentioned incidentally and where they bear on the subject of packing. The papers are in no sense intended as treating of anything more than the operation of packing.

I have myself packed over some thousands of miles of mountains, and after the draught of these papers was made, it was submitted to two other practical packers of great experience, Mr. H. G. Dulog and Mr. E. Hofer, and to these gentlemen I am indebted for suggestions on several points. I am, therefore, hopeful that the papers will prove to be what they are intended for, a clear and intelligent exposition of the method of throwing the diamond hitch.

AN ADVENTURE AT MONTE CARLO.

EUROPE possesses many wonderously beautiful and picturesque places of resort, and in addition to the richness that nature and art have bestowed upon them, there is a romance that surrounds them and some old story connected with them that lends peculiar interest to the spot and makes it deeply interesting to the visitor. Among the many of these places there is none more attractive nor beautiful, both in situation and surroundings, than the little town of Monaco, which rises from a rocky promontory, putting out into the blue Mediterranean Sea, a few miles from Nice. Here nature and art have combined to form a scene that might well be considered a little paradise.

In close proximity to the town is Monte Carlo with its lovely gardens, its terraced slopes and sparkling fountains, its shady inviting walks and the famous Casino, now the last of those sumptuous gaming halls, that once formed the chief attraction of Baden-Baden and Homburg, and is now that of this charming little spot.

I had arrived by the afternoon train, and having finished dinner, I lit a cigarette and stepped from the piazza of the Hotel de Paris for a stroll among the flowers and palm trees and a look at the calm blue sea. I seated myself in one of the pretty little nooks which, while they invite you to rest, at the same time open to you a portion of that gorgeous panorama that the eye never wearies of at Monte Carlo. For a long time I sat in a sort of reverie, my mind wandering from the surrounding beauties to my home far away, and I scarcely noticed the passers by, who all seemed to be wending their way toward the Casino. After a while I felt that I was entirely alone, the numerous lights flashed through the foliage and over the flower beds and made the water of the fountains sparkle like diamonds. I could hear the strains of sweet music creeping deliciously through the still air and trembling among the beautiful bowers. This music came from the orchestra in the music hall of the Casino, and as I had an hour or two to spare I decided to go to the Casino and see the play and listen to the music. I took my way along the terrace, and turning into the main avenue I arrived at the superb entrance of the grand hall which leads to the gaming room. As I entered the spacious door what a transition! I had left the flowers and fountains, and here was a noble hall, pillared with precious marbles, the walls and the ceiling gilded, panneled and richly frescoed, and the brilliant light from the numbers of crystal chandeliers made the entrance a scene of rich splendor. As I stepped toward this room a polite attendant addressed me in French and requested my hat and cane, and I was ushered for the first time into the famous gambling palace of Monte Carlo.

What a scene was before me. I had heard no noise while without, and yet when I entered this immense and splendid saloon it was nearly crowded with people, each one of whom seemed wholly engrossed in watching the progress of the games being played at the several tables, and if conversing at all, doing so in a low tone. There was no sound of laughter or jollity, no expression, aloud, of anger or disappointment, but only the rapid click of the little ivory ball, as it shot from place to place in the swiftly revolving wheel of the roulette board, or the measured voice of the stoical master of the table, as he mechanically called out when the wheel ceased revolving, "*Rouge, messieurs, numero trente-quatre,*" or "*Noir, messieurs, numero dix,*" as the little ivory ball ceased its clicking and dropped into the red or black number, and which decided which were the very few winners and the very many losers. The splendid chandeliers shed a flood of light over the hall. The polished jasper pillars, the grand frescoes, the gilded ceilings and luxurious furniture were all around and arranged with the most consummate taste and rare beauty. And yet this throng of players seemed oblivious to all, and engrossed in nothing save the chances of that little ivory ball dropping into the number in which they hoped to win a heavy stake, strolled around the hall admiring the splendor of the appointments, and as I passed the different tables I paused a few moments to watch the game, and when I saw the attendants draw in the heavy winnings of gold and notes and ivory checks with their little rakes, I could discern the sound of a sigh or groan from some of the heavy losers. I was naturally drawn at last to observe the character of the throng of people engaged in the play. The professionals, or steady players, were generally seated around the long tables, and I observed that many were females, not young and foolish, but staid middle-aged ladies, many of them richly attired, and nearly all heavy betters on the game. Each of them seemed sober, earnest and deeply engrossed. Now and then a man or woman would drop out from among the players with a downcast air and sad expression which plainly showed the heavy loser, and pass slowly from the room, while others, eager to try their fortune, would press into the vacant places. There was one class of those who occupied the tables upon whom the fortunes of the game seemed to have no apparent effect; no change of fortune, no heavy gains or losses seemed to ruffle them or change a single feature of their countenances. Their hard, calm, stern features never betrayed a single look of compassion, nor a glance of momentary pleasure. Such were the attendants, who dealt the cards or spun around the jeweled wheel, or with careless air drew in toward the bank with little ivory rakes the piles of notes or checks of the misguided victims. Such is a faint picture of the Bank at Monte Carlo.

At the end of one of these long tables there was for a moment a vacancy, into which I placed myself, anxious to see the game, although I had but a limited knowledge of its workings. As I took my position, a number of the players raised their eyes for a moment from the table to scan "the new victim." I felt a little embarrassed, but held my place. Beside me, on the left, sat a fine-looking woman, attired in a rich suit of black, with a large pile of notes, gold and checks in front of her upon the table. Her hand, which was ungloved, sparkled with the number of jewels which adorned her fingers. Leaning lightly upon the back of her chair, on either side, were two men, one much younger than the other, but both cultivated in their appearance, and taking no part in the game. As the lull occurred between the betting the lady would turn her face first to one side and then to the other, speaking in French and Italian to these gentlemen without any seeming effort. After a few moments I resolved to try my chances at the betting, and carelessly tossed a Napoleon on the red diamond. The lady in black, stooping forward, cast a quick glance upward toward me, and then resuming her position made her bets upon such numbers as she had selected. The wheel spun rapidly around, and each one near watched the motion of the little ball as the wheel turned more and more slowly to see into which number it would drop. The number and color were called out and the winnings thrown out upon the table. Several had been betting upon the red diamond and others upon the black, and I really did not know whether I had lost or won. At the right of me, a few paces off, stood a tall, straight individual, with long gray side whiskers and moustache and gray hair. As the bets were paid, this man reached forward his long, thin arm, and with his bony hand slowly drew in two Napoleons, which he deposited in his pocket and then resumed his quiet, confident air. The lady at my side again turned her head and looked toward me, this time a little longer than before, and I fancied with an inquisitive expression. However, I resolved again to risk another Napoleon, just to get even, and I tossed it again upon the red diamond. The wheel was turned, and when it stopped a faint smile came over the face of the lady. She had won a large stake. But even this luck did not seem to ruffle her or fix her attention, as will be seen by her action toward me. Again the long, bony arm of the military man was reached forward and the bony fingers were nearly grasping two bright Napoleons, when the lady hurriedly spoke to the attendant near in French, who tapped the fingers of the military-looking gentleman and he pushed the two Napoleons toward me, and the military gentleman quietly walked away without a look or a remark. The lady turned toward me, and speaking in perfect English she said, "That party was taking your money, and took the Napoleon that you won before. You do not seem to understand this game, sir?"

"No, madam," I replied.

"Then let me give you a piece of good advice; never, never learn it. I have been here for three weeks and have lost 43,000 francs."

Judge of my confusion at such an episode. Here I was standing among those that I deemed to be utter strangers to me and my nationality, and wished to appear, at least, not a novice. But I was covered with shame, my face flushed at the knowledge that this "military individual," who was one of the many "dead beats" that frequent all gaming places, picking up here and there a little money from the unwary, this fellow had read me at a glance, and had it not been for the lady he would have picked up my winnings as long as I would have bet. He knew that I was a novice and knew nothing about the game. But my greater confusion was caused by the lady, whom I thought was a foreigner of distinction, speaking none but foreign languages, and yet she turned to me and read me in an instant, and in my own language gave me some good, sound advice. I thanked the lady as well as my confusion would permit, and turning away, I left the room to think calmly over some common sense teachings that may be gathered even in the Monte Carlo gaming room. As I passed into the hall, my attention was attracted by a straight-built, dark-complexioned man, who was pacing the hall with measured step and approaching me. His chin rested upon his breast, his brow was deeply furrowed, his eyes cast down and he seemed to be buried in distressing reflections. I stepped to one side and he passed me, and as I left the door I turned back to look, and I saw the same figure, still pacing, with measured tread, the marble pavement, and his dark, troubled countenance seemed to haunt me. As I walked hurriedly along the broad gravel walk that led to the hotel, the thought of that troubled face filled my imagination, and although years have passed away, that countenance is photographed upon my memory. I knew that he must have been a heavy loser at the game and probably hopelessly ruined. But he was among the many who had suffered the same bitter experience and must have known when he commenced the game that the chances were much against him. And then the kind countenance of the lady in black would come to my mind, and I could hear her earnest voice exclaim: "Take my advice, sir, and never learn." But I had reached the hotel portico and it was getting late. I paused a short time to breathe the evening perfume that arose from the flowers around, and look upward at the clear blue starry sky; and then out upon the lovely sea, where the waves danced and shimmered in the soft moonlight. I seated myself at a table on the broad piazza among my friends, and sipped my coffee and smoked a cigarette. We talked over my visit to the Casino, joked a little over what so excellent a player as I was must have lost or won; but I kept the events of the evening to myself, and went to bed to pass a sleepless night, for it seemed impossible for me to rid my mind of that troubled face I had seen in the hall of the Casino.

The sun is an early riser at Monte Carlo and I was glad to welcome his charming light, for I could not have slept an hour during the night. As the dawn brightened I arose and cooled my fevered head with refreshing water; I dressed and made up my mind to take a long walk and enjoy the fresh pure morning air and endeavor to drive away my foolish reflections. There were but few of the hotel people up when I descended into the corridor. The porter bowed me a polite "*Bon jour, monsieur,*" as he opened the door, and I passed out into the fresh air. The sun had just peeped above the horizon. I walked along a narrow path taking a short cut to the terrace, and as I approached a thick portion of the shrubbery I detected voices talking in low hurried tones. I quickened my steps, and turning a corner formed by some dense boxwood, I saw three men, gardeners apparently, bending over a bed of mignonette and heliotrope. I hurried forward and was close upon them ere one of them heard me, when it was too late for them to prevent me from observing that among the beautiful flowers, nearly buried in the purple blossoms, lay the figure of a man flat upon his face. One of the men urged me to retire, but I persisted in staying, and he placed his fingers to his lips warning me to be secret. They now proceeded to raise the man, who was evidently dead. As they turned him over, from his hand dropped a small pistol, with which he had inflicted the fatal wound in his left breast, and which had ended his life. His tight-buttoned coat was burned with the powder, and the pretty flowers were stained with his blood. As they bore him past me I glanced at his face, when to my horror I recognized the dark troubled face I had seen pacing the hall but a few hours before. Oh, how sad! Oh, how horrible! Shall I ever forget the scene? I hastened back to the hotel and went to my room. During the morning I mentioned the whole circumstance to a friend of mine, an old habitué. He listened to my story and then with a melancholy smile replied, "Oh, such things are quite common here; they gamble, they lose, they die."

Well, I have ended my little tale of Monte Carlo. What scenes of misery, wretchedness and woe are hidden beneath the quiet beauties of this most lovely place. C.

A DAY'S DUCKING AT MARTIN'S.

THIRTY-FIVE miles south of Montreal, on the Richelieu, the outlet of Lake Champlain into the St. Lawrence River, is Martin's. I imagine there is scarcely a sportsman in Montreal who does not know the place. For forty years it has been the favorite resort of the ducking fraternity of the Canadian metropolis. Ever since Père Martin—the best shot in all the province of Quebec in his day—built the rambling, white-washed, low-roofed house over against Isle le Noir and the duck hunters' marshes of South River, the place has been famous.

Is not the occasion when fortune disclosed to Père Martin his opportunities and his mission in life worth recounting? It was shortly after he had completed his domicile on the west bank of the Richelieu, and had settled down to the humble, hum-drum life of a small Canadian farmer and fisherman, that a party of Montreal sportsmen come up to Isle le Noir in a yacht, for a couple of weeks' sport shooting and fishing. One fine morning in September Père Martin heard a great banging of guns from Isle le Noir. Tumbling into his flat-bottomed scow, he rowed over to the island to see what might be the matter. As he stepped on shore he saw a long-extended line of sportsmen in high boots and knickerbockers, marching toward him. In front of them ranged a brace of fine dogs, which, as Martin left his boat, were just in the act of drawing to a point. The worthy Frenchman was no novice in the art of gunning, and he knew at once what this maneuver meant.

Scaipe, scaipe! Up went a brace of snipe between Martin and the gunners. Quick as thought the Frenchman dropped prone upon his face, and a dozen hurtling loads of shot whistled over his head. When the firing was over, Martin looked up, unharmed, and saw the birds, after circling around the chimneys of the old ruined British Fort on the island, pitch down in the swale beyond. It was a critical moment with the honest native. He was amused, to say the least, but he dared not betray it in the face of ten smoking guns!

"*Voilà! voilà!*" he cried, pointing in the direction of the swale. The ten sportsmen and two dogs hurried off in the direction indicated.

Now Martin always kept in his boat an ancient double fowling piece, whose barrels had at some time been so rudely divorced from the stock that the owner had found it necessary to reunite the parts by a stout cord, wound a dozen times or more about them. This venerable fusil Martin hastily fetched to land. He inspected the priming, clapped on a couple of caps, raised the hammers and stood awaiting developments.

Presently from the swale beyond the chimneys came a crackling sound, like the snapping of faggots in a giant's fireplace. Bang-bang-bang-bang-bang-bang! Over the chimneys whirled the snipe again, unruffled in so much as a feather, but complaining hoarsely with their metallic *scaipe, scaipe* at having their quiet so often disturbed by such purposeless racket. Martin saw them coming like the wind, one a little in advance of the other, their white breasts gleaming in the sunlight. He calmly raised the old fowling piece to his shoulder. Bang! Down dropped the first bird, turning over and over and fairly knocked out of shape by the heavy duck charge. The other bird turned and mounted into the air like a rocket. But Martin's aim, relentless, sure as fate, followed its towering course. Bang! a little cloud of feathers floated off in the morning sunlight, and the snipe, dying in the air, fell almost at the feet of the city sportsmen as they came hastening over the ridge. And thus it was that Martin and Martin's were discovered.

Every season thereafter the little whitewashed Canadian house opposite the island and the fort became a rendezvous of a score or more of Montreal gunners. They could run up in the evening to Stottsville on the Grand Trunk, only thirty-five miles from Montreal, and there Martin would meet them with his sturdy little French pony and they would be jolted over the rough road three miles to their destination. Scarcely a night for forty years, during the ducking season, has there not been jollity in that lonely little house by the Richelieu. Do you recall those dark stormy nights by the blazing wood fire, the pipes, the songs, the stories, the good cheer? But alas! Whom do I invoke? Who can answer of that band of choice spirits, through the shades and mists of well nigh half a century?

But the old place is the same, scarce changed a whit, save by the addition of a newly-built kitchen and loft, the latter divided by rude partitions into little 10x12 apartments for the accommodation of sportsmen who must be housed during the shooting season.

It was the second week in November when I made my last pilgrimage to Martin's. Père Martin has now two stalwart sons, Romauld and Joe, who do the guiding; and the boys have an invaluable ally who goes by the unmusical, but thoroughly distinctive name of "Gamash." The veteran himself, Père Martin, has seen his day. Gamash wields the venerable fowling piece of forty years ago, and there is life (and death) in the ancient fusil yet. It will beat many a breechloader of modern pattern and improvements at long range shots and for killing qualities. Romauld and Joe are both splendid shots, but they will never equal the veteran. When his eye was clear and his nerves unshaken by age and decrepitude he was as sure of bringing down his brace of ducks at 50yds. as though he saw them already lying breast up on the water.

When I stepped upon the platform of the station at Stottsville the ground on every side was white with snow. It was the first snowstorm of the season, and I had taken advantage of it in the hope that it would hasten the still lingering wildfowl south and afford good flight shooting during the few days that I could remain. I had had no

time to notify the Martins by mail, and consequently no conveyance awaited me at the station. I stepped into the adjoining tavern, where one Antoine Fortin presides over a shining array of cut glass and long-necked bottles, the only indication to the public of the existence of a hostlery, being the quaint announcement in French that the proprietor is "Authorized to sell all kinds of liquors." I asked Fortin if he could provide me with a team and driver to take me to Martin's. He was very doubtful about it; the roads were terrible—mud a foot deep. We went to sup over the question, however, and after imbibing an extraordinary amount of cabbage soup Fortin's heart warmed, and he assured me that I should be set down at Martin's door within an hour. Ten minutes later I was on my way thither, with a sociable young fellow, a friend of Fortin's, as driver. The wheels fairly wallowed in the mud and slush, and sank every now and then nearly to the hubs in some miry slough. But on we plunged. Our team of Canadian horses was a good one, tough and wiry, and after about an hour of tugging and floundering they landed us safe at Martin's door.

In five minutes more I was toasting my shins before the kitchen fire. Romauld sat opposite me. The grizzled veteran dozed on the bench beside the stove. The good wife and her sister sat at a little table busily engaged in sewing, while their tongues were busier still with the swift-flowing Canadian *patois*.

"Well, Romauld," I asked, "how are the ducks?"

"Scarce, very scarce. You should have written me."

"True enough. But I would have come if there were not a duck flying from sunrise to sunset. Do you suppose I could let a season pass without coming back to the old place?"

Romauld laughed. "We will try the cabin just below the island in the morning," he said. "Never mind; we shall have some ducks."

Up to the little room under the eaves—my room I had learned to call it—I climbed when the fast-moving hands of my watch said 9 o'clock. "At 5 o'clock, remember, I will call you," cried Romauld, as he went creaking down the stairs. "Good-night."

"Good-night, Romauld. Don't oversleep."

What's this, a sound of stockinged feet at my door, a rap. "Five o'clock, time to be starting."

Ugh, it was chilly as I crawled out of bed, and so dark that I had to light my lamp to dress by. Into my thick corduroys I plunged, drew on my cardigan, my coat and my overcoat, thrust my feet into the depth of my rubber boots and made my way down the rickety, almost perpendicular flight of stairs to the room below. Romauld was tossing my Bonehill to his shoulder and aiming it at an imaginary duck. "You ought not to miss," he said, fondling the gun.

"If I do it won't be the gun's fault, at any rate," I replied, filling my pockets with shells. "Well, shall we be off?"

We stepped out into the cold morning air and made our way down to the boats. Heavily clad as I was a shiver ran through me as the raw southwest breeze came sweeping over the white fields. Romauld placed a cushion in the stern seat of the boat and then spread a rubber coat over the cushion. He placed in the boat a dozen wooden decoys and a live decoy drake; and then, laying his gun across the thwarts, pushed the boat away from the rude little wharf, seized the oars and we were off.

With rapid and powerful strokes Romauld sent the light boat flying down the river. "We must try and be the first to reach the cabin," he said, "this is a good morning and there will be many out." Past the black indistinct shore we rapidly sped, past Isle le Noir, with the lonely chimneys of the old ruined fort showing dimly against the sky; out into the bay beyond where the river widened like a black gulf stretching out into the night. Romauld never turned his head, but rowed, as if by instinct, straight to the rushy point where the "cabin" was hid. It was nothing but a rudely constructed blind of sticks, intertwined with rushes, oblong in shape, three-sided, with one end opened to admit the boat.

Romauld first set out the decoys, disposing them in two small flocks with an open space between. While doing this the sound of approaching oars was heard, and presently a boat appeared in the dusk. Romauld chuckled audibly as the occupant of the boat, turning his head and seeing the favorable point already taken, uttered an imprecation in French and pointed the bow of his craft for the next cabin. But judge of our amusement when, as the boatman approached the next blind, a gruff voice issued from the darkness, "Keep off my decoys!" and the belated duck hunter again sullenly shaped his course down the bay.

But now it was getting gray in the east, and objects at hand began to be more clearly seen. We pushed the boat into the blind, took our seats facing the decoys, dropped some shells into our guns, and patiently awaited the beginning of the flight. Nothing was to be heard but the rattle of oar locks from some distant boat and the occasional muffled quack of our drake as he drifted about, now this way, now that, over his shallow anchorage.

By and by, like elfin music away up in the air, we heard the sound of the ducks' wings as the earlier flocks passed over us, far out of sight. "I am afraid they will fly high this morning," said Romauld, shivering and slapping his hands against his shoulders to warm his fingers. Then there was a long silence as we sat waiting for the daylight.

We waited, shivering, for ten minutes, fifteen minutes, twenty minutes. High up in the air the ducks were still flying over, with that tantalizing, shrill whistle of rapidly moving wings. But none came low enough to decoy. Occasionally a gun boomed out of the reeds, but not often. The flight was a poor one.

Suddenly I felt Romauld's hand pressing heavily on my shoulder. I crouched down low upon the gunwale of the boat. Romauld was peeping through a small gap in the blind. I knew by the glitter of his eye that the birds were coming. "Down!" Down!" he whispered. "Now!"

Suiting the action to the word, Romauld sprang to his feet. I sprang up too. A flock of eight or ten widgeons was just whirling over the decoys. The Bonehill cracked—not a feather! Then Romauld's old gun boomed out, and one of the pair fell wing-tipped into the water. Boom! again, and the other duck fell stone dead on the edge of the rushes. Once more the Bonehill cracked, and this time successfully, as the hindmost of the rapidly disappearing flock closed his wings and set the water splashing as he came down. But see! Romauld's wing-tipped duck is skittering off at a lively rate over the surface of the water. In a few seconds it will be out of range. Hastily dropping a shell into the right barrel of the Bonehill I cover the fugitive, and at the report he lies still on the surface of the water.

"Three out of the first flock is not bad!" cries Romauld. "But we must pick them up right off, or the wind will carry them off." We push our boat out from the blind and retrieve the ducks with all dispatch. Then, safely ensconced behind our rampart of rushes, we watch and wait again. Half an hour passes and no ducks. Romauld gets up and scans the horizon on every side. Not a speck against the sky. It is nearly 8 o'clock. We wait another half hour, but not a bird comes near us. Concluding that the flight is over, we are just pushing out to gather up our decoys when two little butterballs come darting around the point. Scarce seeming to notice us, they wheel to the outer edge of the decoys.

"I'll take the leader," I exclaimed. Bang!—bang! The leader keeps right on, but the other is down. Before, however, Romauld can "wipe my eye" I fire my second barrel, and the remaining duck comes down. We now have five birds bagged before breakfast, which is not so bad as we feared.

Hunger insures a quick passage home. And then that breakfast! Shall I ever forget how good it tasted? Bull pouts, fried as only a French-Canadian knows how to fry them; eggs, fried on pork; potatoes, baked; coffee and cream (at least cream is what we should call such milk in the city); rye bread, dark but sweet; doughnuts, and plenty of that same rich, creamy milk to drink. Under the circumstances, I am not ashamed to confess that I outdid even Romauld on the viands, to make up for his superior skill in shooting. As for the general greasiness of the repast, why, take the appetizer that I took, you dyspeptics and people of fastidious tastes, and see how you will be disposed toward grease!

After breakfast the fragrant weed. A wonderful digester is tobacco, when indulged in with moderation and in connection with plenty of outdoor exercise. Then to the boat once more. We rowed down the river three miles, and put out our decoys in front of a blind built parallel with the water and curved in at the ends to conceal the boat. There we sat until 3 o'clock in the afternoon, for the sake of six shots! Romauld was anxious to try the Bonehill, so I exchanged guns with him for the time being. The result was that he missed his first bird and I "wiped his eye." Then he got possession of his own gun again and wiped my eye twice. Two flocks of widgeons came in to the decoys, and one pair of redheads. We got one bird out of the first flock, two out of the second and one of the redheads. Then we hastened home, to carry consternation to the larder again.

With the evening came the most romantic and delightful experience of the day—shooting black ducks by moonlight. Fortunately, the moon was near its full at the time, and as we pushed our boats into the great South River marsh, shortly after dusk, Luna's great round orb was just coming up over the distant hills. South River marsh is the place where thousands of black ducks come to spend the night, flying from the Mississquoi Bay in Lake Champlain, fifteen miles distant. Hiding our boats in the rushes, we waited, Romauld and I in the skiff, Gamash and Joe in the canoe.

Hark! A sound like a heavy wind blowing in the woods. Look out, the ducks are coming, hundreds of them, thousands of them. Like flitting shadows the flocks pass over us in the moonlight, one after another, a long procession of phantoms. We wait until a flock whistles directly over the boat. Then the guns crack, and away off down the slough—so swiftly are the ducks flying—comes splash, splash. Two of them are down. Now lines of fire shoot skyward from the canoe, and we hear a bird drop on our companion's side, 200yds. away. The flight lasts only fifteen minutes, then stops as suddenly as it began. The ducks are all down, here and there, among the rushes. We can hear them quacking and rustling in the stillness of the night. Each boat has had, perhaps, a dozen shots. Some have taken effect, some not; for it is a much more difficult matter than might be supposed, to hit even a flock of ducks flying at more than railroad speed in the deceptive moonlight.

Now to retrieve our birds. Romauld has brought his little black retriever dog with him, for without this valuable member of the party we might as well have shot at the moon, for all the ducks we would have actually brought to bag. But now the intelligent little animal begins his work, half wading, half swimming around the boats. One by one he finds and retrieves the birds, most of them stone dead. Now and then there is a wounded one, which the dog, after an exciting chase, catches and brings in alive. Our total bag for the two boats is nine birds—a pretty good showing for fifteen minutes' sport.

As we row home in the moonlight Gamash sings a French-Canadian ditty, in a weird yet melodious monotone, keeping time with his paddle to the rhythm of the song. The moon sails higher and higher in the now clear and star-sprinkled sky. A light breeze steals across the water out of the northwest. Romauld poises his dripping oars for a moment and says, "It will be colder to-morrow." I shiver apprehensively. Gamash's song has died out with the final chorus, and as the beacon light from the window of our home and shelter shines over the bay, oar and paddle are plied more vigorously. The light craft come gradually together and shoot forward side by side. A few more strokes and we glide alongside the little wharf, and a day's ducking at Martin's is over.

PAUL PASTNOR.

CARIBOU NOTES.—Fredericton, N. B.—Henry Braithwaite, the Canadian hunter, who resides here, says that caribou are abundant within fifty miles of this city, at no great distance from the highway, and that from September to February he can secure one at any time. They are certainly much more plentiful in the green woods on the Southwest Miramichi and its branches than they have been before for a long time. The flesh of caribou which feed in the hardwood forests is much more palatable than that of those which frequent the barrens. These animals change their locations at night when the moon shines bright, but when the nights are dark they travel during the day. During March weather, when the sun shines bright and clear, they become very sleepy and stupid, and frequently lie down and sleep on top of the crust. During the hot summer months they seek the still waters and lakes to get rid of the flies which are then so troublesome. At this time they feed largely on the broad leaves of the water lilies, which grow abundantly in such places.—EDWARD JACK.

FLORIDA BIRD NOTES.

HERONS, EGRETS AND SPOONBILLS.

(*Continued from Page 411.*)

IN the morning we concealed the boat in the rushes, and hiding ourselves in the bushes, began our watch for the spoonbills, which we knew flew over the island every morning and sometimes stopped there. After waiting patiently for almost an hour, a solitary one was seen coming toward the island. As he passed within thirty yards, a charge of No. 6 caused him to reel in the air; but catching his balance, he started to move on, when a charge from the second barrel brought him to the earth. I shall never forget how we admired him as he lay dead, his bright rose-colored wings, delicate pink breast and back, snowy-white neck, bald head and wondrous bill. Many a time have ladies in looking over my birds here exclaimed, "Oh, how lovely you have got that pink bird colored!" The morning sun had just risen over the bay. My companion, tired of his cramped position, arose for a moment to look around, but gave an exclamation and quickly jumped back under cover. On my inquiry of "What's up," he replied, "Keep still, there comes a whole string of those red fellows." And sure enough, about 200yds. to my right, flying very low and headed directly toward us, came a triangular-shaped scarlet line of fifteen spoonbills. But their watchful eyes had discovered him, and they turned sharply off and started in the direction of Rocy Island, another of their feeding grounds. We were now getting hungry and thought of returning to camp. The black-headed gulls were now flying around the island in large numbers, and after each of us had killed three of them, we packed everything in the boat, shoved her from the rushes, hoisted the sail and brought her about. She hesitated a moment while the sails filled, then cutting the waves like an arrow sped over the bay like a thing of life; and in twenty minutes we were landed. After breakfast the cases of tools were brought out and we spent the remainder of the day in preparing our bird skins and fighting sand flies. After replenishing our larder with some prime fish and snipe we retired for the night.

The next morning at daybreak found us busy cleaning guns, loading shells and getting our breakfast. A little after sunrise, having everything in readiness we set off for a day's cruise among the numerous small islands in the bay. The white and brown pelicans had been seen daily by us, but as yet we were unable to procure any. The bay this morning was unusually abundant with bird life. About 9 o'clock we saw seven white pelicans and a large number of cormorants on a small island. The bank on one side being high we saw that by making a long detour we would be able to approach within a few yards. Approaching the island quietly and looking over the bank I saw the seven sitting close together about thirty yards distant. Slipping a couple of shells of turkey shot in the chambers of the gun I fired. There was a loud commotion among the cormorants, and after the smoke cleared we found five pelicans and two cormorants. A pretty good shot if it was a pot shot. Loading them in the boat we once more headed for Shell Point. This time we had to pull with oars as the wind had gone down and there was a dead calm over the bay. We reached camp about noon and spent the remainder of the day in preparing our pelican skins.

The next day our supply of water being all gone, we set out in the boat to find Spring Creek, which emptied into the bay about three miles from our camp. None of us knew the exact place. After running up a number of bayous we at last entered one, and after following it a mile through the rushes came to the timber at the edge of which was an immense volume of water boiling from the earth with such force as to rise several feet above the surrounding water. Running the boat directly over the spring or boil several times we were disappointed to find it strongly impregnated with salt. About 50yds. to the left of this we noticed a large stream issuing from the woods. We followed this for 100yds. and came to a second spring about 50ft. in diameter. There was no current nor movement whatever in this spring and the water was cool and fresh—better than any I ever drank in the wells at Tallahassee. The spring was overhung on all sides with live oak and magnolia trees. On sounding, it proved to be over 40ft. deep. Having a few hours to spare we took the boat and ascended a small stream that emptied into Spring Creek near the first spring.

The channel was narrow and deep and overhung with dark green boughs that formed an arch overhead. A number of ospreys' nests were seen in this neighborhood. Water turkeys, or snake birds, were also very numerous, some sitting on snags or stumps just over the water, and others in groups of half a dozen perched on some tall dead tree pluming their feathers. The pileated woodpeckers could be heard on all sides, making the woods ring with their clear notes. Woodducks, with their broods of young, were seen every few yards, and an occasional heron. The sportsman who wants to shoot alligators ought to visit this place, for on every pile of driftwood, fallen log or muddy bank they could be seen by dozens, from the tiny lizard-like specimen a foot long to the enormous fellows of 10 or 12ft. in length, with their great ugly heads. Some would allow us to approach almost close enough to strike them with an oar before they went down. Cardinal grosbeaks and other small birds were abundant around this stream. At one place a horizontal limb overhung the water, and in this a pair of cardinals were rearing their young. The nest was only about a foot above water. Going down the stream we shot a snowy heron, three water turkeys and a great blue heron. Next day we added more tern and gull skins to our collection, and after spending several more pleasant and profitable days in the neighborhood, one bright afternoon we bade good-bye to the charming place. We had worked hard, but been amply repaid by the number of fine skins we brought away. The bay was rough that afternoon and the waves were just rolling high enough to make it interesting sailing. We were soon near the lighthouse, but shortened the distance several miles by coming through a narrow channel known as the Indian Pass. An hour later we were in the harbor of St. Marks, where we were to stay all night. St. Marks is not the thriving

town it was before the war. It is connected by rail with Tallahassee, twenty miles distant. There are two stores, a post office and half a dozen dwellings. On the north are the immense pine woods, and on the south an extensive marsh covered with rushes stretches away a distance of eight miles to the Gulf of Mexico. A number of spongers stop here daily, and in company with a number of these we spent the evening. We staid up late, as we had one stubborn fact to face, and that was there would be no sleep in St. Marks that night on account of the mosquitoes. All were glad when morning came, for then at least the mosquitoes would leave us alone.

From St. Marks we shipped all our luggage to Tallahassee by rail, as we had to take the boat up the river eighteen miles to the Natural Bridge. A person that has visited Florida and not hunted nor fished in this river has missed one of the richest treats the State affords; and the naturalist too will find here an almost inexhaustible field. More especially do the woods adjoining the river abound in rare and beautiful birds. As we passed up the river that day we saw or heard over 100 pileated woodpeckers, the most conspicuous bird of the cypress swamp. On bright days they make the woods ring with their loud, clear notes, and their heavy rapping on a dead cypress can be heard a great distance. They breed in the largest cypress trees, and commence nesting early in April. Not only are these birds abundant along the streams, but they are often met with in the open pine timber, especially when not nesting. Their bright scarlet crest is often used for a bait in trolling for black bass.

On one occasion while hunting along the St. Marks River I met a man with gun and fishing tackle. He said he was trying to kill a "logcock," to get his top-knot for bait. That "he heerd one poundin' up the stream a half mile, and he slipped up and let him down with his old gun, and when he got him he was the consarndest lookin' logcock he ever seed. He had nary a bit of red on him, and a big white bill." I told him I would give him a dollar if he would get him for me; he willingly consented, and in a short time I was in possession of my first ivory-billed woodpecker, a large female. Many and long were the tramps I took through that swamp to catch sight of the cock, but finally had to give up. I had heard a number of times of another pair of these rare birds that stayed in a very gloomy swamp some miles up the river. I had visited the place a number of times, but it was not until the 8th of April last that I caught sight of them. The pair were feeding on a decayed tree, and were so intent on their morning meal that they did not notice me as I approached carefully through the thick undergrowth. They presented a striking appearance in their jet black suits, with scarlet and white markings. The male was easily distinguished by his beautiful scarlet crest, and he was the one I singled out, as I thought at the report of the gun they would leave. I fired and the male fell dead at the foot of the tree, and the female alighted on the ground close to her mate and made a very loud noise. She too was easily killed, and the trio now adorn my cabinet. The notes of these birds when flying about are very low compared with the notes of other species of this family. It is a simple *pāt, pāt*. No other birds of woods make a similar noise, and the lover of birds who once hears it will never forget it. At one time the ivory-billed woodpecker was found as far north as Illinois, and in the State museum at Springfield is a fine male taken in this State many years ago. This bird if found at all outside of the boundaries of Florida must be extremely rare. I have not heard a single instance of its capture outside Florida for many years.

The beautiful golden-winged woodpecker is very abundant about Tallahassee in winter, but rare in summer. The red-bellied, hairy and downy comparatively common. The red-headed winters principally further south. Few are seen in winter, but during March and April a good many pass through, migrating northward. As we passed up the river that day we frequently saw the water turkey. They breed about the ponds near the head of the St. Marks, making a shallow nest on the horizontal limbs of the cypress, always over the water. Near the head of the river we found the nest of a Florida gallinule containing eight eggs. It was placed in some wild potatoe vines growing on a small island in the middle of the river. It remains in the neighborhood all winter. Its near relative, the beautiful purple gallinule, spends the winter further south and arrives in the vicinity of Tallahassee about the first of April. Just outside the city limits, south of the city, are a number of grassy ponds. Large numbers of them breed here every year. I have often watched them feeding as they walked gracefully about, stepping carefully from one lily leaf to another, their long, slender toes wide spread. Standing on one leaf, with their bills they raise the edge of another, and woe unto the unlucky marine insect that is lurking beneath. Their flight is heavy, very much like the rail's. During the mating season their loud cacklings can be heard for a long way. About these same ponds the least bittern breeds, sometimes making a nest in the low bushes, but oftener in the rushes. I observed the American bittern here also, but don't think it breeds. The clapper and Carolina rails also breed here. The beautiful American egret can be seen here almost any day in the winter. In the spring, as bird life becomes more abundant, I often noticed the water turkey, white ibis, great blue, green, snowy, blue and black-crowned night herons, to say nothing about the numbers of ducks, jacksnipe, killdeer plover, meadow larks and other birds. In the latter part of April large flocks of bobolinks put in an appearance. They feed almost entirely in the oat fields, but whether on the young grain or insects I am not prepared to say. They usually remain about two weeks. Here, at least, little Robert o' Lincoln is not persecuted. He is here known by the name of "wheat bird." Why he should be called that I don't know. Surely if he depended on wheat for a living in Florida he would not live long. If the bobolink escapes the local gunners, another species is killed for the same reason, and that is the red-winged blackbird, which is there called rice bird. I was asked last spring to go with a party gunning for rice birds and could not go. They reported at night with about 100 red-winged blackbirds, and were quite indignant when I told them they were not rice birds. However, they filled the bill probably as well as the genuine rice bird.

Another bird that ought to be protected, especially in the South in winter, is the turtle dove. Here they congregate in flocks of from half a dozen to several hundred, feeding in the cotton and cornfields. Thousands are killed every week; sometimes one man killing fifty or more in a day. I know in this locality (Ogle county, Illinois) there are not one-third the doves there were five years ago. They are not shot here for food, and it must be this promiscuous slaughter in their winter homes that is thinning their ranks. In a country where quail are so abundant as they are in the hill country of Tallahassee, doves should never be killed for food.

The greatest curse to the birds in the South is the negro. He kills, traps, shoots and ensnares any or all kinds of birds—the gay cardinal redbird, the sweet-singing mockingbird, and even the tiny wren all find their way to his capacious game bag and more capacious maw. He uses the old-fashioned figure 4 trap, in which nearly all kinds of our insectivorous birds can be captured while in winter quarters. I myself have known him to capture the following species: Robin, brown thrush, golden-crowned thrush, wood thrush, ground robin, cardinal grosbeak, catbird, mockingbird, ground dove, turtle dove, quail, house wren, and several kinds of warblers. Everything in his eyes is game. He will sit down and relish a thunder-pump fully as well as the finest woodcock, or he will eat a garfish as easily as a brook trout. This is a nuisance that should be stopped. If law making won't stop it, it would be a good plan to try law enforcing. In Tallahassee around the old buildings several thousand purple martins breed every year. Around the negroes' cabins and old plantation houses I often noticed a tall pole, with cross arms near the top, from which were suspended large long-necked gourds, in the sides of which were cut small holes. These are placed there by the country folks for the accommodation of the martins. They seem to enjoy these swinging homes, for none are ever left unoccupied. This bird is called by the negroes the "gourd martin" or "hawk's enemy." The name is very appropriate, as they will not suffer a hawk to be about the premises.

In April, 1886, I visited Lake Iamonia, about twenty miles north of Tallahassee. The lake was dried up, with the exception of a few dark-colored pools and some extensive mud flats. At this time there were several thousand white ibis in the neighborhood, as well as large numbers of herons and other aquatic birds. The ibis were in flocks of from a dozen to several hundreds. They were wild and I only procured one specimen. These birds have a large rookery on the Oclocknee River, two miles from the lake. They were not yet breeding when I visited the place, but commenced several weeks later. Their nests numbered hundreds, and the noise of the birds could be heard a great distance. Wild turkeys are abundant along any of the heavily wooded river countries. There are a great many species of birds common about this locality I have not mentioned, and a great many I expected to find abundant either were not seen or were very rare. Those three attractive birds so common in most parts of the North were only noticed once or twice, viz.: the Baltimore oriole, scarlet tanager and rose-breasted grosbeak. The orchard oriole, summer redbird, kingbird and redwing blackbird breed abundantly. The naturalist or collector visiting Florida will find as many interesting birds in the neighborhood of Tallahassee and the adjacent Gulf coast as anywhere in the State. A boat is something that can not be dispensed with. A tent is not needed, as the palmetto is everywhere abundant, and a tent equal to the best canvas can be constructed from its leaves in a short time. The naturalist will not find it all sunshine, orange groves, islands teeming with beautiful birds and beaches strewn with shells. He must make up his mind to endure any or all hardships that come in his way. He will be called upon to undergo thirst and fatigue many times. He will have to endure the pests of the many noxious insects that infest the State, from the tiny red bug and jigger to the sandfly and mosquito. Or perhaps it may be his lot to be on the dark waters of the Gulf of Mexico in a small open boat tossed about all night by the wild waves. But barring all this, there is a fascination about the place that binds one to it so strongly that he will willingly face the perils of land and sea so he can enjoy the rest.

FORRESTON, Ill.

GROUSE NOTES.

Editor Forest and Stream:

My second hen grouse began laying on the 17th inst., in the nest which the other hen had previously made. The hen which first laid began sitting on the 24th inst. This morning I found that the laying hen had taken advantage of her companion when the latter came off to feed, and had taken possession of the nest for the purpose of increasing the stock of eggs. Accordingly I picked her up and placed her in the adjoining coop with the male bird, where in a bunch of oak leaves fixed for her in a corner, she promptly made a new nest and went on laying as if nothing had disturbed her. On examining the first nest I found that the sitter had fifteen eggs under her, but suspect that perhaps two of them were laid by the second hen after the first had begun sitting. It seems a little remarkable that while both these birds come from the same locality, the eggs of the second hen are pure white, and very much larger than those of the first, which are cream color.

In 1885 my Ohio grouse hen (which was without a mate and laid sterile eggs) began sitting June 5. Last year the same hen, having been mated with a Canadian male, began sitting May 29. This year the Pennsylvania hen was four days earlier. As she has both her own eggs and those of her companion, she has a double chance of bringing out chicks.

TOLEDO, O., May 27.

BRUIN'S CUNNING.—One trick that bruin sometimes resorts to for his mutton evinces deep cunning. Finding a sheltering bush or hedge near a frequented path, he lies in ambush with great patience until a victim passes. On its approach he rises erect and at the right moment his powerful paws bring it to the earth, when his jaws instantly sever the neck bone. In this way he sometimes makes way with young cattle and colts and even cows. He will never feast where he kills, but drags his quarry to some convenient thicket and usually tarries in the vicinity until it is consumed. I recall an instance when a bear thus killed a fair sized cow and dragged it some two hundred yards to cover. On his next visit to the carcass he fetched up in a steel trap.—WARFIELD.

THE TRAVELERS, of Hartford, does not have to rely on "growth" for the security of its policies; its surplus of $2,089,000 is a sure foundation.—*Adv.*

Game Bag and Gun.

A TRIP AFTER PHEASANTS.

WHEN my friend J. Cope, of West Chester, and I arrived at White Haven, Pa., we found Bob Mason waiting for us with his buckboard. He was glad to see us, and after a ride of two or three miles we reached his house in time for supper. "Pheasants," he said, "are as thick as hairs on a dog's back."

Monday morning we started off with Bob to Spring Run. We had hardly made our way into the thicket before we heard the welcome sound of whirring wings. "Look out, Dick!" But John was there, and he cut the flying game's career short. Two more made a bee line for the swamp. It was a snap shot for both of us, but each scored a clean miss. We continued down Spring Run, when Bob let loose and yelled at the same time: "Look out, boys!" John was on the right and I on the left of him. John let out but missed with his right barrel, though he brought him down with the left. While waiting for Bob to come up, I took a few steps, and almost from under my feet flew a pheasant; up went my gun and down he came, my first bird. So I, too, let out with my lungs in full blast. We walked on to the teaberry patch, put up four or five more, and made three misses, when Bob called out again: "Look out, boys!" One, two, three, four, would they never stop? five, and not one shot. "Where are you, boys?" came from Bob; but the birds made a beeline for the tamarack swamp, so we missed them. Thereupon Bob said: "Let us go to dinner."

After dinner we started out again toward the tamarack swamps. Soon after getting over the fence up went a fine bird and up went three guns; and there followed three reports. But the feathers went on with the bird. Philosopher Bob explained: "You fellows ate too much dinner." On we went and up rose another bird; but his shrift was short; John's aim brought him to the ground. Another bird rose to the left of me. I pulled on him and brought him to bag. Near the edge of the swamp in some pines two birds whirred up. Bob missed, I followed him, but John brought one to the ground. In the thick ferns John put up one and missed it; we marked the bird down at the head of the swamp and pushed after him, but could not find him, so turned our steps toward the house.

As we came out of the woods into Bob's field up went two pheasants. I covered my bird true. Bob took the other, but missed. He said the bird was going "like a streak of gimlets"—a great word with Bob. We returned to the house, put the guns away and counted the day's trophies. Seven in all, four for John and three for myself.

The next morning John and I repaired to Spring Run. In a buckwheat field we flushed three pheasants. I brought one down; John missed his. We marked them down in some oak brush; soon put them up. I made a clean miss with both barrels. They flew toward the Big Creek and we followed; soon put them up, with two more. John fired, missed with the right barrel, then cut him down with the left.

We walked down to Big Creek. Two more were flushed, but neither of us got a shot, for the laurel was very thick. I knew the cover, and knew that we would soon be out into more open ground. We were driving the birds ahead of us, and we had not gone far before an old fellow started from some logs and startled me; but I turned around quickly and shot, missed with my right barrel, but with the left broke his wing. We had a great time finding him, but at last I saw him under a log. Putting up three more, we lost them; they flew toward Spring Run, so we concluded to leave them and go across Big Creek. Soon we had four or five in the air, but both of us missed. The birds flew to Graham's swamp, on the edge of which we flushed them again. John shot one but could not find it. I missed. Now we crossed back to Spring Run on the way back to the house for dinner, put up another, and John gathered in. Two or three more were flushed before we reached the house, and both of us made quick shots into the alders, but the birds went on their way.

After dinner we set out toward the tamarack swamp and missed four or five shots. When we came near the teaberry patch, John started two up, but missed them. I had better luck, bringing one down. We found them very wary, much given to hiding behind bushes and trees. We pushed on, raised one, and John brought it down; then flushed two more, and missed seeing one of them. Seeking the woods, where it was more open, just before reaching the top of the hill we flushed one, and I pulled on him, but did not know whether I hit. John also shot, and when I came up to him he handed me the pheasant, saying it was mine. We started toward the house and scared three or four more on our way, but missed them. I had just stepped into the road, when a pheasant came out, and I sent a load after him which made the feathers fly, but he kept up his speed. I marked him down on the edge of the field an eighth of a mile away, and found him dead. This made our score eight, or fifteen for the two days.

Soon we hear Bob coming, so we go out. We started out in the morning, five in number, John's two brothers T. S. C. and Allen having joined us for the next three days and a half, going from one to two miles away from the house up Pond Creek, then up on Green Mountain, down in the valley alongside of Buck Mountain, at last down to Morrison's. We always came back to the house hungry as bears. It was astonishing how we would make the buckwheat cakes go, but Mrs. Mason said it did her good to see us eat. At the end of the week we counted 48 pheasants and 2 woodcock. John 17, T. S. C. 17, Allen 3, Bob 1 and the tail of one. This one he shot at while it was on the ground, and it flew away without a tail, so that we all had a good laugh at him. I shot 10 pheasants and two woodcocks. So ended our week's shooting.

FRENCH.

PHILADELPHIA.

VIRGINIA GAME.—Warrenton Junction, Va., May 25.—There is plenty of game left in this locality. I never saw so many quail at this time of the year; there are also plenty of wild turkeys; one man told me of seeing three large flocks of young ones in one woods. About two hundred were shot here last winter.—W. H.

SOUTHERN CALIFORNIA.

NATIONAL CITY, California.—Our game season has closed with more than usual success attending our efforts. Ducks have been very plentiful here, and the flight of geese has been unusually late. Mr. Geo. Beermaker, of this place, and myself bagged some forty-three ducks in one hunt on the Tia Juana during last month, while Mr. Mercer, Mr. Chick and myself brought in twenty-seven from an afternoon's shoot at the same place three weeks ago.

The boys are busily engaged at the trap to-day and have been for some time past preparing for a tournament, which will come off in the near future.

Some of the most successful hunts of the period were made during the past season, a number of the boys going up to the San Luis Rey Valley and on the Santa Margarita (the home of geese) at different times, and having great sport, besides shipping home great quantities of game.

I took my wife on one trip to San Luis Rey Valley and spent ten days in the field, camping out and enjoying it as only the California camper can. I found a jack snipe ground just back of the Mission San Luis Rey, covering about ten acres, which contained thousands of the game little bird, but having all my shells loaded for ducks and geese, and not being able to get any small shot nearer than Oceanside, distant about five miles, I had to let them go. But I went back there with Morgan the week preceding Christmas and then had some royal sport.

Morgan and myself arrived in the valley with my horse and hunting wagon on Sunday night, the 20th of December. After hunting all over the valley for three days and meeting with indifferent success, having bagged less than a hundred ducks, we determined to "beard the lion in his den" and go up and interview Mr. O'Niel at the Rancho Santa Margarita, distant three miles. Mr. O'Niel, the manager and part owner of one of the finest ranches on the coast, has been bothered so much by marauding sportsmen (?), who burnt his fences, shot his cattle and destroyed property generally, that he has determined to stop any and all shooting on the ranch, and has posted it and advertised it thoroughly. Those who defied him and dared to hunt without permission met with such a reception that the ranch very soon acquired an unenviable reputation for hospitality. It was, therefore, with considerable trepidation that we ventured to "take the bull by the horns."

However, we ventured it, and after a short parley Mr. O'Niel's son Jerome, the senior being away on business, very kindly accorded us the privilege of driving up to the laguna, as it is called, and spend the afternoon. To say we were delighted would hardly express our feelings. Up the valley we drove and camped at just 12 o'clock. After lunch we went over to the shores of the laguna and could see thousands of ducks and geese resting on the shores and on the surface of the water. It seemed a pity to disturb them, but our fingers fairly ached to commence pressing on the triggers, so we separated, Morgan taking the right and I the left banks of the lake. The laguna is about a half mile in width and it was very hard to get the geese in motion.

As soon as we commenced shooting, however, the fun waxed hot, and for about two hours we kept up a continual fusilade, and when we hauled off for repairs and proceeded to gather up our game we counted seventeen fine large Canada geese and a trumpeter swan, besides nine mallard and canvasback ducks. We felt satisfied indeed, and proceeded to pack up and get ready to make for San Diego, distant some fifty miles. It was then Wednesday night, and we had promised our respective wives to be sure and be home by Thursday night, Christmas eve, and it was worrying us to know how we were going to keep our promises. Finally we decided to leave my team at Oceanside and take the train for San Diego the next day, which would bring us home on time.

On arriving at Oceanside I found a friend who was intending to make a trip to San Diego; so I prevailed upon him to take my outfit in with him, thus relieving us of the responsibility. Here occurred a little incident which shows the intelligence of man's best friend. My old setter dog Trix had been with us during all our trip, and when the team left Oceanside we forgot to send him along. When the train pulled out from Oceanside on Thursday afternoon at 3:30, my old dog was left on the platform. After the train had gone perhaps a couple of hundred yards, I missed the dog and ran to the back platform onty to see him standing on the platform of the station looking after the train. To seize my whistle and give it a blast was the work of an instant; and the old dog ran down the steps and after the train. It is needless to say that he was soon left far behind the train. I gave him up for lost and speculated as to what farmer would get him, for it never struck me that he would find the way home, as it was forty-five miles to San Diego and over a road that the old dog knew nothing about. Well, I got home at 6:30 that evening, tired and hungry and worried about my dear old hunter, and wondering if I should ever get him again. Feeling fatigued I went to bed about 8 o'clock, and very soon fell asleep; but I was awakened by a noise at the side door at 11:30. Getting up, mentally blessing the disturbance, I opened the door and—in walked old Trix, wagging his tail. The dog had run that forty-five miles, over a strange road, following the railroad track, and had made it in a little over seven hours. I just put my arms around his neck and hugged him.

We had enjoyed this hunt so much and talked so much of it that the next week Mr. Will Francis and Walter Morgan took the train and spent another week there, doing even better than we had among our feathered friends. We propose to make a grand hunt in the vicinity of Warner's Ranch, some sixty miles southeast of here, said to be a grand hunting ground, during the coming season, and you may watch for a report thereof.

Our sea fishing has fairly commenced here now. The run of sea, or silver trout has commenced, and some fine catches of halibut have been made, both at this wharf and San Diego. A young man landed ten fine halibut in one day here from the railroad wharf, and the catches of croakers, smelt, rock, cod, etc., have been very large. I invested yesterday in 100ft. of oiled silk line of the largest size, and feel prepared now to land anything that "catches on." Mr. Francis hooked and succeeded in unhooking one of the largest halibut I ever saw yesterday, far exceeding in size the one you published a cut of a short time ago, and which was killed by D. B. Hinman, of this place, although that was a magnificent fish and reflected great credit on the angler who landed him, for the superb manner in which he handled so large and powerful a fish with so light a tackle.

Our fishing season here comes in just right to keep the sportsman occupied. Our game season closes March 31. The fish commence to run about April 30, and keep it up until about September 1. So from hunting we go to fishing, and don't lose any time either in making the change.

San Diego city has grown so remarkably fast that one can hardly realize it, and we meet sportsmen from all over the world now, while a year or two ago perhaps fifty of the fraternity would pay us a visit during a season. Our population in 1885 was 4,000, while in December, 1886, the census taken showed a population of over 12,000 people, a gain of 8,000 in twelve months, and the city is still booming. Town lots which two years ago were sold for $150 each, bring to-day $2,500 apiece. This is no exaggeration, as a look at our statistics will show. Our old hunting grounds in the near vicinity of San Diego are now under cultivation and fenced and posted. All our old duck grounds are being surrounded by dwellings and fences, until next season we expect to be compelled to go twenty miles or more to get a respectable day's sport.

National City is fast keeping pace with her sister city, and is doubling her population about every year, while fine buildings in the course of erection show the march of enterprise and energy. With the influx of immigration I hope it will not be long ere we can organize so as to be able to protect our game in this section. As it is, the birds have no protection whatever. It is only a question of time, however, for as the sportsman sees the increasing scarcity of game year after year, he will take alarm and do as they have had to do throughout all the Eastern and Western States. Let us protect the game while we can, for although quail here are considered a pest, at the rate the farmer destroys them by poison every year it will not take many years to make them a thing of the past. I have known cases within 18 miles of San Diego in which the farmers poisoned a spring and soaked a half sack of wheat in squirrel poison and killed thousands of quail weekly in order to protect their raisin and grape crops. It is no unusual thing here to bag 150 birds in 10 hours' hunt, so you can see how many there are and have been in this lower country. Three market hunters killed and shipped to the San Francisco market (in round numbers) 65,000 quail during one season.

But that day is past and new arrivals who are looking for homes with us are fast clearing up the land and killing off the birds, so that where we had thousands a few years ago we have hundreds now. AD. B. PEARSON.

A DAY IN A DUGOUT.

HOW delicious is the early morning as we push the canoes off from the bank and settle ourselves for half a day's paddle down the river and over the second Squatook lake. The breeze pushes aside the branches overhanging the stream, and allows the lights and shadows gaily to chase each other over the rocks and under the banks. Approaching some rapids, the guides grasp their iron-shod poles, and standing in the stern, deftly direct the canoes from off the rocks as we leap on down through the water, foaming white with its race. Entering the quiet and glassy pool beyond, the reflection is so perfect that we seem to float through waving tops of trees and drifting clouds. Coming quietly and quickly around a bend, we surprise a huge blue heron, which standing on the bank, rank with brakes, watches the water with hungry eyes. As he rises his wings, legs and long neck each seem to start at first in a different direction, and the saucy Canada jays (how faded and colorless in comparison with ours!) yell in derision at his unmannerly departure. Drifting around into a clear stretch of water, three huge ducks are seen winging rapidly toward us. Two of them see us, and porting their rudders, disappear over the trees. The third comes hurrying on, and mounting quickly into the upper air when too late, is easily cut down, and pitches headlong into the water within reach of the second canoe.

Snap! crash! and some animal plunges back from the bank a little ahead of us on the left. We paddle quickly down to where a tiny brook pushes out a bed of white sand and pebbles, and see the hoof marks of a caribou. Just my luck! Why did not that duck follow his brothers over the trees and allow us the chance of seeing the owner of those hoofs?

Entering the broad expanse of the lake, shimmering with the glare of the sun, we leave the guides with their tireless paddles to push the snaky dugouts through the ripples, sink back on the balsam boughs heavy with the sweet breath of the forest, and are lulled by the water swashing against the sides. The steady dip of the paddles grows fainter; the busy hum of nature wings itself away; the glare of the sun softens, and sinking softly, slowly, sweetly.

"Hush!" whispers Maxime, as I start up in alarm, the canoe coming to a sudden stop just at the mouth of the lake.

"What's the matter?" I ask, seeing the guide's excited look.

"There's something in the water round the bend, and—there, there it is again."

Dip, splash, ker-flop, went the "something" in the water, and thump, ker-thump, answered something else in my throat, jumping around in its endeavor to get out of my mouth in an alarming manner. I grasp the rifle—my hands trembling with excitement—and whisper to Maxime to go ahead.

With noiseless stroke he sweeps the canoe along, and gliding around a bunch of willows, we see a bear, standing up to his shoulders in the water, splashing about to cool and rid himself of the swarming flies. There stood the huge, sun-burned fellow, the first wild animal of any size I had ever seen, not more than 70ft. away and totally unconscious of our proximity. I shall never forget that moment!

It seemed as though I could touch the bear with my rifle he was so near and so tremendous. The moment I raised my gun the bear disappeared, and instead the trees, sky and banks skipped about the heaving barrel in a mad dance. Raising my head—the bear was still there enjoying his bath. I tried again, but the gun would not keep still. A cold perspiration covered me; I suffered agonies.

"Why don't you shoot?" breathed Maxime, in an agonizing whisper.

In my desperation I tried once more, and seeing both the bear and the gun at once, fired.

"I've got him, I've got him," I shrieked with joy, as the bear tumbled over backward in the water. I nearly capsized the canoe in my excitement and—great heavens! he was tearing through the water for the shore.

"Shoot, shoot again," yelled Maxime. My trembling hands seemed palsied as I attempted to push in another cartridge. Just as the bear was scrambling up the bank the other canoe came up, and a charge of buckshot was placed where it only tended to assist the agility of the beast, and he was gone. I was thunderstruck. How could I have missed him? There he was almost within reach of my gun, and now tearing through the underbrush a mile off probably. We landed and found a few drops of blood on the leaves where he had galloped through the bushes. Walking back to the canoes we paddled slowly down the river. What a great change had come over everything and everybody. Maxime gave a sharp, decisive little thrust to his paddle at the end of the stroke that sent the water twisting and sucking behind in a frothy, disgusted way. The other canoe exchanged the shotgun for the rifle and took the lead down the river. In disgust I sank back upon the balsam boughs only to find them dry and cushionless. The mosquitoes and flies buzzed about in the most assiduous way. The sun glared down derisively, and the shadows mocked me as they danced down the stream ahead of us. Closing my eyes, there stood the bear leaning against a tree, his huge sides shaking with laughter, and his claws wiggling before his muzzle in a very undignified way, and—. Well, I have had better luck since. F'LIN.

DEER DRIVING.

"GET ready by one o'clock to-morrow, for I have written to our friends Crickett, Tom, Bunk and one or two others to meet at our usual camping ground at sun down. Old Hamp Baldwin will be along with his antiquated long muzzleloader to take care of the dogs and make the drives; and that blab-mouthed nigger Sam Crafford has agreed to go and carry with him his pack, some of which, he says, are "famous" for deer.

That is just what Teceel said to me one day about the first of November, 188–. At the appointed hour I was at the meeting place. It was not an outdoor camp with only the shelter of boughs and dirt, or even canvas, but a camp made of scantling, plank, sills, sleepers, joists, rafters, flooring boards and shingles—in plain English, a house. In it were several plain bedsteads, mattresses on springs, chairs, tables, lamps and candles, buckets, plates and cups and saucers.

"The storm without might roar and rustle,
We would not mind the storm a whistle."

The following morning, before the sun had rolled his fiery chariot to the eastern hilltops, we were all out of bed and by the aid of Hamp and Sam had prepared our morning meal.

Breakfast being over the horses and buggies were brought out and we started off to occupy stands on the Job's Creek drive, our old hunting companion, Calvin Mc., having agreed to meet us at a certain point. When we reached it he was there and he gave full directions to Hamp and Sam how to manage the hunt. It was not a great while after we got to our stands before we heard the hounds. Nearer and nearer they came, and in a short while the clear ring of Teceel's little gun was heard. Then his shrill horn filled the atmosphere with its melodious cadences, and the cry of the dogs was hushed into silence. We knew what that meant. A forked-horned buck fell before his almost unerring aim. This was disposed of and off we went in quest of other deer.

Going over to Adams's Creek we were duly posted, and Calvin, Hamp and Sam took charge of the dogs. It was a long, and as we found, a fruitless drive. Calvin came up to where I was standing, and told me that though he had seen signs, and the dogs trailed some, they could not start. While we were talking we heard the dogs in full cry about a half mile to the north of us, and then both barrels of Hamp's and Sam's guns, they having followed the dogs. We separated so as to be about fifty yards apart. I had my setter dog with me, and he was so frisky that I found it hard to keep him quiet. At length I saw approaching, on a line toward both Calvin and myself, a doe and two well-grown fawns. But for my frisky dog they would have passed within twenty yards of me. They saw him, however, and turned off, passing me about fifty yards. At least the doe did, while the fawns were at much greater distance. I discharged my 14-bore at the doe, but she went on and fell at the crack of Calvin's big muzzleloader. Then in sheer desperation I fired at one of the fawns, fully eighty yards off. But he did not stop. My setter became uncontrollable and entered the chase by sight. We went to the doe, and found that she had been hit with only one shot, and that was not from my gun. The setter was still absent. Calvin remarked that he believed I had hit the fawn, for it ran like it. In about twenty minutes my dog came back. Inasmuch as he never was out of my sight more than five minutes, I concluded that he had either run until he became heated and was cooling off, or had found the deer. We examined his mouth, but saw no blood nor hair. I saw a drop on his ear, and ascertaining that it was not wounded, I told Calvin that the dog had caught the fawn. Taking an old hound with him which had come up, and holding him by a string, he set out. In less than fifteen minutes he returned toting the fawn. The dog had caught it in a straight course of about a quarter of a mile, and proceeded to recompense himself by a liberal bait from the hind quarter. It had been hit with one shot only, and that struck its hind leg, breaking it about the ankle. Who was entitled to the hide, the dog or the sportsman? One or two other drives were made, and though in all we started deer, no one got a shot except Sam, and as usual he missed. Then "the hour approaches, I am maun ride," and we set out for our resting place. When we got there we found our old friend Dit, who could not come along with us.

The following morning we had some elegant venison steak, and this and the coffee (we always have good coffee in our hunts) were eaten with great relish.

The following day Teceel and I took our setters, and with plenty of shells, concluded that we would divide the sport by going into some neighboring fields and see if we could not bring home some birds. The others went to the Crouch drive and the Rocky Fork of Naked Creek. Calvin went with them. When they returned at night they

brought with them a small buck, which Bunk killed; a large gobbler, which dropped before Crickett's gun, and a fox squirrel, which was Tom's trophy. They had started several other deer, and Hamp and Sam shot. Dit saw a big buck, but he was beyond the range of old "Broad Horns," and he saved his shells. Teceel and I were at the house getting supper ready for the other hunters. We had gotten 39 birds, of which he justly claimed 25. He always beats me, and as for that, everybody else with whom he hunts, regardless of the size of the gun which his competitor uses. He shoots a 16-bore, choked at that.

The next morning the hunt was declared ended, and "each took off his several way." We had had a pleasant time, and were not luckless. WELLS.

ROCKINGHAM, N. C.

DAKOTA GAME.

A NEPHEW of mine who, with his brother, is making a farm in central Dakota, near Bismark, thus writes of the animals of that region in April last: "We have seen large numbers of swans this spring. Wild geese, especially the snow goose, are very abundant, as are most kinds of ducks. The avocet is quite common here in summer, a bird which I never saw near Chicago. We have a few ravens. The turkey buzzard is seen here occasionally, though it puzzles me to say what they find to eat; also we have the prairie or burrowing owl. We have not the prairie hen or pinated grouse, but the sharp-tailed grouse, a species nearly allied, are abundant, very tame and unsuspicious, and are slaughtered by the pot-hunters in a very unsportsmanlike manner. We have no prairie dogs or rattlesnakes. The place of the prairie dog is supplied by the gopher (*Spermophile*), which swarms about the grain fields and does great damage to them and to gardens. Their natural enemies are the buzzards and badgers.

"Large game is scarce. The buffa'o, once so abundant here, are all gone, and nothing is left of them but their bones, which are being gathered up and shipped East by the carload. The antelope is fast following the buffalo to extinction, and their fleetness will not save them. They are beautiful animals and their flesh is considered better than venison. A pair of them came within a quarter of a mile of our 'shack' last summer. People say that last winter was an exceptionally severe one, and I hope it was." S. C. C.

HE WANTED THEM TO SHOW HIM A BEAR.—Los Angeles, Cal. It happened thus: Three of us went hunting for large game in the Rio Honda, twenty miles from San Jose. The party included a "tenderfoot," who was loud in praising his own prowess as a hunter. He wasn't afraid of anything from a jack rabbit to a grizzly. We looked around for bear signs. Sure enough here were signs of fresh tracks up the mountains. All grabbed rifles and started in pursuit. We must have gone about three miles when we came to a thick clump of mosquito bushes and by the way the dogs acted we knew we had our game. We tried our best to get that bear out; threw stones, yelled and "sicked on" the curs, but to no avail. At last it was agreed that Tenderfoot should climb a small tree and try and get a shot, while H. and I were stationed in front to shoot if he made a break. He broke. No sooner had Tenderfoot showed himself than old Grizzly made a rush at us. We let him get in good range and then let fly. A convulsive shudder and he tumbled dead almost at our feet. But where was Tenderfoot? Alas, he had fled at the first charge, and when H. and I went back to camp he was hitching up to go for help to bring back our mangled remains.—C. B. W.

PENNSYLVANIA QUAIL SEASON.—Columbia, Pa., May 29.—The list of bills recently rushed through the Legislature toward the close contained one which amended the game law pertaining to Virginia quail so that it is illegal to kill that game between the 15th of December and the 15th of October. That gives but two months for sportsmen who have kept their pointers or setters the other ten months to enjoy themselves in the field. I think as the open season stood, from Oct. 15 to Jan. 1, it was in no wise too long, as we seldom have any snow worth speaking of that would injure the quail or make them easily captured before Christmas or Jan. 1. It closes, too, our Christmas sport, which so many in different pursuits of life look forward to when they can return from the cities to spend the holidays.—ONOJUTTA.

GUN SPOTS.—"Eternal vigilance is the price of" bright gun barrels. I thoroughly clean my guns the day they are used before retiring, using white cotton flannel swabs with oil, wiping out till no stain is left, finishing with a slightly-oiled swab. I use bear's oil, preferably; but coon or skunk oil is good. I prefer animal oil, as it is limpid and is rendered by great heat, thus evaporating all water. At the close of the season, in cleaning to put away, after the usual thorough wiping out, I use a dry swab till no stain or oil is seen, then swab with mercurial ointment, plug the muzzle with a sound cork, place in a canvas cover and put away in a dry closet where woollen clothes are kept, and when the season comes round again I find the inside as bright as when put away.—WARFIELD.

CAMP FRYING-PAN.—When I go "roughing it" I use a frying-pan fixed thus: Remove original handle and plug superfluous rivet holes, drill two holes 1¼in. apart, near the top of the rim on opposite sides. Usually one of the rivet holes can be utilized. Take for a bail tough iron ⅜in. wide, ⅛in. thick, split the ends 3in. and fashion the ends to fit the holes easily; turn outward at right angles ⅜in. and bend on a circle to match the rim of the pan with a ring 1½in. in diameter, riveted on top in the center. Fit the bail so it will require a little pressure to adjust or remove it. When packing the kit the bail fits close to the outside of the pan where the space could not be utilized for other things. I have tried various methods, but was never suited till I devised this.—WARFIELD.

NEW YORK CITY, May 18, 1887.

The U. S. Cartridge Co., Lowell, Mass.:

GENTLEMEN—I wish to thank you for the very excellent shell you are putting on the market. I refer to the "Climax." *I swear by it*, not at it, as I have had to do with other makes. It has given me unqualified satisfaction ever since I first began to use it, and that is since its introduction. Don't allow it to deteriorate, and sportsmen will call you "blessed." Very truly yours,

—*Adv.* (Signed) C. W. CUSHIER.

RIFLES AND BULLETS.

Editor Forest and Stream:

In my opinion, there are too many vital questions yet unsettled, pertaining to the modern rifle, which are open for discussion and ventilation, and which can be most profitably argued upon, to waste time, talents and good printer's ink in writing up the muzzleloader. I am free to admit that some of these articles, diagrams, etc., are very interesting. So would be an account of the long bow, the cross gun or any of the arms used some centuries ago. Yet as interesting as these accounts are, I do not think any one would for one instant desire a return to the use of these arms. Yet the modern breechloader, with its fixed and waterproof ammunition, is as much superior to the old-fashioned muzzleloader, with its loose powder, ball, patch, cap and ramrod, as that was superior to the matchlock and other queer firearms which first came into use when gunpowder was invented. Of course I am writing now of the rifle as used for hunting purposes, but I am not inclined to yield to the superior qualities of the muzzleloader as an all-round target gun. However, I will let some more able exponent take up the lance in behalf of the breechloader as a target rifle, though I think the past record of the arm in all matches, especially long range, has been such, that no champion need fear he has a poor cause to fight for.

What we need at present is open and fearless opinions on our modern arms and their ammunition. We have some very able writers who are doing much to assist and educate those who are looking for a good rifle and the proper proportions of powder and lead and shape of ball, etc. Witness the tests for trajectory and other experiments which have been recorded in the FOREST AND STREAM and other journals, by that very successful hunter and rifle expert, "P." Here is what we want, actual experiments with field guns and results on game. It is hardly necessary to mention the very exhaustive tests made under the auspices of the FOREST AND STREAM, which taught many very useful lessons and more wholesome truths, proving that the ammunition used generally was not the thing for good shooting, and that there, more than in the arms, was a great need of improvement.

This is a fast age and everything has the same tendency, therefore it has been that the repeater has gone rapidly to the fore. The main idea seemed to be not how accurately a bullet would fly, nor what execution it would do if it did strike the object, but to see how fast bullets could be sent flying through space; even if they flew wild, some might by chance strike the game, and a good many bullets would possibly kill, if one did not. The repeater no doubt is a very useful arm, and if such a one could be made as one would like, it might be preferred to the single shot, but so far that repeater is not on the market, and it is doubtful if it ever will be. There have been many improvements since the old Henry and Spencer guns, and to-day some of the repeaters lack very little of reaching the desired pinnacle of success, but even if it is little, they fail to "get there." In the matter of single breechloaders, I think all candid and unprejudiced riflemen, who have any extensive acquaintance with the system, will admit that there has been no improvement on the old Sharps. Here was a system that was safe, reliable and positive. No springs upon which depended the manipulation of the arm, to get out of order or break, unless we count the mainspring, which, of course, has to be used in some shape in every gun. No working parts exposed to the weather or to dirt and dust, but a gun that would stand all manner of hard usage, weather and abuse, and yet be what the trade mark said—the "old reliable." It has often been a source of wonderment to me that some of the many gun manufacturers did not continue to place upon the market rifles built on the old Sharps system, with outside hammer. It might not pay to run a factory for this exclusively, but in connection with their other models, the extra cost would not be so great for any manufacturer. If the friends of the old Sharps will come to the front and agitate this matter, some enterprising manager may be induced to try the experiment.

In the matter of ammunition there is much to be desired, even more than in the rifle line, as there are makeshifts on the market which have some of the needed points, but there is but little, if any, just such fixed ammunition on the market as is needed for a hunting arm, that can be called first-class. Why is it? Because the sportsmen of our country do not demand it. Let me quote a few lines from a recent letter received from that rifle expert "P." who has kindly given the writer some information in regard to the ammunition he uses. He writes: "I note what you say in regard to patched bullets, and your desire to have me 'prod' the manufacturers for not preparing patched ammunition. I have been doing that for several years, but I notice I never get any help from other riflemen." Brothers in the craft, let us help "P." "Of course they will make canellured ammunition as long as they can sell it, because it is all loaded by machinery and much more is shot away than if it were patched. The only way to bring about a change is to get up such a public sentiment among rifle men as to force manufacturers to supply a demand for the patched bullets. The factories are going to stick to the naked bullets because they can be loaded by machinery, whereas the patched ball cannot. Yet they are charging just as much, or more, than the patched ammunition would or should cost. In regard to the quick-burning powders, the dealers don't know much about it, if it is their opinion that slow-burning cheap FG powder is more effective. Their interest, of course, lies in the cheap FG powders. In Great Britain there is no other powder used for .40 to .50-cal. rifles, but one of their quick powders, the Curtis & Harvey No. 6, is almost exclusively used, and it is considered the standard for their sporting rifles. Using a light bullet you require a powder that will upset it. The Curtis & Harvey No. 6 is not only 15 to 20 per cent. stronger than any American powder I have tried, but it is cleaner and better in every way for a rifle."

These are "P.'s" sentiments, and most all will have to admit that he has had practical experience enough to make his opinion of some value and weight in an argument on this subject.

I do not think that any rifleman who has used naked and patched ammunition, or who has seen them both used under the same circumstances and conditions, will deny that the patched bullet does the best work.

In 1874 I was on the plains with a professional hunter after buffalo. He used a .44 cal. Sharps with patched bullet; I used a .50-cal. with naked bullet. Here were two rifles of the same make, and though of different caliber, otherwise, as regards rifling, etc., the same gun. The .44-cal. shot a few more grains of powder and less lead, and there was no comparison between the two rifles, the .44 being much superior, both in accuracy and execution. Considerable of the shooting was done at long range, and some very rapid firing was also done. The patched ammunition was superior in every way. We also did not find any trouble with the patches becoming torn or out of place in the belt, and things were not handled very carefully, either, and when it came to reloading shells it was very little more trouble to use the patched ball. So the cry that patched ammunition is not good for rough usage, or requires too much care, is of no moment.

A friend took an extended tour the past summer through the mountains of Idaho, where everything was subjected to the roughest handling, and he carried patched cartridges in his belt all the time, and I saw some of the cartridges afterward and they were in good condition.

We now come to the comparison of light and heavy bullets and large and small powder charges. It really is a matter that admits of no argument, for the facts have been so plainly proven during the last few years that there can hardly be any one so obstinate as to deny the superiority of the express cartridge. Even the manufacturers, the last ones to see these things, have admitted that there is something in it, by putting upon the market so-called express cartridges, but they lack the essential yet. Why will they not "put their ears to the ground" and heed the coming demand. Let us have a genuine express cartridge, powder, bullet and all. The novice, as well as the veteran, will do better work with express charges. Especially the novice, for with a rifle that sends its ball nearly along the line of sight, there will not be as many unaccountable misses as with one that sends the ball a foot or more high at 100yds., when shooting at an object 200yds. away. I fancy there is more game overshot than undershot, and when most sportsmen have to raise their sights, their shooting is not very accurate. A rifle sighted for 150yds. and shooting an express charge will kill more game in the hands of ninety-nine men out of one hundred than a rifle shooting small charges of powder, heavy bullet and only sighted for 75 or 100yds. As distance is apt to be over-estimated, the man with the latter gun is apt to raise his sights, and where does his ball go? At any rate, it is not apt to strike his game. With a rifle sighted to be shot at all reasonable distances with one sight, the shooter does not vary his sight, and if he has either over or under-estimated the distance, his chances are still good for his getting his game if he "holds on."

Now let our good brethren in the craft ventilate these points, let them cry a truce to "muzzleloader versus breechloader," and spend their time more profitably to themselves and others in trying to educate our rifle shooters and creating a demand for better ammunition, so that the manufacturers will supply it. Let also the owners and users of single-shot rifles come to the front and sing their songs of praise as loudly as do the lovers of the repeaters. The sportsman of the day wants a good, safe single-shot breechloader, good sights and an express cartridge, let us have it. There will be more game killed, but less wounded and crippled to crawl away into some dark nook or glen and die a miserable death, or linger through months of torture to end its life as a poor miserable cripple. We must hunt, it is our nature, and it is right to hunt, but let us try and kill, not maim. Don't let us say, "I hit that deer," or "this antelope, but he got away." Let us use such guns and ammunition that when we hit we kill. This will be a mercy to the poor beast and a joy to the heart of the hunter.

DETROIT, Mich. F. F. F.

Sea and River Fishing.

Address all communications to the Forest and Stream Pub. Co.

Hum! hum! I'm coming, coming.
Don't you hear me humming, humming,
Like some distant drummer drumming
His tired troops to sleep?
Rat-tat-tat, and hum-hum-hum,
Near, more near, I come, I come,
With some to dine, to sup with some,
With all a feast to keep.

Hum! hum! How neat you are!
Hum! hum! How sweet you are!
Hum-m! Hum-m! Too sweet by far!
I'll dally for a bit.
Try you there, and try you here,
Taste your chin, your cheek, your ear;
And that line of forehead near,
Ere settling down to it.

Hum! hum! You cannot say
I sup and dine, and do not pay.
Behind me, when I go away,
Just here, and here, and here,
I'll leave a tiny, round, bright spot—
A brand-new coin, laid down red-hot,
In full return for all I got,
I pay most dear, most dear.

Hum! hum! I've supped, and rarely;
And you still are sleeping fairly.
Hum-hum-hum! We twain part squarely,
All my dues I pay for.
One more taste, and one more sip,
From your eyelid, from your lip,
Then away I'll skip-skip-skip—
There's nothing more to stay for.

—*St. Nicholas.*

A FISHING DOG.

"QUARTERMASTER, pass the word forward for T.' "Aye! aye, sir," and word came forward, and in a few minutes T. was aft in the cabin receiving his orders for the next day's fishing trip. We were lying in a nice basin of water about one mile and a half in circumference, into which we had floundered on the coast of Newfoundland, somewhere near Placentia Bay. Most all day we had been steaming up a beautiful river (we were on an exploring expedition on the coast and rivers) whose banks in some places we could touch on each side with a broom-handle, when toward evening we dropped the jack in this basin.

The next morning I had as you may supppose my wicker lunch basket packed and rods in cases all ready, real old 15-footers, two of them with which many a fine salmon had been brought to shore. Three of us landed with the dog Sailor, a Newfoundland pup about eight months old, which the captain had been presented with a few weeks before. We started on a tramp up stream, to cast down which was the captain's usual method. The captain made the first cast, and as the leader touched the water there was a strike, and then the fun commenced. The captain knew how to handle his rod, and the fish was a beauty; one second he would be off down stream, and the next would skulk and lie heavy on the line. It was exciting to stand with gaff in hand ready to pull the brave fellow on shore; and after twenty-five minutes the salmon was gaffed and lay in all its dying beauty on the green bank of that stream. This was the style of fun nearly all the way down stream, till we had seven of the beauties ranging from 5lbs. to the one of 13lbs. 4oz. first caught, which was the largest that day.

But now comes the story. While the captain and his clerk were fishing, the dog was taking a lively interest in every fish as it was landed, and would run along the banks, watching as a cat watches a mouse. Finally the captain was taking a rest at the stump of a tree, when his companion struck a small fish, which was pretty lively; but the angler was playing it pretty cleverly, and I was moving up with the gaff as the fish was almost to the bank, when the dog made one plunge and caught the fish by the back of the neck and brought him ashore and laid it at the captain's feet, and looked up as much as to say, "I caught that fish." At times after that we had to hold him when a fish was hooked, as he was always ready to retrieve. After that the dog was named "Sailor, the Fisherman." I have heard that dogs are trained to catch salmon on some of the rivers of Newfoundland, but that is the only time I ever saw it done. X.

A CEMENT FOR FERRULES.—*Editor Forest and Stream:* As the time draws on apace when the noble bass may be lawfully taken from his native element and consigned to the frying-pan, it behooves all good and true anglers to look well to their tackle, and especially to their rods which did such efficient work last season. I find nearly all of the ferrules of my rods become loose and require to be re-cemented at the commencement of each season. Up to about one year ago I used shellac for this purpose, but I have learned better. During the last year I used Dodge's ferrule cement on my own and on several of my friends' rods with the most complete success. It holds good on both wood and metal, and as it melts at a comparatively low temperature the amateur will experience no difficulty in properly applying it, either at home or on the stream. I consider it an article of more than ordinary merit.—E. A. LEOPOLD (Norristown, Pa.).

FISHING TACKLE, Material and Manufacture, by J. Harrington Keene, $1. A. Grothwell, 1421 Third avenue, New York.—*Adv.*

THE TOURNAMENT.

THE fifth annual tournament of the National Rod and Reel Association took place on the Harlem Mere, Central Park, New York city, on Wednesday and Thursday last. It was by far the most interesting and important meeting that has yet been held, and shows that the interest in these contests has been gradually growing since the inauguration of them by FOREST AND STREAM in 1882. The records were broken so badly that there seems little chance to break them in future. The great cast by Hiram W. Hawes of 102ft. with a single-handed fly-rod seems almost incredible, but it is now placed on record as exceeding by 11ft. any cast heretofore made in public in this or any other country. The cast was made in what is called the "switch" style in America, but in England is known as the Wye cast, a style introduced by Harry Prichard, and one that was strongly opposed in the first tournament by those who were accustomed to put their flies as far behind them as in front; but our anglers were quick to see the merits of a cast which could be made with a wall of rocks or brush behind them, and it soon became popular, and now many of them consider it an indispensable mode of getting out a fly under certain circumstances.

As far as weather was concerned we did not see that May proved to be better than October, for the wind was strong and so variable that a contestant who used his full allowance of fifteen minutes might have the wind in all quarters during the time allotted him. It is to be noted that but one man in the first class used all his time, and one of them cast only four minutes when he said, "That's the best I can do."

There was less grumbling at the decisions of the judges by "mug-hunters," who enter for what they can win than on any former occasion, and this shows that the contestants in the amateur classes are men of more gentlemanly instincts and that the Association is getting rid of the small element which would put its contests on a level with the base-ball matches, where winning in any event is the central idea. Few men did more to bring about this result than the late Ira Wood, who used to take off his coat and help his opponents not only with his counsel but with assistance to untangle lines and to replace flies, an example we are glad to see has not been lost.

FIRST DAY.

The first class called was the amateur single-handed fly-casting, which was done from a platform one foot above the water, and along a line with marked buoys at every 5ft. Judges, Francis Endicott, Dr. A. Ferber; referee, Rev. H. L. Ziegenfuss. The following is the score:

	Length of Rod. Ft. In.	Weight of Rod. Oz.	Distance. Ft.	Delicacy.	Accuracy.	Total Points.
G. Poey	10 11	8¼	77	15	17	109
T. B. Stewart	11 06	9	73	14	20	107
Dr. G. Trowbridge	11 04½	9¾	81	12	13	106
C. G. Levison	11 06	10	77	11	17	105
Graydon Johnston	11 02½	10¼	68	8	12	88
Fred Mather	11 06	10	57	13	10	80
J. L. Cornell	11 01½	10	65	6	6	77

"Switch" Fly-casting.—This was with single-handed rods, distance only to count, no cast to be counted in which the fly went behind the caster, and here Mr. Hawes outdid himself and all previous records. The judges were John A. Roosevelt, Hon. Henry P. McGown; referee, James L. Vallotton.

	Length of Rod. Ft. In.	Weight of Rod. Oz.	Distance Cast. Feet.
H. W. Hawes	11 00	10	102
Harry Prichard	10 11	8¼	85
Ed Eggert	11 6	10¾	72
C. G. Levison	11 1½	10	70

Salmon Casting.—Here again the record was broken by Reuben C. Leonard, who beat the cast of 131ft. made by Hawes in 1884 by 1ft. The judges were Dr. A. Ferber, James L. Vallotton; referee, Wm. Dunning. The following is the score:

	Length of Rod. Ft. In.	Weight of Rod. Oz.	Distance Cast. Feet.
R. C. Leonard	18 00	37	132
H. W. Hawes	18 00	37	123
Ed Eggert	17 6	37	113
H. Prichard	17 6	37	108
T. B. Mills	18 00	37	107

Minnow Casting for Black Bass.—This contest was made with half-ounce sinkers on the turf of the Polo Grounds, and in this trial all previous records were beaten. The judges were W. C. Harris, Hon. H. P. McGown; referee, W. E. Hendrix. Mr. Dresel beat his own record of 1885, which was the best up to this time. The score was:

	Length of Rod. Ft. In.	Weight of Rod. Oz.	Score of Casts in Feet. 1st.	2d.	3d.	4th.	5th.	Average. Feet.
A. J. Dresel	8 6	9	115	133	69	110	128	111
Sidney Frey	8 6	9½	116	125	92	77	77	99 2-5
G. Poey	8 3	8	88	84	104	32	94	80 2-5
Ed. Eggert	8 6	7	54	82	44	77	80	67 3-5
J. L. Cornell	8 5½	7	3	53	47	25	47	32

Dresel—Accuracy, 25; style, 23; total, 159. Frey—Accuracy, 23; style, 20; total, 142 2-5. Poey—Accuracy, 15; style, 20; total, 115 2-5. Eggert—Accuracy, 12; style, 15; total, 94 3-5. Cornell—Accuracy, 5; style, 0; total, 32.

Expert Single-handed Fly-casting.—Here Reuben Leonard exceeded all the records of previous years, and, in fact, everything but the switch cast of Hawes this year, with a wonderful cast of 97ft. with a retrieved line. The casting throughout was remarkable. The gentleman who entered under the name of John Gray was as suspiciously like a contestant in the first contest as his name was, and many thought him to be the same elegant wielder of the rod. The judges were T. B. Stewart, C. Van Brunt; referee, Gen. R. C. Ward. In this class distance alone counted. The score stood:

	Length of Rod. Ft. In.	Weight of Rod. Oz.	Distance Cast. Ft.
R. C. Leonard	11 6	12	97
T. B. Mills	11 00	10	92
H. W. Hawes	11 00	10	90
Ed. Eggert	11 6	10¾	76
John Gray	11 2¼	10¼	70

SECOND DAY.

The first class for amateurs in single-handed fly-casting was called shortly after 10 A. M., and several gentlemen who had never taken a first prize entered their names. The judges were R. C. Leonard, H. W. Hawes; referee, James Rice. The following is the result:

	Length of Rod. Ft. In.	Weight of Rod. Oz.	Distance. Ft.	Delicacy.	Accuracy.	Score.
C. G. Levison	11 1½	10	83	20	23	126
Dr. G. Trowbridge	11 4½	9¾	85	25	14	124
R. B. Lawrence	10 6	8¼	71½	18	25	114½
Graydon Johnson	11 2½	10¼	76	12	13	101
T. B. Stewart	11 6	10	75½	12	12	99½
J. L. Cornell	11 1½	10	69	7	15	91

Salmon Casting.—Mr. Harry Prichard, whose single-handed casts had never been equaled until now, entered and won in this class. He announced it as "the old man's last cast in public, but he's goin' to keep on fishin' just the same," and his friends were pleased to see the veteran in such good form. The judges were James Ramsbottom, Wm. Dunning; referee, T. B. Stewart.

	Length of Rod. Ft. In.	Weight of Rod. Oz.	Distance. Ft.	Delicacy.	Accuracy.	Score.
H. Prichard	15 6	26½	113½	14	5	132½
T. B. Mills	15 6	26½	105	8	3	116
C. G. Levison	15 6	26½	104	7	1	112
J. L. Cornell	15 6	26½	92	7	1	100
R. N. Cranford	15 6	26½	75	0	2	77

Light Rod Contest.—This class was introduced in 1882, but has not had a place on the list since. Then Hawes won in two classes, casting with a 4½oz. rod 82 and 78ft. respectively. To-day Reuben Leonard beat the best cast by 6ft., using a rod of 4¾oz. Under the rules the rods were not to exceed 5oz. in weight nor 11½ft. in length, and distance only was to count. The wind blew hard from the west across the casts, which were made to the north, and at times it rained heavily. The judges were W. H. Wood, Dr. A. Ferber; referee, William J. Cassard.

	Length of Rod. Feet.	Weight of Rod. Ounces.	Distance cast. Feet.
R. C. Leonard	10	4¾	88
H. W. Hawes	10	4¾	87
Thomas B. Mills	10	4¾	82
C. A. Bryan	10	4¾	70

Heavy Bass Casting.—This was done on the Polo Grounds and again the records were broken, Mr. W. H. Wood, the celebrated tarpon killer, beating his average in 1885 by six feet. Judges, Hon. H. R. McGown, J. S. Van Cleef; referee, Col. Frank S. Pinckney.

	Length of Rods. Ft. In.	Score of Casts in Feet. 1st.	2d.	3d.	4th.	5th.	Average. Feet.
W. H. Wood	9 00	234.6	240.4	241.7	260.1	255.9	246.5-10
T. A. Buell	9 00	225.6	227.1	212.1	208.9	129.8	200.7-10
J. A. Roosevelt	7 06	181.7	198.5	203.8	198.2	203.4	197.1-10
A. J. Dresel	8 2½	163.6	164	176.7	178.7	175.3	171.6-10
Sydney Fry	8 2½	164.9	170.2	159.5	159.1	141.3	159
Ed Eggert	9 00	145.1	147	153.6	157.8	167	150.1-10
G. Poey	7 11	161.4	138.7	94.4	132	98.8	125

Fly-Casting for Black Bass.—This was a new class and was open to amateurs under Rule 2, single-handed rods not to exceed 11½ft. in length. Only one fly required, this to be furnished by the committee and to be tied on a No. 2 Sproat hook. Distance only to count. It was similar in all respects, save the size of the fly, to trout casting, and it did not awaken much interest. The judges were G. M. Skinner, Francis Endicott; referee, Wm. Dunning. The score stood:

	Length of Rod. Ft. In.	Weight of Rod. Oz.	Distance Cast. Ft. In.
C. G. Levison	11 1½	10	80 00
Dr. S. Trowbridge	11 00	10	79 00
Graydon Johnson	11 2½	10¼	75 6
A. J. Dresel	11 04	10¾	74 00
G. Poey	10 00	9	71 00
Ed Eggert	10 00	9	71 00
T. B. Stewart	11 6	9	70 06
S. Fry	11 4	10¾	62 00
J. C. Cornell	11 1½	10	58 00

YOUGHIOGHENY AND TRIBUTARIES.

IN looking over an old file of the FOREST AND STREAM of 1885, I find a communication from "Amateur" relative to the fish in the Youghiogheny River, in which he mentions the advent of black bass and the exit of other fish, *i. e.*, sunfish, chubs, catfish, suckers, etc. This is partially true, as above the falls at Ohio Pyle it is a very rare occurrence that a catfish or sucker is caught, although the fish he terms sunfish are really the rock bass, and they are quite frequently met with. As to the chubs, their name is legion. Frequently when the bass have refused to bite I have turned over a few stones and procured some dobsons, then standing in one place I have caught forty or fifty. These, however, are the salmon trout he speaks of. It appears that these fish were put into the north fork of the river near the town of Ursina by a party of gentlemen who had procured them for salmon trout, and while they failed in stocking the river with fish they had expected to, they most effectually stocked it with food for the bass. I coincide with "Amateur" when he says that as an ediable fish it is worthless. They have a peculiar trait that I do not understand and can in no manner account for it. They take a fly very readily, something that in my experience I never knew any other chub to do. I was fishing in the North Fork in June last, about the time that the large trout leave for the smaller and cooler streams. At my first cast a good sized fish arose, but I failed to hook him. At the next attempt I succeeded in capturing him. When "Amateur" says there is no game in them he is mistaken, for they fight as stubbornly as any fish I have ever caught. I was confident that I had hooked a trout, but what was my disgust upon landing him to find a "something" weighing about a pound, that was soft and worthless within an hour after I had caught it. They bit readily and fought well, and it was some sport to catch them. I attempted to take this lot home, but was compelled to throw them away before I got to the railroad station. I have caught a number of them since but always returned them to their native element.

We have a fish and game protection association here, and have done much in the way of stocking the "Yough" and its tributaries, having planted about 75,000 brook trout and about 15,000 California trout in ten streams in Fayette and Somerset counties. We did not have much faith in the rainbow trout, but have been agreeably disappointed, for within a year after planting I caught several that ran from 8 to 9in. long, and a friend of mine caught one about 10in. long; and I also heard of a number of others being caught, all being about the same size. This would indicate a very rapid growth. Most of our mountain streams are well adapted to brook trout. We have one stream in particular, fed by two small streams, which run through a swamp where the underbrush is so thick that it is impossible to fish it. The fish breed in this natural retreat and then go down into the larger stream. The supply seems to be inexhaustible. I know no stream that is fished as much as this, although the fish are small. The main stream is a series of ripples and pools well protected by rocks and trees. It is about five miles long; there is not a clearing on the whole length of it, and owing to its roughness and poor quality of the timber it is not likely to be bothered with much for years to come. All the streams that we have put trout in are natural trout streams, and our attempts at restocking seem to be a decided success.

There is one good-sized run in the mountains, at the head of which is an immense pond of spring water covering an acre or more and very deep, where they tell me leviathan trout lurk, and no man can entice them. It is a Mecca to which I have longed to make a pilgrimage, but as yet I have failed to rea h it. When the stream leaves the spring it flows under the rocks entirely out of sight for half a mile, although in places you can hear it running beneath. It derives its name from this peculiarity and is called Lost Cow Run. It is almost impossible to find where it enters the other stream. I have fully made up my mind to explore it this summer, and if I succeed in getting there will let you know more about it. I have fished the lower part of the stream for the last four years on Fourth of July, with a net result of about 300 fish, all being good-sized.

The greatest obstacle in restoring the "Yough" River is the work of the dynamite fiend. Almost every pool from Connellsville to Rockwood has been shot. It has been at the cost of very serious results to the perpetrators. I can now recall three instances, one in which the party had his arm blown off, another his eyes blown out and was disfigured for life, and the terrible accident at Brooks Tunnel, which occurred on a Sunday, last year, was caused by the explosion of dynamite cartridges which some men were preparing in the magazine at the mouth of the tunnel for the purpose of dynamiting Shoo-fly Hole, a favorite bass resort near by. Six or seven men lost their lives in this accident. You would naturally think that such lessons as these would be heeded, but still this dynamiting goes on. YOUGH.

CONNELLSVILLE, Penn.

NEW ENGLAND WATERS.

THE salmon fishing at Bangor is good. Some large fish have been taken. The showing of a 21lb. fish in Dame, Stoddard & Kendall's fishing tackle window has set all Boston talking salmon, and the interest centers around Bangor. The season has been good there since the late opening, and those high up in salmon lore say that it is going to hold out well. Mr. Fred Ayre is on record as believing that later there is to be a good run of smaller fish and everybody can take them. Indeed, they are everybody's fish in the fullest sense of the term. That salmon pool at Bangor is everybody's pool. Were it only in the Queen's Dominion now—just over the line in Canada—it would rent for thousands of dollars. A certain Englishman is said to have been asking the question if that pool cannot be leased. He has suggested that he would give $30,000 or even $40,000 for it. But not so in the State of Maine. You can't John Bull salmon pools nor trout streams there. Though the breadth of river at Bangor, below the dam, is proving to be the finest salmon pool in the world—thanks to the enterprise of the State commissioners—it is free to everybody who will fish within the bounds of the laws of Maine.

It must be rare sport to witness the salmon angling of everybody. The river driver, the beachcomber, who owns a boat, with his whole outfit of tackle not worth a dollar, is just as good a man as the aristocrat with $60 worth of flies alone, as carried there by one man last week. The river is broad enough for everybody to get a chance. The old Penobscot runs feather white for more than half a mile below the dam, when the tide turns, and it is then that the fun begins. The object is to have a good boatman, who by lusty strokes of the oar can set the craft up into the rapids as far as possible. Then the fly is cast down stream into the seething water, often without much skill. It is frequently done with a mere fish pole; but a reel or some sort of loose line is necessary. The salmon strikes the fly—not always a Jock Scott, worth $6 the dozen, for the Irish boy, the beachcomber from Bangor, must put up with something less costly. But, all the same, the fish is hooked. Give him loose line, for he darts down stream like lightning. Hurrah! Up anchor and down after him! He can never be brought to gaff in that rushing, boiling water. Everybody is watching. There is a crowd on the shore. The boat dashes down river after a hard fight, where the salmon is landed on the more level beach a mile below. Landed? Not all of them. It is said that, counting in all the ungainly tackle used, not one-quarter of the salmon hooked are landed. They break away. But not so from a few of the real salmon anglers there. Not all prove to be salmon that are hooked. More than one piece of slab or driftwood has been followed down river this spring, with all the excitement of a real live fish. Not all catch a salmon who go to Bangor. Two-thirds come home empty-handed. Our good friend Henry, of Appleton & Litchfield, has been there. Did he have a nice outfit? He is in the tackle business and is after every improvement. Did he hook a salmon? He did. "Did you land him, Mr. Litchfield?" His head is down and he is tending to the wants of a customer just the length of a fish rod further down the counter. Don't press the answer.

The fishing at the Androscoggin lakes is improving. This will doubtless be the best week of the season. The reports of 7lb. and 8lb. trout begin to come in. Mr. Tuttle, of Lake Point Cottage, is on record with one more of 8lbs. There is one curious feature of the season, if it be true, and the authority is good. There is said to be good fly-fishing at Moosehead Lake. Seventy trout were taken with the fly in one day last week off the grounds near the mouth of the river. Harry Mason and W. D. Weld, of Boston, are reported to have been among the lucky sportsmen. This is two weeks early for fly-fishing.

W. T. Rockwell, Will Whitcomb and Harry Moore are at Rangeley; C. P. Stebbins, Mr. Shuttuck, Mr. Smart and Mr. Stevens, of the Vine Vale Camp, are on their fishing grounds. What is known as the Faxon party of twelve were to start Saturday for the Upper Dam. Lieut. F. R. Mudge and wife, Geo. T. Freeman, Mrs. Freeman and Miss Wyman, are this week the guests of Mr. and Mrs. W. K. Mood at Camp Stewart. So the jolly parties go. Well, what a blessing this trouting is, to be sure.

SPECIAL.

A MEMORY OF HAYTI.

"TALK about your fishing around here, but I should shiver my timbers you aint anywhere, You ought to see some of the kind of fish we used to catch."

So spoke the old tar the other evening while we were telling fish stories, and he went on:

"Why, way back in the 60's when I was cruising in the West Indies, we laid some time at Cape Hayti during Gen. Salnane's insurrection there, and the first week we were there, having got everything aboard all a-taunt and nothing much to do, we thought we would organize a party and go a-fishing; and as I was generally the one to start the ball a-rolling for anything of that kind, and being pretty well in with the Captain, the business to obtain leave was most always left to me, and I generally could get permission. So aft I went to the First Lieutenant and got permission to take a party on shore to draw the seines, of which we used two; not the fine twine seines one sees here on the rivers, but real old sockdolager twine, as big as marlin. So, when we had everything ready, the boatswain's pipe was, 'All you who want to go fishing fall in aft.' When we fell in we mustered eighteen good, stout, able-bodied fellows to go and try to catch a few poor little fishes, but as the sequel will show, we got caught ourselves. So, landing our nets in the cutters (not the cutters the FOREST AND STREAM advocates, but regular 10-oared double-banked boats of a regular man-of-war), our Second Luff took charge, and we pulled for the shore, up to a sandy beach above what was then called the Bush Fort, above the coral reefs with which that harbor abounds, and prepared to get out our nets, which we were not destined then to do, for lo and behold, just as we commenced, 'What is that?' said the Second Luff to me. 'An apparition or what the devil is it? Hold on, men,' says I, 'see what's coming.' Well, sirs, it would have done some of you sportsmen good to see the apparition and hear the roar of laughter that went up from that party. Imagine to yourself first a small-sized mule with a rider on his back about 6ft. 4in., with his legs hitched under the mule's belly, one of his trousers' legs split up to the knee flying back with the wind, an old swallow tail green coat trimmed with yellow, with one gold epaulette on the right shoulder and an old cocked hat picked up from some old sea captain, and you have the commander of the hosts following, and you have the apparition which gave those jolly fishermen such a hearty laugh. But the laugh did not last long, for us, for about 200 of his followers came behind him and surrounded us on the beach, with such a miscellaneous set of arms as never was collected in any museum. They commenced to jabber away, which we could not understand, for they spoke some kind of French lingo. But one of our men knew enough of it to interpret to us as the apparition gave orders for us to fall in and he would escort us to headquarters to find out who we were. He gave orders to his men to haul out our boats and make them fast; and so we had to fall in and were marched through the brush to headquarters and reported to the senior officer, who decided, not knowing who or what we were at the time (we could not talk so as to be understood), that myself and two with me were to remain in camp as hostages, while he sent an officer on board to find out what we were doing there. When he found we were friends instead of enemies we were released. By that time it was growing dark, so we resolved to go on board, and this ended our first great fishing trip in Cape Hayti.

"But the next day, after dinner, we had permission, as the first day had been a failure and brought no fish, for the same party to land and catch some fish. We went to the same spot and commenced to draw, and when we were closing in the net, such a hullaballoo you never saw in a net. We had quite a number of most all kinds of fish, such as are found in those waters, several small sharks from two feet up to five; but the king pin was a fish I had never seen before nor had any of our officers. It was about 5ft. long, with perfectly round head, resembling a pig's, a large fin on each side, with one under belly, and tail up and down; the natives called it a sea-pig. I had seen the sea-horse of the Mediterranean and sea-lions, but had never seen a sea-pig before. Its skin was about ¼in. thick with no scales. The natives skinned it, and we cooked it, or at least some of it, all the ways we could think of, and it tasted neither like fish, flesh, nor fowl, but mostly like very young veal. We caught another of the same species, only not quite so large, which we put in the copper punt in hopes to keep it alive to send to the British Museum; but it only lived a few days, and I have never heard the name proper of it to this day. And that ended the most remarkable fishing trip I ever was on."

TAR.

MIDDLETOWN, Conn.

THE ADIRONDACKS.—Canton, N. Y., May 27.—Reliable reports to-day from Cranberry Lake say poor fishing in the streams, but very fine in the ponds and lakes. As usual, the trout-hog is abroad. One party is reported catching near 60lbs., another 125lbs., and the trout when seen were in a fair way to all spoil before the parties could either eat or sell them.—J. H. R.

Fisheulture.

ILLINOIS RIVER FISHING.

THE Illinois law forbidding seining fish between Feb. 1 and Sept. 1 is under discussion by some of the citizens of Peoria who propose to take measures to secure its enforcement. The Peoria *Journal* has interviewed the fishermen on the subject and this is their side of the story;

"The law is conceded by both amateur and professional fishermen to be a good one, and the only thing the latter have against it is a lack of unanimity and an evident discrimination against the firshermen at certain points or at one certain point. The given point is Peoria. The charge made against [the local fishermen, who ply their calling for the amount of bread and butter there is in it, is that they catch the young fish, destroy the spawn and disturb the fish in the spawning season, thereby preventing the immense piscatorial population that would otherwise swarm in stream, lake, slough, creek and inlet. That these charges are true and that they cannot be disproved is not denied by the seining fishermen. They admit that the supply of fish in the Illinois River and its tributaries is not near so large as it was twenty, fifteen, ten, or even five years ago. But they declare that this is not the result of seining, that is, not directly. They charge—and it will be observed that their charge is not without foundation—that the great decrease in the Illinois fish supply is due to the volume of sewage sent down of Chicago, aided and assisted by natural causes. For instance, last winter the river was high and the frost severe. Ice formed thickly and airholes were few. An hermetical seal was thrown over the Illinois River, under which were confined all the noxious gases and the deathly effluvia generated by the tremendous discharge of Chicago sewage. On the surface was clear ice, but below was a putrescent mass. Denied aeration the fish died in swarms, and when the river shook off its icy shroud the bodies of thousands of dead fish made a ghastly coverlet. It is not in any way rash to state that more fish were killed by that putrescence in a single season than are taken by seining fishermen in half a dozen seasons.

"Now then, a fair glance at the fish situation, and waiving a mass of details that might be introduced, bring the question down to this: Can Peoria afford to subordinate an industry, which sustains over a hundred people, to a pastime which affords occasional amusement to half a hundred wealthy men, who make large incomes in other departments of trade?

"We are aware of the fact that we have sprung this question rather abruptly, but we will follow it up with facts. Yesterday afternoon the *Journal* detailed a reporter to investigate this fish question and get all the facts, figures, and in short all the details it was possible to procure in the time granted him. An interview with the various boss fishermen, or masters of fish boats, developed the following facts: In the fish business of Peoria alone an aggregate capital of $15,000 is invested. The volume of business transacted amounts to about $40,000 a year. There are now three fish boats or fish markets in Peoria, each of whom man three crews of twelve men each. Each of these men are paid $25 a month and board. Each boat pays a tug captain $20 a week each. Another $12 a week is spent among grocery men for empty barrels and boxes. The icemen reap $150 from the fish interest. The express bills amount to $120 a week, or $500 a month, a sum equal to $6,000 a year. Here we have quite an industry, supporting, or doing their level best to support, other industries. At all events, and from facts and figures collated, it is evident that the fish industry distributes in Peoria and among Peorians not less than $40,000 a year. Can we afford to squelch this to gratify the sporting tastes of some half-hundred wealthy rod and line men? We guess not.

"Now, then, let us hear what the men who tug at the oar and haul the seine have to say. These are men who make only their monthly wages and have nothing whatever to do with the profits. They say that when the stream freezes over they are obliged to go down the river. During the spring rise they make a few good hauls of fine game fish, such as croppies, pike, salmon, sunfish, etc. But they go down with the flood, and all that are left are buffalo and catfish. In the early spring the fishing is as fine and as plenteous as it is anywhere in the river, but as soon as it goes down the fine fish seek other waters. Last winter was a terror on fish. Most of the catfish were killed and all kinds suffered. They deny the charge that they wantonly destroy the spawn. As an offset they declare that in every haul they find from 25 to 50 dogfish and gars. These are the cannibals, the pirates, of running water. More voracious fish consuming their smaller species were never created. For every gar or dogfish killed a hundred minnows or small fish are saved. The toil of the fisherman is of the severest kind. No manual labor ashore is heavier. Tugging the oar under a blazing sun or hauling a seine waist deep in water is not the easiest or healthiest work in the world. They are good, honest fellows, who earn their bread by the most profuse sweat of their brow; they are free from the baser of the vices that mar the characters of many classes of laboring men, and they are entitled to all they get in their wrestle with the water. In the winter they occupy their time in knitting nets or making ice, and are never idle and seldom dissolute. One of the men with whom the *Journal* reporter conversed was particularly intelligent and vouchsafed a flood of information that the man of news never dreamt of. There is material in the lives of our fishermen from which to write many a chapter.

"During this interview many of the fishermen grouped around the reporter and fired in an occasioned shot of quaint philosophy. 'The trouble with these fine-haired fellows,' said one, 'is that a fishing trip with them is only an excuse to go on a big drunk, to some place where they will be quiet and secure from arrest. I know 'em and have sold 'em many a string of fish.'

"Returning to their bosses it was remarked that most of this agitation came from the Chicago cold storage men who get vast supplies of lake and Wisconsin brook fish and freeze them down for the shipping trade. 'Why,' said one man, 'there is one Chicago firm that has $100,000 worth of fish frozen up by the ammonia process and has been since last season. Next winter those fish will be released and shipped to various points. By the time the fish reach their destination they will be two years old. Now so far as this prohibitory law is concerned we admit that it is a good thing. But it must be enforced from one end of the river to the other. Last summer we obeyed it to the letter. Not one of our men pulled an oar or drew a net during June, July and August. All that time we sat idly on our boats, and men at Havana, Beardstown below, and Chillicothe and points above, were seining and were not molested. This year we determined to haul anyhow, and we have done so. Now these rod and line men are bucking against us and they want to down us. We don't want to haul during prohibited months, but if they haul below and above us without interference what can we do? If the law can be so enforced that Peoria fishermen will not be discriminated against, we are in favor of it and comply with its demands cheerfully and willingly. But we do not want to be made the sole sufferers.'

"Here we have the whole question. Both sides of it have been presented fairly and impartially, but as faithful chroniclers we must confess that the preponderance of the evidence is in favor of the fishermen. We cannot afford to throttle any industry in Peoria at this or any other time. Here is one that supports over a hundred people directly, to say nothing of its indirect benefits. Let the rod and line gentlemen, who meet this week, give these facts due deliberation and act accordingly."

SALMON ABOVE THE TROY DAM.—The salmon in the Hudson are not disposed to wait for the erection of a fishway in order to let them pass to their breeding grounds, and some have gone up the canal lock. Judge F. M. Danaher, of Albany, reports May 23: "A friend of mine tells me that he saw three small salmon, the largest estimated at about six pounds, taken in a net yesterday above the dam at Troy, and near the lock, which is not to exceed 100ft. above the dam. Evidently they had come through the lock which had just been emptied. The fishes were returned to the water."

RAINBOW TROUT IN ENGLAND.—Mr. W. O. Chambers, secretary of the National Fishculture Association, writes from London April 22, as follows: "I much regret to state that our entire stock of rainbow trout, reared from eggs presented by Professer Baird in 1885, have been maliciously poisoned."

BOUNTIFUL NATURE AFFORDS NO FINER SPECIFIC for skin diseases than Sulphur, a fact that is proven by the action upon the cuticle afflicted with eruptions or ulcerous sores, of that supreme purifier and beautifier of the skin, Glenn's Sulphur Soap. HILL'S HAIR AND WHISKER DYE—Black and brown, 50c.—*Adv.*

DOG SHOWS.

Sept. 1 to 3.—Inaugural Dog Show of the Pacific Kennel Club, at San Francisco, Cal. J. E. Watson, Secretary, 516 Sacramento street, San Francisco, Cal.

Sept. 12 to 17.—First Show St. Paul and Minnesota Kennel Club, St. Paul, Minn. W. G. Whitehead, Secretary.

Oct. 12 and 13.—Stafford Kennel Club Show, Stafford Springs, Conn. R. S. Hicks, Secretary.

FIELD TRIALS.

Nov. 7.—Third Annual Field Trials of the Western Field Trials Association. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 21.—Ninth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

December.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5036.**

DACHSHUNDE.

Editor Forest and Stream:

Mr. Houpt, whose remarkable production in your last issue will immortalize the name, appears to be a well-meaning gentleman, and I am glad you have unburdened his mind of the erroneous idea that he would not be permitted to "criticise your critic." And now that Mr. Houpt has jumped into the water instead of throwing his dogs there, I earnestly beg of you not to pull him out until he has been in long enough to teach him better than go there again. Life—especially the would-be dog critic's—is short, and editors should not have license to prolong it by transferring erratic effusions to the flames.

Mr. Houpt owns a couple of little liver and yellow dogs; they have taken first and second prizes at a dog show under incompetent judgment, and Mr. Houpt feels happy. Did you, dear reader, never feel that way yourself? How well I remember the proud feeling of satisfaction that takes possession of a man's very self when he steps out of the ring, his first blue ribbon in hand. And I, too, have felt the blood freeze in its course when I have taken up one of the papers only to find that my model of perfection was worth but two cents per pound, and not even that unless there was a reputable sausage manufacturer in the neighborhood. And memory takes me back to 1868, and I ask myself, "How ever did I have the cheek to be seen at a dog show and on a public thoroughfare with an animal like that at my heels?" If Mr. Houpt is spared to enlighten the world another twenty years, he will look back with disgust on the little liver and yellow snipe-nosed, light-boned dogs he would have us believe are typical dachshunde.

Mr. Houpt's love of truth must have left his body to take shelter in his clothes when he asked you to print the stupid statement that I am severe against judges who give a preference over New York dogs, and that I favor New York judges. Let Mr. Houpt call at the Broadway firm and ask any one of the partners to point out to him an unmerited favorable comment on any dog or dogs owned by the members. And where is the bagman judge from this section that can truthfully say I have whitewashed his record or refused to lay his blunders or presumption broadside before the "discerning public?" Mr. James Mortimer can testify that in his case I have never neglected my duty, and so can Mr. James R. Pierson and others. If Mr. Houpt is a gentleman he will support this part of his letter by stronger evidence than Mr. Houpt's opinion.

The report which caused so many tears to flow is as follows: "Gretchen, first prize, is not a show dog and should not have been noticed. A standard would have to be specially prepared to admit such a specimen into a prize list. Head very wide and flat; muzzle short, weak and dished; ears very short and placed high on the head; light eyes; body very short; loin flat; stifles and hocks, faulty; very light of bone; knuckles over; skin tight; coat not very good; color and markings very poor. Flirt, second prize, is of similar type and has the same faults; she should not have been noticed." In the same report I said that Rubenstein, unnoticed, should have won, and that he was three times more valuable than all of his seven opponents put together. This opinion was in a measure indorsed by the New York judge who placed Rubenstein first in a poor class and gave third to Gretchen. Flirt was not noticed. The main points of Mr. Houpt's reply, or "criticism upon your critic," are these: "I would like to refer Mr. Mason to Vero Shaw, of New York, to find out what a dachshund is. She (Gretchen) is chocolate or seal brown and tan. Mr. Mason says her color is bad. Gretchen's ear reaches ½in. from nose, and her head is broad behind the ears, which denotes courage" (so says Mr. Enoch Hutton). "German authority and Vero Shaw say that conical heads and long ears are very faulty, and that the ears should come to within ½in. of nose. Mr. Mason says Gretchen is too light. As there are several classes of dachshunde I wish Mr. Mason would look them up or consult Vero Shaw and then give as near as possibly what a dachshund should be.

How good a judge is Vero Shaw, of New York, I cannot say, but Vero Shaw, of London, was never a good judge. He became prominent just as several men in this country have done, and just like them, his ignorance is constantly leaking out. Never over-scrupulous and always heavily freighted with the most consummate cheek, in his bearing he was the living image of one of our own notorious bagman judges. He had a fifth-rate record as an owner, and in something less than twenty-five minutes learned more than the combined knowledge of such men as Adcock and Dawes. The Rev. G. F. Hodson, one of the right sort and an excellent judge, was the friend at court, and but for his influence Vero would have been relegated to where he belonged much sooner than was the case. His "Book of the Dog" is almost wholly made up of articles supplied by competent judges; indeed, if such were not the case, nobody would buy it. This was as well known to Shaw as to those who employed him, hence the many excellent and thoroughly reliable articles which appear in his (?) work. If Mr. Houpt had followed Shaw's plan, instead of writing on matters he knows nothing at all about, it would have been better for him.

The most valuable opinion Vero Shaw succeeded in getting for the dachshund part of his book was that of Rev. G. F. Lovell, who is one of the best, if not the best judge we have. Had this gentleman been specially retained as counsel in my defense, he could not have given the Philadelphia report a more substantial indorsement than his letter in the "Book of the Dog." If Mr. Houpt will compare Mr. Lovell's letter with that report, he will soon see what he has in his kennels. Mr. Lovell says: "They may be divided into three varieties—the hound, the terrier and the toy, though, of course, these are crossed with one another. The first of

these is more generally recognized in the south of England, the second in the north. The third breed [Mr. Houpt's], which seems chiefly to come from Hanover and adjacent countries, is distinguished by its snipy jaws, broad, flat head and small size. It has never found acceptance with judges, who prefer a dog that looks good for work. Dismissing this last, then, we find two distinct types, easily distinguished."

Mr. Houpt will kindly note that Mr. Lovell "dismisses" the Houpt type of dog, which is precisely what I did in my report. "The dachshund proper," continues Mr. Lovell, "as it would seem from old engravings, was a hound in miniature. * * * The head of the hound is long and narrow, the skull conical, with the protuberance strongly marked, though I have never seen it actually peaked as in the bloodhound; no stop, the jaw long and very strong, the teeth long, the canines curved, the eyes of medium size and somewhat deeply set, ears long, fine, set on somewhat low and further back than in any other breed * * * the skin over the head not too tight, the forehead being wrinkled when the dog is excited. * * * The loin is light and well arched; the muscles of the hindquarters should have immense development. The forelegs are very thick and muscular, bending in so that the knees nearly touch and then again turning out, so that a line dropped from the outside of the shoulder will fall just outside the feet. * * * The coat must be short, fine and as thick and close as possible, the skin very thick and extremely loose. * * * In height the dachshund ought not to exceed 10in. at the shoulder, and a dog of that height and 40 or 42in. long, should weigh 20lbs.; the bitches being lighter than the dogs. At the same time many of our very best specimens are a little more than this both in size and weight. The prevailing faults in this breed are too great thickness of skull, combined with ears short and badly placed; the jaw is very weak; in fact, not one dog in ten has a good level mouth, while many have a lower jaw like an Italian greyhound and cannot crunch an ordinary chop bone. Others get out at elbows from want of exercise or from weakness, while some have kness bent over, a great defect." How much does this leave of Mr. Houpt's dogs?

Now, let us see what Mr. Hutton says in his article in the same book. I know this gentleman well, have seen his best dogs a hundred times or more, have judged several of them, and know what his views are just as well as I know my own. "One of the pioneers of dachshund lore in England was Mr. John Fisher, who has had much experience as a breeder and as a judge. Mr. Fisher's unrivalled old dog Feldmann was also the pioneer of his race on the show bench in this country, in the days when even the judges had to be educated and enlightened as to the breed and utility of such an animal. * * * Now, as to what a real dachshund should or should not be like. He should be a hound in all houndlike points, the peculiarities of the breed only excepted—*i. e.*, he must have a hound's head, set on a very long body on very short legs, and the forelegs must be crooked or bandy without being much out at the elbows or knuckling over at the knees; the extreme length from the nose end to point of stem should be about four times the height at shoulder, and the animal should be massive, or, as some of us would say, clumsy and cloddy in appearance; in short, a big dog in small compass. The head should resemble somewhat that of a foxhound, but must not be of so decided a type as seen in the bloodhound." There is nothing in this to show that Mr. Hutton wants a dachshund with a head like a toy French poodle. I do not hesitate to say that Mr. Hutton would turn out of the ring such dogs as Mr. Houpt exhibited at Philadelphia, and I am quite sure I know what Mr. Fisher's course would have been, for I have had the pleasure of judging with him, and I think the last Sunday he ever spent from home was with me. As an all-round judge of horses, cattle, dogs, poultry, pigeons, cats, etc., John Fisher had few equals. The able article on foxhounds by "Vert" in "British Dogs" was written by him.

Mr. Hutton tells us that old Feldmann was the pioneer of his race on the show bench in England. So he was, but he was not bred by Mr. Fisher, and I think I know how he found his way into the Wood House Kennel. Mr. Thomas Fisher, a son of the old gentleman, was steward for Prince Edward of Saxe Weimar, and the dog was a present to him from the royal kennels. No wonder he was so highly prized in the Fisher household. He was a beautiful fellow, long, low, excellent in coat and perfect in limb. I did not like his head so well as some of the dogs more recently exhibited by Messrs. Arkwright, Lovell and others, but that he was a grand dog is beyond dispute. The last time I saw him on the bench was in the spring of 1871, but he was shown a few times after that. I tried to get a son of his, but the best Mr. Fisher could do for me was to let me have a young dog by Festus, who was Feldmann's best son. This was a grand young dog and Mr. Fisher considered him quite as good as Festus, and wrote me to that effect. After having carefully examined such dogs as these, could anybody truthfully say that Mr. Houpt's dogs were anything but mongrels?

I have already occupied too much of your valuable space, but Mr. Millais is such an excellent judge of bassets and dachshunde that I must trespass still further on your indulgence and ask that you allow Mr. Houpt the benefit of his opinions. He writes in Vero Shaw's book: "That there are dogs, and, alas, too many of them, with fine bone, terrier sterns, terrier heads and light, crooked legs, I will not deny; but at the same time I say they are mongrels, * * * The dachshund proper is a hound, and a little beauty, too. It is very easy to breed a terrier from a hound, but it is impossible to breed a hound from a terrier. * * * The head of the dachshund should be conical. * * * The ears are set on low, and hang like a hound's; they ought to reach some way over his nose. * * * On no account should the joints at the ankles have a forward bend. * * * The skin should be loose all over the body, so that on grasping the hound you find you have a handful of skin. * * * Color is an essential matter to the dachshund. I myself care little whether it be red, black and tan, or chocolate and tan, but I will have a good color." Are Mr. Houpt's dogs beautiful little hounds, or weak-headed weeds? Mr. Houpt tells us that Vero Shaw, of New York, considers "conical head and long ears are very faulty." Perhaps he does, but Vero Shaw, of London, dissents from his views as follows: "For our own part we are certainly in favor of the type supported by Messrs. Lovell and Millais. * * * We consider that type —the hound type—has been proved to be in existence for centuries."

If one of the results of this letter is the drowning of Mr. Houpt's dogs and his appearance at our shows next spring with a string of dachshunde proper, I shall feel that my time and your space have not been wasted. CHARLES H. MASON.

A DOG'S FATE.—Saco, Maine, May 25.—Last winter a young setter dog disappeared from his home in Biddeford, and although a thorough search was made, no trace of him was found. The night after his disappearance a heavy snow storm set in, and this was followed soon after by others. At the time no particular notice was taken of the storms, but later developments showed that the secret of the dog's disappearance lay hidden in the beautiful snow. This spring, while men were working on the track of the Boston & Maine R. R. west of Biddeford, they discovered the missing dog's remains. He had evidently attempted to crawl under a barbed wire fence and had been caught by the back by the barbs and held in such a manner that he could not get either ahead or back. When found his legs were stretched out at full length, and his back was badly lacerated. The poor creature was headed toward home and was probably caught on the day of the snow storm and buried alive.—C.

DETROIT BENCH SHOW.

[From a special correspondent.]

DETROIT, Mich.—The first bench show of the Michigan Kennel Club has passed off very smoothly, and the managers have scored a credit mark. They had much to contend against, for the building was much too small, everything crowded, and the stalls took up so much space that unless the dogs could be seen when in the judging ring they could not be critically examined at all. The rings, too, were not large enough for some of the classes. The managers were conspicuously polite and mindful of the pleasure of visitors. They did the best they could with their restricted space. Among those in attendance was Mr. Chas. Hanitch, a representative of the Southern Ohio Bench Show Association, which is to give a show at Dayton next September. The judges were:

Major J. M. Taylor, Cleveland, O., English, Irish and black and tan setters and pointers.

Major J. M. Taylor and J. F. Kirk, beagles and foxhounds.

J. F. Kirk, Toronto, Can., all other classes.

ENGLISH SETTERS.

In the champion dog class Paul Gladstone, alone in his class, was shown in good condition. In bitches Juno A. was in good condition and Leddersdale in fair condition. Both are good bitches of entirely different types, the judge preferring the smaller and finer of the two. There was quite a good open class of dogs with few absent. Roderigo, the winner, deserved his position; his head is not the type we fancy, being a little too short and flat in skull; his neck also is not thin enough, and a little too heavy, and his coat coarse; those are about the only faults we could find in an otherwise extraordinarily powerful, well built, medium sized dog; and we cannot understand why Paul Gladstone could beat such a dog as Roderigo for the special prize. Keystone, described in your Pittsburg report, we thought unworthy of notice in such a class, and for the place would have preferred Little Dan, a handsome young dog with good head and neck, good shoulders, chest, legs and feet; good back; fair loins, quarters and stifles and fine stern, with a silky flat coat. Dude, already described in your reports, was well placed, owing to the bad condition of Mingo, who in equal condition we think can beat him. Blue Joint we would have given another letter; he is a little long in body and a trifle crooked in hough, but a dog of a good deal of quality with a silky flat coat. Dover we thought worthy of notice, and Knight of Snowdon we thought merited some notice, being shown in fine condition. The bitch class had a number of very fair bitches. Lady Rock, improved in condition, the winner, has been already described in your reports. Cambriana we would have preferred for the position, who is a bitch of great power and quality; she is a trifle full below the eyes and a little flat in skull; with good neck, shoulders, chest, legs and feet; good back, loins and quarters; fair stifles and stern and fair coat. Forest Fern deserved third place. She is a little coarse in head, but otherwise a very fair bitch. Blue Cubas we thought merited three letters, and in good condition would trouble that class, but unfortunately, like the others from the same kennel, she was shown in poor condition. Canadian Lassie we thought might have had another letter, as also others in the class. In the dog puppy class we did not fancy the winner Claude, he is short in the head, round in the barrel, and straight behind, although a muscular little fellow. We much preferred Forest Sport, who has a beautiful, long, clean head, good neck and shoulders, strong good legs, and fair feet, good back, quarters and stern, and flat, silky coat, although a little flat and lathy now. Frank Berwin, winner of second, and Forest Sportsman we considered more typical setters than the winner of second. In the bitch puppy class the winner, Eclipse, is quite a good puppy, her worst fault being in head.

IRISH SETTERS.

Elcho, Jr., in champion dog class, was shown in fine condition; and in bitch class Zella Glenduff had improved since shown at New York. In open dog class. Max, winner of first, is a very good dog and deserved his place. Earl of Bantry we favored for second place; he has a much better head than Glenduff and is quite his equal otherwise; aside from that, we thought this class correctly judged. In the bitch class Flame, a little faulty in head, deserved her position. Glenduff was correctly placed in dog puppy class; he has already been described. Bitch puppies were correctly placed, Mona being in much the best condition.

BLACK AND TAN SETTERS.

Royal Duke alone, in champion class, was shown in good condition. In the dog class Don, already described, had an easy win over Dashing Count, also previously described. The class was correctly judged, as were also the bitches.

POINTERS.

Champion King Bow, in fair condition, and Lady Macbeth, in good condition, were alone in large champion classes. Champion Robin Adair and Patti M., also well shown, were alone in small champion classes. Lansdowne, winner in large open dog class, is an excellent dog, a trifle faulty behind, but entitled to the position. Patterson has much pointer character, but lacks the quality of the winner. This was a good class of large pointers, and, we thought, correctly placed. Mollie Faust, first in bitches, is a good, large bitch, showing much quality. Queen was shown in fine condition, and has been previously reported upon. This class was properly placed. The small dog class exhibits were properly placed. Among the small bitches the winner, Juno S., we thought entirely the best pointer in the show; her head is a little faulty and neck a trifle thick at setting on of head. Aside from that she is as perfect a pointer as we often see, and combines power, symmetry and quality throughout; we thought her entitled to the special for best dog or bitch in the show. Second, Hyppolite, is also an excellent bitch, showing much quality, and merited her place. This was a good class and, we thought, properly placed. In dog puppies, the winner, Storm Bow, and second, Crow Bow, are large, handsome, well-formed puppies, and merited the awards; they were properly placed. The bitches were fair puppies and properly placed.

IRISH WATER SPANIELS.

Patsy O'Conner, winner in champion dog class, has been often described in your reports. The two entries in open class, fair specimens, were properly placed. In bitch class Chippewa Belle, although badly out of coat, should have exchanged placed with Coleen O'Donoghue; winner of first. The winner in puppy class has been already described, and was entitled to the position.

SPANIELS.

The class for field spaniels, dogs, had no entry. The winners in the bitch class were correctly placed. In cocker champion class, other than black, Little Red Rover was the only entry and took the prize. He has previously been described, as has Brant, the winner in black champion class. The awards in the large open class were rightly given. In small dog class, Obo II., the winner, and Dixie, hc., have been described in former reports; the ribbons were correctly given out. Of the bitches we cannot write. They could not be examined in the confined space of the stalls, and when they were in one ring the pointers were being judged too. The same may be said for the puppy classes.

BEAGLES.

In champion class, champion Bonnie, first, and Rattler, second, have already been described. There was little choice between the winners in the open large dog class; the bitches were a good lot and got their deserts. The small dog class had only one entry. The bitches were a capital collection. Roxy was heavy in whelp; we liked her for first instead of second; she seemed to us the best of the lot. She is quite as well formed as the winner, and has more bone and substance and a better coat. Racy, unnoticed, we should have given second place. Foremaid has not so good head nor coat as those mentioned, and she is lacking in bone. The puppies we thought rightly judged. The beagle classes brought out in the exhibit of Mr. John Bross, of Dexter, Mich., a kennel of beagles probably quite equal to any in the country. This was Mr. Bross's first appearance as an exhibitor.

FOXHOUNDS.

Roxey, Mr. O'Shea's winner in the champion class, is well-known. The open dog class brought out probably the best display of American foxhounds, and shown in the best condition of any exhibits made by an individual in the history of American bench shows. This was the kennel shown by Mr. H. E. Cook, of Hillsdale, Mich. We thought them well placed. Brave, the winner, is a magnificent hound, of beautiful style and proportions. The bitches were also a grand class, but we cannot agree with the judges in the awards. Spotty was our favorite for first place; she is not a large hound, but level and beautifully proportioned, with fine style and carriage. Yum Yum we liked for second place, a level, powerful bitch, with much substance. We preferred Wild to the winner. Throughout they were a beautiful lot, quite equal to the dog class, and proved one of the principal attractions of the show. Mr. Cook has a kennel of foxhounds that he may well feel proud of.

ENGLISH FOXHOUNDS.

The winner of second in dog class, Sportsman, is a fair hound, but showed himself badly; and in the bitch class second went to Romade, an ordinary specimen only. Puppies formed a good class and the awards were given justly.

COLLIES.

Scotilla, alone in champion dog class, is well known; there were no entries in the bitch class. In open class the winner is well known, and with the others has been described. In bitches, first went to Bonnie Brae, an excellent young bitch. Spoiled Miss took second. She has been described already. Garrick in dog puppies is a good one, and deserves his award, as did Jess in the bitch class.

MASTIFFS.

The mastiff prize winners have all been described in reports of previous shows. Awards in the puppy class seemed to be correctly made.

ROUGH-COATED ST. BERNARDS.

In champion dog and bitch classes Sir Charles and Swiss Beda were alone. The judge erred in giving the ribbons in the open class. Hadjar, vhc., was much the best in the class. Julien, the winner, was reported on at Buffalo. In the bitch class Plinthia has a larger head and more correct markings than Noma, but Noma has the better body, stands on good legs and feet and was in better condition than the prize winner, whose place we think she should have had. In the puppy class, if Monte Cristo was good enough for first, Cora, unnoticed, ought to have been given second.

SMOOTH-COATED ST. BERNARDS.

In champion smooth-coated dogs Montrose was the only one shown; there was no entry in the bitch class. The open dog class brought out Darby, a cream dog, whose like we have never seen before. In bitches first went to Queen of Sheba, with Joan, Darby's sister, second.

NEWFOUNDLANDS.

The winners are all well known and have been described; we thought the puppy awards correctly given.

ULMERS.

Don Cæsar and Juno were alone in champion classes; they have previously been described. Brock, winner in open dog class, is an excellent specimen, and in our judgment merited his prize. Cæsar, well known, was shown in poor condition. Paula, first in bitch class, is strong, of good proportions, stands well on her legs and shows much character; she deserved her position. Belle, second, was in poor condition, nursing a litter of puppies, and out of show form. The puppy class was rightly judged.

DEERHOUNDS.

Mr. J. E. Thayer's entries were absent, and the exhibits were only fair specimens. The awards went where they were deserved.

GREYHOUNDS.

Memnon, the only one shown in champion class, is well known. Bob, a good dog, given first, deserved it, and the other awards were correct. Belle, in bitch class, took first; she has been described. The puppies were well judged.

CHESAPEAKE BAY DOGS.

There was but one entry, Rex. He was given first prize, but is not a first-rate specimen.

BULLDOGS.

Mr. Thayer's dogs were not shown. First in open bitch class went to Mope, the solitary bulldog in the show; she is of middling quality only.

BULL-TERRIERS.

Count and Maggie May, well known, were alone in champion classes. The open class winners, Young Count and The Baron, have been described. The puppy prizes were withheld.

FOX-TERRIERS.

Champion Fennel was alone in champion dog class, and the champion bitch class was empty. We did not see the open class entries out. The dog puppies were a poor class, first withheld and second going to Mischief, a strong, coarse puppy. Bitch puppies were of inferior merit also.

SCOTCH TERRIERS.

Glenlyon was much the best in his class. He has been described in your Boston report. Glen Gow was properly placed, Glengarry lacked in substance. The decisions in the bitch class we cannot indorse; both have already been reported on before.

DANDIE DINMONTS.

In the dog class Bobbie Burns scored a win, but we should have put Cromwell, second, ahead of him. Both are good ones. Pansy, described in Boston report, was correctly placed first in bitch class.

OTHER TERRIERS.

First and second Irish terrier winners have been fully described in reports of earlier shows. We agree with the judge in his Skye and Yorkshire decisions. In Bedlingtons, Rocks, given hc., we preferred for first place; he is a powerfully and symmetrically built dog. Belle deserved her second prize.

PUGS.

In champion classes, champion Joe and Bo-Peep, well-known animals, were alone. The open dog class prizes were well adjudged. In bitches, Frankie C., given second, we thought the most perfectly formed and marked bitch in the lot; the rest were properly placed, as were also the puppies.

TOY SPANIELS.

There was but one King Charles, and Little Banjo was the sole representative of the race of Blenheims.

MISCELLANEOUS.

Sir Lucifer scored another win and wagged his bob-tail with pride. Second went to something new in the line of canine miscellanies, Sandy, catalogued as a Russian re

triever; all we could make of him was that he was a mongrel from Toronto. Following are the

AWARDS.

ENGLISH SETTERS.—CHAMPION—*Dog and bitch:* Memphis and Avent Kennels' Paul Gladstone and Juno A.—OPEN—*Dogs:* 1st, Memphis and Avent Kennels' Roderigo; 2d, S. L. Boggs's Keystone. Very high com. reserve, A. G. Harbaugh's Dude. Very high com., W. B. Well's Mingo, W. H. Jarvis's Lexington. High com., S. L. Boggs's Blue Prince, E. V. Hale's Pride of Dixie, J. Kime's Blue Joint, J. E. Platt's London. Com., T. Donoghue's Count Noble's Druid. *Bitches:* S. L. Boggs's Lady Rock; 2d, C. A. Stone's Forest Fern. Very high com., W. B. Wells's Dinah G., Memphis and Avent Kennels' Dixie. High com., T. Donoghue's Dictator's Queen and Dari Gladstone, E. Richards's Canadian Lassie, J. Kime's Lucy Bee. Com., T. Donoghue's Jeanette and Blue Cubas, Detroit Kennel Club s Kelp and Rachel, S. L. Boggs's Sparkle, C. Smith's Lady and J. Chaffer's Lady Paris.—PUPPIES—*Dogs:* 1st, Memphis and Avent Kennels' Claude; 2d, Detroit Kennel Club's Frank Berwyn. Very high com., C. A. Stone's Forest Sportsman. High com., J. O. Horne's Westmoreland. Com., C. A. Stone's Forest Sport, D. O'Shea's Prince, T. R. Savage's Tasso. *Bitches:* 1st, E. Richard's Eclipse; 2d, J. E. Patterson's Louise Gladstone. Very high com., C. B. Merriam's Flash.

IRISH SETTERS.—CHAMPION—*Dog:* Dr. Wm. Jarvis's Elcho, Jr. *Bitch:* H. E. Chubb's Zilla Glenduff.—OPEN—*Dogs:* 1st, D. L. Carmichael's Max; 2d, H. E. Chubb's Glenduff. Very high com., C. Hanitch's York. High com., Dr. C. Spaler's Dashing Elcho. Com., L. Lea's Pix and Earl of Bantry. *Bitches:* 1st, L. Lee's Fame; 2d, T. Donoghue's Irish Maud.—PUPPIES—*Dogs:* 1st and special, H. E. Chubb's Glenduff; 2d, C. M. Nelles's Beau. *Bitches:* 1st, C. M. Nelles's Mona; 2d, T. Donoghue's Irish Lass.

BLACK AND TAN SETTERS.—CHAMPION—*Dog:* W. Hammett's Royal Duke.—OPEN—*Dogs:* 1st, W. E. Rothermel's Don; 2d, E. A. Clobitz's Dashing Count. Very high com., A. G. Harbaugh's Sport; R. Schmidt's Dan. *Bitches:* 1st, W. Hammett's Rose; 2d, F. W. J. Ball's Lottie. High com., T. Donoghue's Malissa.

POINTERS.—LARGE—CHAMPION—*Dog:* Detroit Kennel Club's King Bow. *Bitch:* Idstone Kennels' Lady Croxteth.—OPEN—*Dogs:* 1st, Gillman & Barnes's Lansdowne; 2d, Idstone Kennels' Patterson. Very high com., Detroit Kennel Club's Fleet, J. R. Daniels's Donald's Ranger. High com., Mrs. C. I. Engel's Young Meteor. Com., R. Schmidt's Bow Faust. *Bitches:* 1st, C. White's Mollie Faust; 2d, E. Richard's Queen. Very high com., Detroit Kennel Club's Bow Queen.—SMALL—CHAMPION—*Dog:* J. H. Craft's Robin Adair. *Bitch:* C. M. Munhall's Patti M.—OPEN—*Dogs:* 1st, Dayton Kennel Club's Rumpty; 2d, C.M. Dix's Hamlet Sleaford. High com., F. Billings's Tamarack. *Bitches:* 1st., T. Donoghue's Juno D.; 2d, J. A. Powell's Hyppolite. Very high com., Detroit Kennel Club's Lady Pearl and Rose Pape. High com., Detroit Kennel Club's Judy. Com., Columbus Kennels' Corsican Tobe.—PUPPIES—*Dogs:* 1st and 2d, Detroit Kennel Club's Storm Bow and Crow Bow. Very high com., J. H. Walker's Blucher. *Bitches:* 1st, Detroit Kennel Club's Countess Lill; 2d, J. H. Craft's Maggie Maguire.

IRISH WATER SPANIELS.—CHAMPION—*Dog:* Stock & Chisholm's Patsey O'Connor.—OPEN—*Dogs:* 1st, J. D. Alcott's The O'Donoghue; 2d, Excelsior Irish Water Spaniel Kennels' Patsey O'Donoghue.—*Bitches:* 1st, T. B. Lewis's Coleen O'Donoghue; 2d, T. Donoghue's Biddy Malone.—*Puppies:* 1st, F. B. Lewis's Coleen O'Donoghue; 2d, Excelsior Irish Water Spaniel Kennel's Patsy O'Donoghue.

FIELD SPANIELS.—OPEN—*Dog:* J. L. Curtis's Kaysi—*Bitches:* 1st, J. Roche's Fan II.; 2d, R. G. Wilkie's London Jet.

COCKERS.—ANY COLOR EXCEPT BLACK, UNDER 28LBS.—CHAMPION—C. M. Nelles's Little Red Rover.—OPEN—1st, H. G. Charlesworth's Dandy; 2d, C. M. Nelles's Rage. Very high com., H. S. Falls's Tony. High com., A. Laidlaw's Robin.—BLACK, UNDER 20LBS.—CHAMPION—C. M. Nelles's Brant.—OPEN—*Dogs:* 1st, C. M. Nelles's Obo, Jr., A. Ross's Smut. Very high com., H. A. Carter's Hector. High com., American Cocker Kennels' Dixie. Com., A. G. Wilkie's Count Obo.—*Bitches:* 1st, H. G. Charlesworth's Miss Ladybird; 2d and very high com. reserve, C. M. Nelles's Frou Frou and Juno W. Very high com., F. E. Curtis's Woodstock Flirt, J. S. Niven's Busy, O. Henry's Lady of the Lake. High com., C. M. Nelles's Bonita, H. G. Charlesworth's Ladybird Obo, Miss E. Saunders's Cora. Com., Abbotk's Belle Obo.—PUPPIES, ANY COLOR—*Dogs:* 1st, C. M. Nelles's Guy; 2d, R. G. Wilkie's Count Obo. Very high com., J. A. Roche's Nob. High com., C. M. Nelles's Jack B., American Cocker Kennels' Dixie, O. Henry's Sir John A. Com., A. Laidlaw's Robin, A. Ross's Tom.—*Bitches:* 1st, C. M. Nelles's Frou Frou; 2d, H. G. Charlesworth's Vesta. High com. and com., R. G. Wilkie's Black Bess and Zulu.

BEAGLES.—CHAMPION—Mrs. C. White's Champion Bonnie.—OPEN—OVER 12IN.—*Dogs:* 1st, D. O'Shea's Tomboy; 2d and very high com., J. Bross's Dexter and Dan. *Bitches:* 1st, 2d and high com., J. Bross's Rela, Belle and Flora. Very high com., D. O'Shea's Hasty. High com., C. M. Nelles's Betty.—UNDER 12IN.—*Dogs:* 1st, Mrs. C. White's Bugle. *Bitches:* 1st, D. O'Shea's Foremaid; 2d, J. Bross's Roxy. High com., Mrs. C. White's Fairie. High com., H. B. Nichols's Banner Queen. *Puppies:* 1st, D. O'Shea's Music IV.

DACHSHUNDE.—OPEN—1st, Idstonek's Prince; 2d, P. Lach's Lisette. Very high com., L. Melchor's Gertrude. High com., W. Kyll's Fix.

FOXHOUNDS.—AMERICAN AND ENGLISH—CHAMPION—*Dog and bitch:* D. O'Shea's Ranger and Roxey. AMERICAN—OPEN—*Dogs:* 1st, 2d, very high com. and 2 high coms., H. E. Cook's Brave, Roderick, Roderic II., Hec and Willie H. Com., D. O'Shea's Leader. *Bitches:* 1st, 2d, 2 very high com. and 4 com., H. E. Cook's Rose, Fly, Wild, Spottie, Fannie, Pearl, Flash and Belle II.—ENGLILH—*Dogs:* 1st withheld; 2d, H. Card's Sportsman. *Bitches:* 1st withheld; 2d, D. O'Shea's Romade.—AMERICAN AND ENGLISH—*Puppies:* 1st, H. E. Cook's Roderic II; 2d, E. R. Hickerson's Cook. Very high com., D. O'Shea's Forester. High com., H. E. Cook's Flash and Pearl. Com., H. E. Cook's Jewel and Fly.

COLLIES.—CHAMPION—*Dog:* Chestnut Hill Kennels' Scotilla.—OPEN—*Dogs:* 1st, Chestnut Hill Kennels' Dublin Scot; 2d and very high com., reserve, McEwen and Gibson's Bonnie Duntroon and Bonnie Dunkeld. Com., Abbott Kennels' Flyaway, A. R. Kyle's Heather Belle. PUPPIES—*Dogs:* 1st, McEwen and Gibson's Carrick. *Bitches:* 1st, McEwen and Gibson's Jess.

MASTIFFS.—*Dogs:* 1st, Wacouta Kennels' Wacouta Nap; 2d, R. R. Oesterreich's Ashmont Tiger. Very high com., J. Stroh's Nero. High com., J. Mahoney's Prince Bismark. High com., A. Laidlaw's Leo, E. L. Thomas's Jeffrey and C. C. Cook's Cæsar II. *Bitches:* 1st, Wacouta Kennels' Wacouta Rose; 2d, E. Oesterreich's Ashmont Bess. Very high com. reserve and high com., J. Mahoney's Betsy Baker and Kathleen Mavourneen. High com., Miss Maclean's Meg Merrilies. Com., J. Mahoney's Margarette and C. C. Cook's Rena. *Puppies:* 1st, H. T. Buchauan's Tom Snyder; 2d, C. C. Cook's Rena.

ST. BERNARDS.—ROUGH-COATED — CHAMPION — *Dog:* R. J. Sawyer's Sir Charles. *Bitch:* R. J. Sawyer's Swiss Beda.—OPEN—*Dogs:* 1st, H. Newberry's Julien; 2d, Mohawk Kennels' Marco Palo. Very high com., Hospice Kennels' Hadjar. High com., R. Storrs's Rex. *Bitches:* 1st, R. J. Sawyer's Plinthia; 2d, Mohawk Kennels' Norna. High com., R. J. Sawyer's Floss and Dudley Kennels' imported Mercedes. Com., R. J. Sawyer's Priscilla. *Puppies:* 1st, Dudley Kennels' Monte Cristo.—SMOOTH-COATED—CHAMPION—*Dog:* Alta Kennels' Montrose.—OPEN—*Dogs:* 1st, T. Stephenson's Darby. *Bitches:* 1st, Hospice Kennels' Queen of Sheba; 2d, T. Stephenson's Joan.

NEWFOUNDLANDS.—*Dogs:* 1st and 2d, D. O'Shea's Bruno and Leo. *Bitches:* 1st, D. O'Shea's Juno; 2d, J. Struthers's Juno II. *Puppies:* 1st, D. O'Shea's Carlo; 2d, A. Card's Queen.

GREAT DANES.—CHAMPION—*Dog:* Osceola Kennels' Don Cæsar. *Bitch:* Wolverine Kennel Club's Juno.—OPEN—*Dogs:* 1st, A. Trinkle's Brock; 2d, Wolverine Kennel Club's Cæsar. Very high com., P. Merker's Nero. High com., Wolverine Kennel Club's Nero. Com., A. Goebel's Siegfried, P. Merker's Pluto. *Bitches:* 1st and high com., Wolverine Kennel Club's Paula and Lady Gray; 2d, A. Trinkle's Belle. Very high com., A. Goebel's Lady Sawtelle. Com., W. F. Krehl's Minca. *Puppies:* 1st, E. Ortman's Brutus. Very high com. and com., Wolverine Kennel Club's Don and Augusta.

DEERHOUNDS.—*Bitches:* 1st, W. F. Krehl's Rube; 2d, S. W. Skinner's Maida. PUPPIES—*Dogs:* 1st, S. W. Skinner's Ronald; 2d, W. H. Mullin's Custer.

GREYHOUNDS.—CHAMPION—Terra Cotta Kennels' Memnon.—OPEN—*Dogs:* 1st, F. C. Whitney's Bob; 2d, C. T. Reed's Rake. Very high com., W. R. Branch's Heber. High com., Abbott Kennels' Leicester Laddie. Com., C. F. Reed's Rake. *Bitches:* 1st, J. F. Nicholson's Belle. Com., E. Marchall's Branch and Jewel. *Puppies:* 1st, J. E. Kingston's Maud K.; 2d, withheld.

CHESAPEAKE BAY DOGS.—1st, J. H. Bishop's Max.

BULLDOGS.—OPEN—*Bitches:* 1st, D. Maclean's Mape. *Puppies:* 1st, W. W. Campbell's Maggie May.

MASTIFF.

[From the American Kennel Register.]

BULL-TERRIERS.—CHAMPION—*Dog and Bitch:* F. F. Dole's Count and Maggie May.—LARGE—OPEN—1st, F. F. Dole's Young Count; 2d, W. W. Silvey's The Baron. Very high com., W. A. Shaw's Miss Norah.—SMALL—1st, withheld; 2d, A. C. Orvis's Kit. *Puppies:* Prizes withheld.

FOX-TERRIERS.—CHAMPION—*Dog:* R. Gibson's Fennel—OPEN—*Dogs:* 1st, ——'s Lytham Ben; 2d, E. Lever's Little Swell. Very high com., R. Gibson's Mischief. Com., J. H. Walker's Avenger. *Bitches:* 1st and 2d, R. Gibson's imported Gaudy and Belvoir Teagle.—PUPPIES—*Dogs:* 1st, withheld; 2d, R. Gibson's Mischief. *Bitches:* 1st, withheld, 2d, W. Campbell's Bell.

SCOTCH TERRIERS.—OPEN—*Dogs:* 1st, 2d and high com., J. H. Naylor's Glen Garry, Glen Gow and Glenlyon. Com., D. O'Shea's Major. *Bitches:* 1st and 2d, J. H. Naylor's Fannie Fern and Rosie.

BLACK AND TAN TERRIERS.—LARGE—1st, G. Bell's Bessie; 2d, W. Campbell's Turk. Very high com. and high com., N. Muss's Mahomet and Lady. SMALL—*Dogs:* 1st, Mrs. J. Lockwood's Tiney. 2d, W. Campbell's Toby. Very high com., M. W. Hartigan's Pincher. *Bitches:* 1st, W. Campbell's Trix. 2d, T. Blake's Tiney. Very high com., D. Martin's Tiney.

DANDIE DINMONTS.—OPEN—*Dogs:* 1st, J. Rae's Bobbie Burns, 2d and very high com., J. H. Naylor's Cromwell and Bonny Briton. *Bitches:* 1st and 2d, Pansy and Pride of Leader. High com., W. P. Burns's Uno.

IRISH TERRIERS.—1st, J. O. Home's Eileen; 2d, C. T. Thompson's Geesela. Very high com. and com., D. O'Shea's Erin and Fly.

SKYE TERRIERS.—1st and 2d, J. H. Naylor's Drollie and Harrie. High com., D. Maclean's Crecpie.

YORKSHIRE TERRIERS.—1st, W. Campbell's Rowdy. 2d, F. Wild's Crickett. High com., L. Brown's Topsy. Com., W. H. Newton's Polly.

BEDLINGTON TERRIERS.—1st E. C. Coldman's Hillside Sallie. 2d and very high com., D. O'Shea's Belle II. and Sting. High com., W. W. Silvey's Rocks. Com., D. Martin's Benjamin Ross.

WHITE ENGLISH TERRIERS.—Prizes withheld.

PUGS.—CHAMPION—*Dog:* Mrs. G. H. Hill's Champion Joe. *Bitch:* Mohawk Kennels' Bo-Peep.—OPEN—*Dogs:* 1st, J. R. Richard's Pudgie; 2d, C. Schwein's Punch. Very high com., O. W. Delano's Don. *Bitches:* 1st, G. Bell's What's That; 2d, Mohawk Kennels' Frankie C. High com., O. W. Delano's Kate, T. Billing's Dot. Com., Mrs. H. A. Bliss's Dot. *Puppies:* 1st, Mohawk Kennels' Frankie C.; 2d, H. A. Bliss's Tot. Very high com., G. Gillivan's Talent. High com., J. H. Lyrick's Jumbo. Com., J. W. Walker's Molly, Miss M. Edson's Don, Jr.

KING CHARLES SPANIELS.—1st, C. Sander's Mickey S.

BLENHEIM SPANIELS.—1st, Miss L. Hart's Little Banjo.

MISCELLANEOUS.—LARGE—1st, Glencoe Collie Kennels' Sir Lucifer (bob-tailed sheep dog); 2d, G. Bell's Sandy ("Russian retriever").—SMALL—1st, Miss I. A. Jones's Topsy (Maltese). Very high com., D. O'Shea's Nellie (toy-terrier) and Miss M. J. Sinclair's Joli (Bolognese spaniel).

AMERICAN KENNEL CLUB METHODS.

Editor Forest and Stream:

"I hope I don't intrude; "but query; the proxy of the Pittsburgh Club was cast in support of Mr. Munhall; the Cleveland Club was the only defender of "pewter medals"; I smell a rat. Was the proxy "instructed?" If so, doesn't it look like "a job?"

I must protest against Mr. Peshall's proposed mode of settling the difficulty. The A. K. C. has now twice given a "final decision." Are three times the charm? If so, why so? If the A. K. C. can reverse itself twice, why not twenty times twice? If an officer of the club, voting on a proxy, gives cause for a rehash, and the same officer, without a proxy, or any authority of any kind, can move for the rehash, why not hold a meeting of the protestor (or as Mr. Peshall inimitably puts it, "a sub-proxy, when the proxy for the sub-proxy was the protestor") and call in a "majority" of gutter snipes to vote the decision of the august A. K. C.?

The only solution of the difficulty, that will restore the tarnished honor of the A. K. C., is the defiance by the New Jersey Kennel Club of this preposterous summerset, and a declaration by the A. K. C. that the action at the May meeting was utterly null and void, and a direction that it be expunged from the minutes.

The only satisfactory thing the delegates of the Detroit and St. Paul clubs can do is to state that they voted not knowing that a final decision had not been given six months previous, and that they thought they were voting on an open question.

Just imagine the consequences of this ridiculous "bare-backed" act being allowed to stand as authority. Jones protests against Smith. The A. K. C.'s first "final" is in favor of Smith. Jones "hustles" in the most approved ward politics style, gets a majority with him, and gets a "final" number two. But Smith is no fool and he "sees the boys," gets a meeting of his, and secures "final" number three. Hey, how is that? Of course, the securer of each "final" immediately demands his "boodle." Well, that "speculative" show we used to hear rumors of, sees herein a bright idea, they get a protest from a "Mrs. Harris" for every award, and hold the money for the "final final." That's the racket, boys. W. WADE.

HULTON, Pa., May 27.

A BIGGER NUT FOR MR. RENDLE TO CRACK.—*Editor Forest and Stream:* One of your city contemporaries contains the following "nut": "Constable Riker has had an eye on Mr. Rendle's dogs, and in looking up the records for information in cases where persons had been accused of keeping dogs without a license, found that none of Mr. Rendle's pure-blooded canines had been duly registered according to law. Then he made a complaint, and Mr. Rendle came before the Justice yesterday and pleaded guilty to keeping two dogs without a license, and paid a fine of $11 and costs."—CHARLES H. MASON.

MASTIFF TYPE.

WE are able to present to our readers an old illustration of the mastiff that has so far escaped all writers on dogs. It is from "Bingley's Memoirs of British Quadrupeds," London, 1809, a copy of which, after a long search, was at last found. From the excellence of the workmanship, it is fair to presume that some pains was taken in securing a faithful likeness, and it will be noticed that it is a revelation, in presenting the extreme bulldog type, as existing eighty years since. It may be remembered that Mr. Wynn, Mr. Hutchings, Mr. Haldeman and Mr. Wade have discussed this question of what the original type was, Mr. Wynn maintaining that the bulldog type was the original, real thing, and the others differing and going to various lengths in claiming the modified St. Bernard type as the correct and original one. To our mind, all are wrong. A study of the heads of King (called Governor's by mistake), Turk and Hanbury's Duchess in *American Kennel Register* of November, 1885, will conclusively show that at their date the bulldog type was not the fashionable one, and the pictures in the "Sportsman's Cabinet," as copied in Capt. Brown's book, and Vero Shaw, also sustain this view; but here we have a picture, eighty years old, that shows the extreme of bulldog, undershot, short-muzzled type.

We believe the fact to be, that there was no such thing as type in the early days; dogs were bred for use alone, no strict definitions as to type being thought of, and a few characteristics, such as size, speed, habits, etc., were the only distinguishing marks of different breeds. Bingley dwells very little on the shape of the mastiff, what we now call "type," devoting his remarks almost exclusively to the habits, temperament, etc., of the breed, attributing to them exactly the faithful, wise, watching qualities their admirers now claim for them.

We propose to continue illustrations from Bingley of other breeds, as may be of interest to our readers.—*American Kennel Register for May.*

Editor Forest and Stream:

The admirable illustration of an English mastiff, taken from "Bingley's Memoirs of British Quadrupeds," given in the May number of the *American Kennel Register*, is worthy of more than cursory notice by lovers of this noble breed of dogs. As the editor pertinently alleges, "From the excellence of the workmanship, it is fair to presume that some pains was taken in securing a faithful likeness, and it will be noticed that it is a revelation, in presenting the extreme bulldog type, as existing eighty years since."

In the lengthy discussion in your columns upon the question of what the original type was, I confined myself to pointing out supposed inaccuracies of enthusiastic breeders who are struggling to perfect a type unknown a hundred years ago. To quote the article in the *American Kennel Register* again: "We believe the fact to be, that there was no such thing as type in the early days." This has always been my decided opinion.

The Old English Mastiff Club having adopted a description of what a modern bench show mastiff should be, it is the duty of those who wish to produce such dogs to follow their rules, and judges should make their awards consistent with this standard. There is no doubt in my mind that both bulldog and mastiff are derived from a similar source. Old pictures support my belief, Darwin has conclusively proven that all pigeons had a common origin—the wild rock pigeon—and it is probable that the various breeds of domestic dogs have descended from a few, or possibly one, wild prototype. From a limited variety of dogs, many have been made and are still multiplied. What annoys the mastiff fancier of to-day is the inconsistence of our judges. One is governed entirely by the shortness of the dog's muzzle, another by size and ability to move easily, while still another is undecided between the two extremes, and divides the prizes between the different types brought before him, in the most incongruous fashion.

Until recently the bulldog "layback" on a mastiff was unknown. I doubt if, formerly, the bulldog himself had this extremely short upper jaw, which is now his chief characteristic. A modern bulldog, had he to hunt his meat, would starve to death, ditto mastiff.

Formerly dogs were bred for certain uses, and it was the mastiff's duty to watch and protect his master's house. He was made large to command attention and impress trespassers with fear. As a guard dog speed was not essential, but strength of limbs, body, neck and jaws were indespensable. In breeding for fancied points all these grand characteristics of the mastiff have been ignored. The prize winning mastiff of to-day cannot walk, much less spring upon a man, nor could he take hold even if he did manage to get at him. As a guard he cannot compare with the despicable "yaller" dog.

The show mastiff is a new creation, and off the bench no one would have any use for him. Offer a brute of this kind to a person not acquainted with bench shows and your gift would be refused. The ladies call them "horrid brutes," yet they "go wild" over a dog the type of King and Turk. Deformeties are always repulsive, symmetrical and regularly proportioned animals are a pleasure to look upon.

As long as short-nosed cripples are awarded prizes, let those who want them breed that type of mastiffs, but let us encourage as much as possible the breeding of a large, heavy mastiff, of medium length of muzzle and of the noble qualities of mind that endeared them to their masters in former times. Are not mastiffs as a breed growing stupid and listless? If so, what use are they, and why keep them at all?

VICTOR M. HALDEMAN.

WESTERN FIELD TRIALS DERBY.

ENTRIES FOR 1887.

TRINKET COUNTESS (Paul Franke, St. Joseph, Mo.), pointer bitch (Crocket—Trinket).

LASSIE JEAN (A. J. Gleason, Alma, Kas.), pointer bitch (Corner Stone—Gertrude).

BELLE C. (C. T. Allcutt, Kansas City), pointer bitch (Corner Stone—Gertrude).

COUNT C. (J. I. Case, Jr., and F. K. Bull, Racine, Wis.), English setter (King Noble—Elsie Belton).

CAPTAIN NOBLE (J. I. Case, Jr., and F. K. Bull, Racine, Wis.), English setter (King Noble—Elsie Belton).

KING MARK (J. I. Case, Jr. and F. K. Bull, Racine, Wis.), English setter dog (King Noble—Belle Belton).

QUEEN NOBLE (J. I. Case, Jr. and F. K. Bull, Racine, Wis.), English setter bitch (King Noble—Belle Belton).

BLUE CHIEF (J. I. Case, Jr. and F. K. Bull, Racine, Wis.), English setter dog (King Noble—Elsie Belton).

RODERICK (J. I. Case, Jr. and F. K. Bull, Racine, Wis.), English setter dog (King Noble—Elsie Belton).

JILL (J. I. Case, Jr. and F. K. Bull, Racine, Wis.), setter bitch (Dashdale—Bonfil's Dot).

ROSE (Branch Martin, Little Rock, Ark.), English setter bitch (Little Dan—Bet).

PRIDE OF M. (R. M. Hutching, Galveston, Tex.), pointer (Bang Bang—Zannetta).

LITTLE GIFT (Bert Crane, Chicago), English setter (Rodrigo—Queen Bess).

PRAY'S GLADSTONE (J. A. Bolen, Kansas City), English setter (Paul Gladstone—Bessie A).

HATTIE WEST (J. A. Bolen, Kansas City), Irish setter bitch (Bush, Jr.—My Maud).

VAN HORN (George McConnell, Chicago), Irish setter (Brust, Jr.—My Maud).

LADDY (W. B. Gates, Memphis, Tenn.), English setter (Roderigo—Bo-Peep).

SAMUEL S. (W. B. Gates, Memphis, Tenn.), English setter (Paul Gladstone—Lottie).

OLLIE S. (W. B. Gates, Memphis, Tenn.), English setter bitch (Paul Gladstone—Lottie).

BERTRAM (W. B. Stafford, Trenton, Tenn.), (Guess—Viola).

WELL (W. B. Stafford, Trenton, Tenn.), (Guido—Bell).

GRAPHIC III. (Graphic Kennels, Netherwood, N. J.), pointer (champion Graphic—Bloomo).

FRIVOLITY (Graphic Kennels, Netherwood, N. J.), pointer (Donald—champion Rene III.).

MISS GLEE (Graphic Kennels, Netherwood, N. J.), pointer (Ned of Effend—champion Bracket).

BABE GLADSTONE (F. N. Wood, Kansas City), lemon belton setter bitch (Paul Gladstone—Bessie A.).

STELLA JACKSON (R. C. Van Horn, Kansas City), Irish setter bitch.

JESSIE B. (R. C. Van Horn, Kansas City), Irish setter bitch (Patsy P.—Betsy Crafts).

RENÉ (W. B. Gates, Memphis, Tenn.), English setter bitch, (Paul Gladstone—Lottie).

UNNAMED (W. B. Gates, Memphis, Tenn.), (Roderigo—Lady Rake).

HUBERT (E. C. Sterling, St. Louis), pointer (Mainspring—Dell).

BELLE OF KANSAS CITY (Drury Underwood, Kansas City), English setter bitch (Paul Gladstone—Bessie A.).

MOLLY, JR. (A. T. Harridge, Alma, Kansas), (Frank—Flora).

DON CONSULTS THE DOCTOR.

PHILADELPHIA, May 24.—*Editor Forest and Stream:* Herewith I send you an account of an interesting incident illustrating the marvelous instincts of the canine species. I can vouch for the reliability of the statements made by the writer of the letter.—C. A. KINGSBURY.

PHILADELPHIA, May 15.—*Dear Doctor:* Last Friday (May 13) I went to New Hope, Bucks county, Pennsylvania, to visit Dr. Richard C. Foulke. He met me at the station, and on reaching his house we were met at the door by two dogs, who were waiting for us, one belonging to the doctor, the other, a short-haired pointer called Don, belonging to a neighbor. Mrs. Foulke, the doctor's mother, met us at the front door, into which Don pressed in such a marked way as to cause her to remark: "Why, Don! what are you coming in for?" The doctor's dog remained outside. Don followed us into the sitting-room, where Mrs. Foulke and I sat down, while the doctor remained standing, talking to us, but taking no notice of the dog, who was standing directly in front of him and looking up into his face. After the dog had been standing this way for some time and no one noticing him, he held out his left foot as if to shake hands with the doctor, who was still talking. This movement of Don attracted the attention of Mrs. Foulke, who remarked to the doctor, "What makes Don hold up his foot to you? He wants you to examine it. He may have something in it." At this remark Don stood on his hind feet, placed his front feet on the doctor's chest, looking directly at him, and held out his left foot, which the doctor took in his hand and turned it over, saying: "No wonder he wants me to look at it! See here." There was a long, rusty pin, which had run some distance into the poor dog's foot. After the doctor took the pin out of the flesh the dog remained in the same position on his hind legs and began to gently lick the doctor's hand till I called him and said: "Come here, Don, and let me see your foot," when he came to me, put both feet in my lap and stood there while I examined his foot. Did Don tell the doctor's dog about his foot, and learn from him that his master could cure it?

I make this statement of facts at your request while fresh in my mind. ROBT. R. CORSON.

JIMMIE GOES TO ENGLAND.—Jersey City, N. Y.—*Editor Forest and Stream:* I have concluded to send my old pointer Jimmie to the Jubilee show, to be held next month in Crystal Palace, London. Jimmie is a Yankee pointer and I believe he will be appreciated by the English. I also think that I will have the influence of Her Majesty, the Queen, because Mr. Mason, who is considered the English representative of dogs in this country, in one of his reports said that "Jimmie was a brown dog with yellow eyes," and I am informed that the Queen is very fond of everything that is brown, so I hope to have her influence with the judge. I will tack an American flag to his box and put in a few trade dollars and send him on his way.—C. J. PESHALL.

DOG POISONING.—Lynn, Mass., May 28.—In the town of Stoneham, some nine miles from this place, the dog fiend is at large, and is committing destruction by the wholesale in the ranks of the noble brutes. While on business in Stoneham for a few hours yesterday, I was informed by reliable gentlemen that thirty-seven dogs have been poisoned in the past two or three weeks. So determined has the fiend been to accomplish his ends, that crackers with the poison on them have been picked up on the streets and even from school house yards. The authorities of the town have offered a reward of $500 for the conviction of the poisoner, but such inducements have failed to find the guilty ones as yet.—R. L.

AMERICAN FIELD TRIAL CLUB DERBY.—Cincinnati, O., May 25.—*Editor Forest and Stream:* In the publication of the entries for the Derby of 1887 the entries of Graphic III., Donald IV., Fashion, Frivolity, Miss Glee and Master Brackett should have read by the Graphic Kennels, as it was their entry and not J. L. Anthony's.—C. W. PARIS (Sec. and Treas.).

BEAGLES AT NEW HAVEN.—*Editor Forest and Stream:* Mr. Mason in his reports of shows often states that a dog was beaten on the condition it happened to be in at the stated time. The same is necessarily an admission that, in his opinion, it is mere guesswork or a lottery to compare a dog as seen at one time with another dog is seen at another time and pretend to rate their comparative values, and it necessarily follows that he must consider such newspaper criticisms as not a criterion of the relative value of the dogs so criticised. Mr. Aldrich recently showed how Mr. Mason critically examined and criticised two Irish setters at the late Philadelphia show, one of which was the whole time in Mr. Aldrich's kennels at Providence. In your criticisms of the late Hartford show, signed "Charles H. Mason," the opinions expressed in the beagle comments are profusely introduced with "I's," therefore I take them as Mr. Mason's individual opinions. Mr. Mason, who refuses to judge beagles or American foxhounds at shows, as he does not consider his experience with the breeds warrants it, criticises Trailer and other hounds in the show, giving their comparative standing. Now, the facts of the case are: Trailer was a very sick hound and was withdrawn from the show before Mr. Mason's arrival, and as a result he never saw him at the show at all; and when he was being compared with the other hounds he lay sick in my kennel, under the care of Dr. Glover, or he certainly was at least on the way there. As Mr. Mason would have had my hound placed lower than he was, justice to my hound calls for the above, particularly as I have shown above that his own writings show it is not a proper way to judge a dog, much less to unfavorably criticise him. My reference to Mr. Mason's judging beagles and American foxhounds is not given as a personal insinuation, but as a necessary reply to his comments on my hound, particularly stated as his opinions, as I certainly think it is better to pursue such a course about judging than to do as some do, accept when not at all competent, and thereby do some an injustice by the natural result of improper awards.—HERM. F. SCHELLHASS (Brooklyn, N. Y.).

GREYHOUNDS AT PHILADELPHIA.—New York, May 24.—*Editor Forest and Stream:* When I became an exhibitor of greyhounds I least expected to be called upon to enter into newspaper controversy as the present one. If Mr. Huntington desires to continue he must excuse me from replying, as my time is too busily engaged at present. As to the Philadelphia entry I have stated my case, and can only say that three members were present to decide the question, and not one servant. As to the Boston entry, I can say that I did not know that Memnon was entered, nor did I know what dogs were in the open class, as I did not attend the show in person. Regarding the question of best dog he certainly does not agree with other judges when he calls Memnon a better dog than Mother Demdike. Lancashire Witch beats Memnon, and Mother Demdike beats Lancashire Witch and Memnon in England and America; also all the noted dogs in England, including Sister Mary, Acalia, Rose Marie and Destructive, and is pronounced by the press to be the most perfect greyhound living. I also remember an advertisement in the FOREST AND STREAM in which Mr. H. calls Mother Demdike England's champion (very strange). I admit Mother Demdike has been beaten by Mr. H.'s dogs when not in condition, but she in return has also won from the same dogs. I do not care to go further into this subject, but can only say that my dogs are on exhibition in shows held for the purpose to demonstrate which is the better animal. I therefore deem it needless to accept his proposition. As to Messrs. Charles's letters, these are for business and for the sale of dogs, and do not judge them, and can only say that my esteemed friend, Mr. Smith, purchased the best bitch that Messrs. Charles ever bred. With these remarks I sincerely trust to be excused from further writing. —CHAS. D. WEBBER.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Merchant Prince. By E. H. Moore, Melrose, Mass., for St. Bernard dog, age not given, by Merchant Prince out of Nerina.

Daisy Deverell. By Sunnyside Kennels, New York, for white bull-terrier bitch, whelped December, 1886, by Count (Marquis—Kit) out of White Rose.

Bob O'More. By J. McKendree K. Bayly, Baltimore, Md., for red, white frill, Irish setter dog, whelped April 3, 1887, by Rory O'More (Rufus—Friend) out of Gay (Elcho—Fire Fly).

Bandit. By A. C. Krueger, Wrightsville, Pa., for white, black and tan beagle dog, whelped May 1, 1887, by Cameron's Racket (Rally—Louise) out of Maggie (Sport—Fannie).

Chieftain. By A. C. Krueger, Wrightsville, Pa., for white, black and tan beagle dog, whelped April 29, 1887, by his Cameron's Racket (Rally—Louise) out of Trixy (Ringwood—Belle).

Joe. By John Poinier, Newark, N. J., for black and tan Gordon setter dog, whelped May 24, 1882, by Hindoo (Grouse—Bee) out of Pindell's May (Pindell's Dan—Pindell's Fly).

Zulie (A.K.R. 4969). By Sagamore Kennels, West Medford, Mass., for black, white and tan beagle bitch, whelped March 29, 1885, by Rip (Victor—May) out of Blossom (Blunder—Rur).

Robin Hood and Robin Adair. By Geo. Shepard Page, Stanley, N. J., for two dark brindle deerhound dogs, whelped April 16, 1887, by Dunrobin (A.K.R. 1236) out of Shelloch (A.K.R. 2214).

Grace Beaufort and Lady Beaufort. By Elm Grove Kennels, South Norwalk, Conn., for two liver and white ticked pointer bitches, whelped Aug. 1, 1885, by Duke Royal (A.K.R. 2472) out of Lizzie Grace (A.K.R. 2476).

Calhoun Kennels. By Col. R. J. Hamilton, Springfield, Mass.

Ajax. Will the Richland Kennels please note that I some time ago claimed the name of Ajax; his A.K.R. number is 3919, and he is now a first-prize winner?—VICTOR M. HALDEMAN.

BRED.

June. Beagle bitch, whelped March 11, 1884, by Victor II. out of May, by Geo. Pownall, Thurlow, Pa., to A. C. Krueger, Wrightsville, Pa.

Kino. Imported white, black and tan beagle dog, whelped 1882, pedigree not given, by J. Satterthwaite, Jenkintown, Pa., to A. C. Krueger, Wrightsville Pa.

Vickey. White, black and tan beagle bitch, whelped May 29, 1883, by Racer out of Vic, by A. C. Krueger, Wrightsville, Pa., to F. W. Rutter, Jr., Lawrence, Mass.

Lass o' Gowrie. Dark blue Skye terrier bitch, whelped Dec. 12, 1884, by Jim out of Queen Mab, by Dr. Wm. P. Sanderson, Philadelphia, Pa., to N. V. Ketchum, Savannah, Ga.

Rory O'More—Gay whelp. Red, white frill on chest, Irish setter dog, whelped April 3, 1887, by W. N. Callender, Albany, N. Y., to J. McKendree K. Bayly, Baltimore, Md.

Hero III. Fawn, black points, mastiff dog (A.K.R. 1765), by Victor M. Haldeman, Milford, Del., to Charles A. Altmannsperger, Minden, Ia.

Sandycroft Blucher. Fawn, black points, mastiff dog, whelped April 9, 1887 (A.K.R. 4985), by Victor M. Haldeman, Milford, Del., to Dr. G. H. Ashman, Philipsburg, Pa.

Sandycroft Barly. Fawn, black points, mastiff dog, whelped April 9, 1887 (A.K.R. 4985), by Victor M. Haldeman, Milford, Del., to Dr. J. P. Thompson, Johnstown, Pa.

Paul Gladstone. Black, white and tan English setter dog, age not given, by Gladstone out of Lavalette, by Memphis & Avent Kennels, Memphis, Tenn., to S. L. Boggs, Pittsburgh, Pa.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

J. H., Lyme, Conn.—A fox-terrier pup, 6mos. old, appears to have St. Vitus's dance, twitching and weakness of legs. Ans. The puppy has chorea, the result, probably, of a previous distemper. Get the following:

℞. Ferri et strychnin. citrat..... .....grs. xx .
Fit. pil. No. X.
Sig. One three times daily.

Hide the pills in morsels of meat and the dog will bolt meat and pill together. Satisfy yourself that the dog is free from worms.

WENONAH, N. H.—My English mastiff pup, 10mos. old, has been troubled ever since he was 4 or 5mos. old with a bloody urine at times, and also a white pus matter. He seems tender over the region of the kidneys, and I think may have received a strain while younger and weak. Ans. Use the following:

℞. Tr. ferri chlorid.	
Ext. ergot. fld.....	āā ʒ ss
Glycerin	ʒ ii
Aq. q. s. ad.....	ʒ iv

Mix. Sig. Give one teaspoonful three times daily.

A FIVE HUNDRED POUND TURTLE.—Sanner Brothers, commission merchants, received yesterday one of the largest, if not the largest turtle ever shipped to this city. It is one of the trunk-back species and weighs about 500 pounds. It was caught Tuesday at Gloucester Point, York River. The turtle became entangled in some nets running out from the shore and could not free itself. It was hauled in by ropes. About a dozen men were needed yesterday to put it in a wagon. The Messrs. Sanner had it turned over on its back on the lower floor of their store, where it was viewed by many people. It is said this turtle is the third of its kind ever seen here. It measures nearly seven feet from the head to the tip of the tail. The shell, which is smooth and shaped like a trunk, and not so hard that it will not yield to pressure by the hand, at the broadest part is about three feet wide. The color on the back is black, under the belly it is spotted with white. The two immense fin-like appendages growing out on either side near the head, when stretched out measure across nearly seven feet. The fins at the tail are smaller, and the tail is short. The head is very large, and the eyes in keeping with the proportions of the other parts. At the thickest part the head is probably nine inches in diameter. The back resembles black leather or hard rubber. A pure loggerhead turtle is white, but a trunk-head is black. If he is not disposed of soon a tank will be made for the curiosity, where he can have salt water and enjoy a square meal of fish or other food, if he will eat.—*Baltimore American.*

WILMINGTON, Del., May 23.—Wilmington Rifle Club at Schuetzen Park. The reflection from the bright sunshine impaired the shooting early in the afternoon at 200yds., but toward sundown the light became much better and showed the improvement in the 100yds. shooting. Standard American target:

	First Match, 200yds.									
S J Newman	6	5	5	9	10	5	6	6	4	9—65

ST. LOUIS, May 29.—At the last shoot of the St. Lonis Pistol Club it looked very much like a three-handed shoot-off for first place between Perret, Bauer and Bengel, who had tied on 113, but the last man to shoot settled the agony by making 115. Following are the scores made out of a possible 120:

F A Fodde	11 12 12 11 12 12 11 10 12 12—115		
L V D Perret	11 11 12 11 11 11 12 11 12 11—113		
W Bauer	11 12 10 12 11 12 12 12 12 9—113		
A A Bengel	12 11 9 12 11 12 12 12 11 11—113		
M A Thurber	10 10 12 12 10 12 12 12 12 10—112

MANCHESTER, N. H., May 23.—The spring meeting of the Manchester Rifle Association came to a close Saturday night, some high scores being made, the string of Mr. Richardson being highest I know of, and the card of C. M. Hill is high for this target—Standard American target, 7 shots to a card, 5 cards to count:

E Richardson	63 62 63 65 64—317	W Morris	55 56 56 56 58—281
W M Farrow	60 63 61 61 63—308	H Gray	55 55 59 57 54—280
E Munson	60 62 62 61 62—307	C A Joslin	52 52 59 56 55—274
C D Palmer	60 61 62 62 60—305	A Edgerly	53 54 57 52 56—272
C Wharber	61 63 61 59 61—305	J L Niven	55 53 54 55 53—270
O M Jewell	61 63 60 59 60—303	F George	53 56 53 54 53—269
C M Hill	67 56 62 56 61—302	C W Lyman	53 51 54 58 53—269
F Austin	60 60 60 58 60—298	J B Anthony	51 56 54 53 51—265

E J Cram	60 55 56 55 56—282		

Total valuation of prizes, $327.25.

NATIONAL RIFLE CLUB.—Fitchburg, Mass., May 30.—The National Rifle Club had a large attendance at its spring meeting at Vernon, Vt., May 25 and 26. Mr. William Hayes, of Newark, N. J., was present, and used a rifle rifled by George Schalck, and using a lubricated bullet. This rifle was not clean at all, and had been fired hundreds of shots before coming to the match. The rifle and manner of shooting it were the subject of much favorable comment. The rifle was remarkable for the small vertical deviation of its shots, many strings of ten shots each being included within 1½in. in height. Mr. J. R. Munroe was present, one of the riflemen who have made themselves famous the past few weeks by their remarkable work in rest shooting at Walnut Hill. He used a .38-cal. Ballard, No. 6½. The bullets Mr. Munroe used were not suited to the condition of the gun, and he did not do as fine work as he has been accustomed to do. All the shooting was at 40 rods, string measure; 5 strings of 10 shots each were fired. All the shooting but that of Mr. Munroe was done from double rest. Efforts are being made to have a larger shoot in the fall, and an attractive programme will be presented. Mr. Munroe was allowed a discount of 3in. on each string of 10 shots. Mr. William Hayes was allowed a discount of 1½in. per string of 10 shots. The names of the winners and length of strings are given below:

First String.		Second String.	
N S Brockway	7 14-16	H W Smith	9½
William V Lowe	12 6-16	N S Brockway	10¾
L Park	12 14-16	William V Lowe	11 1-16
Third String.		Fourth String.	
N S Brockway	8⅝	William V. Lowe	6 13-16
William V Lowe	8 13-16	N S Brockway	12 7-16
H W Smith	13⅛	L Park	13½
		Fifth String.	
William V Lowe	8⅝	L Park	12 3-16
William Hayes	11 3-16		

William V. Lowe won the silver medal given for the shortest aggregate of 50 shots, with a string of 47 15-16in.—L.

CREEDMOOR, May 28.—The opening military match of the National Rifle Association was shot to-day. Notwithstanding the rain, the attendance was large and the scores were unusually high, especially for the first day. Distances 200 and 500yds. The winners were as follows:

J F Klein, 17th Sep. Co.	23 25—48
T Mahoney, 12th Reg.	21 24—45
J D Burhs, 17th Sep. Co.	20 23—44
Maj. Fox, 2d Brig.	20 24—44
G S Scott, Jr., 23d Reg.	21 23—44
R McLean, 7th Reg.	22 22—44
W A Stokes, 23d Reg.	21 28—44

HARTFORD, Conn.—A prize shoot, open to all comers and any rifle, will be held by the Franklin Rifle Club at Union Grove, Hartford, Conn., July 18. There will be $150 cash in prizes. Committee of Arrangements are: E. J. Hale, E. C. Henn, E. P. Whitney, Henry Andrus, H. M. Pope.

SAN FRANCISCO, May 22.—There was an unusually large attendance of gentlemen interested in shooting at Harbor View Park this afternoon to witness the return match between the teams of the Carson Shooting Club and the California Schuetzen Club. The first match was fired this time last year, the California shootists having taken up a challenge issued by the Carson City club to any shooting club in the United States. The California men on that occasion won by some 68 points, and the match yesterday was the return game. Both teams fired in their respective cities, the Carson people appointing Colonel Kellogg to supervise their interests in San Francisco, while Colonel Boyle and Captain X. Stocker did similar duty for California at Carson. As on the last occasion, Creedmoor targets were used. The rifles used were the ordinary military rifle with a 6-pound pull on the trigger. At the conclusion of the match, Philo Jacoby, the president of the club, announced that the total score of the California team was 1,732, representing an average score of 86 3-5. The largest individual scorer, A. Johnson, was presented with a very handsome gold medal suitably inscribed. Following are the scores in full:

Johnson	5454544455545555445—92
Hovey	4445455455455145455—91
Heath	4036344445455355334—72

Stanton	4455355451555345444—89

The Carson City Guard team shot in Carson, Nev., and made a total of 1,709 points, according to a dispatch received last night. A year ago, in a similar contest, the score stood: California Schuetzen Club team, 1,709 points; Carson City Guard team, 1,658 points.

BOSTON, May 28.—A few riflemen ventured to attend the rifle matches at Walnut Hill to-day. The weather conditions were very poor. Mr. Wilder made ten consecutive 10's, and a total of 112, on the new target. Following are the best scores made:

	Best Match.										
S. Welder	10	11	12	11	12	12	12	11	11	11	11—112

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

DECORATION DAY TROPHY.

To the list of competing clubs as given in our last issue there have been added:

White City Gun Club, White City, Kan.
Delhi Gun Club, Cleves, O.
Lockport Gun Club, Lockport, N. Y.

THE MINNEAPOLIS TOURNAMENT.

THE fourth annual tournament under the auspices of the Minneapolis Gun Club opened under very favorable circumstances in the club's range near Minnehaha on the 23d ult. The weather could not have been more favorable. There were 38 entries in the most popular event of the day. There were but a few spectators in the forenoon, but in the afternoon the number was large.

The first event was at 7 blue rock pigeons, with 18yds. rise. There were 62 entries and the scores were: Krueger 1, Harrison 3, Powell 2, Skinner 7, Bonte 4, Shaft 5, Ensign 6, Paul 5, Thomas 6, Sisson 3, Stevens 6, Madison 7, Johnson 4, Hopper 3, Williams 5, Chantler 5, Gordon 3, Hannah 6, Newton 3, Macomber 5, Ruble 3, Robinson 6, Tuttle 3, Dean 2, Henry 5, Catamaran 4, Maloney 2, Russell 5, Rockey 6, Jones 3, Zinke 3, Best 3. First and second money was divided, Russell won third, Bonte fourth and Tuttle fifth prize.

There were 33 entries for the second event—a shoot at 10 pigeons, sent out in 6 singles and 3 pairs, at 15yds. rise. The score was: Krueger 6, Paine 7, Paul 7, Skinner 6, Stern 7, Sisson 6, Chantler 5, Ensign 7, Jones 7, Ormonde 7, Rucker 4, Hanna 8, Shaft 8, Bonte 4, Thompson 6, Hopper 4, Newton 5, Henry 5, Tuttle 7, Madison 5, Zinke 4, Dean 7, Rockey 7, Robinson 8, Johnson 5, Williams 7, Gordon 8, Russel 8, Ruble 6, Rye 8, Macomber 9, Catamaran 6, Harrison 4. Macomber won first money, second was divided, Paul won third and fourth was divided between Sisson and Hanna.

The following event in the afternoon was a shoot at fifteen pigeons, sent away in nine singles and three pairs. The score was: Shaft 10, Robt. White 12, Paul 13, Skinner 12, Thomas 9, Chantler 8, Tuttle 10, Stearn 13, Madison 11, Krueger 10, Ensign 8, Bouts 8, Henry 9, Hooper 8, Kennedy 10, Zwicke 6, Dean 8, Rockey 10, Hanna 13, Sandpugh 6, Robinson 12, Gordon 11, Newton 9, Jones 11, Williams 10, Johnson 12, Harrison 11, Russell 10, Houghtaling 8, Sisson 7, Whitcomb 8, Pye 9, Macomber 10. After shooting off ties, first second and third moneys were divided. Krueger won fourth money, and fifth prize was won by Thomas.

Thirty-eight marksmen contested in the fourth event, a shoot at ten single birds. This was the showing made: Madison 8, Skinner 8, Rockey 7, Houghtaling 7, Whitcomb 8, Bonte 6, Tuttle 10, Stearn 7, White 6, Russell 8, Chandler 6, Robinson 7, Krueger 4, Shaft 7, Macomber 7, Hanna 10, Paul 8, Koontz 8, Thomas 7, Maloney 7, Jones 6, Newton 6, Gordon 7, Williams 8, Harrison 8, E. H. E. 6, Dean 7, Zincke 5, Kennedy 9, Ensign 4, Johnson 9, Daly 7, Hopper 9, Pye 5, Sisson 5, Henry 5, Rand 8, Morgan 6. Ties in first, second and third money divided; Thomas won fourth prize, and Dr. Skinner won fifth prize—an implement loader.

The marksmen who assembled on the 24th. at the Minnehaha range to participate in the second day's contests of the Minneapolis club's annual tournament were greeted with a very stiff breeze. The forenoon was too windy for comfort and good shooting, but the men showed the benefit of the first day's practice. The shooting averaged up well. In the afternoon it was quite pleasant. The most interesting features of the day were the team contests and the repeating rifle shoot.

The first event of the day and the fifth event on the programme was a shoot at ten Peoria blackbirds. The score was as follows: Skinner 9, Manhattan 9, Daly 7, White 9, Pye 6, Burke 9, Gordon 10, Russell 9, Thomas 8, Ensign 5, Hopper 9, Paul 9, Zincke 6, McCarthy 4, Robinson 8, Krueger 7, Harrison 8, Best 8, Madison 7, Kennedy 8, Sterns 10, Hanna 8, Jones 6, Dabell 9, Sisson 6, Tuttle 9, Whitcomb 6, Henry 8, Perkins 4, Dean 10, Knapp 8, Koons 6, Bonte 5, Johnson 8, Newton 9, Williams 7, Shaft 6, Hetherington 7.

The next shoot was at 15 blackbirds, 9 singles and 5 pairs. The marksmen made scores as follows: Shaft 15, Henry 12, Skinner 13, Manhattan 12, Kennedy 11, Hall 8 Thomas 14, Sterns 10, Burke 13, Sisson 14, Daly 12, Dobett 9, Ensign 7, Hanna 10, Bonte 7, Krueger 13, Hopper 11, Tuttle 13, Zincke 10, White 13, Robinson 12, Newton 12, Madison 11, Dean 11, Knapp 8, Johnson 10, Jones 12, Best 8. Gordon 12, Russell 13, Murphy 10, Whitcomb 9. Moneys were divided.

Teams of 6 men were organized from the shooters of Minneapolis, St. Paul and Hastings. Twenty birds were sent up, 10 singles and 5 pairs. The result was:

Hastings.		St. Paul.		Minneapolis.	
Shaft	14	Pfister	15	Russell	15
Hanna	18	Kennedy	16	Rockey	13
Tuttle	17	Burkhart	16	Krueger	11
Gremer	18	Paul	14	Ruble	16
Hetherington	10	Sisson	15	Dean	15
Westerson	11	Paine	12	Skinner	15
	88		88		85

To decide on the ties between the Hastings and St. Paul teams, 10 pigeons were sent out for each man. The score was: Hastings, 43; St. Paul 47.

This was at 10 Peoria blackbirds. There were 32 entries, and the score was: Krunger 8, Daly 8, Skinner 10, Manhattan 7, Whitcomb 7, Thomas 5, Sisson 5, Sterns 9, Shaft 8, Newton 7, Kennedy 7, White 3, Bente 9, Burke 6, Hopper 6, Dean 6, Gorgen 7, Quicke 6, Murphy 9, Bust 5, Ensign 8, Haun 9, Johnson 10, Knapp 8, Pye 5, Jones 7, Henry 7, Paul 6, Tuttle 9, Ralmson 7, Madison 9, Russell 7. First, second, third and fourth moneys were divided and fifth money was wonby Paul.

An interesting event in the tournament was the shoot for repeating Winchesters. The score: Skinner 11, Daly 13, Whitcomb 11, Manhattan 10, Burke 8, Kennedy 12, Morgan 9, Krueger 11, Shaft 10, Knapp 7, Newton 12, Tuttle 10, Sterns 10, Robinson 10, Thomas 13, Paul 13, White 11, Rocky 10, Johnson 12, Jones 11, Zincke 10, Henry 12, Dean 11, Sisson 12, Madison 10, Harrison 10, Ensign 10, Gordon 11, Williams 9, Hopher 13, Russell 10. The moneys were divided.

The third day of the Minneapolis Gun Club tournament was more pleasurable to those who participated in the events than either of the preceding days. Some of the local and State shooters got discouraged by the presence of some of the crack shots of the country, and did not participate. The entries were numerous enough to make it interesting, however. Budd and Stice, the great wing shots from abroad, fared well as usual. The weather was all that could be expected.

There were 22 entries for the first match of the day and the ninth of the meet, a shoot at 7 Peoria blackbirds, sent up at 18yds. rise. The score was: Krueger, 7; Russell, 6; Lake, 5; Bonte, 5; Budd, 7; Chantler 6; Whitcomb, 4; Willard, 7; Sterns, 5; Tuttle, 4; Daly, 7; Block, 6; White, 6; Paine, 6; Paul, 7; Penwell, 4; Madison, 6; Hart, 6; Kennedy, 6; Ensign, 5; Shaft, 6; Gordon, 5. First second and third money were divided and fourth was won by Gordon.

Eighteen marksmen entered for the second event of the day, a shoot at 15 blackbirds, sent away in 9 singles and 3 pairs. Mr. Willard made the only 15, with Budd and Stice, the famous wing shots, in second place with 14 birds each. The score stood: Krueger 11, Russell 12, Lake 13, Budd 14, White 11, Chantler 11, Daly 11, Shaft 12, Willard 15, Stice 14, Paine 11, Bonte 7, Ensign 13. Kennedy 9, Paul 9, Gordon 13. Messrs. Hart and Thompson, who had entered, withdrew after 10 men had shot. Third money was divided, while Shaft won fourth, after shooting off the ties on 12.

The Jacksonville marksman, Stice, won first money in the third event. It was a sweepstakes shoot at 10 blackbirds sent away in pairs. This was the score: Stice 10, Whitcomb 7, Shaft 8, Millard 5, Budd 9, Chantler 8, Bonte 7, Hart 6, Paine 6, Paul 9, Courtney 6, White 9, Russell 6, Daly, Tuttle 9, Ensign 7, Kennedy 8, Krueger 8, Sisson 8, Lake 8. All moneys but first were divided.

The fourth event of the day was a shoot at 15 birds. The score was: Lake 11, Murphy 13, Budd 15, Daly 11, Chantler 10, Krueger 10, White 14, Bonte 12, Paine 11, Stice 13, Shaft 14, Ensign 8, Hart 11, Paul 11, Willard 12, Kennedy 14, Sisson 10, Courtney 14, Gordon 9, Russell 12, Legg 9, Knapp 7, Rocky 11, Madison 13. Budd destroyed the 15 birds, White won second money and the other moneys were divided.

The attendance at the fourth day's shooting of the Minneapolis Gun Club on the 26th was much smaller than any previous day. There were many of the State and local marksmen who participated in the sport of Monday and Tuesday who did not think they stood any show in the contest entered by Budd and Stice, the great wing shots, whom many people regard as "professionals." So far as the weather was concerned, the day was the most favorable thus far.

The first contest was at 10 blue rock pigeons. There were but 9 entries. The score was: Stice 9, Paine 9, Harrison 9, Budd 10, Willard 7, Courtney 10, Whitcomb 8, Bader 4, Russell 7. First money was divided, second went to Harrison, third was divided and fourth went to Bader. There were but 6 entries in the next shoot, which was at 10 blue rock pigeons, sent up in 6 singles and 2 pairs. Shaft made a score of 10 and got first money, with Budd and Courtney dividing second money on 9. There was a special sweepstakes shoot at 10 birds. First was divided between Skinner and Budd, Courtney won second and third was divided between Shaft and White.

Budd and Stice carried off first honors in the next event, which was a shoot at 10 birds, sent away in 6 singles and 2 pairs. There were 16 entries and the score stood: Harrison 7, Shaft 8, Paul 7, Paine 7, Leonard 2, Budd 10, Stice 10, Skinner 7, White 8, Parker 6, Jayslin 8, Rand 2, Kennedy 6, Courtney 9, Whitcomb 6, Russel 6. First money was divided, second went to Courtney, third was divided and Harrison won fourth.

MIDDLESEX GUN CLUB.—Regular shoot at Dunellen, May 25. The match between Lever and Quinlan is off, and another made between Lever, Quinlan and Cannon for $50 a corner, at 30 birds, Cannon to stand 36yds., the others at 30 yds. Considerable interest is taken in this match as both Lever and Quinlan have their friends, with Cannon selling third choice. For a consideration, I think I could place them in one, two, three order at the finish. The day opened with first on the programme, a team shoot of 5 men a side for the birds. Teams captained by Dickens and Lever.

Dickens, (30)	10111—4	Lever, (30)	11211—5
Wyckoff, (30)	12111—5	C. Smith, (30)	22110—4
D. Terry, (30)	11021—3	N. Terry, (30)	11120—4
Darby, (30)	11111—5	Dean, (26)	22010—3
Keller, (28)	11122—5	Van Neise, (26)	01110—3
	22		19

Five birds:

Five birds for the birds:			
C Smith (30)	12211—5	Dickens (30)	11012—4
T H Keller (28)	21110—4	C Smith (30)	21010—3

First sweep, 3 birds, ties miss and out: C. Smith and W. Terry first, Darby second.

Second sweep, 4 birds:

Lever (30)	1112—4	Forrest (29)	1101—3
Quinlan (30)	1111—4	W Terry (30)	1010—2
Dickens (30)	1120—3	Dean (26)	0111—3
C Smith (30)	1101—3	Darby (30)	1122—4
D Terry (30)	1111—4	Keller (28)	0200—1
Williams (30)	1112—4		

Quinlan, Darby and Williams first, with second tie on 4, Dickens second, with 8 to Dean's 7. W. Terry third.

Third sweep, 4 birds:

Lever (30)	1001—2	W Terry (30)	1212—4
Quinlan (30)	2112—4	Darby (30)	1121—4
Dickens (30)	1112—4	Voorhees (30)	2201—3
C Smith (30)	1021—3	Creely (30)	2112—4
D Terry (30)	1101—3	Keller (28)	1020—2
Williams (30)	1112—4	Dean (26)	1112—4
Forrest (29)	1012—3		

Shoot off: Quinlan, W. Terry and Creely first; Voorhees and D. Terry second, Keller and Lever third.

Fourth sweep, 4 birds:

Cannon (26)	1120—3	Forrest (29)	0122—3
Miller (30)	1111—4	Quinlan (30)	1110—3
J H Force (30)	1100—2	W Terry (30)	1111—4
Manitz (30)	0101—2	Creely (30)	1120—3
Lever (30)	0110—2	C Smith (30)	1102—3
S G Smith (29)	1212—4	Dickens (30)	1221—4
Williams (30)	1112—4	Dean (26)	2100—2
Conover (30)	1111—4	Voorhees (30)	2110—3
Squires (30)	1111—4	D Terry (30)	2111—4

Shoot-off: Miller, S. G. Smith and W. Terry tied on 9 and took first, Quinlan, Forrest and Creely second, Lever and Dean third.

Fifth sweep, 2 pairs live birds, 21yds. rise:

Williams	11	11—4	Miller	11	11—4
Lever	10	11—3	Conover	11	10—3
Voorhees	11	11—4	D Terry	11	11—4
Quinlan	11	01—3	Cannon	10	10—2
Dickens	11	01—3	Creely	00	10—1
Forrest	00	00—0	S G Smith	10	11—3
J H Force	11	11—4	W Terry	1...	11	10—3
C Smith	01	00—1			

Ties one pair: Williams and Voorhees first, Conover second, Cannon third.

BROOKLYN, May 30.—The Fountain and Coney Island Rod and Gun clubs shot to-day in 25yds. sweepstakes at Woodlawn, L. I. C. W. Jones killed 17 birds straight. He took first prize in the first and divided the second sweepstake. Dr. Shield killed 16 out of 17 and of 311 birds shot at only 64 escaped.

CARVER VS. BREWER.—Philadelphia, May 23.—The first of a series of three matches between John L. Brewer, of New Jersey, and Dr. W. F. Carver, of California, took place this afternoon. The shoot began at 3:10 and ended at 6:05, with an intermission of ten minutes after fifty birds each had been shot at. Hurlingham rules with Monaco boundary, 18yds. and 21in. from the center trap. The pigeons were a poor lot, but the wind blowing across the traps made some of them hard to gather inside the bounds. Brewer used an L. C. Smith gun, Carver a Greener hammerless. Following is the score:

Carver.		Brewer.	
	2211222021 1212211211		1c22122111 c111212111
	2221112122 1222121c11		2211112222 2220211011
	2112221012 0123111110		1220120022 0211c12202
	2211222211 201o221222		2211212222 1120020220
	2221221212 0c212c0211—86		0111202210 1201111220—80

47 hit with second barrel. 39 hit with second barrel.

2 denotes birds killed with second barrel. o birds that fell dead out of bounds but inside of 80yds.

May 24.—The second match between Carver and Brewer was to have been shot this afternoon at Pastime Park, but just as they were about starting a representative of the Society for the Prevention of Cruelty to Animals appeared and informed the principles that if the match were begun they would arrest every one connected with it. As there were a large number of gentlemen who had paid their admission to see the match, and not wanting them to be disappointed, Messrs. Brewer and Carver shot at 100 clay pigeons each, 30yds. rise, use of both barrels, both using the same guns that they used at Monday's match. The birds were thrown from three traps. Brewer defeated Carver by a score of 87 to 77, as follows. Brewer taking the lead on the sixteenth bird and keeping it to the finish:

Carver.		Brewer.	
	1112110222 1111101010		0121111111 1121221111
	0011102101 0111010111		1102111112 2211101201
	2100111111 0111120012		1101111111 2120111011
	1211110111 1112110111		2112110221 1110111120
	1001102111 0110221211—77		2221210111 1221120210—87

14 hit with second barrel. 24 hit with second barrel.

Dr. Carver will to-morrow enter suit against the Society for the Prevention of Cruelty to Animals to recover damages to the amount of $10,000 for their stopping the matches of to-day and to-morrow between himself and Brewer.—H. T.

AVON, N. Y., May 25.—Matches at Peoria blackbirds, 15yds.:

Tie on 17: Caris 111—3; West 101—2.—SPORT.

CARVER VS. DAVENPORT.—Brooklyn, May 28.—On account of the rain the match between L. I. Davenport and Dr. Carver today was reduced to 50 birds each, instead of 100, as arranged. L. I Davenport was first to the score and succeeded in killing 37 out of 50. Dr. Carver only missed 3 out of the 50 shot at. The following is the score:

Dr Carver		L I Davenport	
	1111111111—10		1101011010— 6
	1111110011— 8		1111111100— 8
	1111110111— 9		1110110111— 8
	1111111111—10		0111111110— 8
	1111111111—10		1111000111— 7
	—		—
	47		37

Drivers—Dr. Carver, 10; Davenport, 7. Right quarterers—Dr. Carver, 16; Davenport, 7. Left quarterers—Dr. Carver, 17; Davenport, 17. Incomers—Dr. Carver, 4; Davenport, 4. Referee, Mr. Von Lengerke. Trapper, W. Mills.

BROOKLYN, May 25.—The Glenmore Rod and Gun Club had a very pleasant afternoon's sport at Dexter Park, Long Island, today. Besides the ten members who shot for the Bernard Midas diamond badge, there were upward of thirty members of the club and their friends present. Chris Dussler found the birds, and although they were young they flew very well. Out of 76 birds shot at 55 were killed. Both barrels were used. Ex-Supervisor Forbell tied with Phil von Drale for the badge, and in the shoot-off Forbell let his last bird go, after killing 6 straight, and let Von Drale win it. The score is as follows:

E A Forbell (27)	1111111—7	B Rausch (24)	0101111—5
J Selover (27)	1011100—4	F Ochs (27)	1011011—5
P von Drale (24)	1111111—7	W Wilte (21)	0110000—2
P Sutter (27)	1011111—6	D Powell (27)	0011001—3
C Magee (24)	0111110—5	W Linington (27)	1111110—6

ST. LOUIS, May 21.—The Mound City Gun Club held their weekly shoot at the Cote Brilliante race track to-day. The Mound City's have adopted National Gun Association rules and use five traps for all their shooting.

First sweep, 10 blackbirds, 18 yards rise: Thurber 7, Blue 5, McGivney 2, Fox 4, Bright 6, Brawner 6, Hill 9, Wells 6. Hill won first and Thurber second.

Second sweep, 10 blackbirds, 18 yards rise: Thurber 7, Blue 3, McGveny7 7, Fox 7, Bright 4, Brawner 4, Hilli 10, Wells 7, McDowell 6, Flynn 5, Simpson 3, Horner7, Weber 4, Henry 5, Meyer 7, James 8. Hill won first, Fox and Horner divided second.

Third sweep, 10 clay-pigeons, 18yds. rise: Thurber 8, Blue 7, McGivney 6, Fox 7, Bright 4, Brawner 6, Hill 8, Wells 6, McDowell 9, Flynn 5, Simpson 4, Horner 7, Weber 5, Henry 4, Meyer 4, James 6, Faber 6, Bohn 6, Jacks 5, Louis 5. Hill won after an exciting shoot-off with Thurber, Fox and Horner divided second, McGivney and Wells divided third.

Fourth sweep, 10 clay-pigeons, 18yds. rise: Blue 2, McGivney 6, Hill 9, Wells 7, McDowell 4, Flynn 5, Horner 5, Weber 7, Henry 4, James 4, Faber 1, Bohn 4, Louis 5, Adams 3, Bradford 7. Hill won first, Wells second and McGivney third.

Fifth sweep, 5 clay-pigeons: Horner 1, Wells 4, James 2, Flynn 2, McGivney 2, Adams 2. Wells won.

SOLOMON CITY, Kan., May 20.—At the semi-monthly shoot of Solomon Gun Club the following scores were made, and there was a small turnout on account of weather and heavy winds. The club anticipates a good time at blue rocks and live birds on Decoration Day:

Dewad	1111111111211110—14	Kraeuchi	0011001101010100— 7
Edworthy	0222000101000020— 6	Crooks	1111010102101020—10

[We have received a photograph of the club members on their shooting grounds at Solomon City, Kan. There are ten in the club and as many more in the group who may, in process of time, develop into gunners and join the club. The picture is a pleasing one.]

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

The Royal C. C. will sail their Challenge Cup Race on Hendon Lake, on June 11, 1887, and invite American canoeists to attend and compete.

Brown, 4 Bowling Green, New York. Sec'y A. C. A. Eastern Div., W. B. Davidson, Hartford, Conn. Sec'y W. C. A., J. O. Shiras, Cincinnati, O.

THE A. C. A. MEET OF 1887.

FROM the following report of the Committee on Camp Site it will be seen that an excellent location has been found, and at very small cost, the use of the ground being free. The arrangements for supplies, camp steamer, etc. are very satisfactory, and there is now every promise of a most successful meet in August. It is very doubtful whether our English friends will be with us this year, as nothing has been heard from them, but they may yet decide to return for another race for the trophy. The programme we published last week offers some good racing and will at the same time make an attractive exhibition for the spectators. Of course there will be a "Squaw Point" this year and many of the old dwellers in the grove at Grindstone will pitch their tents there. Already several parties are made up and the attendance will probably be quite large. The arrangements for meals makes it possible for those who wish to camp to do so with little trouble, as no cooking need be done. The regatta committee has requested Mr. Nate Smith of Newburgh to serve as clerk of the course, and he has consented to act. The report is as follows:

R. J. Wilkin, Commodore:

Your committee have the pleasure to report that on the 24th and 25th of May a visit was made to Plattsburgh and Bow and Arrow Point, Lake Champlain, and arrangements commenced for the 1887 camp. An unusually late resumption of navigation prevented any earlier efforts.

The site in question was found to be one desirable in the extreme, a well wooded wild point almost an island sloping down to an easy beach on one side and up to precipitous bluff on the other.

Headquarters will be at S. E. end. For sailing or paddling the surrounding bays are incomparable, several islands giving shelter for those who prefer it to the grander cruising of the open lake.

A good site offers for ladies' camp at the N. W. end.

There are no houses on the point and very few near. It is owned by Mr. J. A. Dodds, farmer, North Hill, Vermont, who agrees to give the A. C. A. its exclusive use during the camp in consideration of the advantage of publicity which such use will bring him.

The steamer Maquan, Capt. Hawley, is a large well appointed boat plying between Plattsburgh and Maquan. Captain Hawley will erect a small wharf and will touch at camp each trip. Fare 25c., baggage and canoes free, distance 7 or 8 miles.

The Foquet House is a first-class hotel opposite the railway depot, kept by Mr. Phelps Smith of Adirondack fame, who will erect the necessary shelters, tables, etc., and board A. C. A. men in camp for one dollar per day. Breakfast of meat, eggs, coffee or tea, milk, cakes, etc., etc. Dinner—Soup, roasts and vegetables, pastry, etc., etc. Supper—Cold meats, etc., sweets, tea or coffee, etc.

A prominent grocery firm, Nichols & Co. of Plattsburgh, will provide tent or other shelter and run a general store at usual prices, for all other necessaries beyond the meals supplied by restaurant. Farm produce from Mr. Dodds, the owner, will be retailed at the store, and orders for fresh meat or any other requisites not in stock will be taken in consideration of there being no other store in camp.

The railway depot is on the lake shore with side tracks on wharf by which special cars when used can be run alongside the steamer.

Gen. R. S. Oliver and Mr. C. V. Winne of the Mohican C. C. can give valuable assistance in making arrangements with the D. & H. Railway Company, whose representatives are always most courteous and obliging, and also with the connection at Albany with down river steamers, all of which land alongside the D. & H. tracks.

The camp of 1887 will enjoy advantages unsurpassed before and the above arrangements have been made without incurring any expense to the A. C. A.

The confirmation by the Commodore of the agreements above stated is awaited by the contracting parties.

Your committee and the A. C. A. are deeply indebted to the friendly assistance of the Rev. H. M. Smyth for introductions and information, also to Mr. Ross W. Nichols and Mr. W. L. Foote who put their yacht Dream in commission for the cruise about the site. And it is a pleasure to acknowledge the courtesy and good will of the gentlemen with whom arrangements were made, and to report that Plattsburgh extends so cordial an invitation.

Mr. Frank Hubbard of this committee reports that absence from the country prevented his attending, but a valuable letter of information represented him. All of which is respectfully submitted.

ROBERT W. GIBSON.

ALBANY, May 27, 1887.

THE SPRING MEETS.

THE races this year coming on Monday we are obliged to leave a full report until next week. The meet at Haddam Island was well attended and the racing was good, but both there and at Croton Point the cold and disagreeable weather made the first camping of the season less pleasant than it would otherwise have been. The Hudson River canoeists turned out in good numbers at Croton Point and a successful regatta was held on the Shrewsbury River.

A. C. A. MEMBERSHIP.—Trenton, N. J., May 28.—*Editor Forest and Stream:* The following named gentlemen have applied for membership in the A. C. A.: Dr. H. E. Rice, Springfield, Mass.; F. J. Tate, Lakefield, Can.; W. Lister, Lakefield, Can.; C. S. Byington, Albany, N. Y.—WM. M. CARTER, Sec'y.

THE NORTHERN DIVISION MEET.

THE programme for the races at the Northern Division Meet, July 31 to Aug. 12, is as follows:

PADDLING RACES.

1. Classes II. and III.—Open canoes, single blades.
2. Classes IV. and V.—Open canoes, single blade. (See Note B).
3. Classes A, B and C.—Sailing canoes that are decked and fitted with a centerboard.
4. Classes II. and III.—Open or decked, any blade.
5. Classes IV. and V.—Open or decked, any blade. (See Note A).
6. Classes II. and III.—Tandem—Open canoes, single blades; decked canoes, double blades.
7. Classes IV. and V.—Tandem—Open canoes, single blades; decked canoes, double blades.
8. Any class or paddle, three paddlers in a canoe.
9. Any canoe or paddle, lady and gentleman's tandem.

SAILING RACES.

10. Classes A, B and C.—Decked canoes, unlimited rig or ballast; 3 miles.
11. Classes A, B and C.—Open canoes, unlimited rig or ballast; 3 miles.
12. Classes A, B and C.—Decked, unlimited sail, ballasted with a passenger weighing at least 125lbs. (See Note C).
13. Classes A, B and C.—Open canoes; ditto.
14. Classes A, B and C.—Man-overboard race, to be started in the usual manner; at a pistol shot sails are to be lowered and skippers all jump overboard, regain their positions and finish the race.
15. Classes A, B and C.—Combined paddling and sailing race, open or decked; course 3 miles, the half miles to be alternately paddled and sailed, commencing under paddle.
15. Hurry Scurry Race.—200yds. race, 25yds. swim and 200yds. paddle.
17. Portage Race.—Course to be decided at the meet.
18. Catch the Duck Race.

Note A.—The best five flags will be given to the five competitors making the best average or record in races 3, 4, 5, 10, 11 and 15; canoes entering both 3 and 5 will have their best record in either of these races taken.

Note B.—The definition of Class V, paddling, and Class C, sailing, is length not over 16ft., beam not over 32in. It has been added to let in the majority of existing open Peterboro hunting and cruising canoes 16×31 and 16×32.

Note C.—The committee thought it advisable to have some kind of a cruising load race; they thought of making the canoes carry a certain amount of ballast, but came to the conclusion that it would entail too much work on themselves weighing out rocks or sandbags for each competitor. It was thought that the lady friends of the contestants might enjoy a sailing match and at the same time act as a good cruising load.

Note D.—First and second prize flags will be given in each of the events provided there are four starters. The above programme may be altered by the regatta committee, who will be pleased to receive suggestions from members of the Northern Division or any one intending to be present at the meet.

The events for each day will be posted on the notice board at camp each morning before 8 o'clock.

R. C. STRICKLAND, Chairman, Lakefield.
J. G. EDWARDS, Lindsay.
W. G. MCKENDRICK, Toronto.
} Regatta Committee.

TORONTO C. C. NOTES.

THE Masons, Tysons, Neilsons, Johnsons and all the other sons and members of the Toronto C. C. have moved into their new quarters in front of the Union station which command a magnificent view of the entire bay and the blue lake beyond.

The new club house is a substantial building 50×25 two and half stories high, with spacious balconies and a flat roof, from which the aged and less enthusiastic members, together with lady friends and admirers, will view the attempts of the members who will hustle for the five club medals. The first floor is filled up with 48 racks for canoes. The second floor contains the club room, 25×25, which is finished in pine, oiled and varnished, also the locker room, 20×25, where each member has a locker 10ft. high 20in. deep and 18in. wide (and yet some of the boys want more room to stow away duffle), this room has been so arranged that members can bring their canoes into it, hoist and work on a 100ft. sail without any inconvenience, it is also used to hoist all the wet sails and leave them to dry, twenty can be accommodated at once.

In one corner of this room is a shower bath, which besides being used to douse the boys, will be occupied by the photographers of the club as a dark room. In the other corner is a stair leading to the garret where about five of the boys have been roosting for two weeks and spending all their spare moments rigging, etc. The entire building is fitted up with gas and city water and on the lower flat a hose is connected with the latter so that members can clean the sand out of their canoes without getting down on their marrow bones and doing pendance.

The club intends this season to keep up the reputation it has gained in previous years as paddlers, as sailors, and above all as cruisers. In the paddling line Johnson, Jacques, Leys and some new blood will endeavor to hold up their end of the stick. In sailing it is an open question who will do the holding up, as there has been such a changing of hands in the craft that until the first race no one can tell where he will be in the list. But in cruising each and every one of us get there with both hands. This is the one thing in which every member of the club from the oldest to the youngest can take a turn at and have as good a time as the next fellow. A trip was arranged for and successfully carried out on our Queen's birthday, May 24, ten members started out on the Saturday afternoon and cruised along the lake shore, returning on Tuesday night, and reported having a glorious time. Heretofore all the canoes in the club have been built with the prime object in view of being good cruisers, but this season Messrs. W. A. Leys and W. G. McKendrick have left this hard-beaten path and built racers, or what we hope will be racers, 16×30in. with rising floors and pretty fine ends. Now we do not propose to call these craft cruisers. We leave that for those who think you can get a good cruiser out of a 30in. craft with a rising floor. We have built these racers to try to keep up with the A. C. A. programme in which a cruising canoe man has no place and apparently is not wanted.

Mr. Leys's craft is built by Ruggles off a design by Mr. W. P. Stephens, and appears to be very much like the Mona, of Brockville, and should be very fast. She will carry a suit of sliding gunter sails of about 85sq. ft. Her board is a 10lb. brass one and fitted in a low wooden trunk. The '87 Mac is a rather peculiar model 16x30x12, with a fine entrance of 9ft. and a full run of 7ft. The bow has no flare above the 6in. waterline, while the stern has considerable. Her bow at the keel is rockered 4in. and the stern the same. The foremast tube is 9in. from bow and the mizzen tubes 12 and 13ft., the bulkheads are 4ft. and 12ft. 6in. She is a smooth-skin built by Wm. English, of Peterboro, from a design by her owner, and is a splendid piece of workmanship and a credit to her builder. Her trial sails will have an area of about 75sq. ft. They are entirely behind the mast, and are hoisted by travelers running in a brass tube let into the mast and securely fastened. Her centerboard is of spring steel weighing 4lbs., encased in a low brass trunk; the drop rudder is of steel, of a new design, and with a very large area. Her skipper is much the same as last year, thank you, only with less hair on his head, owing to the way he racked his brains and tore his wool trying to get some of the aforesaid novelties to work satisfactorily. She will be ready for the first race of the club on June 11, and in the meantime her critics, of which there are many, are trying to calculate on which point, if any, she will be fast. Most of them agree in thinking her strong holt will be "getting upside down quicker than anything in the club," while several go one better by prophesying that in calm water with a light breeze she will be fast, provided her skipper can keep inside of her. These members, it is needless to say, have never seen a craft of the Pecowsic model. More anon.

TORONTO, May 27. MAC.

ROCHESTER C. C.—Rochester, N. Y., May 20.—*Editor Forest and Stream:* The Regatta Committee of the Rochester C. C. has adopted the following programme of races for 1887, to be held at Canoe Point, Irondequoit Bay. Course triangular, ½mile between buoys; the whole course 3 miles. A. C. A. rules govern all races. June 22, spring regatta and formal opening of new clubhouse. 11 A. M., sailing cup race (first in a series of five for the Ward cup. The four other races July 6, 20, Sept. 7 and 21); 12:00 M., dinner; 1:30 P. M., review of club fleet; 2:00, sailing, class B.; 3:00, sailing, "man overboard;" 4:00, hand paddling, all classes, no paddles, course straightaway; 4:30, upset, all classes, course straightaway; 7:00, opening of club house.—GEO. H. HARRIS, Purser.
